Yet the old must have housing that is both safe and inexpensive, so that they may have a choice of where they may live in comfort. The housing must be so arranged that they can live there long after ordinary dwellings would have become too much for them.

Miss Ollie Randall, who operated an apartment house in New York's Tompkins Square for the aged for many years for the Community Service Society, points out that the dwellings must also ease the fear of the old that in case of accident or illness "nobody will be around to hear me or to take care of me."

ARGUE CLOSE LIVING VERSUS SCATTERING

Housing officials, social agencies, and others have recommended many solutions: A village of small houses, three rooms at the most; a large city housing development with central dining facilities; a section of special apartments in an ordinary housing development; and deluxe public homes for the aged.

At present there is an argument among experts: Should old people be congregated or should they be spread about the community?

Living together, they can have nearby medical care; special facilities; they may eat inexpensively and well in cafeterialike dining halls; and they can have the company of contemporaries in recreational activity.

Opposed to this is the theory that by lumping the old together they are being segregated from the rest of the community. This makes the older person feel, it is said, that they are not wanted by society, that they have nothing to contribute, that they have no individuality, and that all that the future holds is death.

The argument may be resolved from the current experiments: New York City has 4 low-rent housing projects with some apartments for the elderly; Cleveland has a 14-story apartment house with two-thirds set aside for the aged in 2-bedroom, 1-kitchen units; Chicago plans 350 units for the aged with elevators, ramps, and emergency buzzers.

A NEW OUTLOOK ON OLD AGE—RECREATION, CRAFTS AT GOLDEN AGE CLUBS HELP FILL THE VACUUM OF TIME IN THE LIVES OF MANY OLDSTERS

(This is the 9th of 12 articles on the problems of old age.)

(By Earl Ubell)

"Dos-a-dos. Allemande left. Circle right and swing your partner." A young girl with short black hair was the caller. The music came from a scratchy phonograph. Laughter filled the long, narrow room. The average of the dancers was 70.

After the dance, the old men and women went back to their chairs along the wall to wait until the young girl—a group worker in New York's Lenox Hill Settlement House—would start the next activity.

For the oldsters, the dances, clay modeling, sewing, singing were all minutes and hours that would help them fill the biggest vacuum in their lives: the expanse of time.

"You ask why do people come here?" a retired chef said. "Why to forget their troubles. Some have been sick and lonely. Maybe their children don't write them. Me? I got to keep busy."

That's the way it is in several hundred Golden Age Clubs that have sprung up across the country like blossoms in the desert lives of many old folk. The clubs have given them something to do for the first time in many years and many of them belong to more than one group.

The chef had to stop work because he had both a heart ailment and a persistent rash on his legs. He had never married and lived alone in a cold-water flat in a fourth-floor walkup.

"This is a wonderful place. You can get to see people once in a while. You know what I mean. A person can't be alone all the time. Let me take you to see my pottery."

Besides pottery, many settlement houses and church and community centers, once focussed solely on youth, now offer a variety of activities for the aged, most of them of the arts, crafts, and handicraft type. They offer job counseling, advice on housing, summer camp trips, help with personal problems. All may be vital to the 70-year-old separated from family and friends.

Dr. Harry Levine, director of service for the aging in New York City's welfare department, started one of the first of these centers for the aged in 1942. He believes the programs there prevent mental illness.

"We keep them out of the mental hospitals," he says, "and we know that with the day center the unnecessary visits to the medical clinic drop off 40 percent."

Dr. Levine believes that activity by itself as a primary human need expressed physically and emotionally is fundamental in preserving a personality. "The older person," he says, "needs to fill in his unused day with activity that will continue to use his abilities and his experience * * * to give him a feeling of adequacy, accomplishment, and usefulness."

You would think older persons would crowd the centers, but the truth is, only a minute fraction of them take advantage of the facilities. Many, of course, do not know that the centers exist, but there are other attitudes.

A typical case found in any social caseworker's files might be that of the 70-year-old retired seaman who lives with his daughter. He never leaves the house, rarely bathes, and talks of little else but food and his arthritis. His daughter suggested a "golden-age center."

"It's too cold to go outside now. Besides, what would I do there? Play games like a kid? Talk to ugly old women? Leave me alone. You just want to get me out of the house."

Actually, Dr. Bernard Kutner, who did a study of 500 persons over 60 for the Russell Sage Foundation, found that activity alone can lift morale, but is not as great a stimulus to the aged as employment. So the centers are trying to find activities which the aged can see as useful.

Another reason given by social workers as to why old people shun the centers is that to do so would be an admission that they are old and that their lives are no longer useful for anything but "kid's play."

At the Educational Alliance Settlement House on the lower East Side can be found many old persons who simply attend to get a warm place to sit for a few hours.

There are also those who do not have the necessary skills with which to participate in many of the arts and crafts at the centers. Although old people can learn, as psychological experiments have demonstrated, they hesitate to take on new interests.

Dr. W. Virgil Nestrick, of the New York Board of Higher Education, and Dr. Jay B.

Nash, former head of physical education at New York University, demonstrated in two separate studies that the pattern of leisure-time activities is formed very early in life.

Dr. Nash found that most hobbies and crafts have their origin before the age of 12 in activities around the house. Dr. Nestrick's survey showed that constructional hobbies usually were associated with pleasant experiences with those activities during the teens.

For many of the aged then, settlement house programs may be pointed in directions in which the old person has no basic interest. Dr. Paul Lemkau, director of New York's mental health board, points out that persons from different social groups in society have different goals in life and that single "cultural" programs may fail to serve many.

Despite these considerations, Dr. Levine envisions the time when all will be prepared for leisure in old age and such centers as he has established will everywhere be engaging the talents, energies and spirit of the old people. They will be come useful by simply using their leisure time, he says.

Until the impact of the Golden Age Centers is studied scientifically, little can be said about their ultimate place as a resource for recreation and leisure.

But the aged will continue to draw on their community as they always have. They will go to the movies sit in parks, attend concerts, gossip, read as much as they are able, watch television, or do nothing.

Unless they have the resources to do otherwise, the old person can find his later years a very lonely twilight.

[From the New York Herald Tribune of March 6, 1957]

A NEW OUTLOOK ON OLD AGE—RELIGION PLAYS ROLE IN COMFORTING THOSE WHO FACE ETERNITY, BUT MORE COULD BE DONE FOR THEM

(This is the 10th of 12 articles on the problems of old age)

(By Earl Ubell)

There are many opinions by informed laymen and the clergy as to the effect of religious faith and activity on the lives of the aged, but few scientific studies by lay or religious groups have measured the impact in concrete terms.

This is the handicap in trying to determine what religion can, or should, do for the aged beset with physical, economic, and social ills.

A spot survey of clergy of all faiths discloses a frank admission, with few exceptions, that their emphasis on youth and the family has resulted in neglect of old people. Church and synagogue services, of course, are available for all, but the aged seem to be left out of plans for other activities.

Typical of many observations is one by a church social worker quoted in the Christian Century:

"We've excused ourselves on the ground that we must prepare children to face life, but these older people are facing eternity."

The depth of faith among old people was illustrated by a 70-year-old widow living apart from her children. "My religion gives me strength and resignation," she said, "and resignation is a wonderful thing. Nothing that happens to me now will matter much."

FORTY TO SIXTY-FIVE PERCENT OF ELDERLY COMFORTED BY FAITH

The widow's words are echoed by the few available studies: between 40 and 65 percent of elderly comforted by faith. But what about the other half? How do they respond spiritually to old age? The studies leave the questions unanswered.

Lack of facilities, low income, poor health, and feelings of rejection may prevent many old people from participating in religious activities. And despite the advantages old people report they derive from religion, churchgoing declines in later years.

Three investigations appear to bear out the decreased contact of the aged with established churches, although other research strongly suggests that religious faith strengthens rather than declines in old age.

A national poll by the American Institute of Public Opinion (Gallup poll) reported that persons over 50 attend church less than any other adult-age group. This same survey reported that only half of American adults attend church during any week.

The second study, reported in the Archives of Psychology, told of 381 recipients of old-age assistance in New York State. Nine out of 10 formerly went to church, but at the time of study, more than half no longer did.

The third investigation—the most thorough ever made on the religious impact of the aged—covered 400 aged Catholics in the Roman Catholic Parish of St. Philip Neri, St. Louis, Mo. One out of four reported less frequent attendance at mass. Sixteen percent reported increased frequency.

UNDERLYING INTEREST IN RELIGION NOTED

Despite these findings, the St. Louis survey and another reported in Problems of Aging, by Dr. Ruth Cavan, reported that Bible reading and listening to religious radio programs apparently increased with age. This was taken as evidence of an underlying interest in religion. This applied to about two-thirds of those interviewed.

Yet the St. Louis study shows that 2 out of 3 old people take no interest in church activities outside of worship; the clubs, guilds, societies, auxiliaries. This strengthens the impression about the old person's nonparticipation held by clergy of other faiths.

Although a primary lack of interest in religion may account for a large proportion of the apparent disaffection in almost half the old people, illness plays the biggest role in preventing attendance at church functions.

The St. Louis study also showed that 1 in 4 found it difficult just to get to church. The New York survey indicated that difficulty in climbing church steps was a deterrent. This same investigation reported complaints of rejection. The old people lamented:

"Nobody seems to remember me any more."

"I don't like to go when I can't pay my way."

"I'm so ashamed of my old clothes among all the finery."

To overcome these feelings, clergy of all faiths have renewed their interest in the aged. They have established golden-age centers molded after secular centers for the aged. They provide counseling services and contribute financial and occasionally even medical aid.

CHURCH KIND OF GIVES UP WITH THE ELDERLY

The Reverend Dr. Paul B. Maves, associate professor of religious education at Drew Theological Seminary (Methodist), Madison, N. J., points out that with approximately 50 percent of the population affiliated with a church, the church kind of gives up with the elderly because they are rather discouraging prospects for members. * * * In recent years, the churches, however, have been showing a remarkable interest.

George M. Murray, who heads services for the aging in the family department of Catholic Charities of the Archdiocese of New York, says that "the church for years has been the place where older people come as a kind of meeting place, but practically nothing was done for them. These people built most of the parishes. It's time more was done for them."

Rabbi I. Fred Hollander, director of the Institute for Pastoral Psychiatry for the New York Board of Rabbis, says that "Religious leaders are behind the eight ball in aiding the aged, but not more and not less than other groups * * *."

Besides the direct effect of religion and religious institutions on the aged, there is the shaping of attitudes toward the aged by the clergy. What is the religious implication of aging?

The Reverend Robert A. Ford, family service director for New York's Catholic Charities, says that "The church takes the viewpoint that we are in exile here * * * we hope to lay the groundwork to get them [the old people] on the right road to bring them to their eternal home."

Rabbi Hollander commented: "The problem of tomorrow becomes very real to the older person. If a person has been religiously minded all his life, the answer is simple—there is a tomorrow. To a person not religious, there is a concern with these questions. Science does not answer them."

And further, the clergy has something to say about the attitudes of children toward parents. Jews and Christians are commanded to honor them. But this commandment is put under stress in modern life.

There is the young mother who has her old mother living with her and because of the old woman's interference, the daughter's marriage and home life are threatened. This drama, repeated thousands of times today, brings the question: Should the old woman live with her children if the situation is not harmonious?

YOUNG COUPLE FACES A LOT OF PROBLEMS

The Reverend Dr. Henry J. Whiting, of the National Lutheran Council, says that the young couple faces "housing, inflation and a lot of problems. And it is just not fair to say a young couple must take grandma into the home."

Father Ford says that despite the natural responsibility of the children, some married children simply won't care for an aged parent.

"Many would," he says, "but can't because of space. And there are those who want to, and do, and find themselves with a crotchety old person living with them who may actually threaten their marriage. * * * We advise them to have the older person moved."

Rabbi Hollander concludes that "although recognizing the basic religious concept of responsibility, the younger generation has been unable to meet it."

A NEW OUTLOOK ON OLD AGE—SCIENTIFIC RESEARCH HOLDS KEY TO DEVELOPING LONGER, BETTER, AND MORE PRODUCTIVE ELDERLY LIFE

(This is the 11th of 12 articles on the problems of old age.)

(By Earl Ubell)

Scientific research has great hope of helping old people in the future. For example, there is no reason known to scientists why many of the chronic ills of old age may not someday be prevented. It also may be possible to increase the span of life beyond what now appears to be the 100-year biological limit. There seems to be no bar to the psychological unraveling of the mental tangles of old persons, improving not only their emotional health but also increasing their skills and learning powers to prepare them for a useful old age.

And there is no natural block to the invention and development by social scientists of special housing, useful activities, and social arrangements for old people to give them a firm place in American society, a place they do not now have.

GAP MUST BE FILLED WITH SCIENTIFIC DATA

But there is a great chasm between these possibilities and the actualities. The gap

must be filled with scientific data, but until recently only a minimum of research has been done in any of the areas of aging: biology, psychology, or social action.

Until recently scientists have shown little interest in old people. They have been busy investigating infectious diseases. They have been engrossed in the psychology of college sophomores, the most handy experimental animal to a university psychology professor. And they have tied their social research to young people in trouble, to families breaking up, to the movement of culture.

They have not had time for the silent mass of aged.

Aside from lack of interest, the subjects for the investigation of the biology and psychology of aging have come largely from old-age homes and chronic-disease hospitals. This has given a distorted picture of what aging actually is.

What does an ordinary old person feel? How does he live? What does he eat? How many friends does he have? What activities engross him? What kinds of jobs does he have? How does he budget his money? Although much research has been done, these are largely unanswered questions.

On the biological front, Dr. A. I. Lansing, associate professor of anatomy at Washington University, St. Louis, comments in Cowdry's Problems of Aging, which he edited:

"What is aging? When does aging begin? What cellular components are affected by the aging process? Is aging an inevitable feature of life? What are the age changes which bring about the ultimate death of the organism? We do not have even the beginnings of answers to any of these questions."

Dr. Alex Comfort, a British researcher who reviewed literature on senescence, suggests that the best way to get some of these answers would be to cultivate an interest in all biologists in the problems of aging. The experiments done on animals, usually young animals, should be extended, he said, to include aging ones.

To stimulate such interest Dr. Nathan Shock, of the United States Public Health Service, a leading researcher in gerontology, organized last year a symposium on aging—the first ever held—for 6,000 biologists in Atlantic City.

Much of the work now being done in the laboratories—of which all too few are concerned with aging—is concentrated on the behavior of the basic biological unit, the cell, which carries on in microcosm the chemical processes of life.

CELLULAR CHEMISTRY SAID TO HOLD ANSWER

If the mysteries of cellular chemistry can be unfolded, many scientists believe, the answers not only to the mystery of aging but to cancer, heart disease, and arthritis may also be found. These diseases of the aged appear to be diseases of the cells.

Dr. Shock and others are working on the response of whole organs and the whole body to aging. As described in a previous article of this series, their work is showing that the breathing, kidney, and sugar-using functions of older persons slow down.

And out of these studies could there not come a way to extend life? Dr. Comfort says yes. But the problem remains: How to do it? Research may tell.

In the realm of psychology, Dr. John E. Anderson, of the University of Minnesota, says: "In spite of the fairly substantial literature now in existence * * * little more has been done than to block out or suggest the problems that might well be undertaken."

CITES PSYCHOLOGICAL ASPECTS OF AGING

Dr. Anderson, in summarizing a recent conference on the psychological aspects of aging, listed more than 200 unanswered questions about the mental and emotional status of old people. A few of the important ones are:

How do old people learn to do things? How do old people adjust to life situations? How does the personality change with age? How do old people conceive of themselves and their roles in society? How can old persons be motivated to action? How do old people perceive the world through eyes and ears? How can intelligence of old people be tested?

Some partial answers are known. Lack of practice in learning may account for declining learning abilities in the aged. Then, too, a sense of inferiority, particularly when he is compared to a youngster, hampers an old person's learning process. Dr. Irving Lorge, of Columbia Teachers College, has evidence to show that tests measuring learning penalize the older person by requiring him to work fast.

Dr. Anderson, in effect, called for a prodigious program of research. He wanted several kinds of studies made, and in this he expressed the view of the conference.

WOULD START TESTS ON 50-YEAR-OLD GROUP

One study would take a group of 50-year-olds and subject them to physical and mental tests at regular intervals until death.

A complete and systematic exploration of the regular census data to cover both general and special problems should be undertaken.

Animals, as well as human beings, should be studied under complex conditions for clews to their aging.

Until recently, according to Miss Ollie Randall, a consultant to the National Committee on the Aging, the whole field of social action has been dominated by sentimentality, by a "sweet" concept of old age that does not apply to the millions.

ACTIVITY SUGGESTIONS FOUND POORLY TESTED

There is no doubt that what has been suggested in the way of activity for older people—golden-age centers, handicrafts, voluntary work—has been poorly tested for their effects on the old people's lives. Even the effect of religious activity is unknown.

Social scientists, it is agreed, need to assess the need for activity among the old, "invent" new forms where the old ones do not work and then scientifically test them.

The same goes for housing. Various attempts have been made to find out what the old people like in housing, but few attempts have been made to discover what works. Dr. Anderson described proposed studies along these lines.

All services for the aging, in short, no matter how highly motivated, should stand the test of scientific evaluation, for in that way can the old be helped to find their places.

[From the New York Herald Tribune of March 8, 1957]

NEW OUTLOOK FOR OLD AGE—CONCLUSION: PROBLEMS OF ELDERLY ARE NOT THEIRS ALONE; NATION MUST SEARCH OUT A NICHE FOR ITS SENIOR CITIZENS

(This is the 12th and last article in a series on the problems of old age.)

(By Earl Ubell)

What happens to old people in the next two decades will largely shape the future of all, young and old.

The 14 million persons over 65 now and the 21 million or more of that age by 1970 will press our community into a new and as yet dimly perceived form.

What are the trends?

The old people are staying healthier longer and, if a research breakthrough occurs in cancer or heart disease, their lives will, of course, be prolonged even more.

Because they are retiring sooner and in greater numbers from the labor force, old people represent the smallest proportion of aged workers this Nation has had.

Old people are demanding—and getting—greater economic security through Government and industrial pensions. For many, these funds are at subsistence level and the pressure for help is bound to increase.

Old people are moving out of large family units to live alone in their own households. The proportion of old women to old men is increasing.

HAVE NOT YET FOUND A USEFUL FUNCTION

Old people, the great majority of them unemployed, have not yet found a useful function for themselves in our society. The very aged seem less part of the American stream of life than ever before.

Few have dared to predict how these powerful forces multiplied by the millions of old people will combine. Interest heretofore has been focused mainly on the humanitarian aspect of aging; how to help them get through a bleak period of aches and pains.

Yet the effect will be powerful. It can be expected to exert its fullest pressure on the working part of the population. Through taxes, they will have to help support the aged with housing, medical facilities, and even food and clothing. As the proportion of old people rises, perhaps, to 1 in 8, the burden will get heavier and heavier.

Young and even middle-aged workers will increasingly face the problem of what to do with old parents, who eventually become physically or mentally infirm. Will the number of institutions have to be increased to take care of them?

TO HAVE ENOUGH VOTES TO FORCE ACTION

The young and middle-aged will feel the impact of a large group of old people whose goals, attitudes, and experience will be different from theirs. This same group will have voting power enough to change those ideas into actions.

Already there are glimmerings. In one community the old people voted to cut school taxes. "Why do we need schools?" They cried, "our children are grown. Let the current generation get along on the schools that were good enough for our children."

As the conflicts intensify, there can be expected an intensified search for ways and means to involve the old people in the community in useful and meaningful ways. Since many old people are dominated by a desire to work, special work programs may spring up. An economic method to do this has yet to be found.

The importance of leisure time will grow even more with predicted shortened work weeks for young and middle-aged workers and the decreased participation in the labor force by the aged.

Since available studies show that whatever hobbies, interests, and activities pursued in leisure have their origins early in youth, education in this country may emphasize preparation for those activities. Training for old age may start in kindergarten.

RESEARCH CAN END MANY OF HEARTACHES

In all these possibilities, science can be expected to play a major role. It will be on scientific data that programs will be formulated and evaluated. Scientific research can eliminate many of the heartaches of old age through improvement of medical care. And perhaps by lengthening the life span, and increasing the number of aged, science may bring even closer the day when the Nation faces the crisis with its older population.

But interest in old people is increasing. Many churches and synagogues have for the first time established programs for them. The State and Federal Governments are increasing economic assistance. A special National Committee on the Aging has been set up to provide information and guide programs. The Ford Foundation has made a grant of $500,000 in the field.

Each day brings new incidents to accentuate the problem, whether it be housing, relief or legislation. The tempo is rising.

Representative Paul Rogers' H. R. 2494 Will Create Efficiency and Economy in Government

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. FASCELL. Mr. Speaker, in view of the current widespread concern over the size of the Federal budget, I would like to call attention to the need for further legislation to implement the recommendation of the second Hoover Commission. In the last Congress a strong move was made to put the Federal budget on an annual accrued expenditures basis—rather than on the obligation system. The legislation including this feature was introduced in the Senate by Senator JOHN F. KENNEDY, and in the House by my good friend and able colleague from Florida, Representative PAUL G. ROGERS. I joined in cosponsoring this measure.

This bill, now known as the Kennedy-Rogers Act, passed the Senate as it had been introduced, but the House refused to enact this important portion of the proposal.

Congressman ROGERS has been advised by the Secretary of the Treasury that this Public Law 863—Kennedy-Rogers Act—constitutes an important keystone for the improvement of financial management in the Government, and the Director of the Budget, in collaboration with the General Accounting Office and the Treasury Department, has developed a joint and cooperative basis for each executive agency to review its system of financial management in light of Public Law 863—Kennedy-Rogers Act. The head of each executive agency has been requested to submit a planned program for improvement of financial management in his agency not later than March 31, 1957.

Continuing his great job in the interest of economy and efficiency, Representative ROGERS, has again introduced legislation to carry out his proposed reform. His bill H. R. 2494, my companion measure H. R. 3379, and several cosponsoring bills have been referred to the executive and legislative reorganization subcommittee of the House Government Operations Committee of which I have the honor of being a member.

Ordinarily legislation on technical problems of budgeting and accounting do not receive much public attention. As an execption to this rule, I am including an editorial on the subject from the Miami Sunday News of March 3, 1957. The editor of the Miami News is to be commended for his able efforts in support of this legislation:

WORRY ABOUT FALLING DOLLAR?—ASK CONGRESS TO PASS H. R. 2494

The average American has been a long time coming around to it, but political analysts now believe he has something important to say to Washington.

That is, despite what he has been told about the good things of life as a recipient of Federal spending, he is worried about the falling value of the dollar.

Yet there is nowhere more confusion about what the Federal Government should spend than in Washington itself.

The confusion relates to the budget.

This is the sum of what the departments of Government would like the taxpayer to pay for.

But when President Eisenhower and Secretary of Treasury Humphrey both urge Congress to cut it, the question comes down to how?

Florida is fortunate in that it has one Congressman with a big answer to that question. He is Representative PAUL ROGERS, Democrat, of the adjoining Sixth District.

The total budget figure of $71 billion for 1957–58 is one figure to remember.

Put beside it the figure of $74 billion.

Representative ROGERS would have provided in the 84th Congress for an annual review of the so-called carryover of unexpended funds. Senator BYRD (Democrat, Virginia) has estimated these at a total of $74 billion. The provision was stricken from the Rogers-Kennedy Budget and Accounting Act that was signed into law by President Eisenhower August 1.

Although the President hailed the law as "a long stride toward complete modernization of financial management in the Federal Government," the Hoover Commission recommendation for the budget cannot be carried out without the above commonsense proposal.

Representative ROGERS believes that heavy Federal expenditures are necessary to meet the Government's obligations to its citizens, but he asserts that the problem is to make certain that the Federal budget is spent wisely.

"Our task is to eliminate waste, duplication and extravagance from the operation of the Government without impairing its essential functions, he told the Third National Reorganization Conference of the Citizens Committee for the Hoover Report.

The Florida lawmaker has reintroduced the provision for annual review by Congress of unexpended funds. He was encouraged by the specific request of President Eisenhower for this reform in budget procedure when he submitted his budget message.

The Rogers measure would eliminate the current practice in Federal offices of carrying unspent appropriations from one budget period to the next rather than returning the unused funds to the Treasury for new appropriation. This practice would be gradually replaced by the practice of appropriation on an accrued expenditure basis.

The accrual annual expenditure budget would put Government appropriations on a year-to-year basis rather than building up a tremendous back-log of funds; give stricter control for Congress of expenditures of current funds, and make possible better management by the executive branch of Government.

This new legislation, a companion bill to the Kennedy accounting bill introduced in the Senate, restores the portions of the original Rogers-Kennery act stricken in committee last year.

If the political analysts are right, the average American who lives in this part of Florida should not only tell Washington he is worried about the falling value of the dollar but also tell Congress to pass H. R. 2494.

If the Rogers-Kennedy legislation is fully acted on and implemented, the bipartisan Hoover Commission estimates it should save $4 billion annually.

That will help.

Youthful Scientists Hear Tranquilizers Discussed

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 12, 1957

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Star of Sunday, March 10, 1957:

YOUTHFUL SCIENTISTS HEAR TRANQUILIZERS DISCUSSED

Although tranquilizers have opened a whole new field in brain chemistry, much is still to be learned of their effects, Dr. Winfred Overholser, superintendent of St. Elizabeths Hospital, asserted yesterday.

Dr. Overholser made this observation befor 40 of the Nation's budding scientists meeting in the Statler Hotel. They were the winners of the 16th annual Science Talent Search.

He said the tranquilizers have been well publicized and have captured the imagination to the extent that some people have considered them a "panacea."

Despite the usefulness of the drugs in the care of the mentally ill, "unfortunately, we haven't a panacea yet," he declared.

FORTY DRUGS ON MARKET

Dr. Overholser said he understood there were something like 40 brand names of such drugs on the market, and more coming along. He said his hospital is planning to try 2 or 3 new ones.

Use of the drugs in a mental hospital can proceed under medical observation, he pointed out, but a danger with some of the drugs is that an outside patient may get hold of them and keep taking them, not realizing that he is getting sick. Some doctors, he suggested, may be using them a little too freely.

No one is an "iron man" psychologically, any more than he is physically, although most people are able to stand a great deal of stress.

"I don't think there is anybody who can't be broken," he said.

REFERS TO "BRAINWASHING"

Referring to the experience with "brainwashing" of some of the troops in Korea, he said, "I am quite convinced that some were very solid citizens who cracked under extreme stresses."

He traced the progress of man in dealing with mental illness from the days when it was interpreted as demoniacal possession to today's swing back toward a physiological or chemical approach to treatment from some of the more concentrated psychological approaches.

"There has been a tendency in some circles in neglect the possibility that a symptom might have a physical basis," he said. He noted that just as emotional conditions will produce physical symptoms, so will physical disorders produce various emotional states.

He cited the trend now back to a physiological approach, or at least a recognition that there may be a physical tie-in which has diminshed resistance to the stresses of life to which a person is subject.

PROGRESS BEING MADE

While much progress is being made in many areas of mental health, Dr. Overholser reported, doctors still do not know what

causes schizophrenia, which accounts for 50 percent of some 750,000 patients in mental hospitals. The outlook, however, is optimistic, he added.

Public attitude toward mental illness has greatly improved, he said, though there still are some raised eyebrows when a person sees a psychiatrist.

"Still others," he quipped, "feel they haven't lived unless they have seen a psychiatrist."

The hospital head remarked before going in to address his audience of talented high-school seniors that he was conscious it was an extraordinarily critical and bright one. The youngsters bore him out with their questions, cut short by their overdue call to lunch.

Among other things, he was asked his opinion of the value of psychosurgery ("so low I would hesitate even to mention it, except in the case of intractable pain"), electric shock treatment ("we've practically abandoned it, but it still has a place. We don't know why"), and hypnotism ("We have not done very much with it in general; maybe we ought to do more").

America Pays Tribute Today to the Foresight and Courage a Decade Ago of Former President Harry Truman

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 12, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Fruitful Anniversary," which appeared in the Washington Post and Times Herald on March 12, 1957:

FRUITFUL ANNIVERSARY

Ten years ago today the United States embarked upon the most fateful and fruitful of its postwar foreign policies. On March 12, 1947, President Truman went before a joint session of Congress to ask a $400 million military and economic aid program to preserve the independence of Greece and Turkey. In essence this was the day that the United States formally joined the cold war that the Soviet Union had forced upon it. Mr. Truman asked, and Congress resoundingly endorsed, an American program "to support free peoples who are resisting attempted subjugation by armed minorities or by outside pressures."

So much has happened since that it sometimes is hard to remember the origin of this policy. Yet most of the other developments were influenced in some degree by the Truman Doctrine—the Marshall plan, the withstanding of the Berlin blockade, the formation of the North Atlantic Treaty Organization, the resistance in Korea and Indochina, the thaw in the cold war after Stalin (there is currently a play on words that Stalin's dying remark was "Après moi le légel"—"after me the thaw,") the Geneva summit conference and the subsequent disillusionment, and finally the Near East crisis and the administration's program to stabilize the area.

Perhaps it is an exaggeration to date the end of American isolationism as a meaningful force from the Truman doctrine. Isolationism suffered a body blow in World War II; it was further shaken in American adherence to the United Nations Charter. Events had prepared the climate for a positive assertion of American policy. Soviet pressures on Iran had challenged the infant United Nations; the Communist were promoting civil war in Greece following the withdrawal of British power; there was intense Soviet pressure on Turkey; and retiring Secretary of State Byrnes had learned at the sterile Berlin conference of foreign ministers the impossibility of negotiating with the Russians at that time.

None of this brackground detracts, however, from the prescience of Mr. Truman in coming to grips at the crucial moment with the crisis that Soviet tactics had posed. Significantly, and with future implications respecting the limitations of the United Nation, the declaration was made independently, though within the spirit of the charter. The doctrine succeeded. Greece prevailed in the civil war and, after Tito's break with the Kremlin, the Balkan Alliance among Greece, Turkey, and Yugoslavia replaced the feuding. A Soviet coup was engineered in Czechoslovakia, but no additional European territory was lost after that. Europe took heart for its own defense, and this factor played a part in the recovery that the Marshall plan made possible.

It would be a mistake to compare today's conditions with those in 1947. In the immediate area of application of the Truman doctrine—Greece and Turkey—the issues were far more clear cut than in the spongy situation in the Near East today. It does not follow, either, that present conditions call for the same medicine. The cold war is not of the same intensity and has taken a different form. The challenge today is less military than economic. Imaginative economic development may be a far greater asset to world security than alliances.

Nevertheless, it is proper today to pay tribute to the foresight and courage of Harry Truman a decade ago. Let us hope that 10 years hence current American policies will have been proved as astute.

A Wise Decision

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 12, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Cheraw (S. C.) Chronicle of March 7, 1957:

A WISE DECISION

Prime Minister David Ben-Gurion Monday ordered the withdrawal of Israel troops from the Gaza strip and Gulf of Aqaba—thank heavens—and the threat of immediate renewal of Middle East war recedes.

By his action, Ben-Gurion demonstrated that Israel does have a decent regard for civilized world opinion, and the ultimate interests of Israel will be strengthened by his decision.

America played a leading role in persuading Israel to withdraw. By so doing, we have a strong moral commitment to see to it that Egypt and other Arab nations do not renew their border raids against Israel and their blockade of Israeli shipping through the Gulf of Aqaba and the Suez Canal.

The road to peace cannot be paved with any betrayal of Israel by Western democracies now. We must work firmly and patiently for Arab acceptance of the Jewish nation. We must be prepared to deal as firmly with the Arab nations, if they should continue hostile acts against Israel, as we did with Israel when she launched her defensive, preventive war last October.

Observations on United States Aid to Pakistan

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 4, 1957

Mr. BEAMER. Mr. Speaker, under unanimous consent, I request that the attached letter from Dr. Donald P. Bixler, of Anderson, Ind., be included in the Appendix of the RECORD.

This is some firsthand information which I believe will be of special interest not only to the Members of Congress but, also, to all taxpayers:

ANDERSON, IND.

Hon. JOHN V. BEAMER,
House Office Building,
Washington, D. C.

DEAR MR. BEAMER: I recently returned from a trip to the interior of West Pakistan and I would like to report to you some of the observations that I made regarding United States aid to this country. My information comes from personal observation, talks with missionaries living there, and from point 4 employees and United Nations employees. In general, the unanimous opinion was that America was wasting its funds on activities such as are conducted in this country. I should like to give you some examples of this waste.

The United States Government has sent butter oil to the villagers of this country. Their religious leaders, the Mullahs, told them that it was pig fat and they promptly destroyed it.

Our Government sent used army overcoats to them and I gain the estimate that only about 1 in 60 reached the villagers, the rest being stolen by the government officials.

American cheese was sent to this country. Unfortunately, the individuals do not like cheese and the cases bloated open. I myself enjoyed some of this cheese while there from some of the cases that were not spoiled completely.

Powdered milk has been sent to this country. This was interesting because they have an abundant supply of good milk from buffalo. The villagers looked at the milk powder, asked if that is the kind they have in America, and turned up their noses. Another version is that the religious leaders told them it was pig's milk and they would not drink it.

Another example is our distribution of antimalarial pills during a severe flood about 1 year ago. These pills did apparently reach the villagers. However, they took them all at once and found that they became more ill than having malaria, and so would not accept any or else sold them to the local druggists.

Recently there has been quite a scandal about a large shipment of American supplies that was dumped in the ocean, after having set on the dock for quite some time.

Of course, I understand that you as an individual can do very little to stop this flood of American aid to overseas countries, but I do feel that it is my duty as an American to report my observations to someone in your position, and perhaps some good will come from this letter.

It is not my purpose to indicate to you that the people that I saw did not need help, for they were the most poverty-stricken people that it has ever been my misfortune to visit. However, our method of distribution is totally inadequate and, in the opinion of even the missionaries, they do not know of any distribution system that would be adequate.

I hope my views will be added to the flood of mail that is coming your way regarding the excessive Federal budget. Perhaps this would be an excellent place to start some carving.

Sincerely,

DONALD P. BIXLER, M. D.

How We Look at the Soil Bank

EXTENSION OF REMARKS
OF
HON. RICHARD M. SIMPSON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 12, 1957

Mr. SIMPSON of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I include the following remarks made by Mr. Ira Dunmire, of McVeytown, president of the Mifflin County Farmers' Association, at the annual meeting of the Pennsylvania Farmers' Association held at the Washington Hotel, Washington, D. C., on Monday, March 4, 1957:

HOW WE LOOK AT THE SOIL BANK

Mr. Chairman, Distinguished Senators, Congressmen, and guests, we farmers in Pennsylvania are not much for a lot of governmental agricultural programs. We think that we have a better chance of making a go of it if we depend on "self-help" as a result of mixing together generous portions of commonsense, research, education, and hard work. We believe this philosophy should be employed to maintain a sound balance between the production of farm commodities and the needs of those commodities in the market.

Did you ever think of what we farmers have to sell to pay our operating expenses, taxes, and to make a living? We have our own management ability and labor. It goes to market in the form of milk, eggs, meat, produce, etc., but it is the direct result of our own efforts in cooperation with the good graces of our Maker.

We are vitally concerned about this matter of burdensome surpluses of agricultural products and so we are in sympathy with the soil bank idea for dealing with the problem.

In Pennsylvania we are pretty much family type of farmers carrying on rather small but intensified farm businesses. A lot of our farms have very limited acreages with relatively high investments in equipment, buildings, and livestock. This means we must get a relatively high cash turnover to maintain satisfactory financial conditions and living standards. That is exactly the situation with me. I operate a farm of less than 100 acres with an income mostly from sale of milk, hogs, and some canning crops.

Now how can the soil bank fit into a situation like that? The way I figure it—it does not. However, I am willing to support it where it does fit with the hope that it will help curtail overproduction in the overall picture.

And what about my neighbors in my home county of Mifflin? Well, it's almost the same story. We have 1,067 census farms in the county with about 700 commercial farms. Last fall we had 23 farmers sign up in the soil bank. This year we have about 50 farmers for corn and wheat acreage.

What kind of farmers are making use of it? Mostly older men who are going into semiretirement or those who have incomes off their farm, in industry, or public works.

We believe the soil bank will help reduce the surplus of farm commodities, conserve our natural resources, and permit the efficient producer to stay on the job and adjust to present-day needs.

To make the soil bank most effective we think it should not be used as an emergency-relief program or crop insurance. If it is necessary to provide funds for relief let that be done with funds specifically for that purpose. Also, land put into the soil bank should not be grazed or used for hay crops.

Since an important part of the soil bank is to reduce Government held stocks of commodities, every effort should be employed to use these stocks as "payment in kind" to farmers putting acreage in the bank. We understand there are provisions for that now, but most farmers want cash payments. Those who can use grains for feed should have special inducement as this would be attacking the problem two ways at little cost to the public.

Since support prices have some responsibility for our surplus stocks the Government should require a farmer who expects to use price supports to put from 10 to 20 percent of the acreage going into the price supported crop into the soil bank.

In Mifflin County as a further example of how much or little we use some Government action programs we had only one person apply for supports last year; this was a warehouse loan on wheat.

The confusion that some of these action programs cause among some of our conservative people remind me of the difficulty that Pat and Mike were having in getting to their destination after imbiding too freely. After an hour or so of weaving in and out of streets and alleys and often finding themselves where they started the search, Pat said, "Mike, there just ain't no way to get there from here."

We think there is a way to get there from here but it will take time and patience and working at the problem and doing what we know must be done.

It looks as though it is a mistake to tie separate crop programs to the soil bank such as was done with corn, much to our sorrow. Since the ill-fated corn referendum last December 12 it appears that the minority won out (38½ percent). We need the compromise corn program as proposed in H. R. 4589 and H. R. 4555. This bill would allow farmers to use either acreage allotments with high supports or to use base acreage with soil bank and moderate supports. In other words everyone will get just what he wants if the Congress will pass this legislation to permit it. But, I can't stress too strongly that this legislation to be of any value this year should pass this month. Farmers must do considerable planning ahead of planting. It will take some time for the agencies of the United States Department of Agriculture to set up their procedure until it is definite what kind of corn program we will have. If we should be forced to operate under an allotment program, as we will without a compromise or a change, some livestock farmers would not have enough acres in their allotment to fill their silos without harvesting any for grain.

Another problem which faces some livestock farmers is restricted acreage in planting grain crops under allotments which would all be used for feed on their own farm. Allotments should not be enforced where crop is all fed on the farm producing the crop.

To summarize, here is how we see the present and pending farm legislation:

We support the soil bank to reduce surpluses. We want to encourage use of CCC stocks as payment in kind to farmers. Keep away from the use of soil bank as "crop insurance."

We need the corn compromise bill. The farmer vote last December leaves no doubt about it. The bill should be passed now to be effective this year. We believe that you Congressmen in this room should have the influence to get this accomplished. We hope we can count on all of you to get the job done while there is still time.

Negro Ex-Red Says NAACP Is Vehicle of Communism

EXTENSION OF REMARKS
OF
HON. JOHN L. McMILLAN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 12, 1957

Mr. McMILLAN. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include a news item appearing in the News and Courier which is one of our leading newspapers in the South.

I hope that everyone in the House will take time to read this article:

NEGRO EX-RED SAYS NAACP IS VEHICLE OF COMMUNISM

(By Phil Stroupe)

BATON ROUGE, LA., March 8.—A New York Negro and former Communist for 10 years today testified under oath that the NAACP has "outlived its usefulness and has become a vehicle of the Communist Party designed to overthrow the Government of the United States."

Manning Johnson, 49, who left the Communist Party in 1940, told the Louisiana Legislature investigating committee the Communist Party has infiltrated dozens of Communist-front organizations including the NAACP.

He said the Reverend Martin Luther King, Negro preacher of Montgomery, Ala., "is a dastardly misleader who is creating a psychosis of hate, leading southern Negroes down the road to bloodshed and destruction.

NEGRO PROGRESS

"Any policy that advocates the destruction of 100 years' progress of the American Negro, such as King is supporting, cannot be anything but wrong. If he is not stopped soon the good Negroes will suffer."

Johnson is the fourth witness to testify before the Louisiana group investigating the cause of racial unrest in the South.

W. M. (Bill) Shaw, chief counsel for the committee, has probed into Communist activities through testimony given by W. Guy Banister, assistant chief of police of New Orleans, Joseph Z. Kornfedder of Detroit, former member of the central executive committee of the Communist Party of the United States, and Leonard Patterson, New York Negro, who spent 10 years in the Communist Party before leaving it in 1937.

Johnson, a highly educated man now employed as director of research for the Department of Justice in Washington, electrified the audience composed of Negroes and whites, who heard his firsthand revelations of Communist activities in the southland.

"A big family quarrel is going on in the upper echelon of the NAACP," Johnson said, "between the white liberals, eggheads, Socialists, and Communists for the control of the Negroes of the United States."

Johnson said whatever the brand of party label the NAACP may adopt is not important, "but they are all anti-American, against capitalism, and are based on the doctrines of Marxism."

HAND IN HAND

He said the Communist Party and the NAACP "stand hand in hand" aimed at wrecking the security of the United States.

Johnson said Mrs. Eleanor Roosevelt is among the strongest leaders of Communist-front organizations.

"Somebody ought to muzzle her and put her in a cage," he said. Testimony Thursday established that she is a member of 33 such front organizations.

He said "somebody told this Reverend King he is a modern Moses, chosen to lead his people across the river to safety. I don't say King is a Communist, but I say he is wrong. He has not the ability to lead his race."

Johnson introduced literally dozens of pieces of documentary evidence to show the Communists are infiltrating southern organizations and seeking to disturb the racial transquility of the South.

"The Communist sees the NAACP as a national liberation movement from Maryland to Texas, through the Nation's black belt," Johnson testified. "They have pounced upon the NAACP because it is one of the most influential mixed-breed organizations in the country."

He called Howard University for Negroes in Washington, D. C., "a hotbed for Communists."

He said the Southern Regional Council and the Southern Conference of Human Welfare "are transmission belts" for communism in the Southland.

"They are trying to get at the southern Negro, but the average Negro knows a red light when he sees one," Johnson said.

"It reminds me of the man who killed a fly on his baby's head by using a sledge hammer," Johnson said.

Johnson testified that the Southern Regional Council was given office space in Atlanta by Methodist Bishop Arthur Moore. Members of the council include the Very Rev. Maurice V. Shean, dean of the Roman Catholic Oratory at Rock Hill, S. C.; Marion S. Wright, of Linville, N. C.; Dr. Gordon B. Hancock, professor emeritus, Virginia Union University.

Dr. W. E. B. DuBois, first Negro in the NAACP, was described by Johnson as an "evil, frustrated old man, sucking at the teats of the Old Red Bear, looking to the devils in the Kremlin for vindication and salvation as he nears the end."

Both Johnson and Patterson, a New York hack driver and longshoreman, told of Communist infiltration into southern Negro churches.

"They are working specifically in the Negro churches to give a cloak of respectability to communism behind the door of the church," Johnson said. "That puts them in a position to pressure the pastor."

He told the committee that the Mississippi Council on Human Relations is a Communist-front organization that received $445,000 in 1954 from the Fund for the Republic, an agency already under investigation by Congress.

Among members of the Human Relations Council in Mississippi is Bishop Joseph Brunini, just recently elevated to the status of bishop of the Jackson-Natchez diocese.

A letter from Mrs. R. S. Lyells, of Jackson, executive director, inviting persons to attend an annual meeting in Jackson last November was introduced as evidence.

It said, "the Mississippi Council on Human Relations, affiliated with the Southern Regional Council, needs members and friends, friends among those who agree with us but prefer not to become members of the organization at this time."

Attending the 3-day hearings is the Mississippi general legislative investigating committee, headed by Senator Stanton Hall, of Hattiesburg.

Attorney General Eugene Cook, of Georgia, spent Thursday and Friday as a close observer and interested visiting official.

SOUTHERN EDITOR REPORTS REACTION TO TALK IN NORTH

In Sunday's paper Thomas R. Waring, editor of the News and Courier, reports on the reception given his recent address at Williams College, Williamstown, Mass.

Waring appeared as a guest of the Williams lecture committee and spoke on southern race relations. He called for a better understanding in the North of the southern point of view.

Last spring Thurgood Marshall, counsel for the National Association for the Advancement of Colored People, was a guest of the same committee.

Waring reports a cold, even hostile, reaction on the part of his audience, a reception he had been advised to expect. He points out that these people are not well informed about the position of the South and do not have a true picture of conditions.

Scrambled Phony Vision Rears Its Ugly Head

EXTENSION OF REMARKS
OF
HON. EDMUND P. RADWAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 12, 1957

Mr. RADWAN. Mr. Speaker, a recent newspaper item datelined Washington, February 27, announced that a majority of the Senate Commerce Committee is expected to recommend a full-scale trial run of pay-as-you-see television. Experimentation with this vicious proposal sounds like a first step toward total approval by the Federal Communications Commission.

Since 1955, when the greedy promoters of pay television first reared their ugly heads, I have been strongly opposed to the substitution of pay TV for the present free TV. These promoters suggest that television stations which are now broadcasting free programs—free after you pay for your set, of course—should scramble the image on the picture tube and the sound into a sort of unassembled jig saw puzzle. Such scrambled programs could be unscrambled only when a costly gadget, attached to your set at your expense, was fed a coin, a key, or a card for which you, the viewer, would pay, either in cash or as part of your phone bill.

It is no answer that you would not have to watch these pay programs if you did not want to. Since a station cannot televise two programs at once, any station broadcasting a scrambled pay-television program would necessarily have to eliminate its free program during that time period. In other words, pay television would black out the best of free television. It would render the television owner blind, and then rent him a seeing-eye dog at so much a program, to partially restore the sight he had previously enjoyed free as a natural right.

The amusing part of it all is the excuse offered for the change. They say it is needed to improve the quality of the programs. But if current programs need improvement, the answer is not in increasing the profits by skinning the public. Sponsor support is now more than sufficient for the finest programs, with some entertainers commanding million-dollar contracts, and the sale of world-series rights running into eight figures. If there is anything wrong with TV, and most people are completely satisfied, the trouble is not lack of money. TV has already brought into the home great box office attractions, sports events, movies, current and patriotic events. Letting promoters take in as much as $8 million for a single 30-minute program will not improve the program. It will just line the pockets of the promoters.

I am reminded of one of the favorite stories of comedian Victor Borge. He tells of an uncle of his in Denmark who was a genius. The uncle invented a cure for whch there was no disease. Then, he adds, his aunt caught the cure—and died.

That is exactly what pay television represents—a cure for which there is no disease. It is up to you, the viewing public, and us, your representatives, to see that you are not hurt by the cure. An aroused public is a tremendous force. When this scheme was first suggested, letters to the FCC were 16 to 3 in favor of pay TV. Since the true picture has been brought home to the public, the voting has been 9 to 1 against.

Your letters have helped to bring about this shift. Together, we can lick this thing.

Where Costs Can Be Cut

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 12, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to bring to the attention of the House an editorial taken from the Clover (S. C.) Herald of March 7, 1957:

WHERE COSTS CAN BE CUT

There is a grave concern over the size of the President's proposed $71.8 billion budget—and some of that concern exists within the President's official family.

Secretary of the Treasury Humphrey, for example, has warned of the inflationary dangers such spending creates. He has expressed the hope that Congress will find sound ways to make cuts. He has also said that reductions must be made in future years if the dollar is not to be materially cheapened again.

It is argued, of course, that the current state of the world has imposed such burdens and responsibilities on this Government that significant cuts in spending are out of the question now. But that argument overlooks the fact that Government is conducting business operations which are competitive with private enterprise and are thus either wholly or largely unnecessary—and that these operations are commonly conducted at an out-of-pocket loss to all taxpayers.

The Hoover Commission reports list many operations of this nature, whose total losses

and subsidies run into great sums of money annually. A typical example is the parcel post system. When authorized by Congress, the law stipulated that it should pay its own way, and that it should not compete unnecessarily with private parcel carriers. Neither stipulation has been followed. The service has been continually operated at a loss—and to the detriment of taxpaying private enterprise.

Many such examples of unnecessary Government spending could be cited. The budget can be reduced without imperiling any necessary or desirable Government function.

Interest Rate Increase Not Needed

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1957

Mr. TEAGUE of Texas. Mr. Speaker, I am placing in the RECORD a story from today's Wall Street Journal predicting that interest rates are beginning to decline and that the money market for mortgage financing is easing. This is pertinent, Mr. Speaker, in view of the demands we are hearing that the interest rate should be increased. This prediction should receive the most serious consideration before action is taken by the House on this important issue.

The article follows:

BORROWING COSTS—BANKERS START TALKING OF INTEREST RATE CUT AS LOAN DEMAND EASES—MORTGAGE MONEY GROWS MORE PLENTIFUL; RESERVE SYSTEM PURSUES PASSIVE POLICY—IMPACT OF BUSINESS OUTLOOK

(By Lee Silberman)

NEW YORK.—The cost of borrowed money, which has been climbing steadily for more than 2 years, shows signs of leveling off.

Bankers here in the Nation's financial capital, who only a few weeks ago were talking of the possibility of still higher interest rates, now wonder how soon rates will head downward.

"A further increase in interest rates is out," declares a top official of one major New York City bank. "But there's not going to be a cut for at least 3 months."

HIGHEST SINCE EARLY 1930'S

Banks, naturally, are reluctant to reduce their prime rate—the rate charged the biggest borrowers with the best credit ratings. This rate now stands at 4 percent, the highest level since the early 1930's.

Before cutting the prime rate, banks probably would take a number of other steps. They might ease up slightly on loan requirements; they might, for example, stop being so insistent that borrowers keep 20 percent of the loan on deposit with the bank. Or the banks might selectively lower interest rates for some borrowers without disturbing the prime rate.

The bankers' revised appraisal of the money outlook is based largely on one fact: Loan demand is easing. Business loans of the leading city banks which report weekly to the Federal Reserve System rose sharply in 1955 and 1956. But these loans since the first of this year have fallen by $831 million, compared with a $297 million increase a year earlier.

More important, perhaps, is the fact that New York City bankers see little chance that business loans over the next few months will climb as sharply as they did in the past 2 years.

The bankers keep in close touch with the borrowing plans of their major customers. In addition, they scan business sales and inventory statistics for any indication as to borrowing trends. Banks here in New York, including such giants as Chase Manhattan Bank, First National City Bank, Guaranty Trust Co., and Bankers Trust Co., account for some 20 percent of all bank loans to business.

MORTGAGE MONEY EASES

As bank loan demand slows up, money is becoming slightly more plentiful in other fields, too. Take the home mortgage market, for example. Mortgage money still is scarce—but not as scarce as it was a few months ago. "Some lenders," says an official of a major New York City savings bank "are back in the market looking for mortgages for the first time in over a year."

In the bond market, prices in early January fell to record lows; yields, naturally, rose. But prices since then have edged upward and yields have declined. A few days ago, Illinois Bell Telephone Co. sold $40 million of bonds at an interest cost of 4.21 percent. Only a month earlier, Mountain States Telephone & Telegraph had paid 4.35 percent on a $35 million offering.

The bank business loan statistics for the next 2 weeks will be a bit misleading; corportations will borrow heavily to meet March 15 Federal income tax payments. But even this borrowing, New York City bankers predict, will not be as heavy as it was in 1956.

New York City bankers' loan forecasts hinge to a considerable degree on their appraisal of business prospects. While most expect 1957 to be a good year, few expect it to top 1956.

SOME SPECIAL FACTORS

Some special factors may limit bank loans this year, too. Last year, for example, manufacturers borrowed heavily to stock up on steel in anticipation of last summer's steel strike. "With steel scrap prices falling and no contract talks ahead this year, it's not in the cards for metal loans to rise nearly as much this year," says a top lending officer of a major New York City bank.

Some New York City banks already are casting about for alternative outlets for their funds if business loan demand doesn't perk up.

"If business loans stay off, we know we can make some people happy by making more real-estate loans," says one lending officer.

Comments another banker: "If we wanted to relax our standards slightly, we could take on loans of $50 million to $75 million at a moment's notice."

Up to now, however, the money market change has been so slight that few banks have had to search for borrowers. Most New York City banks, in fact, say they still don't have enough funds to meet the demand.

Some institutions continue to screen out loans they consider undesirable. "We're not through squeezing out some of the stuff we don't care to have on the books—loans to buy companies and loans running ever 5 years, for example," says the president of one New York City bank. But he adds: "We're turning down mighty few short-term loans."

Playing a major role in the money market outlook is the Federal Reserve System. The Federal Reserve, worried about inflation for more than 2 years, has been holding tight rein on the funds the commercial banks have available to lend. As recently as January, many New York City bankers were convinced the Reserve System soon would act to tighten money still more.

But such action has not come. The Federal Reserve, instead, has been pursuing a passive policy, making money neither appreciably tighter nor easier.

New York bankers, for the most part, see no reason up to now for the Federal Reserve to try to prod the economy by making money plentiful and cheap. "Just because a couple of leaves have started to fall off the tree is no sign summer is over," says one New York bank executive.

Many bankers appear to be pleased with the easing of loan demand.

"We've been so highly loaned up, the easing of business loans really has been a welcome relief," says one New York banker. "It's not our plan to rush right out and take on more risk assets. Rather, we want to rebuild our liquidity and get tthe ratio of risk assets to capital down to where it should be."

Youngsters Reveal Scientific Talent

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 12, 1957

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Star of Sunday, March 10, 1957:

FORTY YOUNGSTERS REVEAL SCIENTIFIC TALENT HERE

Forty young Americans unveiled their scientific exhibits at the Hotel Statler last night in the 16th annual science talent search for the Westinghouse science scholarships.

Displayed in the presidential ballroom, they ranged from a story from a rock, showing various fossils, prepared by 17-year-old David Bachrach Adams, of Neosho, Mo., to an electronic heating device, exhibited by Felix Thomas Ulrich, Jr., 17, of Newark, N. J.

Out of the 40, three top winners will be chosen tomorrow night at a banquet. It will be addressed by Rear Adm. Hyman G. Rickover, chief, Naval Reactors Branch, Division of Reactor Development of the Atomic Energy Commission.

The youngest exhibitor in the science show is 14-year-old Jack Howard Silver of Missoula, Mont. He presented a study in higher geometric systems, using a limited number of points and lines working with various theorems. He concedes that it is difficult to explain in layman's language what his exhibit is all about.

FIRM SUPPORTS SEARCH

The Westinghouse Educational Foundation supports the Science Talent Search, which is conducted by Science Clubs of America, an activity of science service, which has its headquarters here. None of the exhibitors is from the District, Maryland, or Virginia, the nearest one being Donald Ray Greenlee, 17, of Charleston, W. Va.

The 40 winners in the search are attending the 5-day Science Talent Institute, which began Thursday. They will compete for $11,000 in scholarships.

Included in the exhibits are one by Rochelle Ruth Beach, 17, of Neodesha, Kans., who raises her own flock of chickens for experimental purposes. She is attempting to find a cure for a cancer-type disease in chickens.

John Lamar Curry, 17, of Evanston, Ill., is demonstrating photography by radiant heat, through the use of oil film which makes visible an image of heat radiated from an object.

COLOR WHEEL

Because her father is color blind and she had to pick out his ties for him, Merry A. Margolish, 16, of New Rochelle, N. Y., devised a color wheel, with varying hues of the same major color, in order to test the reaction of people. They are asked to fill out a blank

and match up varying colors with specific numbers shown on the wheel.

Brett Marcus Nordgren, 17, of South Bend, Ind., has a photographic study of nuclear particles, through the use of argon gas and alcohol and a special apparatus he has devised. He calls this an automatic cloud chamber.

A digital quadratics computer was devised by Philip Meade Ryan, of Scarsdale, N. Y., to solve quadratic equations, extract square roots and to add and subtract.

Marjorie Kay Simila, 16, of Salem, Oreg., investigated detergents and evaluated their effectiveness.

STIMULATES RESEARCH

The get-together of these young scientific minds, officials said, permits them to exchange ideas and stimulate further scientific research. The Washington meeting affords them a broader view of the whole scientific field, officials said. Also, the young people get experience in explaining their works to exhibitors. Those brought to Washington represent the cream of 300 boys and girls over the Nation, believed to have unusual potential scientific ability from 1957 senior classes of secondary schools. There are 9 girls and 31 boys participating in the show.

Toward Racial Harmony

EXTENSION OF REMARKS

OF

HON. THEODORE FRANCIS GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, March 12, 1957

Mr. GREEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by H. F. Oppenheimer, Member of Parliament, entitled "Toward Racial Harmony."

In view of the interest in the new State of Ghana, I believe this article by a Member of Parliament will be of interest to Members of the Senate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TOWARD RACIAL HARMONY

(By H. F. Oppenheimer, Member of Parliament)

(Racial harmony in southern Africa can be maintained and developed only if a realistic policy is pursued. The aim of policy should be to secure the economic, cultural, and social development of all races to the full extent of their capabilities; but this objective must be pursued with knowledge and appreciation of two fundamental facts: First, there is no possibility of changing the existing multiracial character of southern Africa by attempting to segregate European and non-European into separate areas; and, secondly, the real separation between black and white is a difference in cultural level, which is often confused with racial prejudice. In any form of integration, the racial difference must remain; but there is immense scope for improving the lot of the African people by raising their cultural level, through education, training, and experience, as close as possible to the very much more advanced level of the European. These points were the basis of Mr. H. F. Oppenheimer's address delivered at the Duke of Edinburgh's study conference on human relations in industry, held recently at Oxford University. The interest that this address has aroused has justified its being reproduced in full for permanent record, as a supplement to Optima. Mr. Oppenheimer is joint deputy chairman and managing director of Anglo-American Corporation of South Africa.)

The subject on which I am to speak is largely political, and perhaps on that account it is rash of me to tackle it. I am a politician as well as a businessman and have taken some part in the bitter controversy about race relations which has dominated South African politics for the last 10 years. Obviously, it would be inappropriate for me to use this occasion to pursue the South African political struggle, but, on the other hand, you will no doubt expect me to speak my mind plainly. I must confess to being rather nervous of the delicate balancing act that is involved, but I shall do my best.

I shall, as I am sure you would wish, confine myself to the Union of South Africa and the Federation of Rhodesia and Nyasaland, the countries of which I have first-hand experience. Even so, my field is immensely wide. It will, therefore, I think, be best if I start off by stating what I believe the proper objective of policy to be in southern Africa. It is to secure the economic, cultural, and social development of all the races concerned to the full extent of their capabilities in a manner that will not adversely affect the high standards already established for the Europeans. This objective can be attained only by cooperation between the races in all spheres of the national life.

You may well think that by these generalities I have done little to narrow down my huge field to manageable proportions. I would, therefore, at once point out that, widely as I have cast my net, I have already assumed away the whole political issue in the Union of South Africa and, at the same time, have tacitly rejected the claims of African nationalism. The political issue in South Africa does not turn on the problems of a multiracial society but on the anterior question of whether any sort of multiracial society is desirable or indeed, in the long run, possible. The Nationalist Party Government in South Africa says emphatically that it is not; and, similarly, the Black nationalists reject the whole concept of a multiracial society, and, going even further in their point of view than the extreme white nationalists in theirs, claim all southern Africa for a black nation alone.

No political party in South Africa seeks—in theory anyhow—to deny the Africans the fullest development of which they are capable, but it is the contention of the Government Nationalist Party, the protagonists of the doctrine of "apartheid," that the full potentialities of the Africans will be realized only if the two races live in separate areas of their own and work out their individual destinies in their own way. As a theory this is certainly attractive. The problems of a multiracial society are intractable and involve grave risks. It is not surprising, therefore, that many people, black and white, in South Africa feel that, instead of trying to solve these problems, it would be better to abolish them by doing away with the multiracial society from which they spring. Those of us in South Africa who are on the other side of the fence do not seek to impugn the good faith of those who entertain such ideas. It is not only in South Africa that people are able to believe with passionate sincerity in things that are manifestly untrue.

But it is quite plain that the separation of black and white into areas of their own, what in south Africa we call apartheid, if carried out to any significant extent, would destroy the economy of the country with disastrous results for all the races in it. Nothing is more certain, therefore, than that, no matter which government is in power, this policy will not be carried out. But just for that reason the refusal of opportunities for development to the Africans in the multiracial south Africa that exists today, on the grounds that their just claims will be met by racial separation in the future, is calculated to destroy the possibility of interracial cooperation. The idea of solving our racial problems by unscrambling the multiracial society that has already been built is nothing but a dream, beautiful or ugly, depending on your taste, but in any case entirely unsuitable as a basis for action. I am assuming, therefore, that the multiracial society which has come into being in southern Africa will continue to expand and that our object is to regulate it in the best interests of the races that make it up.

Now what are the factors which create the strains and difficulties that face us in this task? There seem to me to be three principal factors, interconnected and overlapping, but logically distinct. The first factor is race consciousness as such: the belief of most Europeans in the importance of purity of race, combined with an unquestioning faith in the intrinsic superiority of the race to which they happen to belong. * * * I mention this matter first because race consciousness is deeply rooted and in its overtones affects the judgment of most south Africans on all sorts of indirectly and distantly related matters. Africans, in their way, are just as deeply affected as Europeans, and an unfortunate, though understandable feature, which must strike any European who sincerely tries to work with them, is their inability to see any problem except in racial terms.

The next factor, and it is of the greatest importance, is that the Africans of southern Africa are, on the whole, still an extremely primitive people. They are primitive in their social and political organizations, in their agriculture, and in their techniques. More important still, their way of life often appears strange and sometimes frankly unattractive to Europeans, and no doubt the reverse is true. Their moral concepts, customs over food and dress, ideas governing the relative status of men and women, and so on, are quite different from those of Europeans. The religion of the majority, moreover, is not Christianity, as some of you may have been led to suppose, but various forms of ancestor worship.

* * * The advancement of the Africans can take place only if the African way of life and thought, however picturesque it may be in some respects, is abandoned in favor of a state and society built on European foundations. An excessive tenderness among many Europeans—but never, I think, among educated Africans—for tribal forms and discipline is a serious brake on African progression.

Naturally, such profound changes cannot be effected abruptly, and much good and much use still remain in traditional African ways. In the long run, however, African society must disintegrate and the Africans must become an integral part of an entirely different sort of society. Until they are able on the whole to do that—and it will take many years—it will not be possible to avoid—and, indeed, it will be essential to maintain not necessarily by law but by custom—a substantial measure of social and residential separation of the races. * * *

Among the Europeans in South Africa we have what I think can fairly be described as a classless—though fortunately not an egalitarian—society. I am inclined to doubt whether that ideal has yet been reached in England. In any case it is surely plain that, even in a homogeneous country such as England, the process of building up a classless society is a long and difficult one. Of course, if a class system depends on nothing more important than snobbery and prejudice, it may be possible to break it down rapidly; but if it rests on profound cultural, social or religious differences, then it is quite another matter. In South Africa, between the Europeans and the vast majority of the Africans there is an immense cul-

tural gulf which it will take generations to bridge, and we must not forget that in Africa a process of leveling down would mean the acceptance for all races of ignorance, poverty and barbarism. For obvious reasons it does not make for racial harmony if people of widely different habits and cultural standards are required to live in close social relations with one another. If we are wise, therefore, we will accept the desire of the Europeans in southern Africa for a measure of social separation as something that corresponds with the realities of the situation, and is not based merely on vulgar race prejudice. That prejudice and intolerance reinforce the demand for separation cannot, of course, be denied, but the remedy for prejudice and intolerance lies, to my mind, in better education for both black and white, and certainly not in an enforced proximity of communities whose ways of life differ profoundly from each other.

The third factor is the fear of the European workers that African laborers, working for low wages, may break down their high standard of life. It is this fear that is at the base of the so-called economic color bar, by which African labor is confined, either by law or by pressure from the White trade unions, or by custom, to unskilled work. Such a limitation is obviously unjust and runs directly counter to our objective of helping the Africans to realize their full economic potential. Nevertheless, the matter is by no means as simple as at first sight it might appear. The fears of the European workers are not groundless and, if African progression is to go forward as it should, these fears must be met.

We are concerned here with what is in essence not a racial but an economic question. How would trade unionists in any part of the world look on an influx into their industries of large number of peasants with a very low standard of living, and willing to work for a fraction of the wage rates they had established? Would they not, at the very least, try to lay down stringent conditions and would they not be suspicious of the motives of employers who wanted to make extensive use of such labor? Of course they would. And who could blame them? And then in southern Africa there is the further complication that the peasants have black skins. On the one hand, this means that the reasonable economic fears of the white workers are reinforced by unreasonable racial prejudice, and, on the other hand, it has the effect of causing many liberal-minded, well-meaning people, in their dislike of racial discrimination, to lose sight of the underlying economic facts.

There is, I am afraid, no doubt that the white workers in South Africa have been on occasion, and in many cases still are, unfair and unreasonable in their attitude toward African advancement. That attitude must change, not only in fairness to the Africans but in the economic interests of the whole population, black and white. * * * But the attitude of the white workers will not change unless the fears that cause it can be removed.

In South Africa the expressed policy of the Government is to maintain the industrial color bar and to limit the Africans to unskilled work in what they call the white areas of the country. On the other hand, they propose to help the Africans to develop to the full, free from white competition, in what they call the African areas. No doubt the plan has theoretical attractions but the practical difficulties are considerable, of which not the least is that nearly two-thirds of the African population live and work in the so-called white areas. The enforcement of an industrial color bar by law, apart from the moral issue it raises, has grave practical disadvantages in that it tends to impose a rigid pattern on the organization of industry. Where the industrial color bar is not enforced by law, it is often enforced by the European trade unions, sometimes directly and sometimes by the maner in which the sound principle of the rate for job is applied. This last approach is particularly favored in the Federation of Rhodesia and Nyasaland, where both Government policy and the general state of public opinion are opposed to an industrial color bar as such.

African labor, except at simple repetitive jobs, is, on the whole, much less efficient than European labor. Naturally, when I say that, I am talking of the present position, and am not saying anything about what the future potentialities may be. Moreover, as I have already pointed out, there is a great gulf between the customary standard of living and cultural and social habits of black and white. In these circumstances you will readily understand that if the white-trade unionists rigidly insist that there must be no dilution of labor, no fragmentation of processes to make room for intermediate grades of workers, and that if Africans do skilled jobs they must receive precisely the same conditions, rates of pay, provision for housing, social amenities, and so forth, as are customary for Europeans, the effect must be completely to exclude Africans from all but unskilled work.

Nevertheless, though the principle of the "rate for the job" can be misused in order to hold Africans back, it remains sound and its maintenance is the only way to give proper security to the white workers. But if it is to be maintained, then the white workers must be prepared to agree to rates being fixed in such a way as in practice to make increasing numbers of skilled jobs available to the Africans.

* * * * *

The problems created by the reasonable demands of the Africans for advancement must be faced, not only by industrialists but by the whole European population of southern Africa, of which the European workers, of course, are a most important part. Much is asked of the European workers, and on the copper belt, anyhow, it has been possible to take an important step forward in agreement with them. Further progress there and throughout southern Africa is going to depend very much on their good sense and good will, and it is to be hoped that the leaders of African opinion on their side will realize that fact.

I know that many people will say that, if African progression has to wait until the good will of the European workers can be obtained, it will have to wait forever. I do not believe that such pessimism is justified, or that it will be impossible to make the white workers see that African advancement is needed to maintain the tempo of economic progress on which the prosperity of all the workers depends. And I think that practical experience supports my optimistic view.

* * * * *

The European population of South Africa is widely condemned in the rest of the world, and it seems to be generally supposed that it is only the Europeans in South Africa who are inclined to reject interracial cooperation. Unfortunately, that is not the case. Racial politics are every bit as popular among Africans as they are among Europeans, and the emergence of black nationalism is a major danger to the unity, security, and prosperity of soutifern Africa. Recent events on the northern Rhodesian copper belt have emphasized this danger. There, with official assistance and encouragement from London, a strong African mineworkers union was formed some years ago, and it has been able to agin important benefits for African mineworkers, both in the form of higher overall wages and by helping to secure opportunities for Africans to do more skilled and better paid jobs that had previously been reserved for Europeans. Recently, however, there has been an unmistakable tendency for this African union to allow itself to be used as the instrument of black nationalists, whose objective is not a fair participation of Africans in a multiracial society, but the transformation of Rhodesia into an exclusively African country.

This brings me back to considerations I touched on at the beginning of my speech. We shall not solve the industrial problems or any other problems of a multiracial society unless we accept the idea of a multiracial society and plan on that basis. Physically, south Africa offers great opportunities, and, if the necessary capital, organizing ability, and technical skill can be made available, should be able to afford a good life to all its inhabitants. It is not any physical difficulty that stands in the way but the psychological difficulty of obtaining good will and cooperation. There is no real possibility of turning south Africa or Rhodesia into white countries or black countries, or of dividing them effectively into white or black areas. It is significant that the Tomlinson Commission, which has recently examined the possibility of territorial separation of the races in the Union, with an obvious desire to prove "apartheid" feasible, has found that, when all that would be possible and, to my mind, a great deal that would be impossible, had been done to separate the races, the population in what the Commissioners call the European areas would be one-third African, one-third other non-European peoples, and only one-third European. The essential multiracial character of southern Africa cannot now be changed. Our choice is not whether black and white should live together or not, but whether, living together, we should quarrel or cooperate. Considerations of morality, economics, and commonsense all point to cooperation, but there are powerful forces of prejudice, stupidity, and political ambition which drive in the opposite direction. These forces of disruption are just as powerful among the Africans as among the Europeans, and are equally dangerous and equally to be condemned wherever they are found.

I have tried to show that most of the difficulties we meet in industry in southern Africa are parallel to those which have been encountered with rapid industrialization elsewhere. Such difficulties are increased by race prejudice but are not caused by it. On the material side, the industrial revolution in southern Africa has already brought about a tremendous rise in the standard of living of Africans as well as Europeans and has, at the same time, developed their needs and aspirations. It is plain that, in Africa, we have reached a stage where further physical progress, which is certainly possible, is going to depend more and more on our ability to solve human problems that have been created. These problems must be faced and cannot be conjured away by assuming that profound cultural, social, and racial differences do not exist or are simply a matter of unreasoning prejudice. On the other hand, if we seek to remove the occasion for conflict by a separation of the races, the effect will be not only to prevent further progress, but to destroy the great advance that has already been made.

An Irish Prayer

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 12, 1957

Mr. PRICE. Mr. Speaker, as we approach the celebration of St. Patrick's

Day it seems appropriate to call attention to an Irish Prayer written by a friend and neighbor of the people of the district I have the honor to represent.

Col. John J. Griffin is a vice president of the First National Bank of St. Louis, Mo. His city lies just across the Mississippi River from the 24th District of Illinois. He has been kind enough to send me the touching verses he has written from his memory of the meaning of Irish faith.

Under permission to revise and extend my remarks I offer Colonel Griffin's verses for the RECORD:

AN IRISH PRAYER

(By Col. John J. Griffin)

May the blessings of the Little One be upon you.
May He find an abiding place in your heart,
May He warm the heart of yours,
Until it glows brighter than a fire of turf,
Its glow to warm both the stranger and friend alike
May it bring the welcome of the dawn upon you,
To soften the blackness of the night.
May it cause you to glow with the warmth of a candle,
As its light beckons a welcome,
From the window on a stormy night.

May the Grace of God abide in and be with you,
Bringing upon you the sweetness of His influence,
As the rain, the light, soft, blessed rain
Brings out the beauty of the spring flowers,
Causing them to send their sweetness
Fleeting in the air to His heavenly throne.
May all these blessings living and breathing in you,
Enable all who meet you to find in you
The likes of Him, who gives to the lives of us,
The sun, the rain, the earth.

May He soften your last resting place
To the fairy fluffiness of the cloud
So your spirit can be ascending from it quickly
In its desire to join the sons of Erin,
Who, thanks be to God, have returned
To Him, they so faithfully served.

Wanted: Low Interest Rates

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 12, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Pageland (S. C.) Journal of March 7, 1957:

WANTED: LOW INTEREST RATES

One of the prerequisites to a proper democratic society is a decent rate of interest for the veteran, who wishes to purchase a home for his family. The natural thing for any young American who gets married and starts a family, or who has been married for some time, saving up for the purpose, is to buy a home for his family.

The purchase of a home by most families means that some of the money will have to be borrowed. We do not believe in socializing the construction industry or the financing industry, but we do believe the Government has a responsibility to see to it that citizens are not fleeced in purchasing what is usually the largest single item of their lives.

This can often mean the difference between happiness and dissatisfaction for many, and the difference in dollars can add up to several thousand in a lifetime. Therefore, we think Congress should see to it that the Government makes available enough reinsurance authority to properly take care of all veterans who wish to purchase homes, and others who have paid their taxes and been law-abiding citizens and are, therefore, responsible citizens.

What American Independence Means

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 12, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith essays written by Charlotte Sue Prater and Judith Yvonne Vollmer on What My American Independence Means to Me. Miss Prater and Miss Vollmer are students in Millstadt, Ill., schools and were awarded first- and second-place honors in the Americanism essay contest sponsored by the American Legion Auxiliary.

The essays which appeared in the Millstadt (Ill.) Enterprise on March 7, 1957, follow:

WHAT MY AMERICAN INDEPENDENCE MEANS TO ME—CHARLOTTE SUE PRATER AND JUDITH VOLLMER WIN LEGION ESSAY CONTEST

Charlotte Sue Prater and Judith Vollmer were awarded first and second place in this year's Americanism essay contest sponsored by the American Legion Auxiliary, it was announced at the Legion meeting on Tuesday night. Mrs. Fred Krick, Jr., chairman of the contest committee, presented the two winners, who read their essays to the group and received their awards at that time.

Seventeen essays on the assigned topic "What My American Independence Means to Me" were submitted by students of the two local schools. They were judged on the basis of pertinence to the topic, originality, coherence, unity, and correct English usage. The judges, Miss Mildred Baltz, Mrs. Peter Mollman, and Herman J. Krohm, were not aware of the identity of any of the contestants until the final decision was made. At that time, the winning papers were matched by key numbers to the title pages, on which the students' names appeared.

The judges expressed to Mrs. Krick their opinion that many of the papers were of unusually high caliber considering the youth of their authors. The two winning essays follow:

"WHAT MY AMERICAN INDEPENDENCE MEANS TO ME

"(By Charlotte Sue Prater)

"My American independence means many things to me, but the most important is the word 'freedom.' We Americans who have always lived free and equal sometimes take our precious liberty for granted. We forget, it was the 'love of freedom' which founded our Nation and spurred the pioneer to build a great Nation.

"From the time of the Thirteen Colonies to the present time of 48 States, our goal has been freedom.

"George Washington with his small Continental Army consisting mostly of volunteers defeated the British and won our independence for the Colonies.

"Paul Revere, silversmith and patriot, played a great part in our American freedom. His famous 'midnight ride—and lantern signal' lives in our memory as contributions to liberty.

"In 1776 the Continental Congress appointed a committee to draw up the Declaration of Independence and selected Thomas Jefferson to write it. July 4, 1776, the Liberty Bell rang out that America was free. Jefferson loved liberty and believed in free schools that should be paid by taxation.

"Lincoln's Gettysburg Address is one of the documents that expresses Americans' democracy, 'that this Nation, under God, shall have a new birth of freedom and that the government of the people, by the people, and for the people shall not perish from the earth.' Lincoln was firm in believing all men are created equal.

"There have been many other wars fought to keep America free, such as World War I and World War II.

"American people sometimes take freedom for granted. We have the right to control our own government. We have the freedom to vote as we please, regardless of race, creed, or color. We have political rights and privileges. Our political rights include the rights to hold office. If anyone has committed a crime, he is entitled to a fair trial before a fair-minded jury. We have the freedom of religion. Every American has the right of free speech. He may give talks, criticize the government without fear of punishment. We also have the freedom of press.

"I am proud to be a citizen in our free country, the United States of America. I go to school and have learned America loves her freedom. From coast to coast her flag will wave the Stars and Stripes forever. For her, American independence will never crumble, but will ring out loud and clear."

"WHAT MY AMERICAN INDEPENDENCE MEANS TO ME

"(By Judith Yvonne Vollmer)

"American independence is something most of us take for granted. We express our opinions, worship in the church or synagogue of our choice, and visit with friends whether they live near or far, never thinking of the sacrifices made by men to obtain them for us.

"Through the years many men have worked for the independence we know today. Thomas Jefferson wrote the Declaration of Independence stating that we were a free republic, no longer governed by England. In 1787 and 1788 after writing the Constitution; the Bill of Rights was added to safeguard each individual citizen's personal freedom. For the 175 years we have been a Nation, we have continually grown until now we extend from the Atlantic and the Pacific Ocean and have Territories overseas. The people of the United States and its Territories are still exercising the freedoms and rights given them in the Bill of Rights.

"Freedom of religion has meant and means a great deal to Americans. To the Pilgrims it meant a whole new life in a wild land, but a life free of tyranny. To me it means I may go to the church of my choice and worship in the manner I choose.

"The freedom of speech, press, and assembly means very much to me. Without them I could not express myself in this contest. I would not know about the Middle East crisis or other happenings in the world. I could not visit with friends or attend gatherings of any kind.

"The privilege of attending elementary and high schools, and of receiving a higher education in the institution of your own choice is a freedom greater than we can imagine. After finishing our education we may enter any vocation in which we have the ability to do competent work.

"The assurance of just and impartial judgment when accused of crime enables us to live lives free from worry of unjust imprisonment. We also know that we will never be made to serve another person without our consent.

"To me my American independence is worth living and working for. My independence is the basis of my future. For it and through it I will achieve my goal in life. I will strive to keep this independence in the United States and help to bring it to other nations and people."

Prosperity for America

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, March 12, 1957

Mr. WILEY. Mr. President, last Sunday evening it was my pleasure to deliver by transcription, over station WGN, Chicago, an address on what I feel to be a three-point program designed to maintain confidence in America's free enterprise system.

In the course of my remarks, I set forth specific ways and means by which I feel this country can continue to achieve still higher levels of prosperity.

I ask unanimous consent that the text of this address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SENATOR WILEY SAYS NO. 1 KEY TO UNITED STATES PROSPERITY IS MAINTAINING CONFIDENCE—PRESENTS PROGRAM FOR NATIONAL MONETARY COMMISSION, TAX STUDY COMMISSION, CORRUPTION ELIMINATION—STRESSES SOUND RISK, CAPITAL EXPANSION AS KEY TO GOLDEN TOMORROW

(Radio address delivered by Senator ALEXANDER WILEY, Republican, Wisconsin, over station WGN, Chicago, Ill., on the Your Senator's Report series, March 10, 1957)

I would like to talk to you tonight, my friends, about prosperity for America. I mean prosperity for all 170 million of us, for the laboring man and the farmer, for the housewife and the businessman, for the student in school, and for the retired old folks.

During the next quarter hour, I would like to discuss some of the ways and means by which we can help assure continued prosperity for America. I am going to answer a series of questions about our country's bright future. In turn, I would like my listeners to write in to me after you have heard this broadcast. Give me the benefit of your own judgment on the answer to this question, the $64,000 question: How can we keep our beloved America prosperous?

1960 OUTLOOK BRIGHT

Senator WILEY, what do you feel is the basic outlook for prosperity?

My answer is: The outlook is excellent. I mean both the short-range outlook and the long-range outlook.

For example, what the economists call our gross national product—the total output of our goods and services—is a huge $412 billion a year now.

By the end of this decade, by 1960, that total should increase by $50 billion more.

By 1960, too, we are going to have around 11 million more people in our country.

We are going to have around 3 million more people employed—over and above our present 65 million workers.

And estimates on other future trends are likewise encouraging.

SOFT SPOTS IN HOME CONSTRUCTION, FARM INCOME

Question. How about the few clouds on the economic horizon?

Answer. Well, we do know realistically that there are some soft spots in our economy.

Those soft spots reflected in recent declines in average levels on the Nation's securities exchanges.

Then, too, when we look, for example, at home construction (which is expected to reach around 1 million units this year), we see a very real soft spot. When we look at the problems of our 5½ million farm families, we also see a major problem—the serious drop in farm income.

But I'm satisfied that we're going to remedy these serious, but isolated soft spots.

RISING STANDARD OF LIVING FORESEEN

Question. And if we do remedy them, Senator, what then?

Answer. Well, then, we are truly going to enjoy a golden tomorrow—prosperity greater than any we have ever before known, even in the best boom time.

And I mean sound prosperity, lasting prosperity, universal prosperity.

Without wearing rose-colored glasses, we can well foresee more jobs, more income, more take-home pay, more so-called fringe benefits, more dividends, more capital gains, more leisure time than we have ever before known.

All this means more automobiles on the roads, more radio and TV sets, more refrigerators, washing machines, vacuum cleaners in the homes.

It means more money available to be invested in our banks, in our life insurance policies, in our savings and loan associations, in stocks and bonds, in American corporations.

HARD WORK ESSENTIAL

Question. But all this will take work?

Answer. Absolutely. All this isn't going to happen automatically or by mere wishes.

It is going to come about through hard work, through rising productivity in American industry.

It must come about through self-sacrifice, self-discipline in America—a willingness to work and to save and to invest soundly.

CONFIDENCE OUR FOREMOST NEED

Question. Senator, if you were asked the single most important step to assure this American prosperity, what might your answer be?

Answer. I can sum up that answer in one word: Confidence.

The future prosperity of America depends basically upon the confidence of the people of America.

Confidence in what? In whom?

Confidence by Americans in America itself. Confidence in their Government—Federal, State, and local.

Confidence in the value of the dollar.

Confidence in the prospects for world peace (a matter in which I personally am naturally especially interested, as senior Republican on the Senate Foreign Relations Committee).

Yes, I mean confidence in the growing, expanding market for our goods and services.

CONFIDENCE IN SOUND, PRUDENT, ECONOMICAL GOVERNMENT

Question. What do you mean by confidence in Government?

Answer. I mean that our people must have faith—well-merited faith that government is going to act wisely—that it will strengthen our free enterprise system and leave it free of any unnecessary restrictions; that it will keep its own financial house in order, economize in spending wherever possible; that it will keep the traffic light green—not red—to advance, rather than halt, the dynamic expansion of America.

Question. How, specifically, can we expand our American economy?

NEW JOBS NEEDED FOR 400,000 NEW WORKERS EACH YEAR

Answer. Well, take the matter of our expanding population—our growing labor force.

You all know that more than 4 million babies are being born every year in America.

But what you may not realize is that aside from this boom in the baby rate, we have a tremendous number of new workers, age 17, 18, and older, coming out of schools every year. Each year, more than 400,000 new workers join America's labor force. There must be jobs for these workers. And there must be new-type jobs for many of our existing 66 million workers.

$12,500 INVESTMENT FOR EACH NEW JOB

Question. What does it take, Senator WILEY, to create new jobs?

Answer. Well, it takes very sizable investments.

It has been estimated that it takes $12,500 to create a single new job on the average.

That means that it requires that much of an investment in plant and equipment, in lands and natural resources and working capital, $12,500 on the average; to start a brand new job with new equipment costs still more.

In other words, for the 400,000 new workers alone every year, for them, we need around $5 billion a year, just for new equipment.

In addition, we need more investment to replace obsolete machinery and plants, so as to keep our productivity moving ahead. That will mean, in turn, a higher living standard. So, for more productivity, we need around $10 billion per year.

Moreover, believe it or not, we need still additional sums, simply to maintain existing plants and equipment, to keep them in working order, without adding to them or improving them, just maintaining them.

And that means around $25 billion more a year.

Now, all of these huge multi-billion dollar estimates may be pretty hard to understand. But what they boil down to is this: Our country needs, perhaps, around $40 billion per year in new capital to keep our economy in high gear and at an expanding rate.

RISK CAPITAL MUST COME FROM PEOPLE'S SAVINGS

Question. Where is all that capital coming from?

Answer. Well, it must come basically from you, the American people, from your own savings, from your own willingness to provide money to American industry to expand.

The American people must be willing to give to industry the money basically for what is known as risk capital. That is capital which is willing to take chances in developing new products and services. Capital devoted, for example, to research and experimentation, and trying out new types of ventures.

And, of course, this risk capital won't be forthcoming until and unless the American people are confident in their own future. That is why confidence plays so crucial a role.

WE DARE NOT DRY UP RISK CAPITAL

Question. What happens if confidence drops and if fear takes over?

Answer. That would indeed spell trouble.

If risk capital were ever partly to dry up, if industry couldn't confidently expand with new equipment, new plants, there would be fewer jobs, less purchasing power, a shrinking market.

That must not happen; it will not happen.

Question. In the light of all of these facts, Senator, what can we do specifically to keep up confidence in America?

AVOID TWIN EVILS OF INFLATION, DEFLATION

Answer. Let me suggest this three-point program:

First, we must maintain confidence in the American dollar. By and large, we have succeeded in doing this. But we must remain vigilant in keeping to this objective.

In order to maintain confidence in the dollar, we have to avoid the twin evils of inflation (at one end of the pole), or deflation (at the other end of the pole.)

Inflation robs value from every dollar in your savings bank, in your life insurance policy, and in your annuity and in your pension.

Deflation, on the other hand, can drag our economy down, decrease the number of jobs, lower purchasing power, and put the economy in low gear.

APPROVE MONETARY COMMISSION STUDY

One of the ways by which we can maintain the value of the dollar is by taking a whole new look at America's prosperous but complex financial structure.

That is why I urge the Congress to approve President Eisenhower's splendid suggestion of a top-level commission to study America's whole monetary and credit system. That means our powerful Federal Reserve System—which, on the whole, has been functioning quite well—as well as reviewing our whole money structure.

Virtually everyone is agreed that this long overdue study should be made. The only remaining question is: Who should review our vital financial system—the Congress or a distinguished panel of private citizens, or both?

ENACT WILEY BILL FOR HOOVER-STYLE FEDERAL TAX COMMISSION

Question. What is the second step in your confidence-creating program for America, Senator?

Answer. The second step is to reform taxes. I mean make our tax system—which is now unfortunately an obsolete hodge-podge—make it a well-coordinated aid to free enterprise, instead of a drag on free enterprise. That is why I have introduced the Wiley bill to establish a Hoover-style Federal Tax Commission. Fourteen Senators are cosponsoring this Wiley bill.

The reasons we are making this suggestion are (1) to assure adequate tax revenue to Uncle Sam, while (2) assuring adequate incentive for expansion of America.

REVIEW DOUBLE TAXATION OF CORPORATE DIVIDENDS

Let's take a brandnew look at our overall taxes—our present double taxation on corporate dividends, our taxes on capital gains, our excise taxes, and income taxes and surtaxes and every other kind of taxes.

Question. You believe that a commission-type approach is the best way of straightening out our tax system and creating incentive for investment and expansion?

Answer. Definitely; yes.

A commission is, of course, no cure-all. It can be no better than the men who are on the commission and the men who review the commission's recommendations. And I certainly don't believe in establishing a commission, simply in order to delay action. The commission approach, as such, can be overdone.

At the same time, significant top-level commissions such as the one to study America's monetary structure and another to study our tax structure—such commissions can render invaluable service to America.

CLEAN OUT CHISELERS, RACKETEERS

Question. What is a third step in your confidence-creating program?

Answer. A third step is to clean up the whole variety of negative, destructive influences which have wormed into some parts of the American free-enterprise system.

I refer, for example, to parasites like the occasional stock chiselers, the swindlers, the racketeers who bamboozle some of the American people into buying hundreds of millions of dollars of worthless securities. This very small minority of chiselers often gives American stocks a bad name—which stocks as a whole don't deserve.

TEAMSTER INVESTIGATION EXPOSES CRIME TAKE

Question. What would be another illustration of the negative forces at work in some areas of free enterprise?

Answer. Well, you are all familiar with the current Senate investigation of racketeering infiltration in labor unions. This investigation is providing a shocking exposé of some of these negative influences at work among the teamsters and elsewhere.

I say that no industry can possibly operate soundly with gangsters and racketeers and hoodlums at its throat. It has been estimated that crime and gambling cost America as much as $20 billion per year. This is money being used nonproductively. It represents a staggering social waste. The American people are paying a tremendous amount of money wasted—costs added artificially to goods and services—because racketeers are syphoning off huge sums from the top and from the bottom.

SUMMARY

Question. Senator WILEY, remedying this crime evil represents then, the third point in your confidence-creating program for the American people.

You had earlier stressed the importance of maintaining the value of the American dollar, of avoiding the twin dangers of inflation and deflation.

You mentioned the importance of a new look at our Nation's financial structure, and have cited the need for improvements in America's tax system.

And you have emphasized that we must utilize our national energies and resources cleanly and constructively, instead of allowing criminal forces to drain away billions of dollars from our free enterprise system.

Answer. That about sums it up. I have enjoyed this opportunity of chatting with you tonight. And I appreciate the courtesy of station WGN in making this period available.

I would like most cordially to invite the reactions of my listeners to this program.

Thank you for your attention. I look forward to speaking to you again in the future.

Wood River, Ill., the Takeoff Point for the Lewis and Clark Expedition

---

EXTENSION OF REMARKS

OF

HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 12, 1957

Mr. PRICE. Mr. Speaker, within a short time, the State of Illinois and residents in the vicinity of Alton and Wood River, Ill., will dedicate a marker in a point of land on the Mississippi River opposite the mouth of the Missouri River to permanently mark the location from which the historic Lewis and Clark Expedition set out. Under leave to extend my remarks in the RECORD, I include an article on this historic site at Wood River, which appeared in the Thursday, March 7, issue of the Wood River (Ill.) Journal.

But, I could not call this to the attention of my colleagues in the Hosue without paying tribute to the memory of the man whose untiring effort and zeal to perpetuate historic landmarks resulted in setting aside this area for posterity. One man, and one man alone, is entitled to the credit for this latest State park in Illinois and for the marking of the spot from which the pioneers under Lewis and Clark set out to explore the great Northwest. He was the late Dr. Howard W. Trovillion, of Alton, Ill.

It was my pleasure to be associated with Dr. Trovillion for several years during his active work in promoting the historic value of the land along the Mississippi River near Alton, Ill. It was Dr. Trovillion who conceived the idea of dedicating a small area on the Mississippi at Wood River in commemoration of the historic Lewis and Clark Expedition.

The article follows:

HISTORIC SITE IS IN WOOD RIVER

(By John W. Allen, Southern Illinois University)

Many places along Illinois highways tell interesting stories to those who pause to question. Most of these sites are unnoted; markers indicate others.

Occasionally a "Historical Marker Ahead" sign will enable the motorist to see the thin edge ahead (right or left) in time to detach himself from the stream of traffic in which he often is being swept along. Then he may park on a narrow turnout beside the marker. Too often, however, he is unable to do this without inviting an accident and can only say, "There it was," as he drives on wondering.

One marked historical site passed by thousands each day is located on the west side of Route 670A near the south edge of Wood River. This marker was placed by the Illinois State Historical Society to indicate the locality where Capt. Meriwether Lewis, private secretary to President Jefferson, and William Clark, younger brother of George Rogers Clark, gathered, organized, trained, and equipped their very select company of 43 unmarried men for a long journey to the Pacific and return. Known as the Lewis and Clark Expedition, it still remains the most significant exploring mission ever sent out by the United States.

Even before the Louisiana Purchase had been completed, Jefferson had formed plans, and funds had been allocated for sending a select group of 12 men west and north along the Missouri Valley to explore the possibilities for trade in that region. With the purchase of the territory completed, the President's earlier plans were expanded to the Pacific. After all, Louisiana Territory had been purchased practically sight unseen. Now it was time to know more fully what was in the new lands that had doubled the Nation's area.

The expedition being recruited at the mouth of Wood River was to become a memorable and significant one.

LAND UNCHARTED

It was to pass through extensive territories for which there were meager written records and little of oral accounts. It was to reveal much of the richness of an area that was later to make up 15 States of the Union.

This expedition was to gather information concerning unknown rivers, mountains, and mountain passes, of wide expanses of prairie and forest, and of strange plant and animal

life. Hitherto unknown Indian tribes were to be encountered. It was to mark the beginning of one of the most romantic chapters of American history, one to which additions are yet being made as more of the records left by those making the trip are discovered.

Also this expedition was to furnish one of the most noted American legendary women, the little Shoshone squaw, Sacagawea (also spelled Sacajawea) or "Bird Woman." She was the wife of Toussaint Charbonneau, a French-Canadian who joined the expedition as interpreter while it was encamped at Fort Mandan during the winter of 1804–5.

Sacagawea soon became one of the expedition's most important members. Without the help that this wise and diplomatic Indian woman gave and the help that she was able to obtain from other Indians, the mission could not have succeeded. It was she, then 18 years and with her first papoose strapped on her back, who guided the party through the unexplored mountain passes toward the lands on the western slopes where she had spent her childhood and where her relatives lived. Recognition of her services partially is indicated by the fact that more memorials have been erected to her memory than to any other woman in American history.

The first winter after leaving the Wood River camp was spent at a Mandan Indian village just west of Bismark, N. Dak. The second winter was at Fort Clatsap, near Astoria and within sound of the Pacific. No ship came to the mouth of the Columbia for them as had been planned, and it was necessary to make the return trip overland. This they did, reaching St. Louis September 23, 1806, almost 2½ years after setting out from their Wood River camp. It must have been with mingled feeling that they passed the site of their starting point on that September day.

Only two of the men starting on the long journey to the Pacific did not return with the group. One of these was Sergeant Floyd, who died and was buried on a hilltop near Sioux City, Iowa, where a shaft now marks his grave. The other was John Coulter who, on the return trip, asked for and received a discharge near the headwaters of the Missouri, wishing to trap, hunt and explore. It was Coulter who first reported the geysers of the Yellowstone. All this indicates only a small part of the story that grew out of the Lewis and Clark expedition.

Today the forest that then stood across Highway 67A at their Illinois camp is gone. Another forest of spreading oil tanks, chimneys and weird structures of cracking plants has replaced the original one on the eastern side. The land lying along the Mississippi and about the mouth of Wood River on the west of the highway is now used by an oil company as an area for the loading of river barges.

One Way To Cut Taxes

EXTENSION OF REMARKS

OF

CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1957

Mr. HOFFMAN. Mr. Speaker, while many agree that the tax burden should be lessened and profess a great desire to lessen it, little if anything has been done to bring about that most desirable situation.

A method of equalizing the tax burden, while at the same time curbing unnecessary spending, was outlined by our colleague, NOAH M. MASON, a Member of the House Committee on Ways and Means, in a talk he made March 3 over the Manion Forum, South Bend, Ind. Mr. MASON's statement reads:

CONGRESSMAN MASON, OF ILLINOIS, PRAISES HOFFMAN AMENDMENT

Dean MANION. One of the most pleasant features of my service with the Commission on Intergovernmental Relations 2 years ago was my association with Representative NOAH M. MASON, of Illinois. Mr. MASON never missed a meeting of the Commission and never failed to make some constructive contribution to the Commission's work while he was present there.

This distinguished public servant has been a Member of Congress for 18 years. He has used his long experience on the important Ways and Means Committee of the House to become an outstanding authority on the subject of Federal taxation. No Congressman knows more about that involved subject than he does and no Congressman approaches it with a more conscientious sympathy for the overburdened American taxpayer.

Congressman MASON's program for tax reform has been widely publicized. I have asked him to explain it to this audience. There is no person in public life for whom I have greater admiration and affection than the Honorable NOAH M. MASON. Here he is.

Congressman MASON. Thank you, Dean Manion, for that nice introduction. Tax revision and tax reduction are the special problems of the Ways and Means Committee of the House of Representatives. Our total taxload is backbreaking. It is a millstone around the necks of all Americans. It is a wet blanket upon every ambitious individual. It is an ever-present roadblock to business growth and development.

One hundred and seventy-five years ago, American patriots insisted that taxation without representation is tyranny. Today, American taxpayers can truthfully say: "Taxation under present representation is ruin."

Our total taxload in this year 1957 will take more than one-quarter of the national income. Not from everyone, for the load is not spread equitably and certain segments of our economy unhappily carry a disproportionate share. No wonder the American taxpayer is today more tax conscious and—yes—more tax-complaining than ever before in the history of our Nation.

In 1956, the total tax burden that was piled upon American citizens was $99 billion. The Federal Government took $72 billion; the States grabbed $14 billion; and local governments collected $13 billion.

Federal taxes come from 4 different sources: The first and most productive source—and, I may say, most burdensome—is the tax upon the incomes of individuals, ranging from 20 percent in the lowest bracket to 91 percent in the highest bracket. It produces roughly $39 billion—a little more than half of the total—but it raises this stupendous sum at a dreadful cost to family incomes.

The man in the lowest bracket must work 3 months of every year for the Government and 9 months for himself and his family. The man in the top bracket must work 11 months each year for the Government, with only 1 month left to provide for his family and himself.

Our second source is corporation taxes, which take from 30 percent to 52 percent of corporate profits. In other words, a corporation must make $2 profit for a single dollar it can pay its stockholders. It means that most corporations work a little more than 6 months of each year for the Federal Government and a little less than 6 months of each year for their owners.

To our Government's liberal spenders, the corporation tax is very profitable. It brings in about $22 billion a year.

Third among Government sources of income are excise taxes, which are levied upon the value of goods sold and upon certain services rendered. They range up to 10 percent of the cost of articles sold or services rendered, except upon liquor and tobacco, both of which are taxed at much higher rates. The tax take from excises is roughly $10 billion a year.

The fourth source of Federal income is from miscellaneous taxes—taxes on inheritances, on gifts, tariffs, etc. Federal inheritance taxes range up to 70 percent of the total value of an estate. Tariff rates average 5 percent of the total value of goods imported. Comparatively speaking, the miscellaneous taxes can be considered peanuts—about $3 billion each year.

As things look now, the Federal Government will take in about $74 billion in the fiscal year 1957–58—but with a $72-billion budget already before us and an open-handed administration in the saddle, we'll probably manage to spend every penny of it without cutting down our debts or putting aside a few dollars against the rainy day when hair may be curled again as it was in Mr. Hoover's day.

Well, you ask, what can be done about it? I propose three tax reforms to spread the load more equitably:

First, we should place a tax ceiling upon all Federal income taxes, corporate taxes, and estate taxes.

KARL MARX SHOWED THE WAY

One hundred years ago, Karl Marx announced a two-point program for the destruction of capitalism and the promotion of communism. All estates should be confiscated, he proposed, by the imposition of a 100-percent inheritance tax, and a steeply graduated income tax should be levied upon all incomes.

We have traveled a long way down the road to the destruction that Karl Marx laid out. True, we are not taking 100 percent of inheritances, but 70 percent is close enough to confiscation. We are depleting small incomes by one-fifth, and large incomes by nine-tenths, and half the earnings of corporations are pledged to the bureaucrats and not to the stockholders. It is time to call a halt.

You ask: "Can the Treasury stand the loss of revenue that a tax ceiling would bring about?" Judging the future by the past, the answer is an emphatic "Yes."

Set the ceiling at 40 percent and receipts of $55 billion a year would still flow into the Federal Treasury—more money than was ever collected by the Federal Government up until 3 years ago.

My second tax reform proposes to repeal all excise taxes now on the books, except those on liquor and tobacco, and to substitute a flat 5-percent manufacturer's excise tax, uniformly applied to all end products.

Repeal of present miscellaneous excises—except those on liquor and tobacco—would cost the Treasury about $5 billion a year.

Imposition of a flat 5-percent manufacturer's excise tax upon all end products would produce about $5 billion a year to make up the loss—with the following definite advantages:

1. We would get rid of the present hodgepodge, hit-or-miss, inequitable mess of excise taxes—taxes levied without rhyme or reason—and we would lower our present 10 percent level to 5 percent.

2. A manufacturer's excise tax is the cheapest and easiest of all taxes to administer and collect.

3. Such a shift in taxes would tend to equalize the total burden upon all our people, without hurting any one producer or consumer.

A well-balanced, equitable Federal tax system, fair to all groups and classes of people, should collect about one-third of the needed revenue from individual income taxes, about one-third from corporate taxes, and one-third from excise taxes collected at the manufacturer's level.

My third tax reform would bring about tax equality among all business competitors. Corporations now pay up to 52 percent tax upon their earnings. Co-ops, mutual savings banks, savings and loan associations, credit unions and other mutuals—directly competing with taxpayers in practically all lines of business—pay little or no Federal income taxes.

I have introduced in the 85th Congress two bills—H. R. 501 and H. R. 502—which would correct this existing inequity. These bills would establish tax equality as between business competitors. They would bring into the Treasury a very large sum of money—about $1 billion—from sources that are now escaping their fair share of the tax load. They would also make possible a little easement of the load upon business enterprises that are now vastly overtaxed.

As a consequence of the present tax inequality between business competitors, co-ops and various mutuals are able to use the major part of their profits for expansion, for buying up taxpaying enterprises in their own lines of business. Thus, they keep expanding year after year.

CLAIMS CONGRESS CAN TAX CO-OPS

Spokesmen for the co-ops have always claimed that Congress has no legal right to tax co-ops; that co-ops were simply agents for their patrons; that co-ops make no profits in the sense that corporations make profits, and therefore they were not taxable.

This argument of the co-op spokesmen was settled when the greatest tax authority in the Nation, the Joint Committee on Internal Revenue, rendered an opinion in 1951 saying that under our Constitution and laws Congress does have the right to tax co-ops in the same manner and for the same reason that it now taxes corporations.

Briefly, the report of the joint committee entitled "The Power of Congress To Tax Cooperatives on Net Margins," pointed out:

1. Nearly all co-ops are organized as corporations and have corporate charters granted by the various States; therefore, they are taxable corporations.

2. The few not chartered as corporations are "associations." The definition of a corporation in the Internal Revenue Code includes associations; therefore, for Federal tax purposes, they are considered corporations; and

3. For many years Congress has considered co-ops as corporations, and has by legislation exempted them from the corporation tax. If Congress has the power to exempt co-ops from the corporation tax, then Congress certainly has the power to repeal that exemption.

The joint committee, in its report, has settled for all time the moot question raised by the spokesmen for the co-ops. The Congress does have the right to tax co-ops. The real question is: Does Congress have the courage to do so?

I want to say in closing, Dean Manion, the Hoffman amendment—your program for outright repeal of income taxes—and my program to limit income tax rates do not conflict with each other—they supplement each other.

You ask for the whole loaf in the Hoffman amendment. I ask for only about a half a loaf. My tax program has been bogged down in Congress. If you build up enough pressure for outright repeal, it will tend to speed action upon tax relief in general, and my tax program in particular. We can, therefore, cooperate and work together.

DEAN MANION. Thank you, Congressman NOAH MASON. Working with you has always been a profitable pleasure and I am sure it will continue to be. You may count upon thousands of people in this audience to help you to help them escape the slavery of ruinous taxation.

Aviation Week Discusses Research and Development

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 12, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial entitled "Another Blow at Research," which appeared in the March 4, 1957, issue of Aviation Week:

ANOTHER BLOW AT RESEARCH
(By Robert Hotz)

Mr. Frank D. Newbury has won his 2-year fight to become czar of all military research, development and production programs. His victory is another in a series of blows to the cause of aeronautical research and development emanating from the top civilian levels in the Pentagon, blows that are seriously restricting the scope and slowing the pace of this vital effort.

We have already detailed the strangulation of the research and development program caused by the constant level budget concept which has been accepted Department of Defense policy for the last several years.

NEWBURY VICTORY

The Newbury victory is a symptom of another disease attacking the roots of research and development. This is a general downgrading and pooh-poohing of the importance of basis research. It has its origin in elder graduates of the American industrial system whose technical education came just after sail had given way to steam and more than a quarter century before the technical revolution wrought by nuclear fission. These men who pride themselves on being hard-headed practical engineers grew up in an era of American industrial development that was nourished on technical principles provided by the prior half century's basic research. The application of these principles in the great industrial complexes where these men worked was so far removed in the time scale from the basic research on which they were based that the connection was virtually invisible.

Today the swift pace of engineering has just about exhausted the reservoir of basic scientific knowledge accumulated by a century of research. To maintain its technical pace, engineering needs an accelerated and expanded assault on the basic frontiers of knowledge by the scientists. Without a major series of scientific breakthroughs all along the boundaries of the unknown, the vast and successful engineering and production effort of this country will slow down to a dangerous walk in the foreseeable future. The link between basic research discoveries and their application to weapon systems and the rest of the industrial system is now so close and vital that no modern engineer even raises the issue. The modern partnership of the scientist and engineer is a vital, delicate, difficult, and basically new relationship that must be nurtured, not divorced, if we are to maintain technical leadership for both war and peace. This is why the constant sneering at basic research, the downgrading of important research posts in the military structure and the resultant budgetary restrictions imposed by the hard-headed practical engineers whose technical outlook is limited to the steam turbine and internal combustion engine is producing such a dangerous threat to this science-engineering relationship.

In addition to the elevation of Mr. Newbury to be overseer of all things technical in the Pentagon, there is other evidence of this trend. After creating Assistant Secretary posts for research and development in all three military services, it has now been decided to do without at least one of the new jobs. In the Air Force, where the post of Assistant Secretary for Research and Development has existed for several years, the vacancy created by the resignation of Trevor Gardner in protest over policies which Mr. Newbury heartily endorses has never been restored to its prior level. The post has been filled temporarily by Richard Horner, an extremely capable civil-service career man, but his role has been vitiated by the handicap of serving only in an acting capacity. There has been no move by USAF Secretary Quarles either to give Mr. Horner permanent status in the post or to recommend appointment of another permanent Assistant Secretary for this job. Thus, by a simple bureaucratic maneuver the cause of research and development within USAF has been moved down several notches in the command echelon.

OBSTRUCTIONIST RECORD

Mr. Newbury's view on advanced aeronautical development are well known to the aircraft industry. He bitterly opposed such developments as the KC–135 jet tanker and the P6M jet flying boat. He authored a plan to make development decisions on jet engines from paper designs instead of performance tests. He promoted a scheme to dictate new engine standards from his Pentagon office rather than rely on the fertile brains of the industry powerplant experts. One embittered research and development man who had the benefit of Mr. Newbury's philosophy during Pentagon service remarked that this philosophy, if pursued to its logical conclusion, would lead us to a policy of fighting world war III with the 1903 model Springfield rifle, because we were all tooled up for them. There are no development problems and it's a proven weapon.

Steady deterioration of the role of research and development in the Pentagon will prove to be a dangerous trend. It will make the Russian's avowed goal of surpassing us technically much easier.

A Contribution to International Friendship

EXTENSION OF REMARKS
OF
HON. THEODORE FRANCIS GREEN
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES

Tuesday, March 12, 1957

Mr. GREEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered on Saturday, March 2, at the ninth annual Bucknell-Burma weekend at Bucknell University at Lewisburg, Pa. This address is entitled "A Contribution to International Friendship," and I believe it will be of interest to the Members of the Senate.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A Contribution to International Friendship

(Address by United States Senator Theodore Francis Green at the Ninth Annual Bucknell-Burma Weekend, Bucknell University, Lewisburg, Pa., Saturday, March 2, 1957)

These weekend proceedings in which you have so kindly asked me to participate are, I believe, unique in American education. The concept of a regular reunion of former classmates is, of course, a well established tradition in the United States. On the other hand, an annual program designed to bring together students from a particular foreign country with which an American college has a special attachment is imaginative, indeed.

The more one reflects upon it the more one wonders why other educational institutions in our country have not appropriated the idea for themselves. Associations with the people of a foreign country such as the one which you have developed here at Bucknell with the people of Burma, are of a most satisfying and mutually rewarding nature. The personal friendships and impressions which are fostered thereby endure beyond the limited period of residence abroad, and necessarily affect the attitudes of the student when he reluctantly must take leave of his temporary home and his new friends.

I am particularly glad that Burma is an example of this, for I have visited Burma several times, both town and country, and I have very dear friends among its people. It has an especial place in my interest and in my affection.

You have built this association on a most impressive basis. Surely the fact that it has already endured for almost 100 years is ample evidence of its solidity. That the first foreign student at Bucknell—Mong Shawloo, of the class of 1864—was a great grandson of the King of Myawaddy, may explain why Bucknell's interest was drawn to Burma at the beginning. As you know, America's spiritual affiliation with Burma was initiated several decades earlier by Adoniram Judson, one of the first, if not the greatest, of the missionaries ever sent abroad from the United States. It was this devout and dedicated man who translated the Bible into Burmese, and for whom Judson College is named.

However, all these earlier contacts do not and cannot explain why this interest has been maintained for almost a century, or how it has grown into the warm and loyal bonds of fellowship which are so manifest on the annual weekends such as this.

No. It was not just the fortuitous appearance at Bucknell of the first of a widening body of students from Burma. There have been many other factors feeding this stream of sympathetic understanding and good will, which are among mankind's most precious—and sometimes scarcest—commodities.

During the hundred years of your academic kinship with the so-called Golden Peninsula, sons and daughters of Bucknell went to Burma as teachers, missionaries, doctors, and Government representatives. Then, too, scholarships given by Bucknell's alumni to students at Judson College in Rangoon, furthered an already warm relationship.

Yet the association between Bucknell and Burma should not be regarded as an isolated illustration of the way in which a harmonious fellowship can be developed between student groups in different countries. Similar associations have existed between Harvard and Leyden, between the University of Chicago and Frankfurt, as well as between the University of Michigan and the Philippine Islands. The relationship between the latter two became so close and so well known that it seemed quite natural for a Michigan man, Frank Murphy, to become Governor General of the Philippines before the United States voluntarily granted the islands their independence. This relationship has done much to spread good will among our two peoples.

Burma's high literacy rate undoubtedly encourages an effective interchange of students and teachers, and facilitates awareness and understanding of the mainsprings of of American policy. But this is always a two-way street; the presence in the United States of Burmese students should help us to understand some of the problems which Burma faces, and its passionate devotion to the cause she has been pursuing in her national interest.

Prejudices and misplaced conceptions of another nation do not survive long in the warmth of the welcome which the student from abroad ordinarily receives. And when he returns to his homeland, he takes with him memories of his college or university experience which he shares with others. In this same way, the American student for whom Burma may have meant theretofore an unreachable, exotic region of curious conventions, acquires an understanding and a sympathetic appreciation of the age-old culture and ineffable charm of the Burmese people.

This kind of contact between two peoples in our educational life is invariably favorable. And, as I have already said, its benefits are not merely those of a personal relationship between a few students. When a Burmese student at Bucknell, or a Bucknellian at Judson College in Rangoon, returns home, one can never measure with accuracy the pervasive extent of the impact which is produced upon the social milieu in which he lives.

Its effects may be far reaching in space and in time. We may not see this until years afterwards, perhaps during a period of crisis, when either the existence or lack of mutual understanding between governments may spell the success or failure of a policy. It is to be expected that many of those who return to Burma from the United States will eventually hold responsible positions in their Government or in their educational institutions, where their knowledge and understanding of the United States and of the American people will be of great use to them.

This is not a mere bit of philosophizing or conjecture on my part. After the First World War, from a group of Belgian students who had studied in the United States here came forth a Prime Minister and six Cabinet members. At the outbreak of the Second World War, nearly 25 percent of the teaching and research faculty of Belgian universities had been graduate students in the United States. It is not just the academic knowledge gained abroad by a student which thereafter serves him and his country. Of greater worth are the spiritual ties of brotherhood, mutual respect and understanding which can only come through people-to-people contact.

I have found this to be true of activities of our Government abroad under the mutual security program—particularly in such fields as that of technical cooperation, which it has been my privilege to study at firsthand. Almost without exception there arises between America technical personnel and the people with whom they work, a depth of understanding, respect, and affection which endures.

Possibly those of you who are commemorating this ninth annual Bucknell-Burma weekend may not think of your educational experience in the broad framework of international intercourse. But rest assured it makes a significant contribution to the harmonious relations between our two nations. It is a basic policy of the United States to support other nations of the free world in their desire to remain independent. We are not being altruistic in pursuing such a policy, because it is in our own highest interests to do so. Students from those countries who reside here cannot fail to become aware of this. They cannot fail to appreciate that we have no ulterior political motives toward their homelands. And that educational and commercial intercourse between our peoples do not mask a subversive purpose.

Unfortunately, there are other governments in the world whose interest is not merely that of a mutually beneficial interchange of ideas and improved international understanding. For these governments, education, technical aid, and trade relations are implements designed to facilitate economic and political domination of another country.

The barter agreements which various countries, including Burma, have concluded with the Soviet Union, are an example of how this device works. One of the major difficulties facing the Government of Burma has been the disposal of its rice surplus. Regrettably, the United States is a competitor of Burma in exporting rice. The natural outlet for Burmese rice is in Asia. And so, when the Soviets offered to buy 400,000 tons of rice annually from Burma over a 4-year period, it is easy to understand why such an offer was accepted.

Yet this agreement, like other commercial agreements with the Soviet Union, had much more than an economic implication. The Soviets do not pay in foreign exchange for the rice, so as to enable Burma to purchase its needs from other countries. Instead, Burma has received Soviet equipment, Soviet capital goods, Soviet machinery, and along with all this, Soviet technicians and replacement parts which, of course, have to come from the Soviet Union. The ultimate consequence of such an agreement would be increasing economic dependence. And this economic dependence inevitably erodes a nation's political independence.

It has not taken Burma's leaders long to recognize some of the hazards implicit in Soviet barter arrangements. The former Prime Minister of Burma is reported to have said that anyone who agrees to barter "when he can get cash is out of his mind." There has been much dissatisfaction in Burma with the results of its agreements with the Soviet Union, both as to price and quality of the goods.

Much resentment has likewise been provoked by the Communist Chinese practice of buying rice from Burma at fictitious prices, and then selling it to Burma's own customers, including Ceylon, Pakistan, and even Japan. This, of course, has the effect of enmeshing the free countries in the Communist economic webb, while at the same time reducing the amount of rice which the free countries can market.

To recognize such hazards is the first step in resolving them. The Burmese Government is fully cognizant of their extent. For my part, I am confident that it will eventually find the solution to them.

The cultural heritage of the peoples of our two countries may be dissimilar; but in a number of important respects they are very much alike; they both possess the eternal qualities of self-reliance and resourcefulness. In both America and Burma, character, courage and self-reliance rank with national and individual honor. And the Burmese possess all of these qualities in abundance. Only a people of stern fiber could have overcome the discouraging obstacles which Burma faced after the Second World War.

Like a number of other countries, Burma had suffered enormous destruction. Her transportation system, industry, and economy were virtually shattered. The Government faced a succession of crises with disorders and insurrections in every region of the country, often fomented by the Communists. The Government of Burma met this challenge. It gradually restored law and order. Its progress since those early terrible days is a heartening and inspiring saga of determination, of courageous leadership, and of hard work.

I rejoice with you that Burma is again on its feet. Its people can feel justly proud of their achievement. It is true that during the critical period of 1951–53, the United States provided the limited sum of $20 million in aid. But since 1953 the Burmese Government has been on its own.

I do not mean to suggest that Burma's problems are over. Very serious problems still remain. Fortunately, however, in the vital matter of subsistence, the Burmese are able to feed themselves. The country is not one which, like some others I have visited, has such limited resources that outside aid is necessary to keep its people from starving. Burma has, in addition, considerable natural resources which are not developed, potential sources of power, and excellent prospects for further growth of its industries.

But Burma has other problems. It has needs on which some of its neighbors seek to capitalize, both in an economic and a political way. The Burmese Government is very conscious of all this. With admirable resolve it has tried to meet the country's special economic needs without endangering its national existence as a free people.

We in the United States have a vital interest in supporting the efforts of other nations to remain free and independent. It is our hope that through understanding of our motives, we can succeed in convincing those nations whose basic interests are identical with ours, that we have no concealed designs; that we do not wish to subvert their institutions or dominate their governments; and that the cultivation of international understanding and fellowship, such as you are undertaking here at Bucknell, will with patience and tolerance usher in an era of permanent peace, for the greater glory of mankind.

United States Academy for Diplomats

EXTENSION OF REMARKS
OF
HON. FREDERICK G. PAYNE
OF MAINE
IN THE SENATE OF THE UNITED STATES
Tuesday, March 12, 1957

Mr. PAYNE. Mr. President, on behalf of my colleague, the distinguished Senator from South Dakota [Mr. MUNDT], I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "United States Academy for Diplomats," written by George Todt and published in the Valley Times of North Hollywood, Calif., of Wednesday, March 6, 1957, together with a statement by the Senator from South Dakota.

There being no objection, the article and statement were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR MUNDT

A few days ago I introduced Senate Joint Resolution 65 for the purpose of establishing an academy for foreign diplomats. Many newspaper writers have commented favorably on this proposal and I have received a number of letters in support of it.

Mr. George Todt, who writes an interesting column for the Valley Times in North Hollywood, devoted his column on Wednesday, March 6, to the desirability of establishing such an academy, and I should like to have this column printed in the Appendix of the CONGRESSIONAL RECORD.

[From the Valley Times, North Hollywood, Calif., of March 6, 1957]

UNITED STATES ACADEMY FOR DIPLOMATS

(By George Todt)

"Strange how much you've got to know—
Before you know how little you know."
—*Anonymous.*

Wouldn't it be the course of wisdom for the American people to establish a sort of West Point or Annapolis for training of personnel in the field of foreign affairs or foreign diplomacy?

One solon who thinks we should is astute Senator KARL MUNDT, of South Dakota. He recently offered a joint resolution (Senate Joint Resolution 65) in the Senate providing for the study of the possibility and desirability of establishing a United States Foreign Service Academy. Said Senator MUNDT:

"It seems quite obvious, in view of the large amounts of money we are spending today in the field of diplomacy and in the field of so-called mutual defense, with the cold war having the temperature it constantly engenders, that it would be good economy and good judgment on our part to prepare and educate a trained corps of Foreign Service officers by sending them through the kind of institution I envisage before they go abroad to represent us in the tricky world in which we live.

"Obviously, if our diplomats make serious errors, it could result in a terrible war, the cost for one hour of which would more than pay the cost for such an academy."

This seems to me to be a wise provision, and one which certainly should have been implemented long before this day. Events of the past two decades, in which we have been driven from pillar to post on the world stage, indicate that we could do much better in the diplomatic field than has thus far been the case. Perhaps a better trained professional corps is at least part of the answer.

However, before we get our hopes trained on sights too high in this instance, let me point out a couple of obvious factors. In the first place, there have been previous attempts to get this kind of legislation enacted by Members of the House and the Senate—but their efforts have invariably come to naught.

In the second place, Senate Joint Resolution 65 doesn't provide for the establishment of such an academy for Foreign Service officers once it is passed—but only for a commission of 12 members to study the desirability of establishing such an institution. It is to report back to Congress, in its final stage of closeout, on or before January 1, 1960. Interim reports will be made between the date of passage of the bill and the final-report date mentioned. There doesn't seem to be any special hurry in this case.

Composition of the proposed commission on the Academy of Foreign Service is designated as follows: (a) Four appointed by the President of the United States, 2 of these from the executive branch of the Government and 2 from private life; (b) 4 appointed by the President of the Senate, 2 of these from the Senate, and 2 from private life; and (c) 4 appointed by the Speaker of the House of Representatives, 2 of these from the House and 2 from private life—a total of 12.

This seems like a good move, but why no sense of urgency here? There's a job which really needs to be done in this case, so why not get on with it? In these troubled times—in which we have had the major portion of the non-Communist world's global burden shifted on us—is there any excuse for fiddling while Rome burns?

The President's National Council on Youth Fitness

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 12, 1957

Mr. PRICE. Mr. Speaker, one of the most widely known publications in the country is the Sporting News, published in St. Louis, Mo., by the respected J. G. Taylor Spink, with the assistance of his son, C. C. Johnson Spink. There is probably not a sportswriter of standing who does not greet the weekly appearance of the Sporting News as something speaking with authority on major league baseball and many other sports.

Many a boy growing up in America has learned to read the Sporting News with pleasure, and the Spink publication is headed by people who have always felt that the physical fitness of American youth is important. Their work in the sports field has contributed a great deal to the thinking of young people coming into the prime of manhood.

It was entirely appropriate that the recent St. Louis engagements of Shane McCarthy, executive director of President Eisenhower's National Council on Youth Fitness, should have been welcomed at a breakfast given by J. G. Taylor Spink. Under permission to revise and extend my remarks, I offer for the RECORD the following articles from the St. Louis Post-Dispatch and the St. Louis Globe-Democrat:

[From the St. Louis Post-Dispatch]

(By Bob Broeg)

St. Louis was urged yesterday to give back its sidewalks to the kids and encouraged to take its young sons and daughters out of the grandstand and onto the field, making them exercise minded as well as sports conscious.

The appeal was made by Shane MacCarthy, executive director of President Eisenhower's National Council on Youth Fitness.

The tall and trim educator-lecturer, speaking with more than a trace of Ireland in his cultured delivery, entertained and informed about 30 city sports, youth activity, physical education, and business leaders invited to a University Club breakfast by J. G. Taylor Spink, publisher of the Sporting News.

The idea in MacCarthy's talk and a question-and-answer session that followed was to create a guide for a local youth fitness committee expected to be formed shortly. And if the St. Louisans make as good an impression on their fellow citizens as MacCarthy did in stumping for the President's project, this area is certain to have better-conditioned young folks—and maybe older ones, too.

LIKE FATHER, LIKE SONS

"There's no doubt," said MacCarthy, smiling in agreement at a point made by Walter Eberhardt, St. Louis University veteran physical education director, "that my 5 boys (ranging from 4 years to 18) enjoy competing in calisthenics only because I practice what I preach, exercising with them. Physical fitness is as much primarily the

family's responsibility as moral and spiritual guidance."

MacCarthy is at his task, seeking to create greater interest in youth fitness, because President Eisenhower and other Federal officials have been alarmed by failure of American boys to compete favorably with European youngsters in scientific physical fitness tests.

Rejection figures show 34.5 percent of the United States young men unable to pass selective service requirements. As a likely reason, MacCarthy said, a survey in New England showed a high degree of youth obesity, not from excessive food intake, but from inadequate physical activity.

"Thirteen of the sixteen great civilizations the world has known decayed of dry-rot, softness," the lecturer said. "When a nation is at its peak, as we are, energy must be spent to stay there. Otherwise, there's only one way to go—down."

Challenging "our pattern of life," as he put it, MacCarthy noted the national tendency to ride rather than walk to the corner market or drugstore.

A VOTE FOR WALKING, CYCLING

"Two of the great natural body conditioners, walking and cycling, are becoming lost arts," he said, "and the proof is the shocking contrast of deserted sidewalks and crowded streets. We're widening streets and narrowing sidewalks and, in fact, in fashionable suburbia we're eliminating sidewalks all together.

"Why prohibit our young people from skating and cycling on the sidewalks? It's far less dangerous for the vanishing pedestrian there than the increasingly busy and hazardous streets are for the youngsters."

Recently in New York when he was asked what the country's largest city could do as an example of encouraging more walking, roller skating, and cycling, for instance, MacCarthy said he had suggested blocking off fashionable Fifth Avenue on Sunday. To brow-raising Manhattan city fathers, he posed the rhetorical question:

"Can you afford to do less for the welfare of your children than when you cut off the same street during the height of a business week for a ticker-tape and confetti parade for a foreign celebrity?"

FOREST PARK: TOO MANY CARS

Asked for an evaluation of Forest Park, MacCarthy praised the beauty and size of the famous St. Louis landmark, but said: "Frankly, it disappointed me because it's cut through by too many roads used by too many cars. The arterial factor has been emphasized to the point the human factor is gone.

"The inconvenience of the adult will help youth fitness greatly. To illustrate, wouldn't it be forth a few extra minutes of the father's time driving to work—by not cutting through the park—so that his boy and others could play, walk, run, skate, and cycle in safety?"

Although favoring increased playground facilities—and he was aware St. Louis has lagged behind other major cities in its playgrounds and community centers—MacCarthy said playgrounds weren't enough, that recreational facilities within the block or at the doorstep were necessary.

"In the hot competitive nature of playground sports, the kid who doesn't have the skill is painfully aware of his shortcomings and frequently drops out," he said, noting that his own boys, who later turned out to become good school athletes, had shied away from playgrounds.

"So I took down the barbecue pit in my yard and put up a basketball court," MacCarthy said. "Kids are kings in their own backyard. And we've all had fun. That's the test of physical fitness, making it fun."

TRAIN ALL, NOT FEW

MacCarthy agreed with Louis Kittlaus, director of physical education for the board of education, that the problem was the many, not the few, the average youngster more than the star athlete, though he noted that even the superior athlete needed a fitness plan in later life, too, to avoid the obesity and softness blamed partly by many medical men for the high incidence of heart disease.

"I'm strongly for organized team sports, but by themselves I'm afraid they're not quite enough because the Olympics and other factors point to the trend which shows that though our athletes are developing greater speed they're also less durable than before. One of my boys, to personalize this, was a good basketball player, yet he could do only one push-up, his arms were so weak. Then he began exercising with me. Now he can really do the pushups—and he's a better basketball player, too."

MacCarthy, asked for his opinion of daylight saving time in a health and recreation program, said:

"I'm for it strongly so that there can be greater joint family fitness activity, which necessarily must be after the breadwinner comes home and usually before dark."

[From the St. Louis Globe-Democrat]

It's time to get off your seat and on feet and St. Louis, in accordance with President Eisenhower's youth fitness program, will do something about it in the near future.

The ball started rolling on the fitness program here at a breakfast meeting given by J. G. Taylor Spink, publisher of the Sporting News for civic officials, physical education leaders, and Dr. Shane MacCarthy, executive director of the Council on Youth Fitness.

MacCarthy, a silver-tongued Irishman who doesn't mince words about the state of the Nation's fitness, urged St. Louisans to form a committee as soon as possible to set up a workable program that will have the local citizens doing more walking, bicycling, roller skating, tennis playing or a hundred other forms of sports and exercise.

"The lack of durability among Americans is an established fact," Dr. MacCarthy told the meeting at the University Club. "President Eisenhower ordered the program set up when he saw some of the fitness reports of young Americans entering military service. Their lack of durability and strength was almost alarming.

"What we are really trying to do is raise the human octane rating and get rid of some of the softness in Americans. Competitive sports fill only part of the need. We must have some form of exercise and athletics for all the youth of America."

The word "youth" covers a broad field for Dr. MacCarthy, who is a noted political scientist and lecturer. At 48, he still takes part in tennis, backyard basketball (with his 5 sons in Washington), and in bicycling.

"It's amazing how few people bother to walk any more," Dr. MacCarthy said. "We jump in our automobiles just to ride a block or two to the store. What's wrong with walking, anyway?"

Dr. MacCarthy has facts and figures to back up the lack of durability among Americans.

"Just look at the number of leg injuries suffered by athletes," he points out. "And in the Olympic games it was firmly established that after 1,500 meters we weren't very good in the running events. What we need is a ground swell of community effort to overcome our lethargy."

When Dr. MacCarthy assumed his duties last September at the request of the Government, he set out almost singlehanded to get the Nation on its feet. The council which he heads reads like a who's who in Government. There are five Cabinet members on the committee and Vice President NIXON is the chairman.

Some of Dr. MacCarthy's ideas seem revolutionary, but nonetheless make sense to communities and physical-education people who have tried them. Kansas City is making great progress, he noted. Boys clubs have been established, playgrounds are being kept open later to accommodate youths and the community on the whole is become fitness conscious.

"Just look at St. Louis," he declared. "You've got 40,000 roller-skating rinks and bike tracks. I mean the city's streets. What's wrong with barricading some of these streets on Sundays and opening them to people who want to exercise and take part in recreation and sports activities? Not a thing. All you need is community effort."

Dr. MacCarthy proposed to the city of New York recently that it close off Fifth Avenue on Sundays and convert it to recreational purposes.

Nothing has been done about this proposal yet. But it has the officials of the Nation's largest city thinking seriously about the matter and that's exactly what he wants them to do. The same holds true with every community, right down to smallest.

National Survey of Fishing and Hunting

SPEECH

OF

HON. LEON H. GAVIN

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 12, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the resolution (H. Res. 190) requesting the President for certain information pertaining to the 1958 budget, and for other purposes.

Mr. GAVIN. Mr. Chairman, last week during the floor debate on the corn and feed grain program, the gentleman from Virginia [Mr. SMITH] used as a partial basis for his argument that economy is needed in Government a publication recently published under the supervision of the United States Fish and Wildlife Service in the Department of the Interior.

At that time I questioned the gentleman's use of the publication as a suitable example for his illustration. Upon study of the material in my file, I find that my objections were completely justified. In fact, my investigation shows that the gentleman was incorrect in using the publication A National Survey of Fishing and Hunting in an attempt to make his point. The gentleman's attempt to depreciate the good work of the Fish and Wildlife Service is unjustified. I am quite certain that if he had known the facts he would not have used this booklet as an example. Governmental economy, in my opinion, can better be achieved by curtailing programs which have outlived their usefulness—and such as foreign and others which have become an intolerable and unrewarding drain upon the American people.

So that my colleagues will have the correct information I will give them this brief background of the National Survey of Fishing and Hunting and the reasons for its publication.

First, and understand this clearly, not 1 cent of regularly appropriated moneys was used either to undertake this long-needed survey or to publish the collected data in concise form for public information. This survey was financed out of the administrative funds specified in the Federal Aid in Wildlife Restoration Act of 1937 and the Federal Aid in Fish Restoration Act of 1950. As many of my colleagues know these two fine national programs are actually financed by fishermen and hunters by means of special excise taxes on arms and ammunition, and on fishing rods, reels, and creels.

Contrary to the charges of the gentleman from Virginia, the United States Fish and Wildlife Service hired not one single opinion taker to canvass "the country for 2 months to get the data upon which another horde of officeholders produced this wonderful piece of work here." This study was undertaken and the report made by a statistical firm, expert in taking such large sample surveys, Crossley S–D Surveys, Inc., of New York City, under contract to the Fish and Wildlife Service. This compilation of data cost $134,000, which, as I pointed out previously, was borne out of administrative funds from the Federal aid in wildlife and fish restoration programs.

The study was conducted at the direction of the Fish and Wildlife Service largely as a result of a request by the International Association of Game, Fish, and Conservation Commissioners, representing the fish and game departments of 48 States. The Association, at its annual meeting in September 1954, recommended that the Fish and Wildlife Service contract with an independent survey organization for a nationwide economic survey of expenditures and number of participants in recreational-fishing and hunting activities throughout the Nation. It was further recommended by this association as well as by many national conservation organizations, that the study be financed from the Federal aid programs.

The reason for a single national study conducted by one organization is clear. For years individual States have conducted studies with varying emphasis and degree of coverage on the number of persons that hunt and fish. Because these studies varied considerably both in scope and coverage, the results were not comparable, and had little actual value for compiling a national picture of the numbers of our citizens who hunt and fish and the total business created by their outdoor activity.

In its simplest sense, this study was motivated by the recognized need for information about the number of Americans that hunted, fished, or did both. Since continuation of fishing and hunting opportunity depends on the wise management of the fish and game resources on which these recreational pursuits depend, the economic benefits from fishing and hunting, as well as the number of persons who participate are an indication of the value of fish and wildlife conservation.

Gentlemen, never before have we had available such a complete compilation of information. Its implication is revealing—and startling.

One in every three households in the United States in 1955 had one or more fishermen or hunters—20,813,000 persons fished, 11,784,000 persons hunted, and 25 million both hunted and fished in 1955.

The business generated by these persons for tackle, guns, equipment, and such services as food, lodging, and travel amounted to nearly $3 billion.

Contrast this to household expenditures for electricity in 1955 which amounted to $3.2 billion; telephone and telegraph at $3.1 billion; physicians services $3.1 billion; radio and television receivers, records, and similar expenditures at $2.4 billion. Hunting and fishing expenditures are significantly larger than the estimated $1.7 billion spent for all spectator amusements such as movies, theaters, concerts, football, baseball, basketball, and other sports.

From the foregoing, you can see that hunting and fishing are without question the top outdoor recreational pastimes of the American people. Conservationists long have suspected this, but prior to the study leading to publication of the National Survey of Fishing and Hunting, there was no factual basis for their assumptions.

Now we come to the very real purpose of the study. Armed with this important information, the Nation's wildlife administrators are going to be able to program their functions and justify appropriations so as to make sure that hunting and fishing opportunity can be maintained for Americans of today as well as in the future. Knowing how many people hunt and fish, how far they traveled, their requirements for such things as food and lodging, and their many other expenditures provides administrators—as well as businessmen—with a real set of values on public modes and movements.

In addition the publication is an important document for businessmen, and State and regional travel and tourist agencies. From the assembled information there can be assimilated useful information—relating to the business opportunities that are generated by and can be augmented by our immense national appetite for hunting and fishing. In short, this study measured the pulse beat of a vast outdoor recreational pursuit and presented information which will be of paramount importance to natural resources administrators and businessmen for many years to come.

Mr. Chairman, it is evident that the gentleman from Virginia did not know the background of the National Survey of Fishing and Hunting when he held it in ridicule before the House last week. He obviously did not know that it was the sportsmen of America—all 25 million of them—who both requested and paid for this very worthwhile study and booklet.

I include the following letter:

UNITED STATES
DEPARTMENT OF THE INTERIOR,
Washington, D. C., February 7, 1957.

We are pleased to send you herewith a copy of a report recently completed by the United States Fish and Wildlife Service on the economic survey of fishing and hunting in the United States. This report is designed to show the extent and character of participation in these outdoor sports by Americans in calendar year 1955.

You will be interested to note that 1 out of every 3 households in the United States contains at least 1 person who hunted or fished in 1955. The total participation included 25 million persons 12 years of age or over. In pursuit of these sports they spent nearly $3 billion in 1955. This is about equal to the amount spent for electricity by all the households in the United States in the same year.

A number of the other figures on the survey, which are included in the report, may be of interest to you.

The survey was made by the Fish and Wildlife Service of this Department in response to a request from the International Association of Game, Fish, and Conservation Commissioners. This is the principal organization of the directors and commissioners of the 48 State fish and game departments. As you will note, the survey was done under contract with the Fish and Wildlife Service by the Crossley, S-D Surveys, Inc., a prominent independent surveying and opinion firm. The cost of the survey was financed from proceeds of the special excise taxes on sporting arms and ammunition and on certain types of sport fishing equipment. These funds are normally used for Federal aid to the States in wildlife and fish restoration. In any event, no general tax funds were used to finance the survey; it was paid for entirely from proceeds of the special excise taxes. Funds used to pay the cost of the survey otherwise would have been allotted to the States to finance their Federal aid programs.

We recognize that the principal values of fishing and hunting cannot be measured in monetary terms. These principal values are the contribution which they make to the health and well-being of our citizens. Nevertheless the survey report indicates that fish and wildlife resources create a good deal of business in the economic channels of the country.

We believe the magnitude of participation by the people of the Nation in hunting and fishing and the amount they spend give increased emphasis to fish and wildlife conservation, which is to be reflected in the expanded overall program now being developed by the United States Fish and Wildlife Service.

As you no doubt know, this intensified program was made possible by the favorable and sympathetic attention given to our vital fish and wildlife resources by the Congress.

We shall be pleased to respond to any questions you have regarding the survey or the report, or to furnish you with supplementary material.

Sincerely yours,

ROSS LIFFLIN,
Assistant Secretary.

The National Guard

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 12, 1957

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the column by Holmes Alexander, from the Indianapolis Star of February 28, 1957.

Mr. Alexander points out the curious developments which have given our country the leadership in arming other

nations and maintaining a standing army in peacetime.

"How the Founding Fathers would hate it," says Mr. Alexander.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNCLE SAM IN MIDDLE OF MILITARY DILEMMA

(By Holmes Alexander)

WASHINGTON.—Defense Secretary Charles Wilson has a heavy hand, but he often uses it to write the truth in big, bold characters. I'm not referring here to his crack about draft-dodging recruits to the National Guard. What he said may be true but it's not nearly so important as several other things he said before the House Armed Services Committee. He raised in my mind the question of whether American military might is shaping the world in our image, or shaping the United States into some alien form, or both.

For example, the American ideal has always been that of a military establishment as small as possible. The Founding Fathers had good reason to fear the results of a large standing army, and this distrust has continued in American minds. Well, what's happened? Because of us, the British are cutting their military garrisons everywhere. With those American divisions in NATO and the United States Air Force basing its atom bombers in England, Great Britain doesn't need as much defense. She is withdrawing several units from West Europe and demobilizing a number of reserve groups.

It's a funny way for America to be reshaping the world with peace-loving American ideals, but there you are. Britain is by no means the only lucky nation which is cutting down military expenditures. France is able to do this because of the sheltering arm of the United States. West Germany, once the Prussian's delight, has become so pacific under American care and protection that the young German's compulsory military service is merely for 1 year. The government which follows Chancellor Adenauer may even eliminate that. All over the world, wherever American military might permits it, the natives are keeping their boys at home and saving their money instead of buying arms.

Secretary Wilson didn't say this, but it was the picture he painted. He did note that the sacrifice which the United States makes to supply soldier boys is greater than in any other free world nation. Our general population is rising about 11.2 percent a year. But the population in the 18- to 24-year age group has dropped by 5.8 percent since 1950. Infants and older persons live longer because standards of medical care are very high. One result is that in order to put 2,800,000 persons into military uniform, we are drawing more heavily on our youth supply than is generally known.

Other nations, by keeping their boys at home and their money out of wasteful military hardware, are following the American peace-loving ideal. And what about America herself? Have we lost some freedom of choice about the size of our Military Establishment?

Mr. Wilson gave a plain affirmative answer to this one. There was a staff study, he said, on the possibility of reducing military personnel by 800,000 over a 3-year period. It was a dandy idea by our own ideals and by the example of Britain and other allied nations. But Secretary Wilson found it "not justified considering the present international situation * * * (it) would have an impact abroad which the free world could ill afford."

That isn't all. Just as we have very little freedom of choice about cutting our forces, so we have very little choice about adding to them. "A sudden increase of our military budget," Mr. Wilson told the committee, "would be * * * misunderstood all over the world." He explained under questioning that an increase would alarm Russia and might precipitate a war—and this we are dead against.

So evidently we are pinioned to a certain military posture. We are forbidden by our friends to relax and by our enemies to make a threatening move. As a result of necessity, we have set out to make military careers more attractive than the Founding Fathers ever contemplated to American youth. By wage hikes and fringe benefits Mr. Wilson's regime has lifted the GI reenlistment rate from 24 percent to 44 percent; has increased the ratio of reserve officers who stay in the service from 1 out of 6 to 1 out of 4; has "slowly increased" the numbers of young doctors and dentists content to stay in the services.

How the Founding Fathers would hate it! American military policy now makes foreigners more peace-loving and makes Americans more reconciled to living in an armed camp. We didn't, heaven knows, plan it that way—but there it is.

The Talented Mind: An Opportunity and an Obligation

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, March 12, 1957

Mr. WILEY. Mr. President, last evening it was my rare privilege to listen, along with many others, to an address entitled "The Talented Mind: An Opportunity and an Obligation," delivered by Rear Adm. H. G. Rickover, United States Navy, Chief of the Naval Reactors Branch, Division of Reactor Development, United States Atomic Energy Commission, and Assistant Chief of the Bureau of Ships for Nuclear Propulsion. The occasion was the award banquet of the science talent search sponsored by the Westinghouse Educational Foundation. On that occasion 40 brilliant boys and girls of America received awards.

Mr. President, the address by Admiral Rickover is one of the finest on the subject I have ever heard, and I hope all Members of the Senate will take the time to read it. I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE TALENTED MIND: AN OPPORTUNITY AND AN OBLIGATION

(Address by Rear Adm. H. G. Rickover, U. S. Navy, Chief, Naval Reactors Branch, Division of Reactor Development, U. S. Atomic Energy Commission, and Assistant Chief of the Bureau of Ships for Nuclear Propulsion, at the awards banquet of the science talent search sponsored by Westinghouse Educational Foundation, Statler Hotel, Washington, D. C., Monday, March 11, 1957)

As I look at the bright faces of the young men and women whose achievement we have come here to honor, I am impressed with the thought: How fortunate are these young people. Fortunate in that God has blessed you with an endowment which is priceless. What has been given all of you—the 40 winners, as well as the 260 runners-up—is the most lasting, the most persistently satisfying, the most all-round useful of natural endowments—a really good mind.

I trust that you will not let yourselves be proud of this gift. It reflects no particular credit on you. Nor is it a guaranty of success in life. Rather does it resemble a vein of precious metal embedded in rock—valuable only when it has been mined intelligently and laboriously. But with it, an unusual opportunity is granted you to develop yourselves into successful human beings in a field of activity where success must always be rare and difficult.

You are here tonight because you have already taken the first step toward making use of your good fortune. You have given that good mind of yours what it most needs—exercise in meeting an intellectual challenge. In doing this you have shown yourselves worthy of the endowment with which you have been blessed. You have demonstrated that you can marshal the ambition and stick-to-itiveness which a good mind demands. You have taken the first step toward success in your chosen fields, but only the first.

Like most of today's youth, you must at times have felt that you missed something exciting and important because you were born in the 20th century, at a time when almost all frontier areas of this country had disappeared and with them the adventure formerly enjoyed by many a young man and woman, of hewing out their destiny, dependent on no power on earth but their own will and ability. Today there is hardly a spot on this globe which has not been discovered and mapped. For most people, life, while doubtless more comfortable, lacks the spice of discovery and adventure so dear to young spirits.

Yet it is precisely in this respect that your good fortune manifests itself most dramatically, for you carry in your own minds potentialities for adventure and discovery not shared by most of your contemporaries. You have as many opportunities for exciting living as people born a hundred or more years ago; different in kind, perhaps, but opportunities not one whit less exciting and rewarding than those which vanished at the turn of this century.

Capable and ambitious young people could once fashion their lives by their own efforts in wild and unmapped areas of the physical world; you can be pioneers today in the wild and unmapped world of science. In the short span of three centuries, since man first learned to think and experiment scientifically, enormous advances have been made. But enough remains to be discovered and mapped to guarantee excitement and adventure to more young scientists and engineers than we are likely to have for many years to come.

I recommend that you make your life an adventure of the mind. This will at times be hard, but always deeply rewarding. When you reap the fruits of your own intellectual labor you will experience the satisfaction of having proved yourselves good cultivators of the talents given you by providence. Over and above all this, you will know that yours is a kind of pioneering which yields not alone personal gain and satisfaction, but it also contributes significantly to the economic and hence the political strength and security of our country. This you will find the greatest reward of all.

There never has been a time in the history of our country when it so greatly needed the services of its talented youth. One hundred and eighty years ago, this Nation was born on a new continent, sparsely populated by 4 million people. Seldom has a new nation started life under such favorable circum-

stances. Not the least of these was the political inheritance which enabled the Founding Fathers to devise a form of government marvelously suited to a vast land with fabulous natural resources which had to be developed by a small population. The Constitution insured fullest scope for each individual's abilities. Moreover, our continuing scarcity of labor helped us to hold fast to that basic respect of the individual which the first settlers brought with them from England, and which is the foundation of our democratic way of life.

The open frontier kept us socially mobile and therefore checked any tendency toward the class barriers which are so apt to accompany advances in civilization, and which are characteristic of most highly civilized but static societies. Respect for the individual, full opportunities for all, abundance of land and natural resources, and a government eminently suited to our particular needs built this Nation into the formidable giant it is today.

In recent years, however, some of the foundations upon which we have built in the past have begun to crumble or have vanished altogether. Instead of 4 million people, lost in a vast wilderness hardly touched by man, we now have 170 million, increasing annually by 3 million, or almost as many new Americans as lived here on the eve of the Revolution. In fact, we may soon reach a density of population close to that of the old countries of Europe. Virtually no good free land is left: much of the wilderness which nurtured the free spirit of earlier Americans has all but been buried under factories, cities, and suburban developments. And, where even as recently as 50 years ago, we exported 15 percent of our raw materials, we now depend on the rest of the world for 10 percent of our raw material needs.

The turning point occurred only a few years ago. Today our consumption of raw materials grows at a compound rate. If we continued to expand our consumption at this same pace for the next 25 years, our needs would reach a fantastic 80 percent of total world production, leaving only 20 percent for all other countries. Let me illustrate with a few figures what this momentous change in our raw materials position, from a resources-exporting to a resources-importing country, portends for our economice health and political strength.

Advances in medicine and public sanitation have quadrupled the world's population since the middle of the 18th century, and population is increasing at a geometrical rate. Our own country has the highest percentage of natural increase in population of the large industrial nations of the world—an increase which is higher even than the increase in Japan and Italy. Scientific calculations give us the astonishing estimate that 1 out of every 20 human beings who have ever trod this earth is alive today.

This enormous and ever-growing population must now be fed, clothed, and housed by cultivating land which over vast areas has become depleted through erosion and faulty agriculture; by harvesting the products of the sea and of inland waters which likewise have become depleted by unintelligent overfishing and by pollution; and by consuming irreplaceable mineral and fuel resources. The United States alone, for example, has consumed as much in irreplaceable mineral and fuel resources since 1914 as had then been used by all the world in all of the 5,000 years of history since man first discovered bronse. And much of this priceless heritage has been and is being squandered in an appallingly wasteful manner.

From a scarcely populated, fabulously resources-rich country 180 years ago we have changed to a densely populated, resources-poor country today. We are, of course, not as poor in resources nor as heavily populated as most of the industrial powers of the world. We are still rich compared to such countries as Britain or Italy. In fact, with but 10 percent of the population of the free world and 8 percent of its land area, we consume close to half the free world's volume of materials. These figures are frequently used to illustrate that we have the highest standard of living in the world. What seems more significant to me, however, is that these figures also indicate our increasing dependence on foreign countries for vitally needed minerals and fuels. At present, we are truly independent only in two metals: molybdenum and magnesium. When measured with our wealth of but a few short years ago, we are therefore poor, and we are poorer still when measured against our future needs.

The shrinking of the once broad materials base of our industrial civilization makes us for the first time in our history dependent on foreign countries for materials basic to our technical organization. So far we have had no difficulty buying what we need abroad. We may, indeed, never have to face the disaster which threatened Europe's economic life when the flow of Mid-East oil was cut off for political reasons. But it would not be wise to count on this. We shall not remain truly free and powerful unless we compensate, to the fullest possible extent, for lack of materials resources within our own borders. There is one way, and only one way, that this can be done. It is by using far more effectively than heretofore our natural resources in brain power; we must substitute intellectual resources for diminishing materials resources.

Applied to this problem, brainpower can devise ways of extracting at reasonable cost the considerable store of low-grade minerals and fuels still remaining to us which we are not utilizing today because of excessive cost in time and labor—thus taconite and shale oil may in time make up for the threatened deficit in high-grade ores and oil. It can discover ways of replacing scarce materials with plentiful materials heretofore considered unusable, as aluminum is replacing scarcer copper. Trained minds may be able to relieve shortages of natural minerals and fuels by creating man-made substitutes as plastics and synthetic rubber have reduced our dependence on imported tin and natural rubber, or as atomic power may replace coal and oil. Similarly, synthetic products made from renewable resources may serve as substitutes for irreplaceable materials.

Perhaps we need brainpower most to teach us the folly of needlessly wasting the inheritance of our children. Using irreplaceable materials resources is like using up your capital instead of learning to live on your interest or earnings. No matter how slowly we deplete capital, the day must come when we have nothing to leave our descendants. For almost two centuries we have been wasteful because we thought our natural resources were inexhaustible.

It will take wise and intelligent guidance to change our ways. But eventually we may learn to deny ourselves today's pleasures for the sake of leaving enough for our children to let them enjoy the blessings of civilized living. We may even learn to deny ourselves such pleasant luxuries as large, chrome-trimmed cars, powered by high-octane gas which discharges thousands of tons of scarce and irreplaceable lead into the air. Changes in national outlook such as these can only be pioneered by people whose minds are able to grasp the scientific problems involved, and who can make them understood by the average citizen.

It is a truism needing no elaboration that as society becomes more complex technologically, it needs proportionately more, as well as qualitatively better, trained professionals. Thus, while the population of the United States has doubled in the last 50 years, the number of its professional men and women has quadrupled. We have today 5 times more engineers and 10 times more scientists than half a century ago and yet there are still not enough. To increase our national productivity by a given percentage annually we must increase our scientific and engineering personnel almost twice as fast. With every step forward in technological progress, the Nation becomes more dependent on its trained brainpower.

Moreover, the closer we come to scarcity of natural materials resources, the heavier grows our demand upon the quality of our trained manpower. Just as it is far easier to dig a lump of coal from a surface vein than it is to pump oil from a deep well, perhaps buried under tons of sea water, so it is more difficult to release the power locked in the atom than the power held in falling water. Substitution of manmade for natural resources, better utilization of inferior natural resources, elimination of waste—all these demand the raising of our entire body of engineering and scientific knowledge to a higher plateau. I can best illustrate this from my own experience.

A nuclear powerplant consists of two distinct parts: The reactor proper; and the heat exchangers, the valves, the pumps, etc., which draw power from the reactor and transform it into electricity. When we began work on the first nuclear propulsion plant we expected that, in building the reactor, radiation hazards would present us with unusual technical problems requiring greater scientific and engineering knowledge than had up to then been needed for construction of conventional power generators. For one thing, the constant bombardment of all metal parts of the reactor by neutrons would in time make the metal itself so radioactive as to change its composition, unless we could find metals resistant to such changes. In the end we had to develop two entirely new metals for reactors—zirconium and hafnium. We had not, however, expected to meet almost as many tough problems with the conventional components of the nuclear plant.

The problem here again was radiation hazards and resultant difficulty of access to all parts of a nuclear plant for inspection and repair. We spent much time and money testing each item to discover what was needed. Costly methods of trial and error had to be substituted for exact scientific knowledge, because such knowledge was not available in metallurgy. We did not know why conventional heat exchangers, pumps, valves, etc. worked with steam or hydroelectric powerplants but not with nuclear plants. Before we can develop a viable and competitive nuclear industry, we must raise metallurgy from an art to an exact science, for empirical methods cannot be used indefinitely in modern technology.

In the past, man's advances in technology have been slow whenever theoretical knowledge failed to move forward. Rome, for example, had everything she needed to build structures of reinforced concrete except the necessary theoretical knowledge of stresses, thrusts, and distribution of weights. From Egypt and Greece, Rome had inherited practical knowledge in building structures based on lintel and post; from the Etruscans she had inherited the arch; and in Italy she found the raw materials from which she learned by accident to develop a hard and durable cement. Greece had already experienced with strengthening masonry by imbedding iron rods in grooves. Had Rome been able to combine these methods with theoretical knowledge, she could have built her aqueducts and pipelines more durably and far less expensively with reinforced cement.

In a sense we are today at the Roman stage as regards metallurgical science for reactor requirements. We must advance

not only our knowledge of theoretical and applied nuclear physics but also our entire level of engineering and metallurgy. Similar advances in theoretical knowledge are needed throughout the entire field of science and engineering if technical civilization is to be maintained and advanced in a resources-poor world. How successfully a country manages to raise itself by its own bootstraps to ever higher stages of scientific and engineering competence will determine that country's position in the world. The fate of our country rests in the hands of those of its citizens whose natural endowments enable them to push back the boundaries of knowledge.

You young people have the ability to grow into empire builders of the intellectual realm. I hope that you will be inspired to adventurous search beyond present boundaries. I hope that you will not let yourselves be deflected from pursuing this aim by accepting positions having less intrinsic importance but greater material rewards. I hope that you will firmly withstand the constant pressure by the advocates of the greatest of modern fallacies—that material possessions are the mark of the successful man. Man's acquisitive traits are not what make him great. Nor can true greatness be measured in dollars and cents. What money value can you assign a book on which the author has labored for years and which may inspire you to actions having incalculable effects? Is it worth only its price of three or five dollars? How would you value the piece of paper on which Einstein scribbled the simple equation which in its ultimate effects may preserve the freedom of the West by providing it with nuclear power to replace coal and oil? Is the pay you receive to be the only measure of the value of your job? No. Nothing material can ever give the intelligent man or woman such deep satisfaction as successful solution of an intellectual problem that challenges the mind.

We are engaged in a grim duel. You are familiar with the threat to American technical supremacy which may materialize if Russia succeeds in her ambitious program of achieving world scientific and engineering supremacy by turning out vast numbers of well-trained scientists and engineers. Democracies move slower than totalitarian dictatorships. We have let our educational problem grow much too big for comfort and safety. We are beginning to see now that we must solve it without delay. Perhaps the greatest danger has been our failure to provide adequate educational opportunities for our gifted youth and, in particular, to seek out the talented at an early age and to give them an education which challenges their minds and induces them to become trained professionals. I am particularly happy, therefore, to be here tonight because the science talent search sponsored by the Westinghouse Electric Corp. is exactly the sort of device we need to discover and develop our greatest national resource—the young man and woman with a really good mind.

It is a typically American device in that it represents an effort on the part of private citizens to accept responsibility for a problem usually considered to be the peculiar responsibility of government. It has ever been characteristic of Americans that when faced with a community problem we do not sit with folded hands waiting for government to solve it but pitch in ourselves. I hope more and more corporations will pitch into the problem of fostering America's wealth of young talent. And I hope that more and more talented young people will make the fullest use of their intellectual endowments. Democracy is not merely a political and social device to insure that under a popularly elected government each citizen may enjoy complete personal freedom, bounded only by the equal rights of other citizens. It is far more than that. Democracy guarantees to the individual freedom and opportunity to develop his mind and character to his maximum potential without hindrance from external sources so that he may put them to use not only for himself but for the community as well.

Sometimes we forget that democracy is not a matter of rights alone; that it depends for its very life on acceptance of corollary duties. If democracy meant no more than freedom of each citizen to enjoy himself, provided in so doing he harmed no one else, it would be a shabby creed indeed for the people of a great country, an uninspiring banner under which to fight the enemies of freedom.

The men who established this Nation and who devised the political institutions which have served us so well realized that democracy puts heavy obligations upon the citizen. It demands of all of us that we participate wisely in choosing the men to govern us, and it places on those who have special talents the obligation to develop these talents to their fullest, and to apply them in the service of the common good.

Long-Range Goal for Foreign Policy

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Friday, March 8, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter written by Livingston Hartley and published on the editorial page of the Washington Post of March 6, 1957, pointing out the need of the United States for a long-range foreign-policy goal. This letter outlines the means whereby at least some general plan could be devised for determining a long-range goal for the United States, and I think it deserves wide circulation.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

LONG-RANGE GOAL FOR FOREIGN POLICY

Widespread dissatisfaction with our foreign policy at this time highlights one of our most serious national failings: lack of a long-range foreign-policy goal.

The Communists possess such a goal in their blueprint for a Sovietized world. It serves both to give overall direction to the zigzag courses they steer and as a means of uniting all Communists who are not merely careerists.

Since the completion of our westward expansion in the last century, our national spokesmen have failed to specify any long-range goal for the Nation. When they have spoken of the further future, it has been in terms of nebulous hopes that a world order based on peace and justice will somehow be created. Their failure leaves us at a serious disadvantage in the conflict with Communist imperialism, indicated by confusion about the utility of our policies at home and lack of confidence in American leadership abroad.

An effort to discern such a goal appears to have become practicable at the stage now reached in international development. During the postwar years the world has been shrinking with unprecedented speed. Economic forces have steadily increased their relentless pressure for international integration, while modern weapons have made our entire planet one potential battlefield. The Communists have established political control over one-third of the world's population. Among the western nations, NATO, and Coal and Steel Community have forged unprecedented political unity.

In the light of history, these developments and their implications for the future point directly toward an assumption which already has wide acceptance. That is the assumption that at some future time—perhaps centuries from now, perhaps only generations—mankind, if it survives, will be united politically.

On the basis of this assumption, determination of a long-range goal for the United States appears a manageable problem. It is then basically a problem of deciding what types of conditions will best serve the interests and welfare of the American people at the end of the road. If we can determine this in general terms, we will then be able to delineate, as we cannot do now, an ultimate objective for our policy.

The shape of such an ultimate objective already appears dimly visible. Throughout history political integration has been brought about by two alternative means: by force or by agreement. World conquest is so contrary to our fundamental beliefs and ideals that we must expect, if it eventuates, that it will be effected by others. Integration by agreement hence appears the only process which would, at the end of the road, enable the American people to run their own internal affairs and maintain their own way of life.

One means of determining such an objective would be a commission, appointed by the President and Congress as was the Hoover Commission. It could be composed of leaders in American life best fitted for such a job, directed to study this problem as long as might prove necessary and submit a public report of its findings.

A report by a high-level body which dealt with the larger considerations involved and delineated an ultimate goal for the American people would produce many extensive advantages at this time. It would provide our policymakers with a long-range objective to guide them in dealing with immediate problems. It would also promote support for policies which lead clearly toward that objective in Congress and among the American people, among our allies and, finally, among the "uncommitted" peoples, all of whom aspire to avoid domination by others and to run their own internal affairs.

It is possible, of course, that the inquiry suggested here might fail to produce agreement on any ultimate goal. But that would leave us no worse off than we are now. It might actually leave us far better off, since the inquiry would educate public thinking about long-range policies and their implications, not only in our country but also in all free countries throughout the world.

LIVINGSTON HARTLEY.

WASHINGTON.

The Postal Savings System

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 12, 1957

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article regarding the effort to abandon the Postal Savings System, published in the Indianapolis Times of March 5, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHAT'S THE USE?

Postmaster General Summerfield has asked Congress to abandon the Postal Savings System, created in 1910 to provide a place where people in bankless small towns could save money.

The Hoover Commission 2 years ago said the Postal Savings System could be liquidated at profit to the Government. Comptroller General Joseph Campbell and the Treasury have indorsed the idea.

But in the Washington dispatch reporting this development was a line which said Deputy Postmaster General Maurice H. Stans assured the congressional committee no employees would be unloaded if the postal savings is liquidated.

We don't need the cart, but we've gotta keep feeding the horse.

Promotion of Child Safety

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Tuesday, March 12, 1957

Mr. WILEY. Mr. President, there is no one in this Chamber who has not had the disagreeable experience of reading in the newspapers of some automobile accident in his hometown or in Washington involving some youngster. The number of children killed or injured each year by accidents is one of the most serious sources of bereavement to countless parents.

Accordingly, I have been pleased to note that the enterprising Wisconsin Optometric Association has devised a contest designed to spotlight traffic safety.

The current issue of the magazine the Wisconsin Optometrist, tells the story of this contest. It is open to any high-school boy or girl in my State. Prizes are awarded for the best essay entitled "I Didn't See" in 250 words or less.

In this connection, it might be noted that unfortunately only seven States require motorists to undergo a visual examination when they renew their operators licenses. The result very often is those tragic words, "I didn't see," when someone responsible for an accident tries to explain an injury inflicted on a child.

I send to the desk the significant pages from the current issue of the official publication of the Wisconsin Optometric Association. I congratulate the association for its vision and industry in promoting this worthy cause.

I ask unanimous consent that this material be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

1957 WISCONSIN OPTOMETRIST ASSOCIATION HIGH SCHOOL ESSAY CONTEST

The following newspaper clipping, letter describing Wisconsin Optometrist Association's essay contest, and high school poster were sent to the principals of all Wisconsin public high schools:

[From the Milwaukee Sentinel of January 19, 1957]

"'I DIDN'T SEE THE CHILD,' TOO OFTEN TELLS THE STORY OF FATALITY

"The tragic words 'I didn't see the child' or the car or the traffic sign too often follow a fatal accident, Paul N. DeVere, O. D., of Morganton, N. C., said Friday. Failure to see properly is one of the biggest factors contributing to highway fatalities, he declared.

"DeVere is chairman of the American Optometric Association's committee on motorists' vision in traffic safety. He addressed the 15th annual Wisconsin Mid-Winter Safety Conference and Exposition which ended Friday at the Schroeder Hotel.

"Only 7 States require motorists to undergo a visual examination when renewing operators' licenses. The result is that many veteran drivers are able to obtain renewed licenses when their vision no longer meets the 20–40 minimum allowed by Wisconsin law, DeVere stated.

"He called for mandatory eye tests every 3 or 4 years. The tests should check a driver's acuity, depth perception, field of vision, and night sight, the speaker said.

"The permanent licensing system which allows drivers to continue untested as long as they renew their permits leads to situations in which persons who receive grants in aid to the blind may still keep their driver's license in effect, DeVere said.

"He pointed out that the demands of the human eye have greatly increased with civilization. Our grandparents had no electric lights, few books, no fast machines, television, movies or autos. The human eye has been unable to keep pace with technical progress, DeVere said.

"Gasoline has been made more powerful. Autos are miracles of mechanical perfection. We have endless miles of ribbon-smooth concrete highways. Everything in the traffic picture is perfect except the human behind the wheel, DeVere continued. If motorists would care for themselves as well as their cars and highways, there should be no drivers on the road with inefficient vision, DeVere concluded.

"L. E. Beier, director of the enforcement division of the Wisconsin Motor Vehicle Department, highlighted recent progress in State traffic law enforcement.

"Four classes of State patrolmen have completed 13-weeks training courses at Camp McCoy, he said. A fifth class is now taking the course. After completing the requirements, fledgling State patrolmen are given 6 months of supervised field experience.

"Better enforcement depends on voluntary compliance by drivers and modern, considerate techniques on the part of patrolmen, Beier added."

"THE WISCONSIN OPTOMETRIC ASSOCIATION, INC.,
"*Madison, Wis.*

"DEAR HIGH SCHOOL PRINCIPAL: Enclosed is an announcement of our second annual essay contest on traffic safety. We would appreciate it if you would see that it is posted on your bulletin board and that an appropriate announcement is made of it at your general student assembly. You will note that the contest closes April 1st.

"The importance of this year's theme, 'I Didn't See' was emphasized by Governor Thomson, who presented the award to last year's first place winner and stated:

"'Today we are living in a world where the need for visual ability is greater than ever * * *. Nowhere is this more evident than in the field of highway safety.'

"This theme is also suggested by the first three words of the enclosed Milwaukee Sentinel article, and by last year's first place essay which emphasized:

"'But the greatest safety factor is myself. Only when I couple good, visual ability with wholesome driving habits will I insure the safety of myself and others on the highway.'

"This wisdom of these words was recognized by Northwestern University's famed Traffic Institute, which published the essay in its 'review.'

"Should you have any questions regarding this contest or if we can be of further assistance to you, we should be most pleased to hear from you.

"Very truly yours,

"WISCONSIN OPTOMETRIC ASSOCIATION, INC.
"CHARLES O. VAU DELL, *Executive Director.*"

"STOP, LOOK, LISTEN TRAFFIC SAFETY CONTEST

"1. Who can enter: Any high-school boy or girl in the State who is interested.

"2. What are the prizes?

"First prize: $100 savings bond. The first place winner will be the guest of the Wisconsin Optometric Association at its annual banquet to be held at Nippersink Manor Resort, Genoa City, June 2, 1957, for presentation of the award.

"Second prize: $50 savings bond.

"Third prize: $25 savings bond.

"3. Essay: 'I Didn't See!' in 250 words or less.

"4. How will the contest be judged? On message value, originality and public appeal.

"5. Contest closing date: April 1, 1957.

"6. All essays are to be sent to Wisconsin Optometric Association, Inc., 1 West Main Street, Madison 3, Wis.

"The judges' decision will be final and all essays become the property of the Wisconsin Optometric Association, Inc.

"Judges are as follows: A. J. Dix, president, Wisconsin Truckers Safety Council, Wausau; LeRoy Floriana, president-elect, Wisconsin Driver Education Association (Green Bay School of Vocational and Adult Education); Chief Stanley Haukedahl, president, Wisconsin Chiefs of Police Association (Kenosha chief of police); John McDowell, former member, safety committee, National Education Association (Central High School, Madison); B. A. Precourt, safety director, Wisconsin division, American Automobile Association; Everett Ravn, immediate past president, Wisconsin Council of Safety (safety director, Wisconsin Power & Light Co.); R. C. Salisbury, director of safety, Wisconsin Motor Vehicle Department); Judge Oscar J. Schmiege, municipal court, Appleton; Randall Swanson, director of farm safety, University of Wisconsin; Wayne N. Volk, engineer of traffic services, State Highway commission.

"Five minimum visual checks for traffic safety: Visual acuity, field of vision, depth perception, light adaptation, color recognition."

Transfer of War Powers to the Presidency

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES

Tuesday, March 12, 1957

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Hon. H. Reuben Clark, of Utah, formerly Solicitor General and Under Secretary of the Department of State.

Mr. Clark discusses the transfer of congressional war powers to the President by Senate Joint Resolution 19, and says by such action Congress is "a great Samson shearing his own locks."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TRANSFER OF WAR POWERS TO THE PRESIDENCY

(By H. Reuben Clark, formerly Solicitor General and Under Secretary of State)

The purpose of the operations is stated thus:

"Whereas the peace of the world and the security of the United States are endangered as long as international communism and the nations it controls seek, by threat of military action, use of economic pressure, internal subversion, or other means, to attempt to bring under their domination peoples now free and independent."

As to the proposed operations, section 1 and section 3 of the resolution provide:

Section 1 provides that the President is authorized "to cooperate with and assist" any nation or group of nations in the Middle East area, "in the development of economic strength dedicated to the maintenance of national independence." The meaning and scope of the last clause is not clear, and might mean little or much.

Section 3 of the resolution is to authorize the President, "when he determines that such use is important to the security of the United States," to use up to a maximum sum specified "for the purposes of this joint resolution."

The constitutional questions involved in the implementing of these two sections will not be considered here, though some think there are such questions. But apparently over recent years we have expended vast sums (running into billions, the general public believes) in an effort to purchase the goodwill and support of various nations. Experience the world over seems to show that goodwill is not permanently purchasable with money, however much. There is the possibility that such goodwill so gained may seem to go to the highest bidder. If there was such a situation it would be difficult in principle to distinguish it from what in civilian life is known as blackmail.

However, neither section 1 nor section 3 seems to contemplate or provide for any measures of force. The ends to be reached will apparently follow the processes of diplomatic negotiation and arrangement.

However, section 2 of the resolution is of a different sort. It is in fact unique in our constitutional history. It provides that the President is authorized "to undertake, in the general area of the Middle East, military assistance programs with any nation or group of nations of that area desiring such assistance." There is no indication as to how that desire shall be witnessed (whether openly or secretly) nor the Government functionary by whom it shall be made.

It is assumed that this provision could be interpreted to mean the supplying of arms and ammunition and materials of war generally. The popular impression is that assistance of this sort has been, in the not too distant past, frequently extended to various nations. Since considerations touching neutrality seem no longer to trouble anyone, this provision may be passed over here.

But section 2 goes further than this. It provides that the President be authorized "to employ the Armed Forces of the United States as he deems necessary to secure and protect the territorial integrity and political independence of any such nation or group of nations requesting such aid against overt armed aggression from any nation controlled by international communism." (Final wording of S. J. Res. 19: "To this end, if the President determines the necessity thereof, the United States is prepared to use Armed Forces to assist any such nation or group of nations requesting assistance against armed aggression from any country controlled by international communism.")

It is not necessary to consider here the subordination, by further provisions of this section, of the military operations of the United States by the President, to the direction of the United Nations, though this factor is both significant and important.

But now come face to face with the use of armed force in connection with a political intervention as between contending parties in a quarrel in which our interest is remote (though it may be real) and not direct.

The only purpose stated for this use of force is to secure and protect the territorial integrity and political independence of any Middle East nation or group of nations requesting such aid. A like proposed guarantee of territorial integrity contained in the League Covenant, was one of the important elements thereof that contributed to the rejection by the Senate of that document.

Obviously this guarantee will mean war. Such political intervention, under analogous circumstances, seems always to have meant war, if the parties so intervened against were able to wage war.

There is an important and fundamental constitutional question involved here in the authorization which it is so proposed to give to the President. In the last analysis it seems to involve a question of a delegation by Congress of the right and power to declare war.

Armed force has been used very many times in the past by the President, without previous authorization by the Congress, and sometimes with that authorization, but it did not involve the declaration of war or the carrying on thereof.

A brief consideration will now be given to such uses of the Armed Forces:

1. From the earliest days of our national life, the President has used the military forces (Army and Navy) of the United States to protect from, in locally disturbed areas in foreign countries, or to secure satisfaction (sometimes from the local authorities, sometimes from the central government) for, injuries inflicted upon our citizens or their property located in such areas; on some occasions there has been also involved some indignity to our national officers or our flag.

In international relations, such operations are not regarded as attacks on the foreign sovereignty, but as police operations, so to speak, affording no national offense, and by some authorities these operations are viewed as complying with the national duty of a government to protect its nationals and their property.

Under our own constitutional principles and practices, these measures and uses have not been considered as involving the necessity of securing the consent of Congress for the President's action. The right for the President so to act seems unquestioned, either on constitutional or international grounds. The measures taken have not been considered as acts of war.

There have been many occasions of this sort in our history. (See Right to Protect Citizens in Foreign Countries by Landing Forces, memorandum of the Department of State.) But so far as known, there is no suggestion that any such situation exists here as will bring it within these precedents. If so, the President has full authority to handle them without congressional authority.

2. Another set of measures that are taken by governments for a redress of grievances they allege against foreign governments, have been classified by the Honorable John Bassett Moore (the greatest authority on international law and international relations that America has yet produced). Mr. Moore designates them as "nonamicable, short of war." These are measures directed against the foreign government itself, not merely a local unit. They are listed by Mr. Moore as: Withdrawal of diplomatic relations (obviously not involving force); retortion or retaliation; display of force; use of force, with special authority or without special authority; gain of preference in payments; reprisals; pacific blockade; embargo; nonintercourse.

Not all of these measures would require congressional action on our part, but frequently Congress has been consulted and authority to use force, if necessary, has been requested and granted. These remedies are sought because of difficulties that usually (though not always) have already been the subject of diplomatic negotiation between the nations themselves. The applications of force to the solution of difficulties of this sort have not been regarded as acts of war, though they might lead to war.

Mr. Moore has put some cases in this classification that it would seem he might have classified as cases of interposition, e. g., the case of the sloop *Dale* and the island of Johanna, in August 1851 (Moore's Digest, vol. 7, p. 112). Mr. Moore (id., p. 118) makes this interesting comment about another situation: "Perhaps the most remarkable case in which force was used without congressional authority, was that of the march to Peking, in 1900, for the purpose of aiding in the deliverance of the beleaguered legations." (Boxer Uprising.)

It is unnecessary to consider these precedents, because there is in the situations covered by the resolution (so far as they are disclosed) none of the factual elements nor of international law and principles, out of which these various situations, cataloged by Mr. Moore, arise. All of them have to do with controversies and difficulties that arose and existed between us and another power toward which our measures were directed. The resolution contemplates another situation entirely.

3. The situation covered by section 2 of the resolution is wholly different from either of the foregoing 1 and 3.

There have been many reasons advanced for political intervention such as is contemplated here. They may be grouped under the following headings: self-defense; under the obligations of treaty stipulations; for humanity; upon invitation of contending parties in a civil war; balance of power; reversionary interests and right to succession; intervention on the ground of religion; self-preservation; imminent danger; protection from illegal intervention; intervention in financial matters; intervention to prevent social or political revolution in neighboring states from extending to intervening states.

It may be again repeated that these political interventions seem always to have meant war, if the country intervened against was strong enough to wage war against the intervenor.

The considerations that might be alleged here justifying our going to war (so far as the operations of the resolution are concerned), could include, perhaps, self-defense, self-preservation, imminent danger, balance of power, and in some aspects to prevent political or social revolution in remote states but not affecting us in respect of one of the other elements, the element of neighborhood.

A brief consideration of some of the characteristics of the resolution will be useful:

1. There is no allegation that any citizen or his property has been or is a victim of indignity or mistreatment or loss of property. We seemingly have no quarrel on this score (so far as the resolution discloses) with any state in the Middle East. There is no need for congressional approval on this account, and no congressional action would be necessary for remedial action, if the jurisdictional situation existed.

2. We have not now pending any controversy with any state in the Middle East (so far as disclosed by the resolution), involving us as a nation or involving our citizens in any such situation as would give rise to the

employment of nonamicable measures such as are involved in our class numbered II above, and out of which might arise, because of our use of force, a situation leading to war.

There is no need for congressional approval for the use of any of these nonamicable measures, because there is no disclosed situation to which to apply them.

3. The situation presented here is that there might arise a conflict between some state or states in the Middle East (not specified) and some other state or group of states (unspecified), over some controversy (unspecified and seemingly unknown) presumably involving the spread of international communism, that might mean the spread of that doctrine and policy, that might involve the territorial integrity of one of the states in conflict, and we are to use our economic aid, our financial assistance, and our Armed Forces (if this last is desired by someone unspecified), to defeat the spread of international communism and to guarantee the territorial integrity of the nation we favor.

It will be assumed (though possibly contrary to the fact) that the state we favor is solidly against international communism, and therefore in making our decision we shall not be forced to choose between two factions and so add domestic strife to the international one.

The experience of the past would suggest that if the United States steps in, it will be necessary for it to assume the major role in the conflict, for no state in the Middle East is in a position to take on the principal power and its satellites that are seeking to spread international communism.

Thus, so far as human foresight can reach, we would by our very first move toward furnishing military aid (possibly also, our economic and financial assistance) find ourselves the immediate instigator and in a sense the cause of another global conflict, that would begin with a plan for enemy extermination. The result, whoever conquers, is too horrible to contemplate.

The actual result of the situation provided for seems to be that Congress is asked now to make a statement which will, in fact and law, meet, internationally, most if not all the requirements that a declaration of war would require, if the international Communists choose so to regard it. It could be that they would require no further action on our part, to justify an attack on us, at a time of their choosing as soon as they believe themselves sufficiently prepared. In terms of destruction of lives and property, such an attack could equal unnumbered Pearl Harbors.

Those in a position to know the facts (the public is not) may be convinced that this prewarning of what we will do, will serve to postpone (hardly to cause the abandonment of) the initiation of the third global war by the international Communist group, who may indeed be really bluffing. They may think we are doing the bluffing.

But the passing of this resolution will put in the hands of one man, the President (counseled, of course, by his Secretary of State, who will play a major role, and his military advisers), the power, in fact, to declare war—an exclusive function of Congress under the Constitution, as it always has been.

If consulted and asked to perform its constitutional function, Congress might consider that the issues involved in any given situation and at any given time, were not of sufficient importance to hazard the issues of an exterminating war. They might consider there were other ways of meeting the communistic threat than of drubbing it out on the battlefield, always an uncertain issue, as the Austrians found at Marengo when Napoleon turned defeat into victory in the closing hours of a late afternoon.

Of course, the horror of this situation is that, so far as one may judge, the issues will not be determined on one battlefield nor perhaps on many, but in the destruction, by nuclear weapons of one sort or another, of billions of property and great essential industries, and probably tens of millions of lives—the greatest holocaust the world has ever known in recorded history.

Thus in effect this resolution (even assuming that its passing will not be regarded as in itself a declaration of war, as it may be) will delegate to the President the power to declare war, an action that has never before been taken in the history of our country. It would be an action attempting to delegate the authority granted exclusively by the Constitution to one branch of government, to another branch of government to be exercised by it. The whole course of our constitutional government from the earliest times, until certainly the last quarter of a century, has been steadfastly against this power to delegate from one branch of government to another, the powers possessed by the first. In the case of this resolution, Congress would be giving up its own powers to another—a great Samson shearing his own locks.

The records of the constitutional convention that framed our Constitution show that one of the prime concerns of the framers, skilled far more than we, was to deprive the Chief Executive of the power to declare war. Even Alexander Hamilton, the traditional friend of and sponsor for a strong central government, proposed that "the Senate should have the sole power of declaring war." The convention determined, after painstaking, exhaustive consideration, that this power should rest in the whole legislative branch of Government, as being nearer the whole people. After all, the people, the mothers of the Nation, bear all the costs of war. This will be so as never before in the next all-out conflict. Why should the representatives of the people not determine the occasion and time of the final last sacrifice of millions of the Nation's sons.

The responsibility of declaring or initiating the next global conflict is so almost infinitely overwhelming that one would expect every man to shrink from it rather than to seek it.

It is hardly to be supposed that Congress will attempt to delegate away one of the most (if not indeed the most) important of the powers granted to it—the power to declare war. The framing fathers probed this power to its depths. Fresh from the War of Independence—with its scandals, its mistakes, and its treason in high places—they deliberately, after long consideration and searching debate, refused to give the President the power to declare war and placed that power exclusively in the hands of the representatives of the people in the whole Congress.

The present crucial situation is not the time to experiment against the wisdom of the framers and the policy and practice of the Nation for over a century and a half.

The Budget and Taxation

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, March 12, 1957

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Budget, Taxation, Our Chief Worry," which was written by Bill Cunningham and published in the Boston Sunday Herald, Boston, Mass., on February 24, 1957.

This article deals, in a very forthright and courageous manner, with the major problems now facing us, and in my opinion is worthy of the attention of all.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BUDGET, TAXATION, OUR CHIEF WORRY

(By Bill Cunningham)

The British people are reported worried over the possibility that the Eisenhower Middle Eastern policy may be diverting attention from what they see as the real and immediate problem—who's going to control and operate the Suez Canal. They well could afford to join the American people in worrying over whether it isn't diverting attention from another real, immediate, and more dangerous problem, involving them as well as us.

That's the monumental $71.8 billion Federal budget for the year 1957–58 and continuing downward from there through the entire subject of taxes as they hit the American citizen of every level—Federal, State, and community, open and hidden. The question now very definitely is, "How much longer can the American taxpayer shoulder his load, and the rest of the world's with it? And what happens to all the rest, the Suez included, if and when he simply breaks down?"

Thomas G. Sabin, author, television program consultant, and producer, whose address is Post Office Box 340, Grand Central Station, New York,, has specialized for some years in newspaper ads and pamphlets calling attention to the Federal tax situation. Many industrial firms and concerned individuals publish these booklets on their own letterheads for a small price arranged for with their creator. I quote here from the opening page of the latest:

"Back in 1848, the famous Communist manifesto urged a heavy progressive income tax as the best way to destroy democracy. It spelled out the power of this weapon.

"First, heavy progressive income taxes permit a government to take—and spend—more and more of what people earn. Instead of people investing their own money, the government does it for them. This requires bigger and bigger government and larger and larger taxes are levied to pay its costs.

"Secondly, government does not pay taxes, so it undersells private enterprise, or gives away goods and services. Unable to compete, private citizens are forced out of business. Jobs are wiped out. So are tax revenues. To make up its losses, the government levies higher and higher taxes.

"Thirdly, this legalized confiscation finally gets to a point where people's earnings cannot be squeezed sufficiently to pay increasing costs of big government. So deficits are covered by government borrowings. The national debt skyrockets and its interest becomes an added burden on the people.

"Having bartered away liberties for so-styled free or cheap government services, the people find themselves working for the government—for what it chooses to pay, and buying from the government at prices it sees fit to charge. They are no longer free people. They are the slaves of a Socialist state. The power to tax is the power to destroy."

MUCH BIGGER STORY

All the sudden furore over the Middle East, starting with the armed action there last October, has almost completely blanketed the subject of the budget, the big spending and the further blood left in the tax paying turnip, but actually to Americans and the world, it's the bigger subject of the two. The Middle East problem, the

Suez included, can conceivably be solved in any one of several ways—war being one—but who can solve this other on which all else depends? Who's even making an effort?

During his 1952 campaign for the presidency, General Eisenhower said, if elected, his fourth budget—the one just announced—would bring federal expenses down to $60 billion. Instead it's climbed to almost $72 billion. That's 3 percent less than the last Truman budget when we were going all-out at the height of the Korean war.

Experts even say the new Eisenhower figure is not a true picture I'm quoting now from the Washington Newsletter, Human Events—that if expenditure for highways, Social Security and other items for which special taxes are levied are included, the Ike budget goes to $85-plus billion.

Just as a printed monstrosity, that budget is so huge it's practically impossible to get through, but those who can make it, can find some startling comparisons between Eisenhower's fifth year requests and those of Truman at the corresponding midpoint of his tenure. Statistics are almost always dull but these are important:

In fiscal '49, the Truman year, the Public Health quota was set at $174 million; the '57 figure is $606 million. Agriculture, conservation, etc., was $3.5 billion in '49; the current figure is $5.5 billion. The Information Service, now the USIA, was $15 million in '49; now it's $175 million. Education in '49 was $65 million; now it's $538 million. And so it goes, the overall difference being $39.5 billion in '49, and $71.8 billion now.

Since fiscal 1955, Federal spending has increased by $7.2 billion, with only $2.7 billion going to the security and defense programs. The remainder has been an additional billion for Labor and Welfare; $570 million for veterans' services and benefits; $554 million for agriculture; $457 million for natural resources; $922 million for interest on the national debt, and so on.

The new Foreign Aid figure is set at almost $5 billion, with costs of maintaining ground troops in Western Europe alone, estimated at from $3 to $4 billion. That's forgetting that our Sixth Fleet is in the Mediterranean, our Seventh still circling Formosa, and that we still have an army holding the long forgotten line in Korea, a subject still live and unsettled, but never mentioned now and apparently as completely forgotten as the French and Indian wars.

DISMAY IN THE CONGRESS

There has been a certain amount of dismay in the Congress and some voices have spoken. Despite the fact that they couldn't be clearly heard through all the Middle East clamor, they're indicative of concern, and in some cases, anger.

Among other things, an Eisenhower quotation from a campaign speech made on October 22, 1952, has been unearthed. In that he said, "They say, 'You cannot cut taxes, you cannot end, nor minimize, Korean losses * * * What kind of stuff is that—don't and can't? Of course we can and will."

Those merely critical in a political way are Democrats joyfully needling the Republicans over the fact that they used to make capital of the FDR spending. The Republicans used to charge, and correctly, that the late Mr. Roosevelt promised a 25 percent reduction of Government expense in 1932, but instead used the widest possible spending, calling it a remedy for social ills, but actually using it to buy political popularity. So who's now calling whom what? ask these Democrats.

Those actually angry are the conservative Republicans who now can see little difference between the New Republicanism and the New Deal, except that the New Republicanism is now asking more than the New Deal ever did, and for practically the same purposes, plus some new ones it's found. Added to this are the complaints of exasperated businessmen that have literally been flooding Congressional offices, and the letters from individual taxpayers, equally exasperated. It's a slow burn as yet, say those close enough to see, but it could develop into a burst of real flame.

Virginia's Senator BYRD and New Hampshire's Senator BRIDGES are two critics who managed to make themselves heard. BYRD has said he thinks the figure can be trimmed by from $5 to $8 billion. BRIDGES was more conservative. He said by $3.5 billion. These figures represent only token relief.

STILL TWO SCHOOLS

The one explosion that made the headlines was that of Treasury Secretary Humphrey, who said, "I predict we will have a depression that will curl your hair." The economists have proceeded to argue that dire prediction but without reaching any answers any can really guarantee.

It's conceded Humphrey meant future unlimited Federal spending, rather than this particular budget, will bring such a depression, and eventually, not necessarily in the imminent future, but not even those who side with him can say how long "eventually" will be.

There are still the two schools. One is the "economists" first brought in by F. D. R., and who've been calling the shots ever since. These maintain Government spending makes more jobs, more money, and more orders, and, although the cost of living keeps climbing, so do wages and dividends, so it all levels off, and, so, what's wrong with it?

The others are the "free market economists," with whom Humphrey will have to be classed. These claim such prosperity false, inasmuch as it takes money from the taxpayer and spends it on something he doesn't want or merely gives it away on something he isn't going to be able to use. The process of all this may even provide him with a job, but while he has to pay increased prices for an automobile, the Government's spending what it took from him on more planes for the Koreans or more shiploads of wheat for the nose-thumbing Indians.

They talk of such things, too, as the inflationary spiral, and it's all too abstruse for the average citizen to fathom. One thing, however, is increasingly plain even to him and it calls for no fiscal whizz to decipher it. That's that taxes are killing us and with no help aloft and no prospect of relief. That's on all levels—not just the Federal.

The best that can be said for the President's monumental demand is that prices have soared. That's particularly true in the Defense Department where just one item concerns the big bombing planes. They used to cost $2 million apiece, but that entire category has been ruled obsolete. The new kind cost $6 million. They, in turn, will be junked in 2 or 3 years, when the accent will go on super guided missiles that will cost $8–$10 million apiece.

But it's the general state of mind that needs complete overhauling. Instead of finding new ways to spend, we need new ways to save. Just for instance on our State level, where our new Governor Furcolo seems to be doing pretty well, and where he's currently campaigning for a sales tax, in an address recently, he spoke of certain services that would have to be cut unless new taxes are found.

Being a politician, he naturally mentioned the type of services that shouldn't be cut, but the general sense of the statement was that we must find more money so we can keep on spending. Nobody ever seems to mention trying to be more economical with what we already have, and talk of ever removing a tax—the restaurant tax, for instance, rushed through on a hot night in a mad effort to adjourn—would apparently be considered completely heretical.

CONCERN OVER STATE PENSIONS

Another illustration that seems illuminating was the Governor's proper concern over those drawing State pensions, but now working at other jobs that bring their total incomes higher than their original State salaries. His suggestion was that their outside earnings be limited until the total is no higher than the State salary formerly received.

In terms of saving the State money, isn't that going at it exactly backwards? Why not encourage them to earn all the outside money they can and trim their pensions until the whole equals the former State salary, until such time as they can't, or don't want to, work, and then restore the pension in full?

That's a miniature item in this whole massive problem, of course, but it may be typical of political thinking in terms of public expenditure. The complete field is almost too big for normal comprehension.

Just, for instance, 20 years ago, Cordell Hull, the Secretary of State had a department of 753 employees in Washington, supervising and directing the work of 3,662 Americans and native helpers in other countries. That was supposed to be big. Now John Foster Dulles presides over a staff of 5,882 in Washington, 5,883 Americans plus 9,885 foreign nationals overseas, and is budgeted at $230,375,720 for the new fiscal year.

In addition, he's been given the responsibility of something called the International Cooperation Administration, which is spending $1.7 billion for "economic aid" and $4 billion "for coordinating economic and military assistance" programs. The total, comparatively speaking, is colossal.

The American taxpayer can't lug it much farther. I can't conceive of anybody voluntarily surrending his American citizenship and was therefore astounded on last December's visit to the City of Mexico to learn how many thousands of Americans have done exactly that because the taxes here now cut too deeply into their pensions and incomes from savings. Some of those Mexican cities—Cuernevaca, for instance—are now heavily populated with former Americans who've naturalized themselves into Mexican citizens. They said they regretted it, but had to, or live in poverty.

So the British, and all others, had better do some of their worrying about what's happening to us, for if we crash, their source of supply will be over. We need relief—not more suction, from them and from our own.

As to what you can do—it's the same old answer: Write your Congressman. It's been done many times and sometimes it's helped. The new angle now, however, is that many Senators and Representatives are reported fervently hoping a real tax revolt will start with the people giving them a mandate to move in and slash. It seems to be that—or what the Communist Manifesto so diabolically foresaw and prescribed.

Community Colleges Favored

EXTENSION OF REMARKS

OF

HON. CLIFFORD P. CASE

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Tuesday, March 12, 1957

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the March 2, 1957, issue of the Bakersfield Californian, which dis-

cusses the establishing and expanding of community colleges.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

COMMUNITY COLLEGES FAVORED

Support of the community college, or the 2-year colleges formerly known as the junior college, is growing throughout the Nation. This is comforting to those in California who have long perceived the value of this institution.

The pressure of new enrollment that was felt so keenly in the elementary field during the immediate postwar years is moving up now into the junior high school and high school level. By 1970, this wave will strike the college level, and the shock is going to be troublesome, since the colleges already are bursting at the seams with students and there is no prospect of a letup.

The community college, or junior college, idea is one of the most practical ways of meeting this situation. The worth of this insitution has been amply demonstrated. The experience of this community is an excellent example of the generous cultural and educational benefits to accrue from such an institution.

There is a wider recognition now of the value of the community college. There is also the belief that an amplification of the program of the community college and increase in their number will serve as an answer to the problem of how to handle the forthcoming wave of students that have indeed a right to the opportunity to obtain a higher education and how to provide facilities for them.

As defined in official literature, the community college is a 2-year junior college with expanded programs and facilities to accommodate the educational and cultural needs of the entire community. It provides the student with an opportunity to get the first 2 years of college at minimum cost and maximum benefits. As one study has pointed out, the community college, in addition to the benefits for the students, allows planning of curriculum to meet local needs for technical and skilled manpower, and affords the opportunity to borrow technical and other talent from the locality for special instructional needs.

The junior or community college also serves as a screening area for the 4-year colleges and universities, which is considered a very desirable function in view of statistics that show a dropout of about 50 percent of the first and second year students of the 4-year institutions. They would also relieve the pressure on the small liberal arts colleges that do not wish to expand.

The record of achievement of students at our own Bakersfield College and the excellent scholastic standards maintained there, in fact, support the statement of President Robert Gordon Sproul: "Certainly, without the excellent junior colleges that are characteristic of our State, the present policies of specialization and high standards of admission and graduation, in the university, would have been extremely difficult if not impossible to establish and maintain."

This is an accolade of high value, and reflects great credit on the junior colleges of the State. Now, in view of the excellent performance of the community colleges, as they are now called, there is a move to extend Federal aid in order to increase their number and extend their benefits.

Senator CLIFFORD CASE, Republican, of New Jersey, has spearheaded this movement, and his statement on the subject is a lucid and sensible argument in favor of such a plan. There is evidence that Senator CASE and others who are aware of the educational problems of the Nation are gaining headway in their effort to expand the community college system, and their work should receive ample support, because the need is great and the benefits are certainly many and demonstrable in every community fortunate enough to have a college of this type.

Bakersfield, with its excellent college, is able to provide a host of arguments in support of the campaign of Senator CASE and his associates, because the educational and cultural advantages provided by the college here are beyond calculation and benefit every citizen, as all thoughtful persons will agree.

Big Government on March

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, March 12, 1957

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Boston Sunday Herald of February 24, entitled "Big Government on March," written by George Minot.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BIG GOVERNMENT ON MARCH

(By George Minot)

Aunt Miranda's letter from Mars Hill, Maine, had both an airmail and a special delivery stamp on it. Before you opened it, you knew she was mad. It started off with a bang. "Why don't you write about that little clique that has Eisenhower a captive?" she began. "Why can't you see it's the New Deal all over again?" "Why don't you admit you can't tell the difference between a Republican and a Democrat in Washington nowadays?"

Well, Aunt Miranda's letter was disturbing because the questions she asked were hard to sidestep. So, omitting those parts that dealt with how deep the snow was and how many days this winter the thermometer had been below zero, her epistle follows in full:

IT STARTED OFF ALL RIGHT

"The rosy glow is off the scene down in Washington, and a full blown row is going to break out any moment. You might say, if you want to be corny, that the honeymoon is over. Eisenhower, in his first term, failed to make the Republican Party over as Roosevelt did the Democratic. That's because he was an amateur, and because the men he put around him were solid, conservative Republicans.

"Look them over. There was Wilson to head the Defense Department, Humphrey in the Treasury Department, Mitchell in Labor, Weeks in Commerce, Benson in Agriculture, Dulles as Secretary of State. Not a member of the new, liberal school of thought in the whole bunch.

"Not a single one of them was of the energetic, young school of 'we were for Ike before Chicago.' Not a one had his heart on remaking the party. As a matter of fact, the only really rabid Ike man who got a big job was Henry Cabot Lodge, and he went off in a world of his own as head of the United States delegation to the United Nations.

"Yes, the President started off all right. In his first term he worked hard to cut expenses and get the Government out of business. He didn't believe there should be direct and complete Federal action in power programs, farm relief, health insurance, old age assistance, schools and highways. After all, he was an amateur then and a Republican, even if sort of a negative one. He sort of acted like a general who thought he had taken over command of some untrained troops."

BIG SPENDING PROJECTS

"That isn't the way he has been acting lately. Those second term landslide votes had hardly been counted when he started to talk about 'modern Republicanism' is on the march.' A little earlier he had said that Government policy should be 'conservative where finance is concerned,' but nobody pays attention to that any more.

"Now he has got a $72 billion budget on his hands and they are planning to spend more than the New Dealers did. The people around him talk about a $50 billion road building program, almost as much for bomb proof cellars, of all things, and billions more for schools, medicine and relief of the veterans, the farmers, the aged and the lame.

"For heaven's stake don't they plan to leave anything at the level where it belongs? Is Government going to get so big it's going to swallow us all up? And, too, where is all that money going to come from anyway?

"None of the Republicans around here like this. I notice Secretary Humphrey, the real big gun in the Cabinet, doesn't either. Secretary Wilson is kicking up his heels, too. Both of them sound as if they wanted to get out of there."

SHE HAS PRAISE FOR BRIDGES

"In the Senate men like BRIDGES, KNOWLAND, BRICKER, MARTIN and DIRKSEN believe the country is more conservative than the new Eisenhower ideas, especially those on spending and taxing. Some of them are dismayed and fearful. I see you printed a lot last Sunday about what Senator BRIDGES said on how the budget could be cut 2 or 3 billion dollars without hurting anyone or anything. There's a real good man for you.

"I want to predict that Eisenhower will have a lot of trouble with Congress before he is through. Don't forget he can't run again and so has to rely on popularity for a lot of his political power. If Republicans can grumble at Eisenhower as they are doing, how about the Democrats? So far they have aimed most of their fire at people like Dulles and Benson and Brownell.

"They ought to be pretty grateful to Eisenhower. He appoints enough of them to big jobs. Have you looked over the list lately? The worst one I can think of came when he named David Bruce to be Ambassador to West Germany to succeed Dr. Conant. Bruce, if you don't know it, has been a Maryland Democrat all his life and was a big wheel who ran around in circles under Truman. He contributed $1,500 to the campaign to elect Stevenson last fall. So he winds up with a big job under Eisenhower."

DEMOCRATS GET BIG JOBS

"There are plenty more. James Zellerbach is a protege of Paul Hoffman, chairman of the Fund for the Republic, and that's enough to say about him. Zellerbach got the job as Ambassador to Italy to succeed Mrs. Luce. Then you remember Ellsworth Bunker, a big contributor to Democratic campaigns and a hard worker under Truman. He's the new Ambassador to India.

"I've got to mention a couple more appointments that filled me with horror. There was Lawrence G. Derthick as United States Commissioner of Education. He is a Tennessee Democrat, and I read somewhere he was introduced around the Capitol by, of all people, Senator KEFAUVER.

"Then there is that great Democratic liberal, Dr. Gordon Gray. Truman made him Secretary of the Army and now Eisenhower has embraced him. He's going to be the new Defense Mobilization Director. If Ike follows this line much further he's going to split the party wide open. There must be

plenty of distinguished and competent Republicans who could fill all these jobs.

"Why don't you put these things in a column some Sunday? People around here have been looking at me with suspicion lately. One of them said something about my liberal nephew in Boston the other day. It worried me."

Fortieth Anniversary of the Revolution in Russia

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Tuesday, March 12, 1957

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement prepared by William Henry Chamberlin, of the American Committee for Liberation on the 40th anniversary of the revolution in Russia. Mr. Chamberlin was the Moscow correspondent of the Christian Science Monitor and the Manchester Guardian between 1922 and 1934.

March 12, 1957, marks the 40th anniversary of the revolution which overthrew autocracy in Russia. Many historians feel that the March revolution brought into existence a regime which undertook to establish democracy and guarantee rights and liberties to the people. The Communist counterrevolution which followed in November 1917 abolished democracy, wiped out all freedoms, and denied the people their civil rights.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

FACTS SHEET ON RUSSIAN MARCH REVOLUTION

(By William Henry Chamberlin)

I. Question. Was it the Communists who overthrew the rule of the czars in Russia?

Answer. Certainly not. Eight months before Lenin, Trotsky, Stalin, and their followers seized power in November 1917, Czar Nicholas II was deposed and replaced by a provisional government of liberals and moderate socialists.

1. Question. Where was Lenin when the Czar was overthrown?

Answer. In Switzerland where he had been in exile for years.

2. Question. Where was Trotsky when the Czar was overthrown?

Answer. In New York where he came upon his expulsion from France where he had lived in exile.

3. Question. Where was Stalin when the Czar was overthrown?

Answer. In remote Siberia in the fourth year of exile.

II. Question. So the Communists (or Bolsheviks, as they were then called) did not overthrow a tyrannical autocracy?

Answer. No. The Bolshevik revolution, when it came (counterrevolution might be a better word) was carried out against a government that was undertaking to establish basic democratic rights and liberties.

III. Question. Who took the lead in the movement to overthrow Nicholas II?

Answer. The movement was unplanned, without known leaders. It was the product of generations of struggle for liberty, brought to a head by the strains and suffering of war. It began with demonstrations against the shortage of bread in what was then the capital, Petrograd. Then followed work stoppages and student demonstrations. Finally the troops who had been called out refused to fire on the demonstrators and czarism simply collapsed. The rest of the country followed the lead of Petrograd; there was no attempt anywhere to defend the old regime. This March revolution in Russia was very like what we have recently seen in Hungary, a freedom movement of the whole people, with individuals who were active in student and worker organizations and liberal political movements giving a local lead. During the last phase of the overturn in Petrograd, representatives of the Duma, the parliament which existed under the Czar, and of the Soviet which sprang up in the course of the demonstrations gave some organization and discipline to the movement and made possible the creation of the provisional government.

IV. Question. Was this Soviet created by the Bolsheviks?

Answer. No. The word Soviet in Russian means council. Such councils were set up in the cities and in the armies at the front. There were Bolsheviks in these councils; but in the beginning they were a small minority. The majority of the members were Socialist Revolutionaries and Mensheviks, moderate Socialists who believed that Russia's political future should be decided by a freely elected constituent assembly.

V. Question. What were some of the measures of the provisional government?

Answer. Abolition of all czarist restrictions on freedom of speech, press, assembly, and trade-union organization and of all measures of national and ethnic discrimination. Recognition of the need for land reform. It was intended to have the details worked out by a constituent assembly, elected on the basis of universal suffrage.

VI. Question. So it was not the Bolsheviks who gave these basic personal and political rights to the peoples of Russia?

Answer. No, what the Communists did was to deprive these people of these rights, and on a scale unknown under czarism.

VII. Question. How could this be proved?

Answer. Well, under czarism there was a parliament, the Duma. It was elected under a limited franchise; but it included representatives of opposition parties, among them the Bolsheviks. Under communism, no opposition party has been tolerated. At the high point of repression under czarism there were about 30,000 political prisoners, as against many millions under the Communist dictatorship. When Czar Alexander II was assassinated in 1881, five persons were executed; and all were actually implicated in the killing. When Stalin's lieutenant, Sergei Kirov, was shot under obscure circumstances in Leningrad in 1934, many hundreds of persons, few, if any of whom had anything to do with the murder, were shot in savage reprisals.

VIII. Question. Was a constituent assembly ever held?

Answer. Yes, in January 1918, after the Bolsheviks were in control of the central government. Because they were a minority (about 25 percent) in the constituent assembly, Lenin ordered this first parliament elected by universal suffrage in Russia to be broken up by armed force. There has never been a free election in Russia since.

Nothing New About Big Taxes

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Tuesday, March 12, 1957

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the appendix of the RECORD an article entitled "Nothing New About Big Taxes," written by George Minot, which appeared in the Boston Sunday Herald on March 10, 1957. I commend this article to the reading of every Member of Congress.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NOTHING NEW ABOUT BIG TAXES

(By George Minot)

The year 1957 is notable in at least one respect. You don't hear any talk about a tax cut. Even the little fellow who pays most of the bills isn't getting any consideration or promises this year. The Government needs the money. Obviously the bigger it grows and the more functions it takes over, the more money the taxpayers will have to fork out.

In all, it's a $100 billion take. That's what the Federal Government, the States and the localities are exacting this year. And that is 30 percent of the total national income. Nobody pays any attention to economists any more, but governments have been levying taxes since the year one. If one thing has been proved, it is that no nation can long survive when around a third of the total gross income of its citizens is devoted to the payment of taxes.

PEOPLE AT HOME AROUSED

It is the size of the executive budget—a call to collect $72 billion in direct taxes—that really has the lawmakers scared. Their mail is breaking all records. The people back home demand one thing: "Cut that budget!"

One of New England's great Congressmen reported he got 356 letters from constituents last week. A hundred and eighty of them angrily criticized the big spending spree in Washington. More than 100 demanded that he vote against the Eisenhower doctrine for the Mideast on the ground we were handing out too much foreign aid already.

Obviously, Congressmen only can know the temper of the folks back home if they communicate with them in plain words. Soaring Government spending and the determination of the administration to spend even more next year has proved to be the straw that has broken the camel's back. Startling numbers of Americans are needling their representatives, and demanding that they be as careful of the public's money as they are of their own.

There are scandalously frequent examples of how that isn't so. The CONGRESSIONAL RECORD one day last week told the story of the International Cooperation Administration's mission to Iran. That is the little country where they collected more than $100 million in oil revenues of their own last year. And that is where our administrator built up a staff of more than 400 assistants in 10 regional offices.

ADMINISTRATOR GOT BIGGER JOB

One of these offices needed 53 automobiles and 41 chauffeurs for its 55 employees (including clerks and office boys). And this is where we handed out $2,246,000 to build an ultramodern cotton mill for Teheran, where there was no electric power to turn its wheels.

What happened to this administrator? Well, his Iranian program is pointed out as one of the agency's outstanding achievements. He has become economic coordinator in Korea, in charge of a foreign-aid program that is spending far more money.

The spending campaign in Iran resulted in some $300 million in economic aid being passed out to that country. This is equivalent to the income taxes paid by 721,000 average $5,000-a-year American families in a year.

It's little wonder that stuff like this infuriates the man who pays the bills. He sees prices of the things he buys steadily

going up and the purchasing power of his dollar going down. Then he sees almost everybody in the world with his hand out, trying to get hold of some of the dough he works hard to earn.

BROAD FIELD OF WELFARE

The new budget, for instance, sets $14 billion for the broad field of welfare—payments to persons drawing benefits from a vast and rapidly expanding social-security program. This $14 billion is going to be a lot bigger in coming years. Already there is pressure to add health insurance to old-age insurance.

In the coming year the administration wants to start Federal aids for school construction that will cost $1.5 billion in 4 years. It has programs in hand to meet increases in college enrollments, in building more medical and dental schools, in trying to solve the teacher shortage and in controlling juvenile delinquency. There are little pressure groups behind all these things.

Aid to veterans is going up from $5 billion to $5.5 billion and in addition the Government is to pay the school bills of 573,000 veterans.

Around 25 million individuals have a direct stake in the cash that flows out of Washington in the form of welfare payments, veterans' benefits, and farm aids. The latter are down for the astounding total of $8.4 billion in the new budget. All this is evidence of how hard it is to resist the pressure for more and more spending.

You have got to have heavier pressure and louder protests from the millions who are saddled with the burden of providing the money or this spending will get entirely out of hand.

WATCH WHAT CONGRESS DOES

It's going to be tremendously interesting to see what the 85th Congress with its essentially conservative leadership in both parties is going to do with the $72 billion budget. Especially you want to watch what it does with the demand for a continuation of the multibillion foreign aid program and the rapidly expanding welfare program. Quite likely, by the time this Congress, running scared, hears from all the people back home who want to be heard, there will be less talk about this new Republicanism than now.

Not yet has any modern Republican explained convincingly how it is possible to keep up Government spending over a period of years and not go bankrupt. There's nothing new about this. It's the oldest stuff in the world. Empires have fallen or tottered since the beginning of time because the burden of taxation was more than the people could stand.

It has been written here before, and it probably will be again, that the most important thing in the world today is to keep the American dollar stable. You can make out a good case with the argument that the aim of the Russians for the last 10 years has been a breakdown of our economy.

We look across the sea and see many of our allies with the existence of their people in the hands of others. In many ways they are better off than we are. The United States has no rich uncle. We have to swim or sink.

Israel Seeks United Nations Protection

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 12, 1957

Mr. ROOSEVELT. Mr. Speaker, I have just received a copy of a telegram sent March 12, 1957, by Rabbi Philip S. Bernstein, chairman of the American Zionist Committee for Public Affairs, to Under Secretary Christian A. Herter, in connection with the action in Gaza of the Egyptian Government. The contents of this telegram are in line with the position which I and many of my colleagues stated here on Tuesday, February 26. I feel very strongly that we owe a great moral responsibility not to allow conditions to return to their former state of hostility. The guaranties which were contained in the February 11 statement by Secretary of State Dulles, and which were reiterated by President Eisenhower in his speech on February 20, are rapidly proving themselves to be paper guarantees.

Mr. Speaker, in the interests of permanent peace, we must prove ourselves to be a Nation interested in true justice and must maintain Israel's rights under the pertinent United Nations resolutions.

Under leave to extend my remarks, I include the timely telegram sent by Rabbi Bernstein:

Present behavior and demands of Egyptian Government not only contravene basic assumptions of Israeli withdrawal of Gaza, but also threaten authority, prestige, and usefulness of the United Nations as an instrument for the attainment of peace. Therefore I take the liberty to urge our Government to exert its leadership by direct diplomatic means and through the United Nations to resist present action by the Egyptian Government in violation and contempt of world public opinion. If this is not done at once and unequivocally, the confidence of small nations in the commitments of the United Nations and the great Western Powers will be undermined. I recommend also that all further action in the Suez Canal clearance be halted until the Egyptian Government gives definite, dependable commitments that the use of the canal will be insulated from the national politics of any country, and that equal rights will be granted to the shipping of all nations, including Israel. It would be incongruous for international community to clear the Canal and to repair the damage caused by Nasser's own sabotage in the absence of any assurances that Nasser will permit the Canal to remain an international waterway and to cooperate in the maintenance of peace.

Rabbi PHILIP S. BERNSTEIN.

Water: Our Greatest Resource

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Tuesday, March 12, 1957

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Our Greatest Resource," from the February 18, 1957, Concord Daily Monitor, Concord, N. H., my home city. The article points out that while water may be a problem, it is also one of the greatest assets a State or section can have.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OUR GREATEST RESOURCE

Water is a problem, when floods come. But water is also one of the greatest assets a State can have, and it is becoming increasingly so in these United States.

West of the Mississippi the past year there was drought across a tier of many States. Crops were lost. So was the wind-blown top soil. And this condition was not new, for it is a pattern repeated every few years. The Great Plains have always, in the memory of white men, been largely treeless.

East of the Mississippi there is a water shortage, too. This is the most industrialized section of the land, with the greatest concentrations of population, and the use of water has grown and grown, until water supplies are an increasingly great problem.

Shipping on the canal connection between the Great Lakes and the Mississippi Basin was stymied for lack of water. Industries are bypassing communities where the water supply is not ample. Even in New Hampshire the Portsmouth area has water problems because of the addition of the airbase. In Concord present water supplies will become insufficient perhaps as early as 1960.

New Hampshire as a State has some advantages in respect to water. It has mountain ranges which help to create precipitation. It has a forest cover which helps to hold water in the soil. It has many great lakes and ponds and streams. And New Hampshire can create, if it will, many more storage facilities, and remain green and increase its water levels to meet ever growing demands upon its water resources.

To anyone who has traveled west in our own country, or to many of the older nations on this earth, in northern Africa, in the Mideast, in much of Europe, in China, the great blessing enough water can be to the land on which we live is all too apparent. Here, used as we are to seeming to have enough, we do not realize the extent to which we have been blessed, nor the great need for making certain that we are ever thus blessed.

Preservation and better use of our water resources is one of the most certain assurances of a sound future for a State like New Hampshire, which has so few other natural resources.

There has been some reclamation elsewhere in the country, but the abuse of water resources has probably outstripped the conservation measures. The population of the country grows. The demands upon water increase even more rapidly. Other than water resources are also being used up; the soil, our mineral wealth, our forests. In the long run, if we in this State are wise, and conserve our water resources we will have won the race in the competition between States.

Some factors may help us. We are on the ocean. The day will come when our seaboard may draw its water from the sea, purifying it as it is used. The day will come, too, when atomic energy may release water now used principally for generation of power for other uses. The antipollution program already in process of development will help in many ways.

Irrigation in this State is still in its infancy. It has great possibilities. If we can reduce erosion, which comes mainly here from the action of streams, we can, with the heavy vegetation which covers the State increase the quality of our soils more rapidly than is possible in many States, and incidentally improve the natural conservation of water.

In a desert it is the oasis alone which thrives, and New Hampshire in the future can, if it will, be an oasis among States, considering the Nation as a whole.

It is not alone what things we do, as public works, which can make and keep New Hampshire a garden State, but equally what each individual does with the land he owns. If all can have a consciousness of the causes

and effects involved in the problem of water then the State is surely safe, protected by the best insurance policy it can buy to assure its everlasting future prosperity.

Juvenile Delinquency Among American Indians

EXTENSION OF REMARKS
OF
HON. THOMAS C. HENNINGS, JR.
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Tuesday, March 12, 1957

Mr. HENNINGS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which deals with the problem of juvenile delinquency among the American Indians, and which pays particular tribute to our friend and colleague, the senior Senator from North Dakota [Mr. LANGER].

Among his other great works, Senator LANGER has labored long and hard in an attempt to alleviate the problems of juvenile delinquency, not only in his own part of the country, but throughout the length and breadth of the land.

I am certain that all of my distinguished friends in the Senate join me in wishing Senator LANGER a speedy recovery from the illness which has incapacitated him for a number of weeks. We all hope that he will be back with us very, very soon—not just to help us wrestle with the problems of juvenile delinquency, but the myriad other problems with which he has had such wide experience.

Come back soon, BILL.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT ON JEWEL BEARING PLANT AT ROLLA, N. DAK.

The other day the Secretary of Defense advised Senator WILLIAM LANGER that the jewel bearing plant at Rolla, N. Dak., which had been scheduled to close on December 31, 1956, will continue in operation. What is so significant about this statement is, that a pilot project to bring employment and improve the economy of the Indian people will continue in operation.

The United States Senate Juvenile Delinquency Subcommittee of which I am chairman, in 1954, with Senator LANGER as acting chairman, conducted a series of hearings in the State of North Dakota to determine the relationship of the plight of the American Indian and its effect on the Indian youth on various Indian reservations. During the course of those hearings, Indian leaders and the Indians themselves urged the subcommittee to do everything in its power to bring industry in or near Indian reservations to provide employment for the Indian people and thereby improve their economy.

Through the efforts of Senator LANGER, Senator YOUNG, the North Dakota Congressmen BURDICK and KRUEGER, and State officials in the State of North Dakota, the jewel bearing plant at Rolla, N. Dak., was instituted. This plant hires exclusively Indian labor. The success of this plant was brought to the attention of the United States Senate by Senator LANGER and the Juvenile Delinquency Subcommittee, and with the aid of the Commissioner of the Bureau of Indian Affairs, a program was inaugurated to induce industry to go to other Indian reservations throughout the United States. To date there are plants at Gallup and Zuni, N. Mex.; Flagstaff and Casa Grande, Ariz.; Cherokee, N. C.; and Lamb Deer, Mont. These plants hire Indians exclusively. There are plans for a greater number of such industries to be brought to or near Indian reservations.

However, with the announcement of the closing of the Rolla jewel bearing plant, Indian leaders and public officials dealing with Indian affairs became greatly alarmed since the closure would seriously affect the existing plants above mentioned and also affect the plans for future installations of industry near Indian reservations.

Senator LANGER, acting in a dual capacity of Senator from North Dakota and as a member of the Juvenile Delinquency Subcommittee, which had done so much to aid the program of bringing industry to or near Indian reservations, immediately took up the matter with the Secretary of Defense, Charles E. Wilson, and with Mr. Arthur Flemming, Director of the Office of Defense Mobilization. He called together a meeting at his office with Senators from 11 States who joined with him in sending a letter to Secretary of Defense Wilson pointing out the reasons why the jewel bearing plant in Rolla should continue in operation. Attached to this statement is a memorandum of the meeting held in Senator LANGER'S office pointing out some of the reasons why the Rolla plant should remain open and the reason for industry being urged for areas near Indian reservations.

In concluding my statement, I want to take this opportunity of expressing the Juvenile Delinquency Subcommittee's thanks to Senator LANGER for the zeal which he has always shown in problems affecting the American Indian both as a Senator from the State of North Dakota and as a member of the Juvenile Delinquency Subcommittee which has held hearings throughout the United States on problems affecting the American Indian and its relationship to their youth. I believe that the decision of the Defense Department to keep the Rolla jewel bearing plant open is of great significance and I am happy of the role that the Senate Juvenile Delinquency Subcommittee played.

MEMORANDUM ON MEETING HELD IN OFFICE OF SENATOR LANGER ON JANUARY 7, 1957, PERTAINING TO INDUSTRIES ON INDIAN RESERVATIONS

At a meeting called jointly by Senator LANGER and Senator YOUNG, of North Dakota, on January 7, 1957, in Senator LANGER'S office, Senators and their representatives from 10 States met with representatives of the Department of Defense, Office of Defense Mobilization, Department of Interior, Department of Commerce, and two Senate subcommittees; there were two primary subjects of discussion: (1) A plan to bring more industrial plants to or near the various Indian reservations in the United States, and (2) to inquire into the feasibility of continuing operation of the Turtle Mountain ordnance plant at Rolla, N. Dak., which hires almost exclusively Indian skilled labor in the production of jewel bearings for defense and other purposes.

The following Senators appeared in person: Senator CHAVEZ, of New Mexico; Senator CHURCH, of Idaho; Senator ANDERSON of New Mexico; Senator MUNDT, of South Dakota; Senator MORSE, of Oregon; Senator O'MAHONEY, of Wyoming; Senator YOUNG and Senator LANGER, of North Dakota. Representatives of Senators attending the meeting were as follows: Charles E. Munson, of Senator BARRETT'S office; Vic Reinemer, of Senator MURRAY'S office; Herb Kirstein, of Senator WILEY'S office; Roy Dockstader, of Senator MANSFIELD'S office; Wilson Hefner, of Senator WILEY'S office; Earl Reynolds, of Senator DWORSHAK'S office; Ken Gunthner, of Senator CASE'S office; W. E. O'Brien, of Senator MUNDT'S office; William Connell, of Senator HUMPHREY'S office; Arthur Juhnke, of Senator CASE'S office; Sterling Munro, of Senator JACKSON'S office; and John A. Carver, of Senator CHURCH'S office. Those representing Government agencies were: Victor Cooley, of the Office of Defense Mobilization; Carl Beck, of the Bureau of Indian Affairs; William Zimmerman, of the Association of American Indian Affairs; and T. R. Baldwin, of the Office of Defense Mobilization. Those representing Senate subcommittees were Peter N. Chumbris, of the Juvenile Delinquency Subcommittee, and James Gamble, of the Senate Interior Committee. Robert Danielson represented the Bulova Watch Co.

After fully discussing both of the above issues for nearly 3 hours, in summary these points were reached: (1) That the Indian people have proven themselves as capable, industrious and have an excellent record of average daily attendance on the job. It was pointed out that at the Rolla jewel bearing plant in North Dakota the turnover of employees was only 3 percent whereas in a similar plant in Massachusetts of non-Indian labor, the turnover of employees was 100 percent. (2) That the Indian people contrary to some public belief have adapted themselves to a special type of skilled labor. (3) That there are now industrial plants that have been established on or near Indian reservations in Rolla, N. Dak., Gallup, N. Mex., Flagstaff, Ariz., Cherokee, N. C., Lamb Deer, Mont., Casa Grande, Ariz., and Zuni, N. Mex. There are also under consideration plants in Oklahoma, Wyoming, and in the area in close proximity on the borders of Washington, Oregon and Idaho on the McNary site. (4) That it was pointed out many Indian reservations have the facilities for industrial power availability of water including use of power, transportation, available sites for expansion, and a stable source of labor supply. (5) That the Indian leaders on all Indian reservations have expressed the desire for industrial plants to be brought in or near the Indian Reservation to stabilize the economy of the Indian people. It not only will provide salaries for workers, but will aid other factors in the stabilizing of economy of these communities. At the same time it will permit Indians to obtain jobs near their reservations and near their families and cultures, rather than force them to go to large cities away from their families and traditions. This is especially significant since the relocation program cannot possibly absorb enough Indians to stabilize the economy of the Indian people living on the Indian reservations. (6) That the Indian people through their leaders have expressed the desire that they want to provide for themselves and their children by obtaining stable and gainful employment so that they may become a self-sustaining people and not depend, any more than necessary, on the services accorded by the Federal and State Governments. Not only will they be more self-sustaining economically, but it will further establish in them the strong family and community pride that has always been a part of the Indian people. (7) That the Commissioner of the Bureau of Indian Affairs has personally met with the leaders of the Indian tribes throughout the country. (8) That the Senate Juvenile Delinquency Subcommittee has held hearings on or near Indian reservations in all parts of the country and that the Senate Subcommittee on Indian Affairs has likewise conducted investigations on problems regarding the Indian people and that through the representatives at this meeting each expressed views which coincide with the views expressed at this meeting. As a result of the above, Senator LANGER announced that he is submitting a bill for $200 million which has as its primary purpose the aiding of the

Indians and the Indian tribes in establishing industries on or near Indian reservations. This bill will be submitted to the Senators from the various States which have Indian reservations.

Summarizing the views on the reason for continuing the Rolla plant, other than those expressed above, it was pointed out: (1) That there are over 50 million jewel bearings needed to accommodate our defense needs in this country. (2) That we only have approximately 3,600,000 jewel bearings in storage at this time. (3) That the Rolla plant is the only available source of jewel bearings from plans in this country. (4) That Russia produces over 200 million jewel bearings each year and they are not dependent upon outside sources for jewel bearings. (5) That Switzerland which is and has been a source of supply of jewel bearings to the United States, in the event of war, may be stopped in some fashion by Russia from either the production or the distribution of jewel bearings for the use of the United States. (6) That without question jewel bearings are an essential ingredient of almost all phases of our defense activities whether it be in the form of missiles, equipment, or transportation facilities. (7) That the differential in cost and quantity of production has reached the point where it is feasible for us to continue production at Rolla.

A motion was made and unanimously passed in which the Senators who attended the conference would write to the Secretary of Defense and to the Director of the Office of Defense Mobilization urging that the Rolla plant continue in operation as originally proposed. The conferees also agreed to exert all possible action to bring industry in or near the Indian reservations.

Interest Rates on United States Savings Bonds

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 12, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "United States Bonds May Yield More," published in the Hammond (Ind.) Times of March 7, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UNITED STATES BONDS MAY YIELD MORE

In proposing higher interest rates for United States savings bonds, Treasury Secretary Humphrey has taken a wise step.

The rate of yield for virtually every other type of investment has gone up. This is partly because of the tight money policy adopted by the Government itself, in order to check inflation.

Savings bonds have been looking less and less attractive to investors by comparison. Redemptions have been heavy.

Something had to be done, for the Government leans heavily on bonds as one means of obtaining its money. An estimated 40 million people now have more than $40 billion invested in these bonds.

The proposed interest rate increase is a modest one—from 3 to 3¼ percent, plus a better yield to an investor who finds it necessary to redeem the bond before maturity.

This is a better course than another suggestion—namely, that the Government tie savings bonds to the cost of living, and let them be redeemed for more if the cost index goes up.

Inflation, if it occurs, hurts anyone who loans money.

We fail to see how the Government fairly can protect savings bond investors against inflation without advancing the same protection to—let's say—bank depositors or to the holders of mortgages.

The way to deal with inflation is to restrain its causes rather than to try only to patch up its bad effects.

United States savings bonds have been widely criticized of late. But they have been of great service to the Nation.

Beginning with the start of World War II war bonds, millions have learned to save who saved little or nothing before.

Having nearned to save through war bonds, millions now are saving in other ways—through stocks, bonds, insurance, savings accounts, etc.

There is still extravagance at many levels of American life—including government—but private thrift is a habit with many. We can thank savings bonds in part for that.

The Attack on TVA and Public Power

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 12, 1957

Mr. ROOSEVELT. Mr. Speaker, Mr. E. H. Wright, of Brownsville, Tenn., the president of the Tennessee Valley Public Power Association, has recently directed my attention to a series of inaccurate and misleading full-page advertisements that have been appearing in national magazines on behalf of the private power lobby. These advertisements attack the Tennessee Valley Authority, an American creation, that has been hailed the world over as an outstanding example of democracy in action.

Such attacks indicate the need for action by our public regulatory bodies to stem the tide of political advertising by private power companies which is written off by these companies as a legitimate business expense and thus paid for by the consumer and taxpayer.

Under leave to extend my remarks, I include the text of a typical advertisement together with a refutation of the misleading inferences found therein:

[Advertisement]

WHERE DO YOUR TAXES GO?

You may have a pretty good idea where taxes go. But did you know that some go to help pay other people's electric bills?

They're the families and businesses that get their electricity from Federal Government electric systems like the TVA.

While about 23 cents of every dollar you pay for electricity from your power company goes for taxes, those other people pay much less * * * only about 4 cents per dollar if their power comes from the Government's TVA, for example. As a result, you are taxed more to make up for what they don't have to pay.

Don't you think this unfair tax favoritism needs thorough study and discussion?

America's Independent Electric Light and Power Companies.[1]

TENNESSEE VALLEY
PUBLIC POWER ASSOCIATION,
Chattanooga, Tenn., February 20, 1957.

REBUTTAL

1. The ad says "only about 4 cents per dollar" is paid to Government by power users in the TVA area. State and local taxes paid by TVA and its distributors last year amounted to about 4½ cents per dollar of electric bill. But TVA had net income of nearly $54 million, or about 24½ cents per dollar of income—and all of this money goes to the Federal Government because TVA is a Government corporation. So in reality TVA power users paid nearly 29 cents to Government out of every dollar they paid for electricity.

Power users in the Tennessee Valley are paying back the cost of TVA, yet it still belongs to the Federal Government.

2. The fact—not mentioned in the ad—that private power companies are now enjoying benefits that will eventually total nearly $5 billion in Federal subsidies through the so-called fast tax writeoff setup.

This was referred to as "bluntly, a subsidy" in a recent report issued by the Joint Committee on Internal Revenue Taxation, headed by Senator HARRY F. BYRD.

Senator BYRD said, "This is a hidden cost for which no appropriation is required by Congress, and its effect makes it more difficult to balance the Federal budget or reduce the Federal tax burden on taxpayers not receiving the benefits of this provision."

And the magazine ad sponsored by America's independent electric light and power companies didn't mention the estimated $18 billion additional subsidy which will accrue to the private utilities as a result of section 167 of the Internal Revenue Act.

3. Advertising like this—which does not sell electricity or create good will for the power companies—is paid for in part by the people who buy electricity from the power companies. But some 52 percent of the cost of this propaganda comes out of the Federal Treasury, since advertising is deductible for tax purposes. Vicious, insidious advertising like this reflects on outstanding American institutions like TVA, and on the 5 million consumers who obtain TVA-produced power from municipal and rural cooperative electric systems. The ratepayer and the taxpayer should not pay for such advertising. This is an item, which, if it must be incurred, should be paid for by the stockholders—the owners of the company, and the only persons who could conceivably benefit in any way from such advertising.

A Small-Business Man Speaks Out

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. MULTER. Mr. Speaker, the following letter came to me unsolicited. I spread it upon the RECORD so that those who are constantly telling us how close they are to the grassroots may know how the small-business men of our country feel toward this administration. The

letter, dated February 28, 1957, is as follows:

Hon. ABRAHAM J. MULTER,
House of Representatives,
Washington, D. C.

DEAR SIR: We Americans are heading down the road to ruin via Inflation Boulevard in a headlong plunge, gathering speed in an alarming manner. The driving force behind the wheel is William McChesney Martin, along with his backseat drivers, the Federal Reserve Board yes men, plus ill-advised President Eisenhower and his economic advisers.

You say, "Has this writer lost his reason? Martin is a tight-money man, waging an all-out war against inflation." Well, let's analyze the results of Mr. Martin's deeds and see who is correct. Let's further examine the effects of Martin's and the Eisenhower adminstration's tight-money policy and see exactly what measures were employed to achieve these results.

Mr. Martin's first act was to pull the plug on supporting Government bonds by reducing the purchase of same. The effect was to freeze banks' bond holding and thus reduce the money available for loans. The next action taken by Mr. Martin was to systematically increase the rediscount rates of the Federal Reserve Banks, or in other words, raise the rate of interest that the member banks must pay to borrow from the Federal Reserve. These rediscount rates have risen from 1½ to 3 percent and now stand at a record peak. Another measure employed by Mr. Martin was the pressure reduction of reserve credit, which the Reserve authorities have placed at the disposal of its member banks. The purported aim of Mr. Martin was to curb inflation; however, let's examine the results of the measures instigated by William McChesney Martin and see what has and has not been accomplished.

Yes, Mr. Martin did make money scarce and costly, but did his deeds help curb inflation? The answer is "No." What Mr. Martin did accomplish was to make money more expensive and the greedy moneylenders richer. Did he curb expansion and large capital expenditures of big business? Well, he did in some small measure, but the big boys in most cases just paid more for their money and passed on the increased cost to John Q. Public, the consumer, thus pushing the inflationary pressure a little harder. Uncle Santa Claus also granted this chosen group special accelerated depreciation write-offs to further encourage their expansion and make the big boys bigger. What about the small-business man? What happened when he went to these moneylenders? When he went to lending institutions he was informed that the well was dry. What had dried up the stream of money? For one thing, the acts of Mr. Martin, and for another, the fact that big business had been to the well and tapped the source too heavily. Who, then, has been the victim of the deeds of William McChesney Martin and the Eisenhower administration? The answer is that small business has been one of the prime victims.

Now then, let's take a look at the housing industry. How has this industry, which represents our greatest weapon in the battle against communism, fared under Mr. Martin's new ideas of deflation backed by the Eisenhower administration who pretends to protect the little man and especially the veteran? The demand for more and better housing still exists and so does the need, but of course, these homes have to be financed. What happened to the money that was formerly available to finance these homes? The greedy moneylenders turned to greener pastures (and you can't blame them to some degree). They turned their backs on the 4½-percent return that they could get on VA loans in spite of Government insurance. In fact, 5-percent FHA loans suddenly lost their attraction to the Shylocks except where they could get bribes in the form of bonuses paid, or extra points as they term them, to negotiate the loans. These points have continued to rise until now it is not uncommon to pay 6 percent or 8 percent premium to have a financial institution approve a Government-insured loan. This is nothing short of money blackmail, yet it is tolerated by the Eisenhower administration, which turns its back and closes its eyes to such shenanigans; and in spite of usury laws these Shylocks get away with this practice. The misguided geniuses fail to realize that increased interest rates are punitive and generalized, not specific. These increased interest costs invariably slow up those segments of the economy that require acceleration and do very little to deter the dizzy ascension of those portions of the economy that are running wild.

Now, let's take a closer look at these so-called hard money policies of Mr. MARTIN and the Eisenhower administration and see what effect these policies have had on servicing or paying interest on our national debt—the increased cost of money in the form of higher interest rates, even to the United States Government, have cost hundreds of millions of dollars in additional interest on the national debt and thus has cost each and every citizen taxpayer more money. President Eisenhower's new budget provides for increased interest costs of $890 million. It is rather ironical that the very government that creates the money is forced to pay exorbitant interest on this same money. Who gets fat? The money lenders.

Many people scoff at the great depression of the early thirties and say, "It can't happen here again." Well let me tell you that a great many of the factors that preceded the crash in 1929 are here with us today. Look at interest rates—they closely parallel 1929. In the late twenties, interest rates were increased for the purported purpose of controlling stock speculation. Today as we view the results of these increased interest rates in retrospect, it becomes obvious that the net results were that this action did not control or deter stock speculation, yet the increased costs of money did slow up the vital processes of the economy and contributed substantially and materially to the crash in 1929. Herbert Hoover was talking about "A chicken in every pot and a car in every garage." We are well on the way to having two cars in every garage, but there are comparitively few that are not in hock. The popular slogan of 1929 was, "Never sell America short;" today they say, "It can never happen again; the old economic laws are antiquated; this is a controlled economy." Well, let's wait and see what happens if the present experimenters continue to rule the economy. Even Herbert Hoover, who had his hair curled—but good—in 1929, warns against our complacency concerning the free spending spree in government and the rising cost of living.

Let's examine the janus outlook of the Federal Government. On one hand they yell, "Curb inflation," and then they talk out of the other side of their mouths and bring forth the largest inflationary peacetime budget in the history of this country. They say, "Do as we say, not as we do." The fact of the matter is that we have so many inept incompetent advisers in government that they just don't know what they are doing or what they are trying to accomplish. Secretary of the Treasury, Humphrey, warns, "If the increase in Government costs is not stopped, we will have a depression that will curl your hair," yet he acquiesces to the whims of the administration.

The administration blames the exorbitant increase in the budget on the Russians and tries to justify these ungodly proposed expenditures as the price of keeping our country prepared and containing communism. Well, let's look at the real facts concerning this budget.

In 1954, the first budget of the Eisenhower administration totaled $67,800,000,000. That year, the military and foreign aid portion was $48,700,000,000. This new proposed record-breaking budget of $71,800,000,000 has allotted $46,500,000,000 for military and foreign aid, or actually $2,200,000,000 less than in 1954. These are the facts.

In this wastrel budget, the civil or welfare state section is wherein the real increases occur:

	Increased
Veteran services and benefits	$796,000,000
Labor and welfare	294,000,000
Agriculture and agricultural resources	626,000,000
Natural resources	445,000,000
Commerce and housing (due to taking out road bonds)	(Decreased)
General Government operations (courts, Congress, and District of Columbia administration)	243,000,000
Interest on Government debt	890,000,000

This is a welfare state budget beyond any Socialist's wildest dreams of a decade ago. Herbert Hoover cautions, "We Americans should realize that we cannot have every social and public works improvement of our dreams all at once, especially in a world where we have to defend ourselves from a monstrous international danger." We cannot pay $103 billion to be governed at various levels without straining our economic stability to a point where it is in danger of blowing up in our faces.

All you have to do is deal with most Government agencies or take a casual trip through one of our Government offices and you will quickly find the answer to this outrageous, shocking budget. A girl clerk that formerly worked for us went into civil service. When she complained about not having enough work to keep her busy, her supervisor told her, "You had better wise up and keep your mouth shut—this is the Government."

I spent 3 years in the Navy during the last war, and I could recount multitudes of incidents of waste of material and manpower that would enrage and sicken every honest God-fearing American. There was some excuse for these sordid conditions during the war emergency, but we sappy citizens have let this pillage of our pocketbook so unhalted for so long a period of time that we just keep dishing out and paying up without questioning the usurpers. Our bureaucrats find new and better ways each year to preempt our rights and confiscate our money with the aid of inept, unqualified leadership in Government. The Federal Government has gradually taken the form of the very thing our forefathers fought against, for we seem to have reached the point where we have taxation without representation in spite of elected officials in Congress. The Federal Government may own our bodies, but it will never own our souls. How long are we going to stand idly by and let our money be dissipated without registering our protests against this foul and sinful waste? Write to your Congressman. Throw the fear of God into these supporters of wanton waste. Examine their voting records; mark them well, and then rid yourselves of them come next election day.

We citizens and our representatives must call a halt to the practice of looking to the Federal Government for aid and handouts in the provinces that are strictly State or local responsibilities. We must remember that the Federal Government obtains its revenue from the citizens of our municipalities and our State; so why let the bureaucrats get their paws on this money, take their overhead cut, and then dole the money in reduced value back to us. Maryland's contribution

to the financing of the Eisenhower Federal aid to public school plan would amount to $6,906,000, yet Maryland would receive only $4,496,000 in aid. The $2,410,000 shortage disappears in the Federal boondoggling maneuver and we cannot afford a costly gift of this nature where we lose $2,4100,000 through the doubtful privilege of having the Eisenhower administration dole out this financing for our school program. You never get something for nothing from the Federal Government, but you can be sure you'll come out on the short end when you get involved with them. The Federal Government has usurped States rights to too large an extent; let's keep our own house in order and control and guard our own destinies without Federal interference.

Whatever happened to the Hoover report? We spent hundreds of thousands of dollars to find out what was wrong with the operation of our Government, and now, years later, we have yet to act fully on the findings of the Hoover Commission. For the most part, each and every citizen is to blame for this sad state of affairs. We look upon these confiscatory taxes as an inevitable price for our American way of life, and we elect inept, unqualified representation in many instances to run this great Nation. If we American citizens are going to bask in the apathy of being taxed to death and permit the country to be run by boss politicians, then we have ourselves to blame. How many people realize that if the recommendations of the Hoover Commission were adopted, the potential savings to the taxpayers would be approximately $5 billion annually? Some token recommendations were put into practice under the previous administration, and a good deal of money was thus saved. Of course, we can't economize in Government too much, as it might hurt some politicians—and that would never do, even though both Treasury Secretary Humphrey and Herbert Hoover agree that the present tax rates are so high that they will hamper the growth of our economy.

How can we suppress this inflationary surge and stabilize the national economy? The first simplest and most sane answer is to curb installment credit through enactment of standby consumer credit restrictions similar to the old regulation W. We know that politicians don't like the idea of getting General Motors, General Electric, and the rest of the big-business boys mad at them, but just for once, let's act out of good commonsense and not out of political expediency. Secondly, freeze salaries and wages, except where increased productivity results to control costs, or additional skills or values are obtained to warrant such increases. Third, encourage capital expansion and see that money is available to small, sound businesses in large amounts at reasonable rates. Fourth, enact a graduate income-tax rate on corporations similar in general structure to the individual rates. Finally, cut the Federal budget by $5 billion and eliminate a large portion of the waste therein. We Americans cannot continue to pay out annually $103 billion of our individual and business income for taxes and other Government levies and at the same time have enough reserves and savings left to finance that growth of industry needed to employ the one and one-half million persons entering the employment market each year, and also finance the homes that are necessary and vital to our expanding population.

What would be the results of these acts? The first move of tightening consumer-goods credit would alleviate the scramble for goods and help hold the price line. In addition, consumers would be forced to save in order to buy at a later date, thus creating an increased savings fund to ease the tight money market. The second action would stem the spiral of rising costs and enable the curtailment of price increases. The third proposal would expand the overall national productivity and help hold the line on prices through increased production and the resultant increased competition. At the same time, small businesses would be able to expand and compete more equitably in the consumers' market. The final step of cutting the Federal budget would decrease the inflationary pressure, provide for a tax cut and again increase the savings funds through these tax reductions, plus alleviating the labor shortage in commercial businesses through the reduction of excessive Government personnel.

The law of supply and demand has always been the fundamental force in the economic structure since time immemorial; so if we just give it half a chance to operate and set a balance so that no segment of the economy is placed at a distinct disadvantage, like the small-business man and the farmer have been in the past, then we'll recover our balance and forge ahead on a sound, economic basis, without concern for boom-and-bust cycles.

Let's get back to Mr. William McChesney Martin and his tight-money philosophy. So far, the only people his policies have curbed and hurt are the small-business man, the farmer, each and every taxpayer, and potential home buyers—particularly the veterans. Now let's take a look at big business. The basic industries raised their prices because money cost them more and wages were increased through union pressure. Did that help curb inflation? No. The railroads increased their rates for basically the same reasons. Did that help curb inflation? No. The oil industry took advantage of the Middle East crisis, raised their prices and forced unwanted products on the European purchasers. Did that help curb inflation. No. The bankers increased their interest charges and raised the rates of interest paid to depositors. Did that help curb inflation? No. The Federal Government intends to spend more than ever and will pay more interest on its debt. Does that help curb inflation? No. The unions have made and are making all-out drives to increase their memberships and increase wages. Does that help curb inflation? No.

Well, Mr. William McChesney Martin and Mr. Dwight David Eisenhower, just what have you accomplished by your hard money policies? You've hurt the little man, as usual; you've made the fat cats fatter, and you've made a mess of things in general and accomplished nothing beneficial for America. You're afraid to offend or put the brakes on big business; you won't freeze wages and get the unions sore at you, you just pick on the defenseless little man and let John Q. Public take it on the chin. Do you think you can hold the line on prices and let wages and interest costs continue their meteoric climb? Do you think big business will voluntarily hold the price line and stop scrounging for the highest possible return? Do you think the unions will ease their demands and help halt runaway increases? If you do, you don't know the first thing about business economics. You can't blame an ex-general for not knowing much about business economics, but you would think that a banker would. The fact of the matter is that most bankers couldn't run a successful monopoly—let alone a competitive business. There are exceptions to these cases, but they are not to be found in great abundance. From the way we are operating the Federal Government, these bankers are just the boys to fix things in this country—but good.

We have representatives of banking interests, big business, Wall Street, the armed services, and the unions in our Federal Government but what about the small-business man and the average citizen taxpayer? Who is looking out for his interest, and who frankly gives a hoot about him? Oh, I know we talk a lot about him in the press and we set up special committee hearings, but, of course, that is part of the smoke screen of political maneuvering and we never act on any of the committee findings or really try to get the little man over to Congress to hear his side of the story. Don't forget—he is the unorganized majority; we only pay attention to and legislate for the organized minorities. We are the champions of the organized underdogs whose advocates drive around in Cadillacs, smoke $1 cigars and live in luxurious suites at Washington's finest hostelries. You know we can't get these union bosses mad at us—they're organized. You know we can't stop big business from raising prices and gobbling up all of the available money for expansion—the NAM is organized. So, Mr. Small-Business Man and Mr. John Q. Taxpaying Citizen, as an unorganized group, you're just the forgotten men, mere statistics in the Census Department that make up the majority of the citizens of this great (?) United States of America.

We must awaken from our lethargy and let our will be known. Let's return to the real American way of life and reassert our independence that is our American heritage.

Sincerely yours,

FRANK S. NICOLL, Jr.

Award to Brett M. Nordgren

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 12, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the Washington Post of March 12 about Mr. Brett M. Nordgren, from South Bend, Ind., who won the Westinghouse science scholarship.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CREW-CUT YOUTH FROM INDIANA WINS $2,800 SCIENCE AWARD

A highly probable physicist from South Bend, Ind., 17-year-old Brett Marcus Nordgren, won the $2,800 Westinghouse science scholarship at the Hotel Statler last night.

When his name was announced, his mouth dropped open. After that, he settled on a dazed grin as he was swept up in a sea of congratulations.

"I thought a girl would win," he said. "This is completely unexpected."

A slim, smiling, crew-cut youth, Brett took a few moments off from the photographers outside the banquet room to say he isn't certain what he will study, but that he'll probably be a research physicist. "I'd enjoy that more than anything else," he said.

His winning project was a homemade Wilson cloud chamber, an apparatus that automatically takes pictures of paths of radioactive nuclear particles.

TO ATTEND PURDUE

The son of an automotive engineer, Brett plans to attend Purdue. His hobbies are tremendous, organic synthesis, physical chemistry, electronics, and photography. Last summer he added to his store of knowledge by working in a television repair shop.

He was announced as winner at a banquet attended by more than 700 persons, representing the Government, business, science, medicine, education, and military worlds.

On hand with Brett was his Congressman, Representative F. JAY NIMTZ, Republican, of

Indiana. "We went to the same high school," NIMITZ said. "Central High." A close observer of the award presentation was Robert Moore, of Silver Spring, winner of the top award last year.

TAKES SECOND PLACE

In second place among the 40 finalists from all over the United States was Jonathan David Glogower, of Brooklyn, N. Y., who won a $2,000 scholarship. Jonathan, 16, is interested in chemical experimentation and mathematics.

Eight other finalists were awarded $400 scholarships, while the remaining 30 received $100 toward their school expenses. All are high school seniors. The awards totaled $11,000.

Two girls were among the $400 winners, Susan Iknayan, 17, of Charleston, Ill., and Sonia R. Anderson, 17, of Omaha, Nebr. Also winning $500 scholarships were John L. Curry, 17, of Evanston, Ill.; Edward J. Pollock, 16, of Skokie, Ill.; Stephen L. Adler, 17, of Bayside, N. Y.; David W. Deamer, 17, of Westerville, Ohio; John D. Reichert, 18, of Austin, Tex., and Robert W. Adler, 17, of Marshfield, Wis.

Rear Adm. H. G. Rickover, who pioneered the atomic-powered submarine, urged the young scientists to work to overcome a scarcity of raw materials and resources in the United States and the world.

"From a scarcely populated fabulously resources-rich country 180 years ago we have changed to densely populated, resources-poor country today," he said.

Pointing out the United States is for the "first time in its history dependent on foreign countries for materials basic to our technical organization," the admiral said, "we shall not remain truly free and powerful unless we compensate * * * for lack of materials resources within our own borders." The only way to do this, he said, "is by using far more effectively than heretofore our natural resources in brain power. We must substitute intellectual resources for diminishing materials resources."

The Mania for Mixed Schools

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 12, 1957

Mr. ABBITT. Mr. Speaker, we read in the press daily items regarding integration or segregation as applied to the public schools of this country. Some of our people have become so wrought up as well as mixed up in their thinking on the subject that they are determined to force the schoolchildren of this country to integrate regardless of the feelings of the children as well as their parents and regardless of the effect of integration upon the education of our youth. The recent misguided efforts of the school officials of New York City is an example of what is happening as a result of public hysteria on the integration question.

A splendid editorial on this subject appeared in the Richmond Times-Dispatch on Tuesday, March 5. Under leave to extend my remarks, I desire to include the editorial, which is as follows:

THE MANIA FOR MIXED SCHOOLS

Is it democratic to force children to attend public schools they don't want to attend, and which are less accessible to them than the neighborhood schools they have always been attending?

The public-school authorities of New York City are shuffling students around on the theory that mingling Negroes, Puerto Ricans, and whites encourages democratic living. Apparently the democratic right of choosing a school that one can get to readily and which one may prefer for other reasons is not considered important under this fantastic concept.

Even Life magazine, certainly no segregationist organ, blasts this nonsensical educational setup in its March 4 issue. Under the heading "Let the Students Choose," it says editorially that "overzealous friends of integrated schools are creating a new problem." It goes on:

"Superintendent William Jansen says he will not make children 'travel unreasonable distances,' and acknowledges that housing segregation will continue to set limits on how much classroom integration he can attain. In our opinion the less he tries to achieve it by restraints upon the free choices of individuals, the more painlessly will integration come to be taken for granted."

Superintendent Jansen and others deny flatly that pupils are being hauled across town in New York, although the Wall Street Journal declared, in late January:

"All concede that hundreds of New York students are already criss-crossing the city by bus and subway to schools far from home."

The same article said that some 200 Negro children were being transported 20 city blocks or more to Public School 93 in the Bronx, and that these children attended neighborhood schools until last September.

We accept the statement of Superintendent Jansen that pupils are not now being hauled across New York. Whether this was being done until recently and then was stopped, because of the mounting clamor, we are unable to say.

The admissions of the New York school authorities are sufficiently damaging, as far as we are concerned. They acknowledge that pupils are being forced to leave their neighborhood schools and taken to schools farther away. As summarized by the Assoicated Press, the plan involves the following:

"Rezoning school districts to embrace racially diversified sectors; transporting Negro students in some cases to white districts and vice versa; equalizing the quality of faculties in rich and poor areas; and locating new schools so as to serve mixed populations."

When this plan was presented last week at a meeting of the New York City Board of Education there were loud protests from Parent-Teacher representatives that it is "discriminatory against both white and colored children," and "just like they do things in Russia."

Under this plan to further democratic living, it is stated by officials that if teachers object to being taken from the neighborhoods in which they have taught all their lives and assigned to slum areas—in order to achieve a so-called balance of educational opportunity—they will be ordered to comply. If they refuse, they will be subject to charges of insubordination.

So much for the brand of democracy with which the people of New York are being favored, at the behest of the NAACP. If this goes through in New York, will the same thing be tried in Chicago, Philadelphia, Detroit, Cleveland, and so on? If so, the South will be in danger of determined attempts to ram a similar system down its throat.

The integrationist fanatics seem to have lost all balance and perspective in their mania for mixed schools.

The Middle East Resolution

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 12, 1957

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement by Mrs. Robert B. Mouat, chairman of the 31st Women's Patriotic Conference on National Defense, Inc. This conference opened in Washington on January 31, 1957.

I call the attention of the Members of this body to the quotation from George Washington, before he became President.

I hope the United States of America will be able to keep disengaged from the labyrinth of European politics and wars—it should be the policy of the United States to administer to their wants without being engaged in their quarrels. * * * Not isolation, but freedom to do as our own people think wise and just; not isolation but simply the unembarrassed and unentangled freedom of a great Nation to determine for itself and in its own way where duty lies and where wisdom calls.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

SENATE JOINT RESOLUTION 19

The 31st Women's Patriotic Conference on National Defense, Inc., in annual convention January 31–February 2, 1957, adopted the following resolution:

"Resolved, That the 31st Women's Patriotic Conference on National Defense, Inc., urges the Senate of the United States to reject Senate Resolution 19 which would deprive the Congress of its constitutional right to declare war and would place the control of the Armed Forces of the United States exclusively with the Executive and the United Nations."

The conference has frequently resolved to petition the Congress of the United States to refuse to vote for any further grants of financial aid to foreign nations.

Instead of granting discretionary power to the Executive to spend $200 million in the Middle East, there should be an accounting on a financial basis of money spent and benefit to the United States received. That score is bad enough, but the overriding question is, Shall we adopt socialism and risk dictatorship at home in a fantastic effort to contain communism abroad by force and repression through the United Nations? Wars are made of such stuff—not peace.

Congress is chided with being hesitant to grant discretionary war powers to the Executive. One of the prime sovereign powers of the people is the control of their armed forces. By this joint resolution the Executive demands that Congress abdicate its constitutional responsibility without the people having any say about it whatsoever. But it is the people who must pay the bills and fight the battles when the Executive calls for war and that is what is expected of them in the beginning.

We hear it frequently said that the Congress must do this and do that. There is no "must" about it. What authority has the Congress to sell out the sovereignty of the people unheard? The issue was not presented to them in the last election or since.

No matter how estimable the character of the man in the White House, what will become of the power of the people to protect themselves against big government and tyranny if Congress continues to abdicate its

responsibility as it has in the matter of tariff rates and treatymaking?

Thomas Jefferson warned, "In questions of power, let no more be said of confidence in man, but bind him down from mischief by the chains of the Constitution."

The resolution before the Senate would guarantee the territorial integrity and political indepedence of a nation or group of nations in the Middle East—a territory we can't even get defined. The chief cause of the defeat of the old League of Nations was its article 10 that guaranteed the territorial integrity of every member nation. This proposition was overwhelming defeated by the American people when the issue was put squarely to them.

Further, the resolution today places the Armed Forces of the United States at the disposal of the United Nations. The President has said that our Armed Forces would be subject to the overriding authority of the United Nations Security Council in accordance with the charter.

Who comprises the United Nations Security Council that the President says will control our Armed Forces? In addition to the 5 permanent members, Great Britain, France, Nationalist China, Communist Russia, and the United States, there are 6 rotating members among which there is usually 1 Iron-Curtain country. The United States has but one vote in the Security Council that would have overriding authority over American Armed Forces.

Then too, the United Nations Military Staff Committee is in charge of all military operations for the United Nations. One of its permanent members is the Soviet Chief of Staff. In rotation he becomes chairman. This committee has the strategic direction of any armed forces of the Security Council.

If communism is the enemy in the Middle East and elsewhere, what terrifying nonsense is it to turn the direction of our Armed Forces over to the United Nations Security Council?

In an effort to counter the veto in the Security Council, the General Assembly has voted itself power the Charter never gave it, to organize and equip armed forces. Nations are expected to abide by assembly recommendations they never subscribed to.

Shall we place our Armed Forces under the political considerations of world power politicians in the United Nations? Lord Cherwell, the Right Honorable Frederic Alexander Lindemann, World War II assistant to Winston Churchill, wrote in his brilliant analysis of the voting arrangement in the United Nations (Washington Star, January 27, 1957):

"A police force, to be of any use, would have to be stronger than any nation or combination of nations. * * * Once the facts are faced, I do not think anybody will seriously maintain that a police force capable of imposing U. N.'s will on the great powers, should they object, can be contemplated seriously * * * nor should I like to see it. For who would care to put an overwhelming military force at the disposal of an assembly constituted and voting as I have described?"

How many American boys would voluntarily leave their homes and jobs to fight for the territorial integrity of the Middle East? Opponents of the League of Nations said that conscription in peacetime was a part of the plan to force young Americans to police the world. They could not envision then that these conscripts would also be subject to the laws and courts of the countries of occupation under the so-called status of forces treaty.

In a letter to Sir Edward Newenham, Washington wrote prior to the Presidency:

"I hope the United States of America will be able to keep disengaged from the labyrinth of European politics and wars; it should be the policy of the United States to administer to their wants without being engaged in their quarrels. * * * not isolation, but freedom to do as our own people think wise and just; not isolation, but simply the unembarrassed and unentangled freedom of a great nation to determine for itself and in its own way where duty lies and where wisdom calls."

Today for our adventure into the labyrinth of European politics and wars, we have the largest national debt in history, some $280 billion, and have suffered 1,001,004 American casualties in 3 wars.

This Nation and its leaders should try to recapture the policies under which we have prospered, pick up the thread where it was dropped and go forward. History proves that only unfettered nations of freemen can hope to lead the world to a moral peace.

The Senate should reject Senate Joint Resolution 19.

Mrs. ROBERT B. MOUAT,
National President, National Service Star Legion, Inc., Baltimore, Md.; Also Chairman, 31st Women's Patriotic Conference on National Defense, Inc., Representing 18 National Organizations.

United States Good Will Ambassador Nixon

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Tuesday, March 12, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "United States Good Will Ambassador NIXON," from the Fort Wayne (Ind.) News-Sentinel of March 9, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

UNITED STATES GOOD WILL AMBASSADOR NIXON

Vice President NIXON'S inherent ability to foster good will wherever he appears is once again being impressively emphasized in his present overseas tour. Wherever he has appeared thus far he has been receiving remarkable ovations and his uncanny ability for cultivating mass friendship is everywhere eliciting enthusiastic spontaneous response from the large numbers of persons greeting him.

The Vice President's concept of his proper role in this timely visitation as an ambassador of good will from the United States, is refreshingly different than has been that of so many American "diplomats" who have so often flittered hither and yon all over the world. Whereas the latter have invariably unctuously promised all manner of rich gifts to be forthcoming from the United States, NIXON has made it plain to all and sundry that he is making "no commitments" on his journey.

No proud, top-hatted, stiffly bowing austere plenipotentiary is DICK NIXON on his good will tours. He has an easygoing informality and contagious smile as he hand-shakes literally by the thousands. As current Time magazine graphically describes:

"Time and again, as the official motorcade edged its way through Casablanca's thronged streets, the smiling guest of honor left his (not too new) blue Chevrolet convertible to mingle with the chering crowds, shake hands, pass out ball-point pens (left over from the United States presidential campaign, marked "Vice President NIXON." Right beside him was his wife, Pat, with hard candies and bon bons for the children."

And how was this earnest, homespun greeting received. Time well answers that question when it reports: "Gasped Moroccan Foreign Minister Ahmed Balafrej, whose country was celebrating the first anniversary of its freedom from France: 'This is unprecedented.'"

The Vice President arrived at Rabat, the Moroccan capital, a day before proceding to Casablanca and immediately plunged into his person-to-person, handshake-and-smile routine, with which, on five previous overseas missions he had won many new friends for the United States, from Manila to Guatemala.

How NIXON'S brand of foreign relations pays off immediately as well as on a long-range scale has already been evidenced. In this connection it was only last year that Morocco had rid itself of the last vestiges of the French and Spanish protectorates. The new government had assumed all French-incurred international obligations except for the airbases the United States has in Morocco on a lease basis.

Taking time out from the rounds of public receptions, NIXON conferred with Mohammed V, the Sultan, of Morocco, about the relationships between his country and the United States. NIXON came out of that conference with Mohammed's assurance that as far as the strategic airbases are concerned, there is no danger that they would be lost.

NIXON made a timely arrival at Accra, capital of the Gold Coast, to represent the United States at the ceremonies marking the transformation of that British colony into the Commonwealth State of Ghana. When his plane landed thousands of Ghanians were massed behind a fence at the edge of the flag-draped field to greet him. Leaning over the white fence to shake hands with hundreds of them, the Vice President quipped "in America we call this the boardinghouse reach," to the delight of the many who, surprisingly, had no trouble in understanding English.

Wherever he goes, NIXON'S straightforward, unaffected friendly manner, his spontaneous human characteristics such as expressed in stopping his entourage to shake hands with a particularly enthusiastic crowd at the curb, coupled with the graciousness of Pat Nixon, is winning friends on his eight-nation 18,000-mile good will trip.

We in Fort Wayne had the opportunity to witness the profound appeal which NIXON registers with people, when the Vice President and his charming lady paid Fort Wayne a visit last fall.

We can appreciate why the Vice President's uncanny ability to meet and greet throngs of ordinary people, should go over big wherever he goes.

DICK NIXON definitely is the Nation's No. 1 roving ambassador of good will.

Labor in Community Service in Portland, Oreg.

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, March 12, 1957

Mr. NEUBERGER. Mr. President, at a time when organized labor is suffering from criticism in many parts of the country, it is heartening to learn of general civic approval in my home community for labor's unselfish efforts toward

the building of a science and industry museum, which will be part of Portland's outstanding new zoological gardens.

I ask unanimous consent that an article from the Portland Junior League News of March 1957, entitled "Labor in Community Service," may appear in the Appendix of the RECORD. Author of the article is Mrs. Patricia M. Rein, herself the mother of two small children who someday will share in the wonders of the museum made possible by the cooperation of labor and management—without undue profit or reward—in our city.

I also ask that there appear in the RECORD an article describing this event, from the Oregon Labor Press of January 25, 1957, entitled "One Thousand Dollar Check Opens Drive for Science and Industry Museum."

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Portland Junior League News of March 1957]

LABOR IN COMMUNITY SERVICE

(By Patricia M. Rein)

"Project science," the joint labor-management effort to "barn-raise" Oregon's new museum of science and industry building is arousing renewed interest in labor's volunteer participation in the community. Harold Halvorsen, business representative of Sheet Metal Local No. 16, is serving as labor's coordinator in this campaign, in which unions led by the Portland Building Trades Council are donating labor toward construction of the $490,000 museum.

But this is only the most dramatic instance of labor's awareness of community needs. Here are some other examples:

Oregon Labor Council volunteers served coffee to 3,500 people in downtown Portland Christmas and New Year's Eves for traffic safety.

The labor council has encouraged labor's participation in "Great Decisions—1957" now underway.

John Gillard, business manager of Steamfitters Local No. 235, was recently elected president of the zoo commission, having been its labor representative since 1951.

Eleven unions contributed to Hungarian relief and many members have helped orient these refugees in their new job situations here.

The Oregon Labor Council annually awards three $500 scholarships to high school seniors in competitive examinations testing students' knowledge of labor unions; their history, structure and function in the American economy. Sixty-six students have benefitted from this program in the past 10 years.

Women's auxiliaries to labor unions provide volunteers to the medical charity drives and give money to various causes, such as Portland's center for handicapped children.

Unions led by Laundry Drivers No. 281 and Fireman's Local No. 43 give time, money and materials to help Toy and Joymakers provide toys for 6,000 children annually.

John H. Wilson, member, Retail Clerks 1257, is labor relations coordinator for the United Fund, a newly created position. His job is to promote better understanding among union members of services available through United Fund. Labor actively supports the annual campaign, were among the first to want a united drive.

James Goodsell, editor of the Oregon Labor Press, from which this material was taken, emphasizes the important role our unions have played in entertaining the European trade unionists and management personnel visiting Portland in the past few years, all sponsored by the Department of Labor and the State Department.

"By entertaining," writes Jim, "I mean taking over their entire schedule of plant tours, technological discussions, studies of local government, visits to union meetings and hospitality. Some of the visitors have lived in the homes of local union members to see how the American workingman lives."

But Seattle's Teamsters have hit the high point in public service when they provided a set of cold weather lingerie for their zoo's elephant. It seems she was cooped up inside and no one could see her in the cold weather. Rosy could do with some of the same in our freezing clime. Any volunteers?

Sometimes it is possible in our absorption with league projects to be unaware of what other active groups are doing in this community. Labor is showing a persistent awareness of Portland's unfilled needs and is showing creative approaches in meeting them.

[From the Oregon Labor Press of January 25, 1957]

ONE THOUSAND-DOLLAR CHECK OPENS DRIVE FOR SCIENCE AND INDUSTRY MUSEUM

A check for $1,000 from Electrical Workers 48 kicked off labor's strong support for the "project science" campaign to build a new educational museum of science and industry at the entrance to Portland's new zoo in Hoyt Park.

The Electrical Workers' substantial gift was quickly followed by a check for $600 from Sheet Metal Workers 16; and other unions, especially in the building trades, were preparing to make their contributions in cash rather than in donated labor.

This week marked the start of a 6-week drive to obtain materials and supplies for the new $489,000 science and industry center. The drive is being undertaken jointly by labor and management as a contribution to the technical and scientific education of Oregon youth.

Construction of the center is scheduled to begin about February 15; it is scheduled to be completed in about 10 months.

Harold Halvorsen, of Sheet Metal Workers 16, is chairman of labor's committee for the drive. "The campaign is getting off to an excellent start," he reported. "Contributions already are beginning to come in, and about 50 unions in this area have been sent complete brochures, describing the whole plan in detail."

All unions affiliated with the Building Trades Council, which officially endorsed "project science" last fall, have been asked to help.

The museum will consist of three main wings, including a planetarium, observatory, camera obscura, a Foucault pendulum, and a huge relief map of the Columbia Basin, showing its industry, waterpower, resources, and geographical features.

Besides the exhibits, the museum will continue to emphasize education for scientific and industrial careers, and will provide career counseling for junior and senior high-school students. Summer science fairs and scientific field trips for teen-agers will be greatly expanded with the new facilities.

Vindication for Benson

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 12, 1957

Mr. CAPEHART. I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Vindication for Benson," from the Fort Wayne (Ind.) News-Sentinel of March 9, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

VINDICATION FOR BENSON

If there is any dedicated public servant who has been more viciously and more unjustly belabored by his political enemies in recent years than Agriculture Secretary Ezra Benson it has escaped our notice. He has been called everything from being dishonest and unrealistic to unsympathetic and plain inefficient.

However, through it all, he commendably did not let this barrage of abuse stampede him into policies he knew would eventually destroy the entire farm economy. He insisted and promised that, given time, the administration would bring real relief and sound prosperity to agriculture.

That a substantial measure of such sound prosperity has now been achieved is reflected in the statistical report on American agriculture for last year which shows that in 1956 farmers realized a net income of 5 percent more than in 1955. And more than that, the comparable figures of last year and so far in 1957 show an increase of upward of 7 percent over the corresponding period in 1956.

This must have been as gratifying as it is a well-earned satisfaction to be able to announce that for the first time in many years a Secretary of Agriculture has been able to report such favorable peacetime developments.

It is providential in the interest of American agriculture and the national economy in general that Secretary Benson had the courage and fortitude to stick to sound principles that would ultimately bring real prosperity to agriculture rather than to go along the policy of unlimited Government largesse that for so long continued to make the ultimate plight of American agriculture worse and worse rather than bringing about any real recovery.

The Nation owes Benson a debt of gratitude.

Urban Renewal—Statement by Mayor Thomas D'Alesandro, Jr., of Baltimore, Md.

EXTENSION OF REMARKS

OF

HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 12, 1957

Mr. GARMATZ. Mr. Speaker, at the present time, a subcommittee of the House Committee on Banking and Currency is holding hearings on housing and urban renewal. This morning Mayor Thomas D'Alesandro, of Baltimore, chairman of the legislative committee of the United States Conference of Mayors, appeared before the committee. I believe his statement will be of interest to all the Members of this body, and therefore, under permission to extend my remarks, insert them in the RECORD at this time:

STATEMENT BEFORE HOUSING SUBCOMMITTEE OF THE HOUSE BANKING AND CURRENCY COMMITTEE, BY THOMAS D'ALESANDRO, JR., MAYOR OF BALTIMORE, CHAIRMAN, STANDING COMMITTEE ON LEGISLATION UNITED STATES CONFERENCE OF MAYORS, MARCH 12, 1957

I am happy to have this opportunity to appear before the Housing Subcommittee of the Banking and Currency Committee to express the deep interest and concern of the United States Conference of Mayors in main-

taining and expanding effective programs for housing and for the clearance and redevelopment of slums and blighted areas.

The membership of the organization is made up of approximately 300 major American cities. Our members feel at first hand the full brunt of the pressure and need for decent housing for all the elements in our population. Looking ahead to the expanding future requirements for housing resulting from the constant increase in this country's population, which is primarily occurring in the large metropolitan areas of the Nation, we feel that there must be sufficient production of new housing throughout the coming years. We are also becoming more aware not only of the importance of clearing our slums but of the necessity for rehabilitating our existing housing supply and conserving those sections of our cities which are still strong and sound.

As a former Member of this House, I know the members of the subcommittee won't mind if I commend for your consideration the fine staff report recently issued by your colleagues on the Housing Subcommittee of the United States Senate Committee on Banking and Currency. This report sums up and analyzes the answers of 150 mayors to a questionnaire sent them by Senator SPARKMAN on the housing conditions in their cities. Because I feel these views are so timely and appropriate, I would like to cite some of the report's findings, which are based chiefly on what the mayors said:

A. Serious housing shortages exist in the Nation's cities.

B. Four groups in the population are especially hard hit by these shortages: Low-income families, middle-income families, families from minority groups, elderly persons.

C. Current production of new, and rehabilitation of existing dwelling units are not materially reducing these shortages.

D. Prices of available sales and rental units, both new and used, are generally too high for these groups to afford.

E. The great majority of mayors feel that expanded housing programs are needed in their communities, and that the Federal Government should provide more effective assistance in meeting these needs.

I certainly feel that these mayoral views are fully in accord with what I wrote the committee about Baltimore's housing situation. As the report pays me the honor of quoting my reply to the questionnaire at length (on pp. 18 and 19), I will not take this committee's time to repeat it here today.

The Conference of Mayors wanted me to emphasize to you gentlemen that we are seriously disturbed by the restrictive effect of current credit stringencies which are resulting in a decreasing volume of residential construction. In plain language, the tight money market is knocking the blazes out of new home building. We therefore trust that your committee will be successful in evolving methods for overcoming these current problems and assuring a constant flow of the home building required to meet the growing needs of our cities.

We would also urge that your committee give consideration and study to the necessity for eventually evolving an effective method for assisting and encouraging the development of good housing for lower middle-income families who in most cities are now not being served either by the private residential industry or by the national supply of low-rent public housing. I would also like to register the strong support of our organization for adequate authorizations of additional low-rent public housing. These will be absolutely essential in order to house adequately our low-income families and particularly to provide for the decent relocation of families displaced by slum clearance and now by the large program of federally assisted urban highway construction.

In Baltimore, our thinking is in the direction of the coordinated use of all possible housing resources to meet current and prospective market demands, including existing and contemplated Federal and State assistance. Some suggestions along these lines are contained in the recent report of my Urban Renewal Study Board, a copy of which I have brought along to give the committee.

I would like to tell the subcommittee members at this point something about the Urban Renewal Study Board, which I appointed last February and reported to me in September. This board was composed of six nationally known experts, who rendered Baltimore outstanding service by recommending a 20-year, $900 million program for urban renewal and a sweeping overhaul of our administrative machinery to help carry out this program. I liked the report, so did practically all segments of Baltimore opinion, and we have moved fast to put its recommendations in effect. On December 31, 1956, I signed the ordinance creating a new Baltimore Urban Renewal and Housing Agency, which represents an amalgamation of several existing boards and bodies and portions of other departments.

Gentlemen, we recognize that each city is different, and has its own problems, traditions, and circumstances. However, I think the following paragraph on page 1 of the report could well apply to a great many American cities, large and small.

"If the city of Baltimore is to remain a community which continues to attract a reasonable cross section of its employed population, it must face the problem of making more of its residential areas competitive in many respects with those of its surrounding suburban districts. Recognition of this need considerably expands the areas requiring urban renewal treatment. Renewal must therefore deal with areas now substandard, areas becoming substandard in the future, areas which are merely obsolete or beginning to decline, and even fairly good areas which may decline in the future unless improved. Renewal, in short, includes slum clearance, the rehabilitation of declining areas, and the prevention of decay in areas now sound. It also includes community action to provide adequate modern industrial and commercial land where new uses are required by the community in older areas."

We always prided ourselves in Baltimore that we were doing a great deal to halt urban deterioration. This report has fired our imagination, and made us realize how much bolder we must be to gradually rebuild our cities and strengthen our tax base. We understand that we must concentrate much attention on slum prevention in order to reduce future problems. We now recognize that new, improved parks, playgrounds, schools, and other community facilities will have to be provided for most neighborhoods. Obsolete commercial and industrial areas must also be renewed. Baltimore is ready to sink a lot of cash and other resources into this challenging program and private investment will undoubtedly far exceed the estimated public cost of $900 million. But to make all of this possible the Federal Government must do its share.

I would like to devote the balance of my testimony to emphasize the vital importance of prompt congressional action to assure the continuity and the expansion of Federal financial aid for the slum clearance and urban redevelopment program. This program is essential to the survival of American cities. It provides a mechanism whereby, at relatively modest cost to the Federal Treasury as compared with the cost of other Federal aid programs, the hard core of urban blight can be successfully attacked and the deteriorated sections of our cities transformed and revitalized to provide new housing, parks, and playgrounds, new schools, modern commercial facilities, or sites for well-planned modern industry. This program, in short, offers an essential tool to help American cities and metropolitan areas—where an increasing majority of American citizens live and earn their livelihoods—to keep in pace with the dynamics of the American economy.

It is for these reasons that the United States Conference of Mayors has been a strong advocate and supporter of the Federal urban redevelopment program since it first began to receive consideration and study by the committees of Congress over a decade ago. As mayors, many of our members assisted in undertaking the first pioneering redevelopment projects which followed the enactment of title I of the Housing Act of 1949. I am pleased that the second redevelopment project in the country to be officially completed is located in Baltimore. We have seen community interests in an experiment with redevelopment broadened and mature in the ensuing years. We have arrived now at a point where the full potentialities of well planned redevelopment for revitalizing the blighted cores of our cities are seized upon by communities throughout the country. After a long period of probing and experimentation, our cities are now on the threshold of actual achievement of the full benefits of redevelopment.

It is, therefore, with dismay that we learn that the continuity of this vital program is now threatened by the exhaustion of the essential Federal capital-grant authorization. We recall that the chairman of this subcommittee, Mr. RAINS, had the foresight a year ago to propose an increase of $1 billion in this capital-grant authorization. It was unfortunate that this recommendation did not prevail in the legislation which was finally enacted in 1956, as the current situation demonstrates. However, I would like to urge upon your committee with all the forcefulness at my command the urgent necessity of congressional action to make adequate capital-grant authorization available as promptly as possible in order to avoid a stoppage in this vitally important program.

The recommendations in the President's budget for an additional authorization of $250 million in Federal capital-grant contract authority to become available on July 1, 1957, and a further authorization of $250 million to become available on July 1, 1958, are, in our judgment, the bare minimums needed to maintain the impressive momentum now developed in local renewal programs. In fact, I would urge your committee to consider whether the best interests of this long-term program would not be better served by a more substantial increase in the capital-grant contract authority in order to avoid a future situation similar to what is now threatened.

The planning and undertaking of redevelopment projects is by nature a complex and time-consuming process. This situation becomes intensified when you contemplate large sections of your city designated as renewal areas. Baltimore's new ordinance No. 692 refers to the "central functions of urban renewal, such as but not limited to, neighborhood and project planning, land acquisition and clearance, area code enforcement, relocation of displaced families, development, redevelopment, rehabilitation, conservation, management of property acquired in renewal areas, investment and improvement counseling, community-organization services, research and public information." These functions we have placed in one agency. But my study board reported that a city's urban-renewal program is even broader than this big list when looked at from the mayor's viewpoint, and should also give a place to comprehensive citywide planning, capital budgeting, construction and maintenance of public works, operation of public service facilities, and private enterprise participation.

The decisions involved in urban renewal go to the heart of the complicated social,

economic, and property interrelationships of the American city and will vitally affect the future trend of its development. Even though both the cites and the Federal Government have gained experience in redevelopment and renewal and, I hope, will continue to find ways and means of reducing redtape and needless delays, there is no magic wand that will ever make the renewal of our cities an easy and quick process. This fact of life makes it all the more evident that any hiatus in the progress and continuity of the renewal program resulting from a failure of Federal financing would represent a major setback to the future welfare of American cities.

We would also like to recommend that your committee, in its consideration of legislation affecting the urban redevelopment program, study the impact of the present statutory requirement that one-third of the net cost of renewal projects be absorbed by the participating communities either in the form of cash grants or through the contribution of supporting public facilities and site improvements.

In our opinion, experience has shown that this requirement has restricted unduly the scope of redevelopment activities in relation to the needs and objectives of cities. The record shows that almost 50 percent of the local contributions to the redevelopment and renewal projects undertaken thus far have had to be in the form of cash donations, over and above the facilities and work in kind which can be contributed through the normal capital municipal budgets. In view of the financial problems and financial demands upon all American municipalities and their restricted sources of revenue, the requirement for a one-third local contribution has, in our judgment, undoubtedly exerted a restrictive influence on the redevelopment program. We would recommend therefore that your committee consider the advisability of reducing the required local contribution to 20 percent. In light of the fact that the federally aided urban highway program, involving much larger expenditures of Federal funds than does the urban renewal program, requires only a 10-percent local contribution on a major phase of the overall program, the Interstate System, we believe that a 20-percent local financial participation in renewal undertakings would be most reasonable. At the same time it would greatly broaden the capacity of American cities to utilize this essential program for the sound future development of our urban centers.

If the committee will pardon one more reference to Baltimore, I would like to conclude with the first paragraph of the foreword to the report of the Urban Renewal Study Board.

"Urban renewal is the new American frontier. During the last century that frontier was the development of the agricultural areas of the West and the mineral and other resources which have made this the most prosperous Nation in man's history. In this century our population has become predominantly urban. Two-thirds of our people live in or near cities. Most of our recent growth has taken place in urban areas. Virtually all of our future population growth will occur in and around our cities. But these cities are largely the product of the 19th century. Their dwellings, factories, and offices, their streets and community facilities are ill-adapted to the needs of midtwentieth century civilization. Overcrowded, blighted, or threatened by blight, these cities must be rebuilt to meet the needs of our contemporary society and to serve the demands of a population blessed with an ever-rising standard of living. The conflict between the development of adequate transportation facilities and the creation of a satisfactory living environment must be resolved. This is the challenge of urban renewal."

I hope the committee will do its best to keep the Federal Government pulling its oar not only so that the boat doesn't rock but that it will forge full speed ahead.

I appreciate very much this opportunity to present the views of the United States Conference of Mayors to your committee.

Democrats Defeat Corn Relief Plan

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 12, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Evansville (Ind.) Courier of March 8, 1957, the headline of which is entitled "Democrats Defeat Corn Relief Plan."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DEMOCRATS DEFEAT CORN RELIEF PLAN

WASHINGTON.—House Democrats beat down a Republican move Thursday to push through emergency relief for Midwest corn farmers.

The 187–180 vote came on a motion to substitute the G. O. P. bill for a Democratic measure which would have provided aid for corn and feed-grain producers in all parts of the country.

The Democratic bill is sponsored by Agriculture Committee Chairman HAROLD COOLEY, of North Carolina.

COOLEY expressed fears that Northern Democrats may side with Republicans to kill his more costly measure.

Shortly after the vote on the amendment, the House ended debate on the farm bill until Tuesday by agreement between majority and minority leaders.

The next vote probably will come on a new substitute sponsored by Representative ROBERT D. HARRISON (Republican, Nebraska), following the recommendations of the American Farm Bureau.

The substitute would allow farmers to either grow 37.3 million acres of corn at a $1.36 per bushel price support, or 51 million acres at $1.31 price support.

Participation in the soil bank would be voluntary under the first choice, but if the farmer grew under the 51 million acre limit, he would have to put 15 percent of his crop land in the acreage reserve.

The Cooley version would allow corn farmers to plant 43 million acres this year and still allow farmers to participate in the soil bank and receive price-support payments of $1.36 a bushel.

It would also extent similar soil-bank aid to feed-grain producers in the South and Southwest. The Republicans strongly oppose this part of the bill.

Republican leaders predicted that President Eisenhower would veto the Cooley measure if it were passed. In any event, they said, hearings in the Senate on the complex Democratic bill would take so long that the legislation could not help corn farmers who must plant their crops in the next few weeks.

The legislation is described as "emergency" since current law limits Midwest farmers to planting a total of 37.3 million acres if they want price supports and soil-bank participation.

The Department does not expect farmers to comply with this growing restriction but believes that corn land will be taken out of production through the soil bank if the allotment is increased before planting begins.

How Parents Can Help Teen-Agers

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 28, 1957

Mr. MULTER. Mr. Speaker, the great fraternity, Free and Accepted Masons, has been a strong and vital force for good government because, while not concerning itself with partisan politics, it has always concerned itself with basic problems of good citizenship.

Every age has always looked upon youth as presenting a problem. This great fraternity attacks the subject by trying to remove the problem.

Grand Master M. W. Nathan Turk, of the Grand Lodge of Free and Accepted Masons of the State of New York, conducted as essay contest on the topic How Parents Can Help Teenagers. The judges were Dr. Richard A. Girard, of New York University; Commissioner John B. Sullivan, of the New York Commission Against Discrimination; and Dr. William F. Rosenblum, rabbi of Temple Israel. I think it would be of interest to our colleagues to set forth the winning essays.

First prize went to Miss Carol Matteson, of Frankfort, N. Y., whose essay is as follows:

The well-adjusted teen-ager of today is the one in whom basic characteristics have been established, such as, the love of God, and home, loyalty, integrity, resourcefulness, and courage. This young adult is the result of loving, understanding, and tactful parents interested in the development of their child.

Parents should interest their children in participating in healthy activities with children of their own age. In this way, the teen-ager will gain valuable experience in social behavior.

CHURCH IS FOUNDATION

The most important thing parents should do is to attend church as a family. Church gives children a firm foundation for meeting with life's crises. In church, strong faith in God, love of neighbor, and kindness is developed. Church gives children some of the richest experiences and blessings of their lives.

All in all, parents should be companions to their children, treating them with respect and kindness, and yet guiding them to lead upright and virtuous lives. On this basis, parents should put their full and complete trust in their children. Teen-agers are the adults of tomorrow, and as the twig is bent so shall the tree grow.

Mr. Speaker, second prize went to Miss Barbara Robinson, of Plattsburgh, N. Y., whose essay was as follows:

There's an old saying that nobody's perfect. Yet most adults think that their children are, or should be, perfect. When we teen-agers don't live up to the great expec-

tations, parents become discouraged and the trouble begins.

Between the ages of 13 and 16, young people are going through a period when they have many emotional and social problems and need the careful guidance of adults. If they shun them and tell them to run along or get lost, that's just what they will do. Training begins in the home and without it we teen-agers are lost.

Every teen-ager has one or more hobbies. If the parents try to interest themselves in their children's hobbies, they would find that they could keep them at home more often and would stop their running the streets. This would also give the parent more time for disciplinary training of the children. Also, if the adults found out the particular interests of the children outside the house, they could provide better organized activities and dances, like the Knights of Columbus dances in our own community.

There are a number of things that adults can do to help teen-agers, but they must begin in the home. Then it can spread to the community. A good motto for adults to follow would be: "The family that plays together stays together."

Mr. Speaker, third prize went to Miss Sue Friedlander, of Mineola, Long Island, N. Y. Her essay was as follows:

I am a teen-ager and I'm growing up. I've finally passed the awful stage of being a nobody where you feel you are ever wading toward a shore you can't reach. Now my feet are touching dry land and I feel as if I'll be able to walk into this new world of young adulthood. I've reached this point in my growing up through the love and trust of my parents.

Of all the services our parents give us, their love is the greatest of their gifts. Their love wraps around us warmly and gives us security and a feeling of our own worth. These are two very important factors in helping us grow up to be happy adults.

The trust our parents place in us by letting us make our own decisions has a great and lasting impression on the shaping of our characters as we go toward young adulthood. Our parents' recognization that we are capable of making independent decisions is the beginning of our feeling that we've finally reached the shores of young adulthood.

Award to Wayne Guthrie

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 12, 1957

Mr. CAPEHART. Mr. President, I ask to have printed in the Appendix of the RECORD an article revealing that Mr. Wayne Guthrie, one of Indiana's outstanding newspapermen, a former city editor and more recently the author of a popular column entitled "Ringside In Hoosierland," appearing in the Indianapolis News, has been awarded $100 and a George Washington honor medal in the 1957 Freedoms Foundation awards program. Listed in the article also are awards received by other Indiana individuals and organizations.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FREEDOM AWARD—GUTHRIE ADDRESS ON AMERICANISM WINS CITATION

A columnist for the News today was awarded $100 and a George Washington honor medal in the 1957 Freedoms Foundation awards program.

Wayne Guthrie, who writes Ringside in Hoosierland, was honored with a second-place prize for his address, Accentuate the Positive, given through the Nation approximately 75 times in the period covered by the award.

Awards for contributing to a better understanding of the American way of life during 1956 were announced today at special George Washington's birthday ceremonies at the foundation's Valley Forge, Pa., national headquarters. The awards total $100,000.

J. Edgar Hoover, Director of the Federal Bureau of Investigation, received the foundation's highest honor, a special George Washington honor medal and $5,000.

HIS ACCENT IS ON YOUTH

The theme of Guthrie's address is that Americans, in their fight against communism, should adopt and follow a positive program of selling to the boys and girls, who will be tomorrow's citizens, the superiority of our free way of life over communism.

Guthrie also was international chairman of the 1956 Kiwanis International Committee on support of churches in their spiritual aims, which committee's work was included in the accomplishments that won for Kiwanis an award of meritorious service.

Valley Forge Freedom Library awards went to Broad Ripple High School, School 54, 3150 East 10th; School 3, 23 North Rural, and School 71, 3333 North Emerson. A principal school award was given School 88, 5801 East 16th.

Other Indianapolis winners are:

Tech: High school annual award of $100 and a Washington honor medal for the Arsenal Cannon, second-place award for high school editorial series of $100 and honor medal, and a Valley Forge Freedom Library award.

Manual: High school award of $100 and an honor medal for the Ivian.

Shortridge: Washington honor medal award for high school editorial series, Ten Freedoms, For Informed Citizens, and Your Duty as a Citizen.

Howe: Washington honor medal award.

Washington High School: Honor medal award and second-place award of $100 and honor medal for high school editorial, Let's All Give Thanks for Our Priceless Possession.

Indiana Farm Bureau, Inc.: Second-place award of $100 and honor medal for its citizenship campaign.

Others prizes in the State are:

Robert Cummings of the Cannelton News: Honor medal and $100 second-place award for editorial, Thank God, I'm an American

Montgomery County Chamber of Commerce: Honor medal and $100 second-place award for Minute Man community program.

Irma G. Haselwood, Elkhart: Honor medal and $100 for her photograph, Right to Worship.

Done Ette Bushaw, Fort Wayne: Honor medal for essay, The American Way of Life.

Jay Gould, radio station WOWO, Fort Wayne: Honor medal for poem, Freedom.

William S. Sandeson, Fort Wayne News-Sentinel: Honor medal for cartoon, The Freedoms Were Here—Left Us Something.

South Side High School: Honor medal for editorials, and radio station WOWO, honor medal for radio series, Freedom Day Broadcasting.

Purdue University: Second-place award of $100 and honor medal for campus program, Thirteenth Student Legislative Assembly.

Wheelabrator Corp., Mishawaka: Honor medal for employee publication, Parade, and honor medal to Joseph Flory, editor.

Warsaw High School: Second place $100 award and honor medal for editorial series.

Ruth Cates, Yeddo, Fountain County: Honor medal for essay, Why I Vote.

Los Angeles City Board of Education Opposes Federal Aid to Education

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1957

Mr. McDONOUGH. Mr. Speaker, the Los Angeles City Board of Education has disclosed that it is opposed to Federal aid to education by the adoption of the following resolution. It is apparent that if an area like Los Angeles, with a recordbreaking increase in population, can get along without Federal aid to education, then most other areas in the United States can do likewise, and that education should be kept close to the people and administered by local government.

RESOLUTION REGARDING FEDERAL LEGISLATION FOR AID TO SCHOOL DISTRICTS FOR SCHOOL CONSTRUCTION PRESENTED TO THE COMMITTEE OF THE WHOLE FROM THE BUDGET AND FINANCE COMMITTEE, FEBRUARY 28, 1957

Whereas the needs of the public schools are certainly no more apparent to others than they are to (1) the parents whose children leave their homes for school each day, (2) all other citizens of the school district who have a civic responsibility for the schools, and (3) the local board of education elected by the parents and other citizens; and

Whereas the Los Angeles City Board of Education has jurisdiction over 381 elementary and 93 junior and senior high schools, 7 community or junior colleges, and 26 adult education centers, with a current school population of 556,000, served by 18,000 teachers and 12,000 other employees; and

Whereas the members of the Los Angeles City Board of Education are elected by a constituency of over 3 million people to represent their interests in affairs directly affecting their local public schools; and

Whereas the members of the Los Angeles City Board of Education consider Federal-State-local interrelationships affecting public school finance to be a matter primarily within the board's governmental province rather than the superintendent of school's field of educational administration; and

Whereas at the present time, and for the foreseeable future, the Los Angeles City School Districts through a combination of State and local financing efforts (primarily local) are supporting a program of school construction and operations while at the same time furnishing excellent instructional and auxiliary services for boys and girls and young men and women from kindergarten to junior college levels and also providing professional salaries for teachers and administrators and prevailing community wages for other employees; and

Whereas to accomplish this financing program the electorate of the Los Angeles City school districts has since June 1946 approved 3 major bond issues totaling $338 million, and in addition has raised general

fund maximum school tax rates by 22 percent in the elementary district and 20 percent in the high-school district with a further tax rate proposal of 18 percent for the elementary district and 50 percent for the high-school district pending before the voters in the municipal election to be held April 2, 1957; and

Whereas during the same period of time the people of California have approved bond issues totaling $635 million to finance the State-aided building program, approximately $165 million of which have been contributed by the taxpayers of the Los Angeles City school districts: Now, therefore,

The Los Angeles City Board of Education does hereby find and resolve as follows, to wit:

1. That we affirm our belief that public education is primarily a local responsibility and privilege; secondarily, a state duty and prerogative, and only incidentally, by virtue of some national emergency, an appropriate subject for Federal subvention or intervention;

2. That the best interests of 556,000 boys and girls, young men and women, and adults attending our schools at the present time and their successors for years to come require that the Los Angeles City Board of Education affirm its position that the voter-taxpayers have a better means of determination and supervision over public educational policies and expenditures when they are retained on a local and State level;

3. That the expedient of enacting Federal grant legislation, without due consideration of all the implications of such legislation, will not solve the problems of half-day classes and severe overcrowding of schools;

4. That since the Los Angeles City school districts subscribe to the historical concept that provision for public education is a local and State government function, since the Los Angeles City school districts have demonstrated their ability over a period of many years to supply educational facilities within that concept, and since the resources of the districts indicate a capability to continue on a local and State financing basis;

5. That as a source of funds for these Los Angeles City school districts, the Los Angeles City Board of Education does not subscribe to the bills for Federal aid for school construction pending before the 85th Congress of the United States.

Adopted by the Los Angeles City Board of Education at its regular meeting March 4, 1957.

Sacred Sanctions

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 27, 1957

Mr. MULTER. Mr. Speaker, the following article, written by Attorney Nahum A. Bernstein, appeared in the second issue of February 1957 of Israel Speaks. I commend this article to the attention of our colleagues as excellent background material on sanctions:

SACRED SANCTIONS

(By Nahum A. Bernstein)

John Dulles and Joe Doe are throwing the word "sanctions" around these days. In fact, just about everyone is using the word except President Eisenhower, who has carefully shunned the nasty word in all his public utterances. Nobody seems to know precisely what it means except that, like the measles, it is catching and should be avoided. Therefore, it is timely for us to take a closer look at the meaning and history of the word "sanctions."

The word "sanctions" has two strangely contradictory meanings. Literally, the word is derived from the Latin "sanctio—to render sacred or inviolable." Its first dictionary definition is a "solem or ceremonious ratification, confirmation, approbation." Thus, etymology and accepted usage would indicate that sanctions are acts of sacred approval which any nation should receive with pride for deeds well done.

WASHINGTON'S USE OF SANCTIONS

There was one President of the United States who used the word "sanctions" correctly, curiously enough, in a letter to the Rabbi of the Spanish-Portugese Synagogue in Newport, R. I. I refer to George Washington's famous letter in which he described the basic tenet of his infant Nation as a country which gives to bigotry no sanction. It is interesting to note that in the same letter Washington described the very conditions for the peace and security of the United States now sought by Israel, and for which it is threatened with sanctions. He told the rabbi that the United States had adopted the philosophy of Abraham by establishing a nation in which "Everyone shall sit in safety under his own vine and fig tree, and there shall be none to make him afraid." Before going trigger happy with sanctions, I wonder why our distinguished delegates to the United Nations do not heed the advice of the Father of our country and determine who has prevented whom from sitting unafraid under his own vine or fig tree. Can we honestly demand George Washington's standard for peace and security for our own country and deny it to another?

When we lawyers got hold of the word "sanctions" we gave it a meaning directly opposite from its actual meaning to the rest of the world. Small wonder that there is all this confusion. The legal definition of sanctions is: "The detriment, loss of rewards, or other coercive intervention, annexed to a violation of a law as a means of enforcing the law." Thus, a sanction can be anything from the withholding of a reward to direct military intervention. As I know of no rewards being offered to Israel these days, the withholding kind of sanction shouldn't worry us too much. As a matter of fact, incredible as it may seem, the United States has already imposed such sanctions against Israel before any recommendations for sanctions were voted upon at the U. N. All visas for travel to Israel have been withheld by the State Department. Point 4 benefits and grants-in-aid have been withheld.

DULLES A BIT CONFUSED

If you are confused by the meaning of sanctions, you may take comfort in the fact that Mr. Dulles is, too: However dubious may be his merits as a statesman, no one can deny his reputation as an able lawyer. Here is how Mr. Dulles defined "sanctions" at a recent press conference:

"The word 'sanction' is sometimes used as though it had a precise meaning. Of course, there are all kinds of sanctions. There is a wide variety of action which can be called a sanction * * * so the word 'sanctions' just used in abstract does not have any clearly defined content."

With this legal opinion from our distinguished Secretary of State, we should not be unduly panicked by the adoption of a sanction resolution by the General Assembly. Such a resolution is meaningless according to Mr. Dulles until the United States decides to implement it at which time the President must determine how he wishes to define the term "sanctions." It may be that after a careful study of Mr. Dulles' legal opinion, the President may decide that a scolding would be a sufficient implementation of any sanctions resolution.

Most people fail to realize that the General Assembly has no power to impose sanctions. It can only recommend sanctions, but it is up to each member nation to determine whether it desires to impose sanctions. Israel cannot be hurt (except in public relations) by any sanction resolution of the General Assembly unless the United States desires to implement such a resolution. As a practical matter, the United States is the only nation whose sanctions could be disastrous to Israel. Therefore, Israel's fate cannot be determined by the U. N. It rests squarely upon the shoulders of the United States. In the last analysis, Israel's fate depends upon the definition of sanctions by the United States. That is why American semantics plays so large a role in Israel's future.

The Security Council could impose sanctions, but it is fairly certain England or France would veto such a proposal. This would create an interesting legal problem.

If the Security Council vetoed a sanction resolution, would its decision not to impose sanctions take precedence over a recommendation by the General Assembly in favor of sanctions? The Security Council is the supreme organ of the U. N. entrusted with the responsibility for enforcing peace. It could well be that the decision of the Security Council on this subject would overrule any recommendation of the General Assembly. If this be so, President Eisenhower may even be able to crawl back from the limb upon which he now keeps his isolated vigil. The President has maintained that we must act only through the U. N. and that the compelling necessity of upholding the authority of the U. N. requires him to advocate pressure against Israel. If the Security Council should negate the resolutions of the General Assembly, the President is deprived of his only basis for imposing sanctions.

CONTRARY TO AMERICAN CONCEPTS

There is another fundamental criterion against the imposition of sanctions. We all know that one of our most cherished constitutional provisions prohibits the adoption of any law which would "* * * deny to any person within its jurisdiction the equal protection of the laws" (sec. 1, 14th amendment). Although this provision relates to United States citizens, the principle is no less applicable to laws affecting nations. It would be a shocking perversion of fundamental American justice if we were to apply one law to Israel and another to Egypt, India, and the Soviet Union. Israel, like any citizen of this country, should be entitled to the "equal protection of the laws."

The road to sanctions is cluttered with thorny constitutional impediments. The whole question of separation of powers is involved. Does the executive branch of our Government have the right to impose sanctions in the absence of legislative authority from Congress? UJA and Israel bond money represents the funds of private American citizens. Although the executive may withhold point 4 and grant-in-aid funds which it is authorized to spend, does the executive have the power to control disposition of private property? If the answer is yes, we are not living in a democracy but in a potential Communist dictatorship. If the executive has complete authority over the disposition of private property, it could dictate to all of us exactly how we use or transfer our money and property. Under constitutional law, the executive has no such authority. What autority the executive may have to prevent us from disposing of our property as we please must stem from laws passed by Congress, and even such laws may not infringe upon the constitutional guaranties against the deprivation of property without due process of law.

"ENEMY ACT" DOES NOT APPLY

Has Congress passed any laws giving the Executive the power to prohibit the transfer

of our money or property to UJA or Israel bonds? Apparently, the executive branch of our Government seems to think so. Hold your breath while I tell you upon what legislation our State Department relies. It is the "Trading With the Enemy Act." It is upon this law that the State Department has refused visas to press correspondents to visit Communist China. We have never declared war againt Communist China. Who is our "enemy" is determined only by our State Department. In the case of Communist China, I am quite ready to agree that it is our enemy. However, this is my opinion which happens to coincide with the opinion of the State Department. But we live under a government of law—not men. Our laws cannot depend upon the vagaries of individual opinion. Suppose the State Department were to arbitrarily label Norway as our "enemy" and impose sanctions under the "Trading With the Enemy Act." No court in our land would uphold such arbitrary action. Yet, the only legal authority for prohibiting the transfer of private U. J. A. or Israel bond money must rest upon a finding that Israel is an "enemy" of the United States. I respectfully submit that such a fantastic finding is in direct conflict with the repeated assertions of our Government, that Israel is our friend and, perhaps, the only friend we have in the Middle East.

Now we come to another fundamental American constitutional guarantee—the due process clause of the 5th amendment. Our Constitution guarantees that "no person shall be deprived of life, liberty, or happiness without due process of law." If this principle is right for the United States, it is right for the world. Now, what "due process of law" has been accorded to the State of Israel? Our courts have interpreted this provision of the Constitution as requiring a trial where evidence may be fully presented, a Judge who is impartial, and a general atmosphere in which hatred, prejudice, and bias are not prevalent. Has Israel been granted "due process of law"? Obviously not. None of the judges are impartial. Each member nation of the U. N. has its own axe to grind. The atmosphere is permeated with Arab hatred and prejudice. If this were a lynch case in the South, our Supreme Court would reverse any conviction after a trial such as Israel was accorded in the U. N. upon the basis that due process of law was denied. Certainly, the laws among nations should not be less zealous for justice than the laws which we have promulgated for our own safety.

Like Mr. Ben-Gurion, I have an enormous respect for the President of the United States. Regardless of the person who holds this office, we must respect his awesome responsibilities to protect and defend the legitimate interests of the United States. If these interests were to conflict with those of Israel, we must painfully espouse our American interests. About this there can be no divided loyalty. There need be none in the present emergency. There is no conflict whatever between the interests of the United States and Israel. Both nations are striving for peace and security in the Middle East. Both nations accept the Eisenhower doctrine designed to prevent Communist infiltration in that area. That is why I am astonished at the President's speech on TV.

I challenge the President, not upon his appraisal of the issues about which people may differ, but upon the cogency of his logic about which intelligent people may not differ. The President stated that sanctions could not be imposed against the Soviet Union because it was an atheistic, immoral country upon whom no pressures could be applied. However, because Israel is a democratic, God-fearing country pressure could be applied. I respectfully submit that this is the non sequitur of the century.

I started off with the comment that sanctions, like measles, was catching. It is. If Israel is subjected to sanctions, then Egypt, India, and the Soviet Union should be subjected to sanctions. If sanctions were impartially applied to all countries who have refused to conform with U. N. resolutions, Israel would have no serious problem today. Nasser's tottering economy is on the verge of bankruptcy. His fair weather allies would part company with Nasser if the Arab States were subjected to severe economic sanctions by the Western Powers. If sanctions had been imposed against the Arab States at the various times when they flouted the decisions of the U. N., the Suez Canal and the Gulf of Aqaba would now be open to Israeli shipping, and the Gaza strip would never have been permitted to be used for continuous raids against Israel. Equality before the law is the basic right of every human being. We demand this equality for our own citizens. We cannot justly deny it to other nations.

Minimum Wages

EXTENSION OF REMARKS
OF
HON. CHARLES C. DIGGS, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 12, 1957

Mr. DIGGS. Mr. Speaker, permission is requested to include in the RECORD the following article from the AFL–CIO news of January 19, 1957, concerning the need for extending coveraging of the Federal minimum wage law, which need arises mainly as a result of failure of the States to protect workers who are not presently included. As a recent editorial in the Charlotte Observer, Charlotte, N. C., so aptly put it:

Some people will shout of States rights if Congress passes legislation on the subject. You won't hear much about States wrongs.

The article follows:

SURVEY EXPOSES MINIMUM WAGE GAPS—FULL COVERAGE FOUND NEEDED IN NORTH CAROLINA TOWN

In the midst of the "greatest prosperity in our history," millions of Americans are living at a bare subsistence level on wages which are a disgrace to the "American way of life."

Wages of 40, 50, and 60 cents an hour exist in America—and people "live" on such wages in cities, towns, and hamlets.

ASHEVILLE AN EXAMPLE

Asheville, N. C. (population, 53,000; metropolitan area, 124,403) is one of these.

Asheville is a typical American city where many workers—especially in the retail and service industries—earn much below the $1 per hour minimum required in industries covered by the Fair Labor Standards Act.

An AFL–CIO research team made a study of wages in Asheville in mid-December. The team—Bert Seidman, economist of the AFL–CIO Department of Research, and Bob Christofferson, of the AFL–CIO Department of Organization—wanted answers to these questions:

How have workers in covered employment and their families benefited from the increase in the Federal minimum wage from 75 cents to $1?

How do workers not covered by the Fair Labor Standards Act get by on wages under $1 per hour?

These are the answers:

Covered workers who are now earning $1 per hour and who earned less before the new minimum went into effect last March 1, are generally getting by a little better than they did.

But it is still an unending struggle to make ends meet on an income of $40 per week, minus deductions, when the cost of living is at its highest level and continues to climb.

No one can live on wages of 40, 50, and 60 cents an hour found in establishments not covered by the FLSA. One can barely manage to exist—and then only on a day-to-day basis, wondering how to feed, clothe, and shelter a family over the next 24 hours, wondering where the next meal is coming from.

Asheville provided all the proof needed that the millions of American workers outside coverage of the minimum wage law—notably those in retail and service industries—sorely need Federal protection.

MANY BELOW $1 AN HOUR

Wages like these were uncovered in Asheville retail and service industries:

Women sales clerks in department stores earning $18 to $24 per week, with some getting $30—even in the so-called better stores—for workweeks of 41 to 47½ hours or more (38 to 73 cents per hour, depending on amount earned and number of hours worked).

A girl clerk in a chain drugstore earning 39 cents per hour for 58 hours' work.

A girl clerk in a dime store earning 50 cents per hour.

A man earning $35 per week for 60 hours' work as clerk in a grocery store (58 cents per hour).

Employees in a laundry earning $98 per month for a 48-hour week (45 cents per hour).

Hotel elevator operators earning $36 every 2 weeks for a 48-hour week (37½ cents per hour).

A waitress earning $2.50 per day salary for 8½ hours' work, plus 2 meals per day, plus tips (which amount to not over $15 per week). Her salary (not counting meals and tips) amounts to 30 cents per hour.

In the course of the investigation the researchers also met Mrs. Smith.

She works in a laundry, a business not covered by the FLSA. She earns $27.50 for a 52½-hour or longer workweek (52 cents per hour). Workers in other laundries earn as little as 45 cents per hour.

The name "Smith" is fictitious. And for the best of reasons—Mrs. Smith is afraid she would lose her job if her real name were used. As long hours as she works and as low paying as her job is, it is all that stands between her and destitution for herself and the two children she supports.

Mrs. Smith starts work at 7:45 a. m. and gets off at 5 p. m., 6 days a week, taking 20 to 30 minutes for lunch.

Mrs. Smith and her two children live in a 5-room frame bungalow for which she pays $40 per month rent. Despite the long hours she works, the house is neat and clean.

ALL-VEGETABLE SUPPERS

They have lived there 2 years. Last winter the only heat was a fire in the grate of the fireplace. This year a wood-burning stove for heating has been mounted in the living room, but "if it gets real cold, it doesn't heat the house," said Mrs. Smith.

Breakfast in the Smith home consists of one egg, sirup and butter, bread and coffee with canned cream. The children get their lunches at school 5 days a week at a cost to Mrs. Smith of $1.25 per child.

Mrs. Smith takes her lunch to work—consisting of a couple of sandwiches. Asked if she usually bought a beverage to go with her sandwiches, Mrs. Smith replied, "I can't afford to. I just drink water."

Supper is a vegetable supper, such as dried beans, potatoes, cabbage, canned peas, tomatoes, corn, and bread. "Some weeks I get a frying chicken for Sunday dinner," Mrs. Smith added. She buys no fresh fruit, just a couple of cans of applesauce a week.

Neither she nor her 15-year-old daughter drinks milk. She buys a quart of milk every other day for her 13-year-old son, who is skinny and underweight and has a poor appetite. She has no money for medicine or vitamins, although she feels her son needs them.

Mrs. Smith hasn't spent $10 on herself in the past 2 years for clothes and shoes. "I have gone back and forth to work with my feet on the ground—with holes in my shoes," she said.

We had one final question for Mrs. Smith: "What would be your most immediate expenditure if your wages were raised to $1 per hour?"

There were several things Mrs. Smith said she would try to do with more money: "First thing, I'd buy more substantial food for my children. Next I'd have my eyes tested and my glasses fixed. I'd have my daughter's teeth fixed. I'd pay on my debts and then I would buy the mattresses we need and a few clothes."

EMPLOYERS HOLDOUT

North Carolina has no State minimum wage law. The State legislature repeatedly has turned down proposals for a 55-cent per hour minimum. The present session will have a 75-cent proposal before it.

There is a maximum hour law. It provides that "no employer shall employ a female person for more than 48 hours in any one week or 9 hours in any 1 day or on more than 6 days in any period of 7 consecutive days."

Employers in retail and service industries don't want provisions of the Fair Labor Standards Act ($1 per hour minimum wage, time-and-a-half pay after 40 hours in the week) applied to their employees. They like it the way it is.

When the higher minimum wage went into effect March 1 for those workers in covered industry, it brought raises to an estimated 1,200 workers in Buncombe County, in which Asheville is located.

This figure is 10 percent of the total number of manufacturing workers in Buncombe County.

The researchers talked to George Watson, who works in a small plant in the textile industry in Asheville. Watson is married, the father of six children. He supports his family on take-home pay of $38.08 per week (the legal minimum of $1 per hour minus deductions).

Watson was earning 85 cents per hour as a sweeper and laborer up until 1 week before the minimum wage was increased to $1. That week he was raised to 90 cents per hour. Thus, in effect, he received a wage increase of 15 cents per hour, or $6 per 40-hour week.

There's a place, many places, in fact, for every penny of that $6 raise. It helped George Watson get, "a little better food for my family, something for the kids to wear," he says.

BUSINESS IS UP

Merchants have noted an increase in their business since the higher minimum went into effect.

Roy Trantham, owner of Trantham's Grocery, told us the increase in the minimum wage had an effect on his business, which is up over last year. Workers are cashing larger checks with him, spending more * * * buying more milk and meat. His store is located in Biltmore, a small community adjoining Asheville, and is near several small plants where the higher minimum brought raises to employees.

H. C. McKenzie, owner for the past 2½ years of Mac's Grocery, a few miles from Asheville in a workers' neighborhood, told us he had experienced his biggest month of sales in the month following the increase in the minimum wage. That month (March) he did over $1,000 more business than in the same month of the year before and $529.16 more than the preceding month.

The higher minimum wage has helped workers covered by it. It has helped business. Its extension to the retail and service industries—long overdue—will help millions more of American workers.

What Price Education

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1957

Mr. TOLLEFSON. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include a thought-provoking editorial appearing in a recent issue of the Aero Mechanic, a paper published by the employees of Boeing Airplane Co. in Seattle:

WHAT PRICE EDUCATION?

There's an income tax problem affecting many Aero Mechanic parents—and other parents throughout the Nation—that deserves a careful scrutiny.

It's this: parents with children of college age are making every effort to send young Johnny or Mary to a school of higher learning, in many cases at a great sacrifice to the family budget. Yet there is nothing in the income tax laws that allows a parent to make a tax deduction on this necessary expense.

Perhaps in bygone years a university education was regarded as a luxury. This certainly isn't the case today, for the average firm or company won't talk to a youthful prospective employee unless he has the benefits of a college education.

Great ado, also, could be made over the gains realized by our Nation, and thus on the welfare of the entire world, by having a growing number of our future adults approaching the problem of life with better tools of learning.

The Congress seldom, of course, looks with great favor upon proposals to allow tax exemptions. But think, for a moment, on some of the common exemptions in everyday usage—such as expense-account allowances, oil well depletions, fast writeoff of certain industry amortizations, donations. Why, even industries are allowed to scratch off the entire cost of sending some of their executives to special training institutions.

So why not a tax relief for the long-suffering parent struggling to keep his kinds in school?

We'd like to make this suggestion to our congressional delegation:

Propose an income-tax deduction of the cost of books and tuition, allowable either to the parents of the student or to the student himself if he is working and sending himself through college.

Propose a limited allowance for board and room costs where it is necessary for students to live away from home.

We'll wager there'll be more young people attending college, and a lot of happy parents, if some version of this needed relief is forthcoming.

The American Red Cross

EXTENSION OF REMARKS
OF
HON. WILLIAM E. MINSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 19, 1957

Mr. MINSHALL. Mr. Speaker, as you all know, the Red Cross bloodmobile visited the House of Representatives last week. The results were, to say the least, disappointing, as they were last year. Not enough blood was taken in last Wednesday to have made it worthwhile for the Red Cross to set up their bloodmobile unit here. The Washington regional blood center must collect 400 pints of whole blood daily in order to meet the nonemergency needs of the local hospitals, doctors, and clinics in this area.

In addition to this, the Federal Civil Defense Administration has requested the National Red Cross to resume the collection of blood for stockpiling of serum albumen and other blood derivatives. This is the continuation of a program which was temporarily interrupted in November 1954, and is not connected with the present world situation or the military services. This stockpiling is for the benefit of the civilian population in the event of massive disasters—military or civilian—in which large numbers of casualties call for immediate treatment of shock and hemorrhage. In fact, of the 80,000 Japanese who died at Hiroshime, expert estimates claim that 20,000 might have been saved if blood had been available.

A recent issue of the Cleveland Press carried a very good editorial regarding the Cleveland Red Cross' annual fund-raising campaign which will continue through March 18. I should like to include it in the RECORD at this point:

[From the Cleveland Press of February 28, 1957]

WHENEVER THERE'S A NEED

The finest tribute that can be paid to any organization devoted to human welfare is that it's on hand whenever and wherever it's needed.

As those who have found themselves in need know, this warm tribute can be readily and wholeheartedly paid to the Red Cross.

The Red Cross is on hand when folks need blood. It manages Cleveland's huge blood program with great competence and skill.

The Red Cross is on hand when a family problem overtakes a serviceman, on duty at some post so remote that he cannot deal with it himself.

The Red Cross is on hand, promptly and expertly, whenever disaster overwhelms a family, a neighborhood, or, as in the recent southern floods, thousands of people in entire counties.

These needs go on, day after day, week after week, and year after year.

It is in preparation for meeting these needs fully and skillfully, as it always has in the past, that the Cleveland Red Cross is undertaking its annual fund-raising campaign next week.

The goal this year is $1,427,600.

Of this sum, more than half will stay in Cleveland to underwrite such programs as the blood banks ($223,827), family help for servicemen and veterans ($161,466), and first aid and water safety services ($96,815).

The balance is Cleveland's contribution to relieving the suffering from national disasters, like the recent floods in southern Ohio and West Virginia, and the endless devastation from tornadoes, storms, and accidents.

The campaign, which will be energetically and hopefully launched Sunday, will continue through March 18.

Within those 2 weeks, the Red Cross must raise the funds to carry it through an entire busy year.

The organization will need your generous help. And deserves it, too.

Canal Pact Delay Stirs Discontent

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 12, 1957

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times of Sunday, March 10, 1957:

CANAL PACT DELAY STIRS DISCONTENT—PANAMA AND ZONE EAGER FOR CONGRESS TO VOTE BRIDGE AND WAGE RATE BILLS

BALBOA, C. Z., March 9.—There is dissatisfaction in the Canal Zone, and even more in the adjacent Republic of Panama, because the United States Congress has failed so far to pass measures to implement parts of the 1955 treaty.

These cover chiefly a single wage scale for workers in the zone, civil service retirement for Panamanian workers and transfer to Panama of about $30 million in real estate and appropriations to build a $20 million bridge across the canal at Balboa.

Critics note that enabling measures for these aspects of the so-called Remon-Eisenhower treaty have not emerged from the Bureau of the Budget, which processes Executive-sponsored legislation. Congress, they note, has been sitting for a third of its annual session.

Package legislation was introduced over a year ago with administration backing. But President Eisenhower did not push it. No hearings were scheduled and the measures died in committee.

TWO BILLS PASSED SO FAR

Many of the numerous treaty articles required no legislation. Of those that did, only two bills have been enacted.

One, approved by Congress early in 1956, raised the canal annuity from $430,000 to $1,930,000.

The second, a bill authorizing the Balboa bridge, was pushed through last July, shortly before adjournment.

However, no move can be made to choose a firm site for the bridge or to design it, until Congress appropriates money.

Many articles of the treaty were and still are unpopular among American residents of the Canal Zone. Despite this, there is a feeling that the executive branch should press for enactment, since President Eisenhower agreed in an international instrument over 2 years ago to ask Congress to make the real estate, bridge, wage, and retirement concessions.

Panamanians are eager for action. They recall that the general principles embodied in these articles were agreed to informally by President Eisenhower almost 4 years ago in a statement with the late President José Antonio Remon when the latter visited Washington.

Americans here reason that the longer the delay, the less effective will be the stated object of the concessions made in the Treaty of Mutual Understanding and Cooperation, a name often termed an unfortunate misnomer, because of its unclear wording.

SEE UNITED STATES VULNERABLE

While matters hang fire, Americans observe, the United States lies open to disagreeable charges of nonconformance that are made frequently in some Panama papers.

For example, the treaty does not agree to raise wages for Panamanian workers on the zone; but canal and military agencies have already given those on the locality-rate rolls two 5-cent-an-hour rises to offset their having to shop in their own country. The treaty article barring them from canal commissaries was granted at Panama's request.

The real estate and bridge matters appear to be simple and clear cut. Wage-scale and retirement bills may require extensive hearings and argument before there can be a meeting of the minds toward changing long-term policies. Why no, it is asked, enact the first two, on which only token opposition is foreseen, and let the others be thrashed out later in the session?

The chief object of the treaty, as announced by United States officials, was to aid the economy of Panama. But Panama cannot use the buildings and lands until she takes title. Nor can the Canal Zone take steps to replace such schools, quarters, warehouses, and railroad stations as may be required. Replacements are expected to cost several million dollars.

The bridge will be a convenience and a timesaver. Traffic across Balboa Ferry and the Miraflores Bridge 3 miles inland is not congested today. But it was in 1942 when the United States first agreed to build the bridge. It may be again if the bridge is not completed before the Pan American Highway brings thousands of vehicles overland to the Canal Zone.

The single wage scale is the thorniest issue. No United States official will discuss details of the expected measure until it has been offered Congress. But authoritative sources think it calls for a cut-off level at about the grade of a GS-3 or GS-4. Below that all jobs would be compensated at the canal's locality rate for Panama, regardless of the citizenship of the jobholder.

Above that Panamanians and Americans will receive the same basic wage, to equal civil service gradings. Americans also will receive an added percentage differential for working outside their own country.

Gov. William E. Potter of the Canal Zone has called the unintroduced legislation "a plan we can live with," and Panamanian officials who have conferred on the provisions in Washington apparently consider it satisfactory.

Congress is thought to have been considering some changes in the civil service retirement as applied to noncitizens overseas. This may delay action for canal workers.

Most other articles of the treaty are working smoothly, but it is too soon to evaluate the effect of those that became effective January 1, 1957.

A Letter From a Constituent

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1957

Mr. McDONOUGH. Mr. Speaker, the average citizen is more conscious today than ever before to the magnitude of the national debt, high taxes, inflation, the high cost of living, and the tight money situation nationwide.

I received a very intelligent and thoughtful letter from a constituent of mine who indicates his thorough knowledge of these conditions which reflect the opinion of many people throughout the Nation.

I am submitting herewith a copy of this letter from Mr. Gene Mahy, of Los Angeles, Calif., which I am certain all Members of Congress will find interesting:

MARCH 4, 1957.

Hon. GORDON L. McDONOUGH,
Fifteenth District California,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN: Here is a fact that is not often enough brought to everyone's attention: The population of our country will soon reach 170 million people—the interest alone on our national debt is 8½ billion dollars so that $8,500,000,000 divided by 170,000,000 equals $50—the cost to every man, woman, and child in the Nation for interest alone yearly.

Here are some other facts: Admittedly we have inflation. Everyone feels the income-price squeeze. The B. of L. price index is now better than 118. This automatically causes wage hikes through escalator clauses.

The hourly wage rate for the Nation is at a new record of $2.04 per hour (December 1956). New wage demands and strikes scheduled for this year will again plague the economy.

By the iron law of necessity, prices of all consumer and capital goods must reflect wage increases—therefore the wage-price spiral is in full effect.

The rate of productivity per man-hour is in a declining trend—this despite record expenditures by industry to combat the decline.

The Government is in direct and indirect competition with private industry, in the following important fields:

Money: Available capital and loan funds.

Labor: Government and industry both engaged in record production and expansion—result: practically full employment at record rates of pay.

Materials: Both Government and industry competing for limited supplies because the rate of production from extractive industries have reached a practical limit so that no surplus has existed to exercise a stabilizing effect on prices.

Other fields in which the Government competes with private industry have been brought out by the Hoover Commission and tend to illustrated the curious fact that a sizable remnant of socialist planning still exists when it should be the sole right and function of private enterprise alone to produce in any field not connected with defense. Especially since civilian productiveness can make any product better, cheaper, and more efficiently. Notable among Government enterprises are TVA and various other industries which operate without burden of regular taxation and which infringe and compete with the legitimate producers of consumable goods and wealth and thus tax revenue to the Government is withheld and later exacted from those who do produce.

Up to this point we have a list of undimable facts which describe the more obvious mechanics of the ascending spiral.

But there is more:

GNP has been establiahing new records.

Employment at record levels and at record wage rates, as seen—industry profits have remained at a high level (although less than

1955, due to productivity decline and higher wage and material costs).

Consumer expenditures as a result have been at new record levels, and the same may be said about capital outlays for expansion and improved productivity by the capital and producers industries.

All of the record totals establishing these record increases have been measured in a further devalued dollar, consequently the actual increases have been somewhat less—but nonetheless greater than ever before. The spendable income of the public and that of industry combined, plus the tax revenues to the Government based on these higher incomes, have all set records.

From the preceding we see:

That supply and demand law is working in raising prices because too many dollars are chasing too few goods, thus aggravating the spiral still more—inflation.

But the following facts point up the truly dangerous condition of our national economy:

The national debt reduction effort has had negligible results despite record Government tax revenue.

Individual and corporate savings have declined in an unprecedented spending binge.

The public, together with many large enterprises, has gone deeper into debt.

The declining value of the dollar as measured by reduced purchasing power has brought home the startling fact that the interest obtainable from what the public regards as the safest securities and depositories, such as Government bonds, savings banks, building and loan companies, have barely kept up with the erosion of value of the dollar. The results of this dissatisfaction have manifested themselves in two developments, one contingent upon the other: (1) The public has been drawing out and using its savings in the belief that they can buy more today with their dollars than they can later with a continuously devaluating dollar in the future. They consequently have much less confidence in Government obligations, and they have been cashing in their bonds at a high rate; (2) the depletion of savings totals in all classifications has reduced the supply of available loanable funds to commerce, industry, banks, and the Government, which explains the rise in interest rates already in effect by many banks and lending institutions, and presently to be raised by the Government, in the same effort, to entice savings back into Government bonds, so as to finance unduly high current expenditures and the astronomically high national debt. Is this the cause of inflation?

A great part of the public still believes that big Government spending is O. K. because the Senators and Congressmen just pluck the billions of dollars from the "money trees." That same group feels that because they are in lower brackets the burden of taxes does not fall upon them. There is great ignorance and irresponsibility prevalent among too many of our citizens and it is doubtless to this segment of the population that you cater in developing many of the proposed bills listed in your last Washington Report. Do you realize how many of them are inflationary? How many of them are designed to favor a given group at the expense of all? Are you aware of the additional costs to the Government if many of these measures pass? Have you and your Banking Committee a money tree? Have you thought about where the money has to come from? What effect continuous heavy taxation has upon the cost-price squeeze and the incentive of producers to buck the losing game? And do you think about their effect in cheapening money?

In these several pages I have tried very hard to give you a clear picture of the sick condition of Nation's economy so that I could point out to you and your colleagues the paramount importance of conserving the money resources of the Nation instead of devising ever new gimmicks for spending more and taxing more. The logic of the facts and statements presented in the foregoing pages points to a serious and deteriorating situation and the remedies for which will require the greatest of political-economic statesmanship plus the combined cooperation of all members of the Congress to put the brakes on all unnecessary spending.

Many men of high intelligence and integrity have sounded timely warnings—among them Hoover, Byrd, Martin (F. R.) but the quotes from Humphrey top the list: (1) "A depression that will curl your hair"; and (2) "A sick American economy would fulfill the Communist dream of conquest just as surely as victory on the battlefield. Our way of life can be lost as completely by economic deterioration from within as by aggression from without."

The above is a statement you should have copied and placed before you on your desk and those of your colleagues to look at just before the time any of you get set to dream up another give away.

Having received yours of February 28 in reply to my letter, and appreciating the courtesy of a reply from a man who necessarily works under a heavy schedule; I would like to say in answer that if in reality a cross section of the 15th District is in disagreement with the facts and figures and principles herein set forth plus my original vehement rejection of the suggestion of price and wage controls as originally inquired about by you—then in effect I can only conclude that if the 15th District is a sample of what the rest of the country thinks—then the economic disintegration of the Nation is in the works right now. May the Lord have mercy upon us, and on you guys too.

GENE MAHY.

LOS ANGELES, CALIF.

The American View on War and Peace

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 12, 1957

Mr. DINGELL. Mr. Speaker, in recent history American taxpayers have spent millions and billions of dollars on foreign aid of various kinds. On the whole this expenditure has been successful in winning friends for America and in preserving and strengthening America's friends and allies. But in spite of these expenditures and the good will of the American people everywhere, all our fellow humans on this planet have not conceived a completely favorable picture of Americans. In part this has been due to ever-present Communist propaganda and to the efforts of others of similar totalitarian persuasion. The fact is that expenditure of dollars alone, although it has done much to help the people of the world, will not make Americans understood by our fellow men in the way that will some of the simple happenings into which Americans are lucky enough to fall.

Many years ago it was the pleasure of my late father to appoint to the Naval Academy a young Polish-American boy, Sigmund Bobczynski. That young man has made a splendid record in the Navy in war and peace. He has risen to the rank of commander and has been decorated many times. Because of his splendid ability he has recently been assigned to one of the most important United States Navy posts with NATO. In connection with his duties he had an opportunity to meet a group of European visitors to our naval base at Norfolk. As a result of that meeting and the sincere hospitality which this fine officer and other American naval personnel extended to these visitors, an article appeared in the Norwegian Labor Union magazine, Fri Fagbevegelse, on December 15, 1956.

That article shows the real, genuine desire of the American people for peace and friendship with our fellow human beings. The warmth of feeling created by the article cannot be bought by the expenditure of many millions of dollars, or the construction of a great number of imposing monuments to peace.

I hope many Americans will read the article and will emulate the actions of Sigmund Bobczynski and others who have helped America to be better understood by sister democracies just by being the decent, warm, natural, hospitable people that we should be.

The article follows:

[From the (Oslo, Norway) Fri Fagbevegelse, of December 15, 1956]

THE AMERICAN VIEW ON WAR AND PEACE

Some of us Norwegians have seen or heard the expression: "The American Warmongers."

My intention while visting the United States was to get a broad view on this subject. It is well known what is said and written on the subject war and peace by President Eisenhower, Foreign Minister Foster Dulles, and the leading newspapers. I shall abstain from commenting on that, but what are the views of the American public?

As I previously mentioned, no general speeches were made during our touring of America (United States of America). However, when people from the free world converse with each other I believe one gets a better impression of the public opinion. At this point I would like to point out that I did not meet anyone who possessed the so-called warmonger attitude.

One need not necessarily be of a military profession to observe that the United States has developed a very efficient war machine. Some are of the opinion that this machine threatens the world peace, believing it one day may run out of the control of the persons assigned to control it.

Down in Norfolk, Va., an Italian journalist and myself one night ended up at the home of a senior officer at the staff of the Allied Command Atlantic. In the party were also an American Navy captain, who introduced hirmself as a destroyer "skipper," and a few others. I was struck by the informality at the party, and it specially impressed me when the host and some of his American colleagues placed themselves in shirt sleeves on the floor to enjoy the supper because there were not sufficient chairs for all.

It is interesting to note how very easy, even considering the language difficulties, it is to converse with people who possess the same line of thoughts. These Americans were as much—or little—imperialists and warlike as myself or any Norwegian farmer, laborer, or fisherman. They have been taught their military trade to perfection and no one need be doubtful about that. However, they do not wish to use their abilities and they don't enjoy their trade in the sense that everything else is irrelevant. One of them strongly expressed the importance of the economical and social developments being progressed in such

a manner as to give the public a feeling that they have something of value to defend.

Let me add the following to complete the picture. The host for the evening was born in the United States, but his parents immigrated from Poland. His wife had a Danish grandmother. The "destroyer skipper's" father came from Latvia and his mother from Turkey.

Every day we met people like that, some in important government assignments. They were all people with strong roots in the Old World, with the will to be free in their blood, literally nursed from a mother's milk, a mother who had escaped slavery and want and distress in her former homeland. They want to defend this freedom because they look at freedom and life as one thing. But they have no desire to destroy the freedom of other people.

Economics Versus Intolerance

EXTENSION OF REMARKS
OF
HON. CHARLES C. DIGGS, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 12, 1957

Mr. DIGGS. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD the following article which appeared recently in the Washington Daily News. It concerns a little-heard-about aspect to the problem of integration in the South:

NOBODY IS REALLY MAD AT ANYBODY IN ATLANTA

(By Andrew Tully)

ATLANTA, January 14.—It made sensational headlines the other day when six Negro ministers were arrested for trying to ride up front in a bus, but the implication was unfair to this bustling, strictly business city of more than half a million.

In the first place, nobody was really mad at anybody, the Negro preachers sat down in the white section of the bus because they wanted to be arrested and put Georgia's segregation law to a test.

STATE LAW

Secondly, Atlanta had no choice. The law which keeps Negroes in the rear of buses is a State law, not a city ordinance, and city authorities enforce that law.

Today, both Negroes and whites josh good-naturedly about what they call the "stunt." It amuses practically everybody. As the Atlanta Constitution pointed out editorially: "The only near hysteria in evidence was confined to the State administration."

This curiously tolerant situation exists because Atlanta is unique among southern cities. The whites here may not want complete social integration, but they want the Negro to live well and to get his share of economic privileges mostly because Atlanta needs the Negro. Of a total population of some 503,000 persons, 130,000 are Negroes and businessmen would have tough sledding without that Negro dollar.

WHAT SIGNS SAY

Atlanta's enforcement of segregation on buses is most casual. The signs on the buses say merely that Negroes shall start seating from the rear, and whites from the front—not that Negroes must sit in the rear. Thus, when the rear seats are filled, Negroes take seats up front. The result is that often a white not only fails to get a seat up front, he cannot even get on the bus.

A little thing, perhaps, but big down here.

Mostly, Atlanta's pride is centered on the Negro's economic situation. White Atlantans like to point out their city has the only two Negro millionaires in the South, and the only Negro bank belonging to the Federal Reserve System. They call attention to the Negro Atlanta Life Insurance Co., with assets of $40 million, the largest Negro stock company in the South, and the $10 million Negro Mutual Federal Building & Loan Co.

Negroes work side by side with whites in most of the city's industries including the well-paying departments of the Lockheed aircraft plant. They play golf with their white neighbors on the municipal courses. There is no segregation in the stores.

BIRACIAL GROUP

For years, a biracial commission has worked out agreements on suburban sections for allocation to Negro developers. The result is that some beautiful high, wooded rolling land on Atlanta's west side is now occupied by hundreds of attractive rambler, split-level and two-story homes for Negro families.

Negroes themselves will admit they are better off in Atlanta than in any other southern city. But they are determined to do better to get all the rights the law of the land grants them. That will be most difficult.

AFL–CIO Announces Significant and Governing Code of Ethics Against Communists, Crooks, Fascists, Racketeers; Conflict of Interests and Health and Welfare Funds

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 17, 1957

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent and approval so to do, heretofore granted me, I herewith present the partial text of a very interesting and informative pamphlet recently published by the AFL–CIO executive council.

Being a member of the House Un-American Activities Committee as I am now, and have been for several years, I am not least of all pleased to see the text of article 8, section 7, of the constitution of AFL–CIO with reference to "Communist, Fascist, or other totalitarian agencies who are opposed to the basic principles of our democracy and of free and democratic trade unionism."

Mr. Speaker, the record of the hearings of the House Un-American Activities Committee during these last several years is as clear as crystal to the effect that whenever a known active Communist is a member of a trade union, he in fact owes his allegiance to the Communist conspiracy to defeat the basic principles of our democracy instead of owing loyalty to the trade union which he joins. In other words, his membership in a trade union is in furtherance of his primary loyalty to the Soviet Communist conspiracy which has and does now seek to spread its evil control over free and democratic trade unionism. This is the record, Mr. Speaker.

Also, I am pleased to see this forthright and timely declaration of principles of ethical practices by this major American trade union because I am aware of considerable and timely cooperation and helpfulness by leaders and active workers in free and democratic unionism in our beloved Nation to uncover and expose the international Communist conspiracy in our beloved Nation which has and does now continue to try to use free and democratic American trade unions for its destructive, immoral, and dastardly purposes.

Therefore, with pleasure I commend the AFL–CIO for this declaration recently published in the AFL–CIO News for February 9, 1957.

The 3 main topics herein set forth are but 3 of the several ethical practices codes adopted by AFL–CIO.

The partial text follows:

[From the AFL–CIO News of February 9, 1957]

RACKETEERS, CROOKS, COMMUNISTS, AND FASCISTS

Article VIII, section 7 of the constitution of the AFL–CIO establishes that "It is a basic principle of this federation that it must be and remain free from any and all corrupt influences and from the undermining efforts of Communist, Fascist, or other totalitarian agencies who are opposed to the basic principles of our democracy and of free and democratic trade unionism."

Under this constitutional provision there is no room within the federation or any of its affiliated unions for any person in a position of leadership or responsibility who is a crook, a racketeer, a Communist or a Fascist. And it is the obligation of every union affiliated with the AFL–CIO to take appropriate steps to insure that this principle is complied with.

Neither the AFL–CIO nor its affiliated unions are law-enforcing agencies. It is not within the purview or authority of a trade union to convict its members of a violation of a statutory law. But it is the duty and responsibility of each national and international union affiliated with the federation to see to it that it is free of all corrupt, Communist, or Fascist influences.

Consequently, a trade union need not wait upon a criminal conviction to bar from office corrupt, Communist or Fascist influences. The responsibility of each union to see to it that it is free of such influences is not a responsibility placed upon our unions by law.

Obviously, if a person has been convicted of a crime involving moral turpitude offensive to trade-union morality, he should be barred from office or responsible position in the labor movement. Obviously, also, a person commonly known to be a crook or racketeer should not enjoy immunity to prey upon the trade-union movement because he has somehow managed to escape conviction.

In this area, as in all others, determinations must be made as a matter of commonsense and with due regard to the rights of the labor unions and the individuals involved.

The ethical-practices committee recommends that the executive council of the AFL–CIO adopt the following policies to safeguard the good name of the AFL–CIO and its affiliated unions:

1. The AFL–CIO and each of its affiliated unions should undertake the obligation, through appropriate constitutional or administrative measures and orderly procedures, to insure that no persons who constitute corrupt influences or practices or who represent or support Communist, Fascist, or totalitarian agencies should hold office of any kind in such trade unions or organizations.

2. No person should hold or retain office or appointed position in the AFL–CIO or any of

its affiliated national or international unions or subordinate bodies thereof who has been convicted of any crime involving moral turpitude offensive to trade-union morality.

3. No person should hold or retain office or appointed position in the AFL–CIO or any of its affiliated national or international unions or subordinate bodies thereof who is commonly known to be a crook or racketeer preying on the labor movement and its good name for corrupt purposes, whether or not previously convicted for such nefarious activities.

4. No person should hold or retain office or appointed position in the AFL–CIO or any of its affiliated national or international unions or subordinate bodies thereof who is a member, consistent supporter, or who actively participates in the activities of the Communist Party or of any Fascist or other totalitarian organization which opposes the democratic principles to which our country and the American trade-union movement are dedicated.

CONFLICTS OF INTEREST OF UNION OFFICIALS

The code herein recommended deals with conflicts of interest in the investment and business interests of union officials.

It is too plain for extended discussion that a basic ethical principle in the conduct of trade-union affairs is that no responsible trade-union official should have a personal financial interest which conflicts with the full performance of his fiduciary duties as a workers' representative.

Obviously an irreconcilable conflict of interest would be present if a trade-union official, clothed with responsibility and discretion in conducting the representation of workers, simultaneously maintains a substantial interest in the profits of the employer of the workers whom he is charged with representing.

Even though, in a particular instance, there may be no actual malfeasance in the representation of the employees involved, the opportunity for personal gain at the expense of the welfare of the employees whom the union official represents obviously exists. * * *

In a sense, a trade-union official holds a position comparable to that of a public servant. Like a public servant, he has a high fiduciary duty not only to serve the members of his union honestly and faithfully, but also to avoid personal economic interests which may conflict or appear to conflict with the full performance of his responsibility to those whom he serves.

Like public servants, trade union leaders ought to be paid compensation commensurate with their services. But, like public servants, trade union leaders must accept certain limitations upon their private activities which result from the nature of their services.

On the basis of these considerations, the Ethical Practices Committee, under the authority vested in it by the constitution of the AFL–CIO and pursuant to the mandate of the First Constiutional Convention of the AFL–CIO, recommends that the executive council of the AFL–CIO adopt the following policies to safeguard the good name of the AFL–CIO and its affiliated unions:

1. No responsible trade union official should have a personal financial interest which conflicts with the full performance of his fiduciary duties as a workers' representative.

2. No responsible trade union official should own or have a substantial business interest in any business enterprise with which his union bargains collectively, or in any business enterprise which is in competition with any other business enterprise with which his union bargains collectively.

3. No responsible trade union official should own or have a substantial business interest in a business enterprise a substantial part of which consists of buying from, selling to, or otherwise dealing with the business enterprise with which his union bargains collectively.

4. The provisions of paragraphs 2 and 3 above do not apply in the case of an investment in the publicly traded securities of widely held corporations which investment does not constitute a substantial enough holding to affect or influence the course of corporate decision.

5. No responsible trade-union official should accept "kickbacks," under-the-table payments, gifts of other than nominal value, or any personal payment of any kind other than regular pay and benefits for work performed as an employee from an employer or business enterprise with which his union bargains collectively.

6. The policies herein set forth apply to: (a) all officers of the AFL–CIO and all officers of national and international unions affiliated with the AFL–CIO, (b) to all elected or appointed staff representatives and business agents of such organizations, and (c) to all officers of subordinate bodies of such organizations who have any degree of discretion or responsibility in the negotiation of collective bargaining agreements or their administration.

7. The principles herein set forth apply not only where investments are made by union officials, but also where third persons are used as blinds or covers to conceal the financial interests of union officials.

CODE GOVERNING HEALTH AND WELFARE FUNDS

The task of administering and operating health and welfare programs which have been developed through collective bargaining has placed heavy new responsibilities upon the shoulders of trade-union officials. The funds involved are paid for through the labor of the workers covered by the plans.

For this reason, it is imperative that the AFL–CIO and each of the national and international unions affiliated with it rigorously adhere to the highest ethical standards in dealing with the subject of health and welfare funds.

The ethical practices committee * * * recommends that the executive council of the AFL–CIO adopt the following policies to safeguard the good name of the AFL–CIO and its affiliated unions:

1. No union official who already receives full-time pay from his union should receive fees or salaries of any kind from a fund established for the provision of a health, welfare, or retirement program.

2. No union official, employee, or other person acting as agent or representative of a union, who exercises responsibilities or influence in the administration of welfare programs or the placement of insurance contracts, should have any compromising personal ties, direct or indirect, with outside agencies such as insurance carriers, brokers, or consultants doing business with the welfare plan.

3. Complete records of the financial operations of all welfare funds and programs should be maintained in accordance with the best accounting practice. Each such fund should be audited regularly by internal auditors. In addition each such fund should be audited at least once each year, and preferably semiannually, by certified public or other independent accountants of unquestioned professional integrity.

4. All audit reports should be available to the membership of the union and the affected employees.

5. The trustees or administrators of welfare funds should make a full disclosure and report to the beneficiaries at least once each year.

6. Where health and welfare benefits are provided through the use of a commercial insurance carrier, the carrier should be selected through competitive bids solicited from a substantial number of reliable companies, on the basis of the lowest net cost for the given benefits submitted by a responsible carrier.

7. Where a union or union trustees participate in the administration of the investment of welfare fund reserves, the union or its trustees should make every effort to prohibit the investment of welfare fund reserves in the business of any contributing employer, insurance carrier, or agency doing business with the fund, or in any enterprise in which any trustee, officer, or employee of the fund has a personal financial interest of such a nature as to be affected by the fund's investment or disinvestment.

8. Where any trustee, agent, fiduciary or employee of a health or welfare program is found to have received an unethical payment, the union should insist upon his removal and should take appropriate legal steps against both the party receiving and the party making the payment.

9. Every welfare program should provide redress against the arbitrary or unjust denial of claims so as to afford the individual member prompt and effective relief where his claim for benefits has been improperly rejected.

10. The duty of policing and enforcing these standards is shared by every union member, as well as by local, national, and international officials. The best safeguard against abuses lies in the hands of a vigilant, informed and active membership, jealous of their rights and interests in the operation of health and welfare programs, as well as any other trade union program.

11. Where constitutional amendments or changes in internal administrative procedure are necessary to comply with the standards herein set forth, such amendments and changes should be undertaken at the earliest practicable time.

Federal Aid to Education

EXTENSION OF REMARKS

OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 12, 1957

Mr. ABBITT. Mr. Speaker, there is now pending in the Bailey subcommittee of the Education and Labor Committee of the House of Representatives a number of proposals known as Federal aid to school construction legislation. Many of our people are very much opposed to this legislation. I am in accord with their feelings.

Yesterday, March 11, 1957, Mr. M. A. Hubbard, executive secretary of the Virginia Farm Bureau Federation, appeared before the Bailey subcommittee and gave a most forthright, interesting, and important statement in opposition to the legislation. In addition to the prepared statement, Mr. Hubbard also, in answer to questions, pointed out cogently why this legislation should not be enacted and why sooner or later it means turning the public schools of this country over to the Federal Government.

Mr. Hubbard is widely known in Virginia for his sound thinking as well as his interest in the problems of our farm people in particular and all Virginians in general.

I desire to commend Mr. Hubbard for his well thought out statement and

under leave to extend my remarks in the RECORD I desire to include Mr. Hubbard's prepared statement which is as follows:

STATEMENT BY M. A. HUBBARD, EXECUTIVE SECRETARY, VIRGINIA FARM BUREAU FEDERATION, BEFORE THE HOUSE SUBCOMMITTEE ON EDUCATION AND LABOR WITH REGARD TO PROPOSALS FOR PROVIDING FEDERAL AID TO EDUCATION

You have now before you for consideration several proposals designed to provide the States and their political subdivisions increased Federal aid to education.

These are financially fascinating propositions, but from the long-term standpoint, they pose a terrible threat to the future health and well-being of our political institutions, to our economic order and to our continuing status as free citizens in a democratic society.

We are not unmindful of the benefits of education. We are fully appreciative of the fact that education has largely been responsible for our progress in forging ahead and becoming in a few short years the richest, the most powerful, and the most influential nation on the face of the earth. Education has made it possible for us to develop and manage successfully a free-enterprise economy of unparalleled vigor and productivity—where ordinary people with average incomes enjoy the benefits of goods, gadgets, and services which are quite beyond the reach of even the wealthiest classes in most countries. What is even more important, with all of our materialist achievements, we have been able to maintain a system of government under which we have enjoyed freedom to worship, to work, to achieve, to speak our minds freely, and to be rewarded for our efforts, usually in fair proportion to the value of our contributions to the welfare of society.

We should never fail to appreciate the fact that education has been a major contributor to our progress, but it is equally important for us to remember that it has been education of a special type—always under the control and administration of local people—the same people who furnished the children to be educated. The diversity and variety which is assured by the cooperative administration of 48 State governments and a great multitude of local administrative units is a major bulwark against the evils of centralized school administration.

Virginia is one of the poorer States from the standpoint of the per capita income of our citizens. We rank 32d among States and 17 percentage points below the national average. This is recognized in the formula used for distributing funds under the Kelly bill (H. R. 1) and also under the administration bills—S. 889 and H. R. 3986. Under each of these measures there would be only 10 other States which would stand to gain more than the Commonwealth of Virginia. Under the Kelly bill, other States would provide Virginia with 180 additional classrooms and under the administration proposals—S. 889 and H. R. 3986—other States would contribute 159 classrooms. Looking at these propositions purely from a dollars and cents—bricks and mortar standpoint, it would appear that we should be wholeheartedly in favor of increased Federal aid for school construction. This would be especially true of our rural areas which are particularly hard-pressed in the matter of providing adequate financial support for school construction and operation. The Farm Bureau has a larger dues paying membership in these areas than any other general farm organization in Virginia. I need not tell you that farmers have not been doing too well financially in recent years, which make it all the more difficult to provide, from local and State tax sources, the increasingly large sums needed for school construction and maintenance.

Yet in 1949, and every year since that time, in the face of mounting school financing difficulties, our Farm Bureau members have continued to express firm and undiminished opposition to Federal aid to education. This is what they said in 1949:

"We are not unmindful of the advantages which might be gained through a better equalization of educational opportunities among the several States by a program of Federal aid to education.

"However, when these advantages are carefully balanced against the danger inherent in a constantly increasing Federal debt and the extreme likelihood that eventually the educational systems of several States will be increasingly subjected to centralized Federal control through the medium of Federal-aid programs to the States and their political subdivisions, we are strongly of the opinion that a program of Federal aid to education would be a serious mistake.

"We suggest instead that a more prudent course would be for the States and their political subdivisions to carefully examine the possibilities existing at the local level for raising the funds needed for the improvement of educational facilities. Unless and until such possibilities have been carefully explored and fully utilized we can see no justification in requesting that the Federal Government assume obligations and responsibilities which we ourselves may choose to ignore or neglect."

Why do we continue to take this position? Is it because we fail to appreciate and understand the part which education has played in the unprecedented progress which our Nation has made in the few short years since we became a republic of free people? Certainly not. We know well enough that we could not have developed and successfully managed the complex political and economic institutions of our free-enterprise economy without a school system which made available to each student all of the education which he or she was willing to work for or was capable of absorbing.

Nor are we unmindful of our own Mr. Jefferson's admonition: "If a nation expects to be ignorant and free in a state of civilization, it expects what never was and never will be." We suspect that people generally understand this. It is because of this understanding that they have been willing to make and are continuing to make decisions to tax themselves in the States and localities in order to provide adequate educational facilities. We think the record is a good one.

Information supplied by the United States Chamber of Commerce indicates that:

In 1947 increased enrollments called for 9,500 classrooms; 16,000 new classrooms were provided.

In 1950–51, increased enrollments called for about 20,000 new classrooms, 44,000 were provided.

In 1955–56, increased enrollments called for 38,500 new classrooms, 67,000 were provided.

The most recent estimate of the United States Office of Education for 1956–57 placed the need at 41,000 classrooms, 69,000 were built. It is to be assumed that a certain percentage of these were replacements for old inadequate facilities. Even so, the record still appears to be a good one.

In the 10-year period, 1945–46 through 1955–56, Virginia spent a total of $346,348,377 in capital outlay on our public school system. During this same period, teacher salaries have increased by 109.4 percent. Expenditure per pupil in average daily attendance has been increased from $90.25 in 1946 to $200.90. It is estimated by our State Department of Education that the costs of needed construction between now and 1960 will amount to a total of $220 million. We are asking for no assistance in meeting this obligation. We prefer doing it in our own way without either assistance or interference.

Hardly a day passes without a newspaper account of some Virginia locality taking action of one sort or another to provide more adequate provision for the education of our children. The State government has underway at the present time a thoroughgoing study of our entire tax structure with the idea of providing a larger measure of State support for our schools. The problem is not yet solved, but we can and will provide a solution and it will be a far better one than any that could be offered by the Federal Government.

We make no pretense that our present educational system is perfect. It is far from perfection. But its imperfections are not all traceable to the lack of money. One of the Nation's leading school administrators, Dr. H. I. Willett, superintendent of schools for the city of Richmond, Va., recently stated that: "In too many high schools, it has been possible for a pupil to elect himself out of an education. Is it true that many pupils select subjects that are easy rather than a program that more effectively utilized their talents?"

This indiscriminate use of elective courses by students seeking the easy way is one of the basic weaknesses of our schools. Is this weakness traceable to a lack of money? It is not. It has come about because all too many parents and pupils have somehow gotten the erroneous notion that education can be bought, paid for, and possessed by anyone who can afford the going price—like a sack of potatoes or a new automobile. The solution to this problem cannot be found in the Federal Treasury. It is a matter of attitude—money is not involved.

If our educational system is to continue to carry out so splendidly the objectives which Mr. Jefferson had in mind, its financing, management, and control must continue to be the direct responsibility of the people who furnish the children to be educated. There is no surer way to shrink, shrivel, and diminish the citizen's interest in education than to take from him the direct responsibility for financing, operating, and controlling the schools where his children are educated. Without this citizen interest, the public-school system will gradually become a thing separate and apart from the lives of people at the community level—control will become more and more centralized and with centralized control will come uniformity—of method, of curricula, of source material, and in the end, conformity to one single pattern acceptable to the central authority. This is not the pattern of public education that has made the United States an oasis of freedom, plenty, and opportunity in a world that is rapidly becoming a desert of political suppression, police state harassment, and economic poverty. The sickening cadence of the goose-step is too high a price to pay for the vaunted efficiency of centralized control. Education without understanding is a very dangerous commodity. The highly literate Hitlerite Germany should be proof enough that education in itself is no guaranty of either freedom or democracy. It takes education of a special sort—decentralized and under the control of the smallest unit of government capable of reasonably efficient administration.

We know, of course, that those who plead for Federal aid say that control will remain with the States and localities. Since when has any responsible legislative body begun appropriating the taxpayers' money without specifying how it is to be used? To our knowledge, this has never been done, and in our opinion, it would be the height of fiscal irresponsibility ever to do it.

Our friends in professional educational circles occasionally ask us, how do you justify your support of Federal aid to vocational

education, while you strenuously oppose Federal aid to education as a whole? There is a vast difference between a narrowly specialized phase of education directed toward instruction in technical know-how and the broader field of education in general, the purpose of which, among other things, is to inculcate into the mind of the student a proper understanding of our political and economic philosophy along with the principles of what we might broadly term, right living. It is in this area of education that centralized control, in the hands of the wrong people, could be disastrous.

Our experience with Federal aid to vocational education, however, has served well to convince us of the complete fallacy of the argument that we can accept Federal aid without Federal controls. Proponents of the Smith-Hughes Act of 1916 argued loud and long that there would be no Federal control. It is interesting to note that regulations propounded under this act, now fill a 108-page book entitled Administration of Vocational Education. On page 4 of this book we find the sentence, "Each State is required to submit a plan which must meet with the approval of the Federal Office of Education." If no controls are involved, we would like to have an interpretation on the meaning of this sentence.

Federal, State, and local taxes are estimated to absorb over 29.1 percent of our total national income in 1957. This is close to the point where inflationary pressures become almost irresistable as wage and salary earners fight to maintain their "tax reduced" living standards, either through demands for higher wages or demands for "free" government services which they were formerly able and willing to provide for themselves. These pressures singly or in combination could set off a spiral of inflation that would tear at the very foundation of our political and economic institutions.

The Secretary of the Treasury and a former president of the United States are both predicting that unless we follow a more prudent course in public expenditures, we may well bring on a depression that would "curl your hair." In the face of all the storm signals, it seems to us the height of folly for the Federal Government to undertake responsibilities and obligations which traditionally and very properly belong to the States and their political subdivisions.

The thing that we now need above all else, if we are to remain a solvent Nation, is prudent economy in the use of tax money. Yet we know that any expansion or extension of Federal grants or the grant-in-aid principle is an infallible method of encouraging extravagance and profligacy in the use of public funds. It is the bargain-sale technique on a grand scale of enticing people to spend more than they can afford for things they can, without hardship, do without.

The Federal Government with its staggering obligations for national defense and other proper and appropriate Federal activities is in no position to either indulge in extravagance or to encourage the States and localities into doing so.

If the Federal Government is genuinely concerned about the shortage of school classrooms, there is a way that it can safely be of great assistance.

It can and should concentrate fiercely on the problem of eliminating extravagance and waste in the expenditure of Federal funds. It can and should unmercifully prune from their recommended budget all proposed increases that cannot be amply justified on the basis of the safety and welfare of the people of the United States.

When this has been done, it will likely be found possible to lessen the burden of Federal taxation enough to enable the States and localities to collect sufficient additional funds to more adequately meet their own responsibilities in the field of public education. This is the traditional way—it is the efficient way and it is the only safe way to insure proper support of our public school system.

Yes, we do indeed face a crisis, but the real crisis is not in our public school system. The critical issue now before us revolves around the proposition of whether we as a Nation have the prudence and the fortitude to deny ourselves the frills in order to hold on to the fundamentals and to match our soaring ambitions with our limited willingness to pay.

Tax Dodge Halted

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 11, 1957

Mr. JOHNSON. Mr. Speaker, a popular method of late to promote ends which are sometimes purely selfish is that of establishing a so-called nonprofit educational committee, or commission, or foundation which is really paid for by funds which are written off as tax-deductible business expense by the supporters. The Internal Revenue Service is currently taking a long second look at one of these bodies, the Natural Gas and Oil Resources Committee. It has disallowed as tax deductible the funds contributed to this lobby by the producers.

The Milwaukee Journal in Wisconsin has taken note of the action of the Internal Revenue Service and suggests that similar action could be taken elsewhere in an editorial in a recent issue:

A TRANSPARENT TAX DODGE

The Internal Revenue Service, at least, is now standing up to what is probably the richest and greediest lobby in our national history. It has called a halt to a transparent tax dodge of the oil and gas industry.

"Eat your cake and have it, too," is the guiding principle of this industry as a whole. A great one for denouncing high taxes, it keeps for itself a giant economy size loophole—a depletion allowance that exempts 27½ percent of producers' income from tax and grows multimillionaires by the dozen.

Mouthing pietisms about its regard for natural gas consumers, it absurdly insists that their best interest lies in exempting wellhead prices from regulation. It has bamboozled even President Eisenhower with this reverse English.

It formed a gigantic lobby, called the Natural Gas and Oil Resources Committee (NGORC), to push this grab through Congress. Producers chipped in nearly $2 million—and wrote it off as tax deductible business expense, on the theory that the NGORC was merely educational.

The real effect of this was to saddle other taxpayers with more than half of the industry's outlay for promoting its own special interest in legislation. For the deductions cost the Treasury, at the 52 percent corporation rate, about $1 million in taxes.

The Revenue Service now says nothing doing. Subject to probable court test, the deductions are to be disallowed and the tax assessed. This is the one fruit to date of the Senate investigation of the oil and gas lobby. Probers sent the Revenue Service a challenge of the NGORC's tax exempt status.

This stiffened attitude may and should extend to other quarters. For there is no small number of self-styled educational groups, heeled with corporate contributions, that actually have political axes to grind, primarily if not exclusively.

One is operating in Wisconsin right now, the Madison Capital Times has reported. The "Constitution and Free Enterprise Foundation" is raising money to favor every rural boxholder with a book by Secretary of Agriculture Benson, defending farm policies of the administration. However sound the defense may be, this is a political activity. Yet the letter of solicitation boasts that contributions to this outfit have been ruled tax deductible for 10 years.

Such activity in itself, of course, may be perfectly legal and proper. But the pretense that it is not political is little more than a confidence game against other taxpayers, who all unwitting and unwilling are made to help pay the freight.

Nepal Observes Seventh Anniversary of Democratic Government

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 12, 1957

Mr. POWELL. Mr. Speaker, when I came back from the Asian-African Conference at Bandung, I announced that I would address the United States Congress each time there was an anniversary of one of the 29 participating nations on friendly terms with the United States. February 18 was the seventh anniversary of National Day in Nepal and I rise to felicitate that country.

I wish to extend to the people of Nepal, His Majesty Mahendra Bir Bikram Shah Deva, and His Excellency Shanker Shamsher Jang Bahadur Rana, Ambassador of Nepal, congratulations and best wishes on this occasion.

Nepal boasts one of the world's oldest traditions of independence. However, February 18 each year is celebrated as National Day, the day on which democratic government was introduced into the country in 1950. The world will long remember the dramatic way in which the Nepalese overthrew the rule of absolutism and so freed the country from a feudal yoke. The country is passing through a difficult period of transition from an autocratic to a democratic regime. Faced with grave problems, constitutional reforms have been instituted and much effort has been expended in programs for the betterment of the people. The eyes of the world are fixed upon Nepal until the stable democracy of which it dreams is firmly established.

Nepal has risen from almost obscurity to a key strategic position in the free world. Nepal is a member of the United Nations. She is also an associate member of the Economic Commission for Asia and the Far East, an agency acting within the framework of the policies of the United Nations, designed to assist the governments of the region in their efforts to reconstruct and develop the economic structure of their countries.

The United States heartily supports the ideals of democracy everywhere.

East and West meet in Nepal in a very specific way. From the United States and other sources emanate programs to help Nepal emerge out of feudalism; to strengthen its economy; encourage it to set up democratic institutions, and so ward off infiltration which threatens everywhere on the periphery of communism's empire. The hundreds of miles of the Himalayas stretching across Nepal's frontier no longer constitute an impregable fortress. The United States realizes this fact and is trying to help Nepal bolster its defenses—economic, military, and geographic.

I salute Nepal on this momentous occasion of National Day and pray for her continued peace, prosperity, and progress as she embarks upon a new year of national life.

Thirty-ninth Anniversary of the Estonian Republic

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 12, 1957

Mr. GARMATZ. Mr. Speaker, on February 24 the Joint Committee of the Estonian Organizations in Baltimore sponsored a concert rally in observance of the 39th anniversary of the Estonian Republic.

Estonia is another one of the countries which has been suffering under the bondage of Communist domination, but in which the fires of freedom continue to burn. Their strong desire for independence will not be quelled as long as they know they can look to the free nations of the world for support and sympathy in their need.

The following declaration was approved at the concert rally and I am privileged to insert it in the RECORD, under leave to extend my remarks:

"DECLARATION

"The U. S. S. R. has committed multiple crimes against the rights of the Estonian nation and against liberties, properties, and lives of Estonians. The perpetration of these crimes continues in violation of precepts of international law and solemn commitments of the U. S. S. R.

"The same pattern of crimes is being practiced over other Soviet-dominated countries, and preparations for new aggressions and other crimes are underway on world-wide scale. Millions are suffering under Soviet imposed terror and misery. No people in the world have accepted voluntarily the Soviet system. All are longing for the opportunity to overthrow the Communist regime.

"Throughout history Estonians have been fighting against the foreign invaders until they regained their independence after the liberation war against the Soviet Union. The same spirit prevails at present. Only overwhelming Soviet forces stationed in Estonia prevent the people from driving out the enemy.

"In their tragic situation they are looking for support from the free world. Sporadic declaration about law, liberty, and rights of subjugated nations are not sufficient if they are not implemented.

"We declare that for achievement of international peace and justice it is necessary that the free world condemn Soviet acts of aggression as international crimes, exercise pressures for the termination of these crimes, and as a first step demand the withdrawal of all Soviet forces and administration from Estonia and the other occupied countries. This should be the primary condition in any dealing with the U. S. S. R."

The above declaration has been approved at concert rally celebrating the 39th anniversary of the Estonian Republic, Sunday, February 24, 1957, 3 p. m., International Center, YWCA, 16 South Patterson Park Avenue, Baltimore, Md.

Oil and Economic Turmoil

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article which appeared in the second issue, February 1957, of Israel Speaks:

OIL AND ECONOMIC TURMOIL
(By Julian Louis Meltzer)

JERUSALEM.—In surveying the panorama of the Middle East's cross-purposes politics and economic interests, the observer finds much evidence to show the brewing-up of a situation that may well confront the Baghdad Pact and Cairo Alliance countries with a polarized challenge. Its solution will require more than the usual propaganda-dialectics and face-saving gimmicks broadcast and circulated by the Arab governments.

The elements are being assembled for a conflict which is likely to develop far more quickly than present portents indicate. At the moment these elements are of a passive economic character. But the possibility cannot be excluded of their latent force becoming militantly acute and perhaps militarily active unless the protagonists of the opposing groups find the way to an acceptable settlement.

The fact is that the Middle East and Arabian Peninsula are divided into two distinct categories of oil-source and oil-transit countries. The real pickings belong to the former category, in which the lucrative oilfields are located. These are the Baghdad Pact allies, notably Iraq and Persia, and the territories within the United States and British spheres of influence—Saudi Arabia, Kuwait, Bahrein, and the Trucial sheikdoms around the Persian Gulf.

The members of the Cairo alliance—Egypt and Syria with their junior associate, the Kingdom of Jordan; the Lebanon still hopes to be left immune as an uninvolved onlooker—get only the droppings from those who have the pickings. The Cairo-Damascus axis commands no substantial petroleum sources of their own worth mentioning around any oil lobby. Their sole though vital function is one of passage; and therein lies their power of economic blackmail not only vis-a-vis the western consumer countries but also in relation to their brother eastern producers.

When the Syrian Army blew up sections of the Iraq Petroleum Co.'s pipeline through their territory at the outset of the Sinai-Suez Canal campaign last November, their sabotage not only cut off the supply to Western Europe, but also sparked a chain reaction in the deterioration of intra-Arab relations. Since that time Iraq has lost millions of pounds sterling in the loss of royalties on unshipped and unshippable oil, and Syria and the Lebanon have suffered to a lesser extent from the stoppage of oil-transit revenue. Persia, Bahrein, and Kuwait on the Persian Gulf, and Saudi Arabia sustained equally large losses through the Egyptian action in blocking the Suez Canal.

Quite apart from the immediate effect, however, there are long-range implications that cannot be ignored by the Baghdad Pact and American and British allied countries of the Middle East and middle Asia. One of these implications arises demonstrably from their nigh-helpless dependence upon the goodwill of their Arab neighbors to allow passage of the oil. A future conflict might well develop over the issue of revenue sharing. The Syrian and Lebanese Governments came to loggerheads with the Iraq Petroleum Co. over a claim for higher royalties long before the Suez Canal crisis blew up. With the oriental attitude of "après moi la déluge" political thinking, they may very well act as violently in future as they did last November, leaving others to pick up the pieces as the U. N. did in clearing the Suez Canal. Having proved their initial success, these spite tactics are capable of infinite repetition.

In a wider context there is another consideration than these immature Arab and intra-Arab actions. Western Europe's oil requirements are growing annually and in 3 or 4 years' time they will run into hundreds of millions of tons. The bulk of that motive and thermal fuel will have to come, as it does now, from Middle East and Persian Gulf oilfields.

But it is obvious that the physical capacity of the existing TAP line and of the Suez Canal to handle the great volume anticipated will be sorely overtaxed and probably quite inoperable. Nor is it likely, from even the best assessment of the logistics involved, that the commissioning of 50,000- and 60,000-ton seagoing tankers around the Cape of Good Hope—the Suez Canal's draft is too shallow for these giant vessels to pass through—will bring any appreciable relief, even if the high cost of maritime carriage is accepted. It is equally unlikely that the development of nuclear energy and the construction of cheap atomic power reactors will have reached the stage by 1960 or 1961 at which conventional fuel power may be superseded.

Should the great oil corporations be thinking of building parallel pipelines from the Mosul oilfields of Iraq via Syria or Turkey to the eastern Mediterranean coast, the question of adequate security guaranties immediately springs to the fore. For one thing, Syria would be able to exercise all its undeniable talent for economic blackmail. For another, it is highly doubtful whether, by the very nature of its political instability and the ephemeral tenures of its multiparty governments, the Republic of Syria could give such guaranties with the best will in the world of those temporarily in power.

But even were these difficulties to be overcome, the trans-Syrian pipelines could only meet a portion of the traffic requirements as there would still be the oil output of Persia, Kuwait, Bahrein, and Saudi Arabia to handle. With the operation of giant seagoing tankers economically and physically limited, there remains the idea of piping the oil out to the southern end of the eastern Mediterranean for onward shipment from there. A pipeline or lines across Egypt from a point just below the town of Suez at the southern extremity of the canal, to the environs of Port Said at the northern tip, may appear at first sight of the map as a feasible and workable alternative.

Let us, however, take a closer look at the prospects. The Egyptians, both during ex-King Farouk's jolly reign and now during the

satrapy of Abdul Gamal Nasser, touted an arrangement of this kind in the most ardent manner. Their sycophantic wooing of old King Ibn Saud had that objective in view. Their current honeymoon with his son King Saud obviously has a similar aim: to persuade him to agree to a pipeline across Egypt to the Mediterranean and thus to jockey themselves into the strong position of being able to extract more of his largesse at another than an eleemosynary level.

Whether King Saud will fall for this attempt at profit sharing or lay his regime open to the risk of becoming a victim of Egyptian ransom is a burnoose of another color. For all the protestations of amity and everlasting friendship, picturesquely illustrated in numerous photographs elegantly posed against ornate Cairo backgrounds, it may be doubted whether King Saud trusts buddy Nasser farther than his own myopic vision. Nasser's precipitate action last November in blocking the Suez Canal indubitably served as a lesson to all and sundry against putting their basket into the hands of one yegg.

Egypt's hopes, therefore, will probably remain another pipeline dream. The quandary that emerges from the foregoing analysis is one in which both the oil-consuming West and the oil-producing East share equally. On the one hand, there is the short-range complication brought about by intra-Arab political and economic animosities, aggravated by extraregional doctrinal intriguing. It is this dilemma which has explosive tendencies, albeit dormant for the time being. On the other hand, there is the long-range outlook which must similarly exercise the Western European powers and the Eastern oil potentates with equal anxiety. The West requires increasing quantities of petroleum, and the East remains its largest supplier; the East is expanding its oilfields by new exploration and discovery and needs bigger markets. The oil is here in the East and likely to be found in growing volume. But how to move it to the West with a measurable and ascertainable degree of safety?

Another glance at the map will reveal a geographical circumstance that has probably not escaped the attention of the oil-strategy planners. Northeast of Egyptian territory, beyond Sinai, lies the shortest route from the Red Sea to the eastern Mediterranean. It runs up through the Gulf of Aqaba and across the comparatively narrow neck of the desert from Eliat to a point near Ashkelon, all through Israel territory. A small-bore pipeline for domestic use is now being laid from Eliat to Beersheba. The route has been surveyed and obviously presents no insuperable difficulties in view of the progress being made in laying the Israel pipeline.

Peace with Israel is thus a factor which, however politically unpalatable it must appear to them at this time, the Baghdad Pact countries and the oil-producing states of the Persian Gulf must inescapably take into consideration for the effective solution of their economic predicament. It must be stated for the record that Persia, Kuwait, and Bahrein are not members of the Arab League and were never officially at war with Israel. Turkey, one of the Baghdad Pact countries, was in the process of fostering amicable ties with Israel before its rulers bowed to Iraqi pressure and desisted, though not unapologetically.

To launch such peace overtures the noncommitted countries as Persia, Kuwait and Bahrein would of course have to run the gauntlet of Cairo-directed odium and propaganda uproar. Indeed, one can almost envisage the wording of the slogans and the outcry, all bearing upon the theme of disruption of Moslem and Asian unity as achieved at Bandung.

But although Egypt has shown itself adept at calling the tune, it cannot possibly hope to pay the piper. The immense losses which the Middle East oil salesmen are facing as a result of being cut off from the Western markets can never be covered by Egypt or its current sponsor, Soviet Russia. Economic realities are immune from political sloganeering and illusionary thinking, and the outlook for the oil potentates is grimly realistic: Either get your goods to Europe by a safe and commodious route, or leave the oil below ground.

Eastern countries without any fanatical political credos cannot afford to ignore the long-range aspects of the situation. Their economic welfare is inextricably bound up with the problem of cheap, rapid, and secure transport of the oil. Without a rational solution eschewing political delusions, all they can hope for is to go floundering and courting the dangers of economic desuetude.

To Study Discrimination

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 12, 1957

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter which appeared in the New York Times of March 11, 1957:

TO STUDY DISCRIMINATION—TAMPERING WITH BILL TO EXAMINE CIVIL RIGHTS PROGRAM CHARGED

To the EDITOR OF THE NEW YORK TIMES:

The Civil Rights Subcommittee of the House Judiciary Committee has engaged in pointless tampering with the administration's civil-rights proposals in reporting the bill to the full committee. Particularly objectionable is its decision to exclude discrimination based on religion from the area to be studied by the proposed Commission on Civil Rights.

One of the four points in the original bill was the establishment of a temporary bipartisan commission on civil rights to investigate charges of denial of voting rights or the imposition of unwarranted economic pressures on citizens because of race, color, religion, or national origin.

For no apparent reason the Civil Rights Subcommittee has voted to drop the word "religion." The full Judiciary Committee must now decide whether to approve the bill in its altered form or to return to its original language.

The attack on racism that has achieved so many successes in recent years has been firmly based on the principle that all forms of discrimination because of origin are equally evil, that as one thrives others are encouraged, and that as one is curbed all Americans move closer to full equality. Accordingly, the fair employment and other antidiscrimination laws adopted in many Northern and Western States, as well as the antibias executive orders issued by President Eisenhower and his predecessors, have uniformly applied to discrimination based on race, religion, or national origin.

FURTHER BIAS

The validity of this principle is illustrated by the very situation which has prompted introduction of the Federal civil rights bill. While the predominant form of racism in the South today is directed at Negroes, there has been a distinct tendency within the White Citizens Council movement, to say nothing of the rejuvenated Ku Klux Klan, to spill over into anti-Semitism and anti-Catholicism. Organized economic boycotts and other unwarranted economic pressures against Jews and Catholics have already been threatened.

It would be most unfortunate if the commission, once established, found itself empowered to investigate charges of discrimination against Negroes but not against religious minorities.

The proposed change in the bill has nothing in its favor and much against it. The House Judiciary Committee will do well to decide the important civil rights issue before it on the basis of tested principle.

SHAD POLIER,
Chairman, Commission on Law and Social Action, American Jewish Congress.
NEW YORK, March 7, 1957.

Side Effects of Drugs Used in Treatment—Possible Effect on Claims

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 12, 1957

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following medical bulletin issued by the National Rehabilitation Commission, the American Legion:

SIDE EFFECTS OF DRUGS USED IN TREATMENT—POSSIBLE EFFECT ON CLAIMS

(By Irving B. Brick, M. D., medical consultant)

DEFINITION

Drugs and various procedures as they are used in modern day medicine may in themselves give rise to either other diseases or complications of the same disease. This type of condition is called iatrogenic (the Greeks also had a word for this) and iatrogenic simply means that it is self-caused. Iatro-means self and -genic means the causation of. This is referred to diseases or complications in which drugs given by doctors, or drugs taken by patients, cause other diseases or complications. As all of us know, in World War II when the yellow fever vaccine gave rise to the large numbers of cases of hepatitis, so-called serum jaundice, this indeed was one of these iatrogenic diseases induced by the giving of vaccine.

BLOOD AND BLOOD PRODUCTS

It was well known during World War II, and indeed in peacetime, that the use of blood transfusions, for instance, is not completely without hazard inasmuch as blood transfusions may give rise to serum hepatitis and it may give rise to other diseases or complications which are less common. All of us know that if you get a mismatched transfusion, unfortunately, for some reason or other, it may kill you by blocking the tubules of the kidney. This, fortunately, happens very rarely and of course we don't anticipate seeing that type of case very frequently. But the use of modern blood products in transfusions, particularly plasma which is a bad offender, and also fibrinogen which is a product of the blood which is given for certain clotting diseases may give rise to serum jaundise as well as other conditions nearly as frequently. The point is that this is illustrative of a medicament very commonly used, particularly in time of war, and which may give rise to other types of disease, in this case, affecting the liver and clinically simulating and being much like infectious hepatitis. Actually, when you

take a piece of liver at biopsy you cannot differentiate between infectious hepatitis and the hepatitis caused by infected serum. Since we started with the liver I think it is well to mention other drugs that are used in common day practice affecting the liver.

LIVER AND DRUGS

One of the most frequent of these drugs now used in medical practice is a drug which some of you may have heard about called thorazine. Another name for it is chlorpromazine. This drug, as well as others in this field, has made a big impact in the treatment of mental diseases, particularly in mental institutions where they were first used. They have actually been able to take patients off of restraints and have been able to give other types of treatments such as psychotherapy after these patients have been given thorazine and now some of the newer drugs. But let's talk about thorazine for a minute because this is the most commonly used one. Incidentally, the usage of this drug in this country has been phenomenal.

THORAZINE

The drug is used commonly in mental institutions. It is used now in everyday practice because it has been found to be somewhat effective in controlling nausea and vomiting; and of course there are many thousands of reasons, many of them psychogenic, why people have nausea and vomiting. It is being used in common everyday practice in tense people, in nervous people, and it is one of the tranquilizing drugs. It is sometimes helpful in hiccups. I am sure, reading the newspapers and magazines and listening to the radio, you can't help but hear about tranquilizing drugs—drugs that sort of calm you down, let you go about your business, and sometimes they are very effective. Now, there are in these drugs, as in all drugs when we get to use them and know them, certain drawbacks; and one of the common ones is the effect on liver of thorazine.

JAUNDICE DUE TO THORAZINE

The British who started using it about 1952 in their mental institutions found that a certain percentage of mental patients who took this drug became jaundiced. They didn't pay a lot of attention to this because they were doing such a wonderful job with the mental aspect, and they also noted that this jaundice usually went away in about 2 weeks after they stopped the drug, and gave no further trouble. Furthermore, they found in some of these patients that even if they continued the drug the jaundice went away. This has not been true in all the cases. Well, the English found this out, and they had only a report of one death, which probably wasn't due to the jaundice caused by thorazine; but, at any rate, when we started using it clinically in the United States, it wasn't very long before case reports started appearing of jaundiced patients due to thorazine. This jaundice is very interesting in that it simulates the type of jaundice you get with obstruction with gallstones, or with cancer obstructing the common bile duct. It is a very unique type of jaundice. We take a biopsy of the liver, and the pattern of the microscopic findings is unique, so that if you have a history of the drug having been given it is not difficult, with certain laboratory tests, to diagnose it. One of the things that I found, and am reporting about, is that, although 90 percent of the cases who get jaundice get over this jaundice completely in 2 to 4 weeks. We encountered 3 cases last year in which the jaundice persisted longer than 3 months; and indeed, when I talked with my liver friends (physicians, that is) throughout the country, several of them had cases that they had seen with jaundice lasting 6 months or more. Unfortunately, in some of these cases, operations were done. This type of disease should not be operated upon as some of the complications have actually resulted from the operation; because there is no obstruction except inside the liver, and all you have to do is have the patient stay in bed, eat a good diet; they feel pretty well despite the jaundice and eventually they get well.

COURSE

Now, as I say, 90 percent of them get better in 2 to 4 weeks, so that the amount of disability from thorazine will be, in most cases, not too great. In some cases, however, they will be out of work for months literally, 3 months, 6 months, and even longer. These are the odd cases. Now, thinking about service-connected cases, I am sure, as Dr. Shapiro will confirm, that in the psychoneuroses and in the psychoses this drug is being used quite commonly and I'm sure that many of these cases or some of the cases will be encountered which jaundice has appeared as a result of its use in this service-connected mental case. One other complication in the neuropsychiatric field that I think is important is that certain cases develop symptoms of Parkinsonism, like the shaking palsy and I've seen that persist for some time. As to whether these cases will develop a chronic Parkinsonism I do not know. I don't know whether it has been followed up long enough. There are other drugs that less frequently cause jaundice. One of these drugs is methyltestosterone. This question was asked by Ray Macdouall: Before we go into the other drugs, is there any permanent residual from thorazine?

CHRONIC RESIDUALS

That's a good question. One of the cases I had that wasn't clearing up was a young girl who works in the Government. She had her jaundice, deep jaundice, for about 4 months. From the liver biopsy that we took one of the expert doctors in this particular field of liver disease wondered to me when we talked about it at a meeting, whether or not this might not go on to cirrhosis. We were afraid that this eventually might go on to a form of cirrhosis that we call biliary cirrhosis. Fortunately, in the case that I was taking care of, she did clear up. But at any rate she did clear up after 4 months of jaundice and I'm sure that in the vast majority of cases, from the information that we already have, no chronic residual liver disease is going to happen. This does not say that there are not going to be some cases that might turn up eventually with biliary cirrhosis, but its going to take a long time before we know because the development of biliary cirrhosis takes years. We think, and we have good evidence from biopsies taken, that most of these cases get over their disease and get completely well. Asked Dr. Shapiro: Have there been any deaths reported from such liver diseases?

DEATHS

There have been a total of four deaths reported by the manufacturers of this drug. Undoubtedly there have been other deaths. However, it is difficult to implicate this type of liver disease and the deaths by themselves because most of these cases have been operated upon. I had the unfortunate situation of seeing a patient who had received thorazine because of nervousness. She was, unfortunately, one of those who had deep jaundice which lasted for 3 months, was operated upon, and no stone or cancer was found; all she had, as the biopsy showed, was thorazine jaundice. Unfortunately, there were complications of the surgery and she died. It's not fair to say she died from thorazine jaundice; indirectly she did, because if she didn't have thorazine jaundice she wouldn't have been operated on, and she wouldn't have had the complications of surgery. In a service-connected veteran like that, it would be a service-connected death. There's no question about it. As to non-service-connected veterans with thorazine jaundice in this category, I think we would have a good argument, if needless surgery was done, under section 31, particularly if it led to a fatal outcome, or prolonged period of disability, and I don't think the Veterans' Administration would argue too much about it.

METHYLTESTOSTERONE

Now, as I started to say, other drugs can cause jaundice but thorazine has been much more common than the other drugs because it is used more frequently. There is another drug that another company has put out called sparine, very much like thorazine, but which as yet has not produced jaundice to anyone's knowledge. Sparine is being used in place of thorazine in many centers. I think they are still using plenty of thorazine. Some of these other drugs, though, getting back to these, have been drugs like methyltestosterone. It is a testosterone drug which is not used very commonly but many doctors use it for patients, particularly men, who come to them with the problem of impotence, not being able to have sexual intercourse as well as they think they ought to. It is also used in menstrual difficulties in females and also used in cancer of the breast in females to suppress menstruation after the operation has been performed. This too has caused the same type of jaundice that thorazine has.

THYROID DRUGS

Another drug is one of the drugs used in the treatment of hyperthyroidism. This is the drug propylthiouracil, and also methylthiouracil. Again these drugs are not used nearly as commonly as thorazine so we don't see as many cases of jaundice, but it can cause jaundice.

ARSENICALS

In days gone by, when arsenicals were used in the treatment of syphilis quite commonly and for other things too, arsenical drugs could cause liver damage and jaundice. There are also other drugs which to a lesser extent may affect the liver and cause jaundice. Now, all of us know that carbon tetrachloride is a very bad offender in not only causing jaundice but also causing kidney disease. These are some of the drugs that we should know about because some of these drugs are used in the treatment of many of the conditions that we see in claims and it is important to know about this type of situation because we can bring it to the attention of the Board if the medical member of the Board doesn't happen to know about these complications of the drugs used in treatment. As I said, some of these drugs are used commonly in the psychoneuroses and particularly in the psychoses, as well as for common symptoms such as nausea and vomiting, it is well to know about the usage of this drug.

PREVIOUS LIVER DISEASE

This question was asked: What additional damage would these drugs that you have mentioned have on an already diseased liver as in the case of someone who has a service-connected liver condition?

This is a question that is not quite clear because it seems that these apparently are hypersensitivity effects. It is thought by the drug companies themselves, or so they advise in their literature, that if the patient has chronic liver disease or has liver disease of any sort, it is probably best not to use these drugs. We actually gave these drugs to cirrhotic patients, especially with thorazine. Now, let me tell you why thorazine is used in cirrhosis so frequently. This has been found to be, as Dr. Shapiro knows better than myself, a very good drug in the treatment of alcoholism. It's been an excellent drug in getting people out of DT's. In getting people off of the shakes after drinking, since so much of our cirrhosis is seen in alcoholics. Getting back to the asked question, it is probably wise on the whole not to give these drugs to patients who have a liver disease

but there is no real good proof that the patients who have liver disease are more susceptible to jaundice from thorazine than patients who do not. As a general rule though, it would be best not to give it to those patients.

Dr. Shapiro added: "Dr. Brick, you mentioned sparine. Sparine is promazine as compared to chlorpromazine or thorazine, and in many hospitals including District of Columbia General, they have switched in their treatment of the acute alcoholics from the chlorpromazine or thorazine to sparine on the ground that it is less apt to affect the liver. The two manufacturers, however, have disputed claims on it but that has been recognized in the treatment of alcoholics where they switched to sparine and also in many psychotic cases to avoid complications."

OTHER EFFECTS OF THORAZINE

Is thorazine known to affect any other organ of the body? Well, Dr. Shapiro mentioned the fact that you may have neurological findings, such as Parkinsonism, and you may have definite psychotic episodes. It does not, as far as anyone knows, affect the heart although there is one cardiovascular manifestation and that is it reduces blood pressure and actually in sensitive patients the blood pressure may go to zero and the patients may pass out, particularly when they stand up. If they are lying in bed it doesn't affect the blood pressure but they have this business of passing out when they walk around. Therefore, when thorazine is given one should check to see whether or not they have this effect. One other side effect is when in a small number of cases the white blood cells are reduced. So this drug has lots of potentialities and has to be watched when given by doctors.

EFFECT OF DRUGS ON THE STOMACH

Butazolidin

The next subject I want to take up is the problem of ulceration of the stomach and duodenum. One of the reasons we are having this lecture is that one of our Service officers in the field thought it would be a good idea on the basis of a case that we had service connected by the Board of Veterans' Appeals. A veteran was service connected for rheumatoid arthritis and given butazolidin, a drug which is used in gout and rheumatoid arthritis, as well as other arthritides. Butazolidin has a very grave effect in some patients of causing or being a contributory factor in the production of ulcers in the stomach and duodenum. In this particular instance the veteran was given the drug, had a massive hemorrhage, was hospitalized, and before he could be operated upon for massive bleeding, dies, and a post mortem showed several ulcerations of the stomach which showed definite evidences of bleeding. There had never been a history in this particular case of the man having an ulcer, so apparently it started with the start of the drug. This is now well known that butazolidin can do this.

Steroid drugs—Cortisone

However, there are other drugs which have even a much greater and wider use than butazolidin that can give rise to ulceration of the stomach and duodenum and all of us should know about this. These drugs go under various names and they belong to this family of miracle drugs called the steroids. The ones which you undoubtedly have heard about are cortisone and ACTH. These drugs now are used in many conditions. They are used in arthritis, particularly rheumatoid arthritis, but they are also used in conditions as far apart as lupus erythematosus and other collagenous diseases, and diseases such as calcific bursitis of the shoulders or arms. They are also used in liver disease, in various endocrine diseases such Addison's disease, and they have a wide spectrum of uses. They are very commonly used in skin diseases, in hematological diseases, as leukemias, anemias. These drugs cut across specialized lines and are used in many, many different types of disease. This is the thing you have to know about. What do these drugs do? We really don't know when you get right down to it. We blame these drugs for the ulcers.

EXPLANATION OF ULCERS FROM DRUGS

What is the explanation of these ulcers? Well, we think it is this: These steroid drugs stimulate the production of or actually substitute for the hormones from the adrenal glands. The adrenal gland is a gland in our body that reacts to stress of any kind, whether it is nervousness, infection or injury, with operations, with any trauma and also with psychic trauma, you get an outpouring of this hormone. It has been found that there is a definite increase in acidity produced in the stomach and also in the peptic activity. That may give rise to the causation of ulcers and this is the idea behind it. Of course, this also gives a nice explanation, if it is true, why people who are tense and nervous get ulcers and why in ulcer patients we find a tense type of individual. This would tie up with the tenseness by stimulation of the hypothalmus and then by way of the vagus nerve to the stomach, you get tense about a problem, there is outpouring of the hormone which would increase acidity, would increase the pepsinogen, and maybe cause an ulcer.

Incidence of ulcers

The incidence and frequency which ulceration occurs with reference to these drugs, is frequent enough to be a very grave source of complication in the use of these drugs. I am often called to see patients who have had a peptic ulcer in the past and who now have a disease in which the doctor wants to use one of these drugs. We know that these drugs will aggravate a peptic ulcer that has been inactive and already present. We also know, incidentally, while I'm thinking about it, that this type of drug aggravates tuberculosis and other infections; although in some infections it is used in the treatment thereof. These drugs are very peculiar drugs and they have to be used very carefully and this is a very important point. There should be an absolute indication for the use of these drugs before they are used because they are potentially dangerous.

Type of ulcer

With reference to ulceration, these drugs cause different types of ulcer than it would appear in the ordinary peptic chronic ulcer. In one instance, a case that brought this whole lecture up, they produce multiple ulcerations and bleeding seems to be very common. Now many of these patients don't have much pain and bang, they start bleeding like a stuck pig. On the other hand, many of the patients do have the pain that goes along with ulceration whether it is from this drug or spontaneous. These drugs have many trade names attached to them as cortisone, cortef, predmisone, sterane, et al. The important thing to know is whether a drug used is a steroid drug. If you have situations in which service connected veterans received these drugs and they developed ulceration, or they develop bleeding, they should undoubtedly be service connected.

ACTIVATION OF TUBERCULOSIS

If tuberculosis is present or has been present in the past, most doctors prefer not to use the drugs because they may activate a quiescent tuberculosis. Of course, this would be a service-connected disability if the veteran was service connected for arrested tuberculosis.

Dr. Shapiro asked: "Suppose he had a non-service-connected arrested TB and this drug made it active?"

Dr. Brick: "He would be aggravated if he had the complication of pulmonary tuberculosis as a result of treatment of a service-connected condition with one of these drugs. I don't think there would be any question about his being service connected."

ASPIRIN AND THE STOMACH

Now, are there other drugs that cause ulceration? There are some other drugs that are bad offenders. The English think aspirin, aspirin mind you, the most commonly used drug, and the drug which you can buy without a prescription at any drug store or grocery store, may be hard on the stomach. For patients that have ulcers, we advise that they should never use aspirin. Now there are some among you who have ulcers and maybe you could tell us about your experiences because we advise that if they have to use aspirin for a headache, muscle ache or pain that they should use a buffered aspirin. These are tablets which are prepared with an antacid in them and are somewhat protective. Actually if you are going to use an aspirin tablet and you have stomach trouble, I think you should use a real antiacid alone together with the aspirin, something like amphojel, calcium carborate, or sodium bicarbonate.

Aspirin and bleeding

Aspirin can be rugged on the stomach, particularly in patients who already have a peptic ulcer. There is an English doctor who recently wrote a paper claiming that fully half of all the patients with peptic ulcers who bleed have taken aspirin within 1 or 2 days of their bleeding episode. Now this is a moot point. I personally know that aspirin will cause trouble in patients who have ulcers because they take these aspirin and they start having pain or indigestion.

Reserpine and depression

There are several other drugs which have a lesser effect on the stomach, such as reserpine which is a drug used in treatment of high blood pressure and also used in the treatment of the mentally ill for psychoneurosis and psychosis. The reserpine incidentally can also cause a Parkinson-like syndrome. The Chief of Medicine at Mount Alto VA Hospital, Dr. Ed Freis, who is one of the outstanding doctors in the world on the treatment of hypertension with drugs, was the first one to find that reserpine caused depressions. He had, in his own personal experience, known of two suicides in patients with hypertension on this drug. He has made the medical profession aware of this complication and that these patients have to be watched very carefully. Reserpine or serpasil is another one that may cause peptic ulcerations and when you have a situation in which a service-connected or non-service-connected hypertensive patient is treated with this drug, or one of the psychiatric patients being treated with this drug, we should keep in mind the possible relationship of the stomach condition with the use of the drug. Mr. Kraabel asked: "I was wondering if you could give the common denominator of the origin of these classifications of drugs. One of them is in the mold, another from the earth, and another is from some kind of root or chemical.

COMPOSITION OF THE DRUGS

That's a good question. There is nothing chemically akin in any of these drugs. We don't know the exact chemistry of the steroids but they are very complex. It appears that there is no common denominator as far as the chemical makeup of these drugs because butazolidin, for instance, which causes peptic ulceration is utterly unlike reserpine. The hormones, as cortison, are drugs which we make ourselves in our own body and which at first were taken from animals adrenals but now are synthetized with a very complex chemical process,

thorazine, which causes the liver problem, doesn't cause the stomach problem and has nothing in common chemically with any of these drugs. All of these drugs are utterly different one from the other, but as we use them in human beings they are changed in the breakdown of digestion, so what the chemical, and undoubtedly there is a chemical something that causes the ulceration, exactly what it is we do not really know.

Antibiotics

Now talking about drugs taken from the earth and molds, the antibiotics, penicillin, streptomycin, aureomycin, viomycin, terramycin, you can name 10 or a dozen more, and the drugs used in the treatment of tuberculosis, are taken from various molds. Now, these drugs have been a great boon and benefactor to mankind, of that there is no question, but these drugs, too, have drawbacks and this is particularly true in sensitive people who are sensitive to one or another of the drugs. In the course of a year I'm sure a dozen cases of deaths due to penicillin sensitivity occur. Sudden deaths occur after a shot of penicillin. This may be in patients who have taken penicillin and, of course, this is the real reason, you never use these drugs unless there is a real good reason for their use.

The mycins

The other antibiotic drugs, such as aureomycin and terramycin, knock out a good many of the normal bacteria in our body only to give rise to a hardy species of bacteria that live and grow and thrive because of these drugs. These bacteria are now causing us a great deal of trouble. We have infections because of the use of these drugs. We use these drugs to eliminate infection and what do we do, we get new infections that are resistant to the drugs. They may be worse than the organisms that we treat.

Resistant bacteria

This is also true occasionally in tuberculosis and, of course, the big fear of the use of these drugs in tuberculosis, and this may come to pass before too many years, is that you build up these resistant organisms. You see, you kill a lot of bugs in TB, but a few of them are unaffected. They are the unique ones, unique and individual just like humans are. They don't get killed and they live and they thrive and they grow and then they jump from human to human and then you get a type of tuberculosis that is even more difficult to treat because we use the ordinary drugs and the bugs grow faster than they die.

Effects of atabrine

A question was asked: What about the residuals of the use of atabrine? The residuals of the use of atabrine have been fairly nil. The only thing that came out about atabrine in all the millions of people who took atabrine during World War II and, I was one of them who took it conscientiously for 2 years and got to be as yellow as could be, was that in about 15 cases, as far as the Armed Forces Institute of Pathology was able to run down there was bone marrow depression. As far as I know this has been the only toxic effect. Bone marrow depression is where these patients become anemic, their white count went down, and their bone marrow was not able to produce any cells. These patients all died and came to autopsy. As far as I know, there were a very small number of them and that was the only by-product that I know about.

Desegregation

EXTENSION OF REMARKS
OF
HON. CHARLES C. DIGGS, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 12, 1957

Mr. DIGGS. Mr. Speaker, under unanimous consent, I include in the RECORD the following press release of the Southern Regional Council, reflecting a report on the progress being made in southern cities to end compulsory segregation on local buses. According to the council, by early January 1957, 21 southern cities had desegregated local bus service without difficulty. Since then, I am informed, at least one more city, Chattanooga, has followed their example.

As the report states, "the experience of these cities contrasted sharply with recent developments in Montgomery, Birmingham, and Tallahassee." Contrary to what a highly vocal minority would have us believe, the results in the 22 cities that have undertaken desegregation abundantly demonstrate that most people will give the equalizing force of the law precedence over their personal biases. This is a must if democracy is to be a living quality and not merely a principle to which we point with outward pride but which, when company is not around, we keep securely under lock and key within our national archives. As one citizen stated, "I hate to pay income taxes each year, especially when I think how advantageously I could use the money for my personal satisfaction. But it's the law, and I pay them."

The press release follows:

ATLANTA, GA.—A spot survey by the Southern Regional Council disclosed that 21 southern cities have ended compulsory segregation on local buses without difficulty.

The cities are: Little Rock, Pine Bluff, Fort Smith, and Hot Springs, Ark.; Charlotte, Greensboro, Durham, and Winston-Salem, N. C.; Knoxville, Tenn.; San Antonio, Corpus Christi, and Dallas, Tex.; and Richmond, Norfolk, Portsmouth, Newport News, Petersburg, Charlottesville, Fredericksburg, Lynchburg, and Roanoke, Va.

In every case the desegregation took place without court action—usually by a change of policy on the part of the transit company involved. The changes caused no incidents of violence or organized protest.

The experience of these 21 cities contrasted sharply with recent developments in Montgomery, Birmingham, and Tallahassee. There, nonsegregated seating on local buses has been met by both official resistance and sporadic violence by lawless elements.

In most of the cities checked, the SRC found that many passengers continued to follow the customary pattern of separate seating. But passengers are free to sit where they wish, and some degree of mixed seating is found in each of the cities reported.

In most cases, desegregation of local buses dates back to April 1956, when the Supreme Court dismissed an appeal from the United States 4th Circuit Court of Appeals which held the Columbia, S. C., bus segregation ordinance unconstitutional (*S. C. Electric & Gas Co.* v. *Sarah Mae Flemming*). Although the ruling directly applied only to Columbia, a number of transit companies operating elsewhere voluntarily revised their regulations.

Following is a brief city-by-city account of present bus practices:

Little Rock, Ark.: The bus system has been desegregated, with Negroes frequently sitting at the front of the buses.

Pine Bluff, Ark.: Negroes sit in all sections of the buses.

Fort Smith, Ark.: Segregation signs are no longer on the buses, but generally Negroes seat from the rear.

Hot Springs, Ark.: Although segregation is not enforced, Negroes tend to sit together at the rear of the buses. The situation is similar to that in Fort Smith.

Charlotte, N. C.: Integrated seating has been more in evidence since the ruling in the Flemming case, but separate seating was not strictly enforced prior to that time. Mixed seating is found on all routes.

Greensboro, N. C.: Mixed seating is in evidence on all routes, though many Negroes continue to sit toward the rear of the buses.

Durham, N. C.: Similar to the situation in Greensboro.

Winston-Salem, N. C.: All bus routes have been desegregated, in practice as well as in policy.

Knoxville, Tenn.: Segregation was ended by the bus company following the Flemming decision. All bus routes now have mixed seating.

San Antonio, Tex.: The transit system has been desegregated for more than a year.

Corpus Christi, Tex.: The same as San Antonio.

Dallas, Tex.: Bus drivers do not enforce segregation though most Negroes sit toward the rear of the buses.

Richmond, Va.: On April 24, 1956, the Virginia Transit Co. announced it would no longer enforce bus segregation laws. Most Negroes continue in the customary segregated seating pattern.

Norfolk, Portsmouth, and Newport News, Va.: Bus desegregation became effective shortly after the Flemming decision was announced. Some customary segregation remains.

Charlottesville, Fredericksburg, Lynchburg, and Roanoke, Va.: Desegregation is now in effect on the buses of these cities. Mixed seating is regarded as normal, though some Negroes continue to sit at the rear of the bus.

Aldo Leopold Memorial Award Medal

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 26, 1957

Mr. METCALF. Mr. Speaker, on March 5, during the annual banquet of the 22d North American Wildlife Con-

ference here in Washington, a very high honor was bestowed on a man known to many of us in Congress as a sincere and dedicated conservationist.

Those of us who know C. R. "Pink" Gutermuth, vice president of the Wildlife Management Institute, recognize and respect his dedication to the public-spirited cause of improved natural resources management.

Before the more than 900 natural resources administrators, technicians, sportsmen, and Members of Congress attending the banquet, Gutermuth was given the Aldo Leopold Memorial Award Medal in recognition of distinguished service to wildlife conservation.

The Leopold medal and scroll, which is given by the Wildlife Society, a continentwide society of professional fish and game technicians, commemorates the late Aldo Leopold, considered by many the father of wildlife management in North America. Conferral of this coveted medal shows the great esteem and appreciation that conservationists hold for a fellow worker who has done an outstanding and monumental job in furthering the objectives of their profession.

The first Leopold Memorial Award Medal was conferred in 1951 upon Carl D. Shoemaker, former conservation director for the National Wildlife Federation. Subsequent natural resources workers who have been honored are: Dr. Olaus J. Murie, 1952; Dr. Ira N. Gabrielson, 1953; Harold Titus, 1954; Hoyes Lloyd, 1955; Dr. Clarence Cottam, 1956.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Mississippi Valley World Trade Conference

EXTENSION OF REMARKS
OF

HON. EUGENE J. McCARTHY

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 13, 1957

Mr. McCARTHY. Mr. Speaker, on February 18, 1957, our esteemed colleague, the Honorable HALE BOGGS, of Louisiana, delivered a very significant address before the 12th Mississippi Valley World Trade Conference held in New Orleans, La. He incisively and eloquently described some of the problems faced by the United States with respect to our foreign trade policies and also summarized the work of the Subcommittee on Foreign Trade Policy of the Committee on Ways and Means. The gentleman from Louisiana [Mr. BOGGS] is chairman of this subcommittee.

At the meeting of the 12th Mississippi World Trade Conference in New Orleans on February 18 our colleague, the Honorable HALE BOGGS, was given the annual Mississippi Valley World Trade Award. This is indeed a deserved honor. Under leave to extend my remarks I include his speech in the RECORD, and I commend it to the attention of all the Members:

The speech follows:

ADDRESS BY THE HONORABLE HALE BOGGS BEFORE THE MISSISSIPPI VALLEY WORLD TRADE CONFERENCE, FEBRUARY 18, 1957

I was honored to receive your invitation to participate in the 12th Mississippi Valley World Trade Conference. It is always a pleasure for me to meet with you and particularly so here at home in New Orleans, the gateway to the Mississippi Valley. You will recall that Mark Twain once wrote, "The basin of the Mississippi is the body of the Nation. All other parts are but members, important in themselves, yet more important in their relations to this * * * a dwelling place for civilized man it is by far the first upon our globe." No one will contest this moderate and accurate appraisal of our region.

It would be superfluous for me to describe the role that foreign trade has played in the growth of the Mississippi Valley region, or, to use Mark Twain's words, in the growth of its other "members"—the rest of the United States. Nor do I have to emphasize the continuing importance of expanding foreign trade to you. The record of the first 10 months of 1956, which marked an increase of 20 percent in the trade cleared through the New Orleans customs district over the comparable period in 1955—and this is a trade of $1½ billion—is graphic testimony in itself.

I need only observe that the United States is on the verge of achieving a level of merchandise export and import trade equal to $30 billion and constituting ⅛ of the total trade of the world. The importance of such trade is reflected in the jobs and incomes, production and sales of every segment of our economy and in every region of our country. And important as such trade is to the economy of our country, it is the life blood of the nations of the free world and on the course of world trade will depend the strength and vitality of the free world community.

I have been asked to participate in this panel in order to discuss customs and tariffs, that is, the foreign trade policy of the United States. This is a subject as you well know in which I have taken great interest. It is a subject which is all the more important to me today because I was recently honored by being appointed chairman of a subcommittee of the Ways and Means Committee which has undertaken a comprehensive study of our foreign trade policy. Our subcommittee began its work last August and will continue to work through the present Congress.

What I want to discuss with you today are the recent developments in our foreign trade policy. There are many problems and many opportunities. I earnestly believe that the work of our subcommittee can make an important contribution in the formulation of our foreign trade policy and that our work can have an important consequent effect on the foreign trade position of the United States and other free world countries.

Let me observe at the start that our customs and tariff policies constitute only one of the many factors that influence the course of world trade. Our trade and tariff policy can either facilitate or impede the movement of trade which is the product of the enterprise and the decisions of many businessmen. It has been the historical policy of the United States, initiated by Cordell Hull in 1934 in the reciprocal trade agreements program, to give increasingly greater freedom to private enterprise and to businessmen in the conduct of world trade. Unfortunately, this program has been under continuing attack from certain quarters and at no time in its long and honorable history has it been under more serious attack than it is today. There are those who seek to reverse the trend of the Reciprocal Trade Agreements program and to inject into the world trade environment greater controls and restrictions on the enterprise of American business and commerce. They represent the point of view that foreign trade, for some reason or other, is a likely candidate for special restrictions and restraints as compared with domestic commerce. When they get into some business difficulty—whatever the cause—they look first to curtailing imports. I reject this shopworn idea; foreign trade does not constitute a form of second-class economic activity. Its importance to our country and to the world is too great to permit second-class treatment.

Yet it would serve no constructive purpose to turn our eyes from the fact that our foreign-trade policy has reached a crossroads. The trade-agreements program and the liberal trade policy that it represents has not in decades been in greater jeopardy. There are many evidences of this. You well know that the Reciprocal Trade Agreements Act was extended only by the barest majority in the House of Representatives, and it was passed by the Senate only after serious and important amendments were made in the legislation. The legislation contained a very modest grant of authority to the President to enter into trade agreements, while at the same time it opened up the escape clauses which permitted upward adjustment of tariffs and other import restrictions. Today there are many who predict that when the Trade Agreements Act is before the Congress for renewal in 1958, it may not be enacted unless new vision and direction is given to our trade policy.

A second example of this developing crisis in our trade policy can be seen from the fact that the bill authorizing United States membership in the Organization for Trade Cooperation, which would administer the important 35 country trade agreement known as the general agreement on tariffs and trade, was not enacted last year. It was reported out favorably by the Ways and Means Committee by a sizable majority, but no further action was taken on it. As further evidence of the situation that I am describing, one need only point to the growing pressure that has arisen for increased restrictions against imports, through import quotas which would involve direct control of the amount of imports that are permitted to enter the United States. If such legislation were enacted, it could reverse the whole trend of our historical trade policy to the serious disadvantage of American export trade.

At the same time that these developments are taking place, we are confronted with the fact that our foreign economic policy, of which our trade and tariff policy is an important part, is faced with new challenges in the world. Not the least of these has been the challenge presented by the economic warfare of the Soviet bloc. That bloc recognizes that foreign economic policy is an important instrument of national policy in the cold war.

Recent developments in Western Europe and the emergence of Japan as an important trading country, which I will discuss in more detail a little later on, are important factors to be taken into consideration. All of which means, to my mind that we need a trade policy that is tied in with our overall foreign economic policy requirements, that can serve the national interest of the United States in this period of rapid change. We need to chart new directions that reflect the dynamic changes of the times we live in.

I have said that we stand at the crossroads. At home, conflicting pressures from all directions converge on the Congress and the administration and demand consideration. It is the responsibility of the Congress to resolve the conflicting demands, to study the implications of alternative lines of action and to make policy that will serve the interests of the Nation as a whole.

It is in the light of this situation that the establishment of our subcommittee with a broad charter to study and examine the range of problems and challenges facing our foreign trade policy is of special interest. It marked the first time within my memory that a committee of the Congress has undertaken a comprehensive study of this question. In studying our trade policy and legislation we are dealing with a very complex and technical subject. And we were fortunate in obtaining the services of a highly competent staff of experts. I was particularly pleased that I was able to persuade my old friend Charlie Nutter of International House to take a leave of absence of 4 months in order to

give the subcommittee the benefit of his advice and assistance.

In the first phase of our work which was completed in January the subcommittee held hearings in Washington and prepared a report on many aspects of our customs and tariff legislation. This unanimous report which is now being published is in the nature of a stocktaking and appraisal of the existing legislation and an exploration of the points of controversy that have arisen. It is designed primarily for the information of the Members of the Congress and the public in an effort to point out particular aspects of our legislation that deserve further study prior to undertaking any new legislation.

In some ways you can say that the body of legislation covering customs and tariff matters grew like Topsy. Our customs legislation has its roots in the early history of the Republic. The second law enacted under the Constitution was the Tariff Act of 1789. Some features of our laws may not go all the way back to 1789, but certain ones, such as our system of tariff classification, still reflect the legislation of a century ago. In any event, the purpose of the analysis of our customs and tariff laws which we have undertaken has been to assess the present situation with respect to these laws as a first step in determining what further studies would be profitable.

Because the impact of our trade policy on foreign countries is a vital aspect of our policy, the subcommittee in November arranged a series of conferences and discussions in Western Europe and Japan, one group visiting Western Europe and another group, including myself, going to Japan. Discussions were held in both places with leading officials of foreign governments, and with foreign and American businessmen. I feel, and I know that the other members of the subcommittee feel, that these meetings were very profitable and great benefit was derived in terms of a better understanding of each other's problems and points of view.

For example, we arrived in Tokyo at a time when the textile export quota was under negotiation between our Government and the Government of Japan. Feelings in Japan were running high; the continuing controversy over Japanese cotton textile imports into the United States had resulted in irritation and sensitivity. I feel that our visit and the discussions we held with the Japanese helped to restore a measure of good feeling. After we returned to the United States, I received a letter from the economic counselor of our Embassy in Tokyo and I want to quote a passage from that letter. He wrote:

"We in the Embassy were delighted to have had the opportunity of discussing with you the various trade problems which exist between Japan and the United States. These discussions were of great benefit to the Embassy staff and the Japanese with whom you met have also expressed on many subsequent occasions their appreciation for the consideration which the subcommittee extended. You may be interested to know that after your visit was concluded, Mr. Ishizaka and the other Japanese businessmen joined in informing the press that their meeting with the subcommittee had been so beneficial to both sides that they were contemplating the establishment of a permanent committee for the purpose of holding similar discussions on problems of mutual interest with distinguished American visitors in every field and were even considering the possibility of sending a top-level team of Japanese businessmen to the United States for that purpose. Even if these plans come to naught, the good will which you and your colleagues generated during your brief stay in Japan has been clearly presented to the Japanese public and will doubtless continue favorably to reflect on the relations between the two countries for some time to come."

I won't dwell in great detail on the observations and information we obtained. One of the sections of our report contains a thorough discussion of this subject. But let me summarize the overall impressions which the subcommittee came back with.

It is clear that Western Europe and Japan have made remarkable progress in the reconstruction of their economies. That reconstruction has, for all practical purposes, been completed, and these countries are now looking increasingly to trade and the development of trade relations as an essential element in their further economic progress. There is a great mutuality of interest between these countries and the United States in matters relating to trade. In the case of Japan—despite the controversy that has arisen over the cotton textile problem, which I believe is being solved in a satisfactory manner—the areas of mutual interest in trade are overwhelming. Japan is the most important market for American farm exports and we continue to sell her considerably more than she sells to us. For example, we shipped 647,000 bales of cotton to Japan in 1955, and, in 1956, these exports are estimated to have risen by 50 percent—to 1 million bales. In dollar terms, we sold Japan $120 million of raw cotton in 1955 and, by comparison, imported $60 million worth of cotton textiles and apparel.

Much the same situation obtains in our trade with Europe. Europe continues to run a deficit in its trade with the United States. These countries look to the expansion of trade with the United States and to the continued liberalization of their own trade restrictions as circumstances permit. I know that we feel that not as much progress has been made in dismantling these import restrictions as we would like to see, but I suppose it is better that progress be made slowly, if steadily and irreversibly. We were impressed as well with the importance that these countries placed on United States leadership in matters of trade and tariff policy. They expressed concern over the protectionist drift in this country, over the escape clauses of our trade-agreements legislation—which make our tariff commitments unstable in their eyes—and with the failure of the Congress to ratify membership in the Organization for Trade Cooperation.

In this connection, I have worked for United States membership in the Organization for Trade Cooperation because it is important as an indication of our continuing commitment to a liberal and multilateral foreign trade policy. It would be evidence of our intent to continue to cooperate with other countries with respect to trade problems. For example, this year the United States will begin important discussions with other GATT countries looking to the accelerated relaxation of the quotas and other special import restrictions which they imposed during and after the war when their trade positions were seriously out of balance. Our membership in OTC would strengthen our hand immeasurably in these forthcoming discussions.

As important as have been the developments in the economies of these countries and in their foreign trade positions over the first decade since the war, we came away with the feeling that the next 10 years will see even more significant developments of importance to the economies and political areas of the free world countries. Many of these developments are already foreshadowed. In Western Europe in each country that was visited the subcommittee was impressed with the strong interest in the development of a common market of the Western European countries. Plans looking toward the establishment of such a common market arrangement seem likely to be agreed upon in the near future and will provide for a gradual removal of all tariffs and other restrictions on trade among the Western European countries that join the common market. It will imply the coordination of financial and economic policies among these countries. If successful, a unified Europe would mean a mass market of 250 million people. It could mean the basis for prodigious economic growth. The political implications of European economic integration are vital and could mean the establishment of a real force on the continent of Europe standing against further Soviet expansion. It is a real step toward a United States of Europe. These developments challenge our foreign economic policy, as well as our military planning.

The emergence of Japan as a major trading country is clearly a significant development of interest to the United States. This is so not only because Japan looks to the United States market for the expansion of her exports but also because Japan must quite literally trade in order to support its present population and to maintain its industrial production and a prosperous Japan is vital to the military defense of the United States. Clearly there are mutual advantages to be gained if Japan could develop sound and stable trade relations with her neighbors in south and southeast Asia and with the expanding economies in Western Europe. But there are a variety of impediments that have made it difficult for Japan to develop such trade relations. Exchange difficulties have channeled Japan's foreign trade into 2-way patterns instead of multilateral 3-way and 4-way trading relations. What can our foreign economic policy do to facilitate the development of a thoroughly multilateral trading world? This is one of the challenges that faces our trade policy as it relates to Japan.

In looking to the future, therefore, our subcommittee has its work cut out for it. Our aim is to devise programs founded on sound and technical understanding of the problems of world trade and which reflect the needs and requirements of a rapidly changing world. The agenda that we have prepared for our continuing work reflects these considerations. Of overriding importance is the role of our trade and tariff policy in our foreign economic policy and foreign policy. It is illogical to put the different aspects of our foreign economic policy in watertight compartments. Our military aid, our aid for economic development, private investment policy, agricultural and commodity policy all are bound together with our foreign-trade policy.

We have, therefore, made only a beginning.

One of the subjects that we intend to study is our trade relations with our neighbors to the South. Latin America acquires one-third of all its imports from the United States, and almost one-fourth of all our exports go to Latin America. Because of the nature of our import trade, tariffs may not be as important an element as they are in our trade with highly industrialized countries, but there are other aspects of Latin America's $8-billion trade with the United States that are of vital importance. I draw your attention to a study recently published by the Department of Commerce analyzing the role of United States private investment in Latin America. Such private investment amounts to almost $10 billion today. United States companies produced $5 billion worth of goods and services in Latin America in 1955, and the exports of these companies to the United States amounted to 30 percent of all exports from Latin America to the United States.

This investment is one of the dynamic factors accounting for the tremendous economic growth that has taken place in Latin America. What we have observed is, I believe, only the beginning. The Latin American continent can be compared with our continent of 100 years ago. It is a continent rich in natural resources, much of them as yet not measured, with large land areas that

have the potential of extensive cultivation and with the prospect of a rapidly expanding industrial development. We can be sure of one thing, and that is that Latin America offers the promise of becoming the most important market for American exports—a market, one should keep in mind, which is potentially of continental size like that of our own country. Of course, unlike the United States, there are barriers, both real and artificial, that separate the Latin American Republics—for example, the lack of adequate transport facilities and differing monetary systems. Although I have not studied the subject adequately—and as far as I know it has received very little attention as yet—I find the idea of economic integration in Latin America an intriguing one. I am sure that the developments in Western Europe will be followed closely to see what bearing they may have on economic developments in Latin America.

Careful analysis and thorough understanding of such factors in our trade relations are essential to the formulation of American trade policy. Let me share with you my personal views with respect to the guidelines that I believe should direct our foreign-trade policy. First, we must maintain a climate which is conducive to high and expanding levels of world trade and this means that we must discard, once and for all, the idea that there is something second rate or even un-American about trade, particularly import trade.

Second, in order to improve this climate, we must provide for greater stability and certainty in the conditions under which trade is conducted. The conduct of trade requires long-run decisions and planning by businessmen; constant changing of the rules is intolerable to the proper conduct of trade. The various escape clauses in our legislation and their potential for protection have to be examined in the light of this consideration.

Third, we need to look carefully at our customs and tariff laws to see what can be done in the way of real simplification of customs procedures and to see what tariffs are seriously restrictive of imports that can be reduced.

Finally, I want to emphasize that the interest, understanding, and involvement of the public is essential if we are to make progress. That is a responsibility that falls particularly on the shoulders of people that are actively engaged in trade, such as you are.

It is clear to me that at this juncture of our history, the United States cannot enjoy the luxury of indecision. The choice we have is one that was aptly described by Theodore Roosevelt four decades ago when he said: "The United States has not the option as to whether it will or will not play a great part in world affairs. It must play a great part. All that it can decide is whether it will play that part well or badly."

Who Determines the Budget?

EXTENSION OF REMARKS
OF
HON. W. F. NORRELL
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 13, 1957

Mr. NORRELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include and commend to the membership of this body an editorial by Mr. David Lawrence, which appeared in a recent issue of the Washington Evening Star, on the subject of the Federal budget.

I believe that Mr. Lawrence has stated concisely what he calls the real story of the Federal budget. Both the facts and the figures are available to every American citizen. Every one of us has the responsibility to apply them to the conditions which they represent in terms of the national security, the national economy, and the national welfare as a whole. Similarly, every one of us has the moral obligation to act with the greatest measure of responsibility at his command in determining the kind and extent of economic and welfare programs that can be undertaken by the Federal Government on a sound economic basis only.

The appeal of every citizen for lower tax rates and the appeals of the general public for a reduced Federal budget can only be effective if active support by all citizens—composing any and all groups having divergent interests—is given to the national legislators to cut back or to eliminate proposed expenditures that continually increase the total budget.

The underlying situation is reminiscent of the adage about the weather—everybody talks about it. Everybody talks about reducing the Federal budget and taxes. But apparently nobody is willing to see the legislators make a reduction if it means that the seemingly easy solution of money problems by Uncle Sam is to be forfeited. If and when every Joe Taxpayer understands just how much more than value received it costs him to reach into Uncle Sam's pocket for financial assistance, he will become sufficiently active in supporting legislators who strive to legislate for the best interests of all American citizens. And he will once again join the illustrious ranks of our forefathers whose self-reliance, courage, and initiative were the foundation of our free and democratic way of life.

WHO DETERMINES THE BUDGET?—PRESIDENT, CONGRESS FORMALIZE FIGURE, BUT PUBLIC REALLY SETS SPENDING RATE

(By David Lawrence)

This seems to be the era of buckpassing in Government.

The Executive says to Congress: "You cut the budget."

The Congress says to the President: "You cut the budget."

The American people say: "You—both Congress and the President—cut the budget. But don't touch our pet projects, our agricultural subsidies, our business subsidies, our social-security subsidies, our school lunches, our highway subsidies, and all the other things that make it possible for us in this community to get our share of the money that's being spent."

But whose responsibility really is it to cut the budget? The Constitution gives the President the power to recommend but not to legislate. The Constitution says:

"No money shall be drawn from the Treasury but in consequence of appropriations made by law."

This means that the final decision is up to Congress. But when Congress tackles the job what does it find? First, that 63 percent of the total budget is for national security, assurance of survival in an atomic age.

Next 25 percent of the budget is for programs fixed by Congress in laws passed in previous years. This includes veterans' benefits, agricultural price supports, soil-bank payments, grants to the States for welfare payments, and interest on the Federal debt. Thus we have 88 percent in these two categories alone and, as the Secretary of the Treasury, George Humphrey, explained it in a speech in Detroit last week, "this leaves but 12 percent of Federal spending in which there is some elasticity in the opportunity to save money."

In actual totals this 12 percent is a sum of $8.6 billion. It cannot all be eliminated. Mr. Humphrey says: "It therefore becomes quite obvious that while some savings can always be made by ferreting out waste, extravagance, and duplication, the really substantial reductions in Government spending can come only from changes in programs. These programs now in effect by decision of the Congress can be changed only by new decisions of the Congress.

"The executive branch must, of course, work closely with the Congress to arrive at the best judgments as to what the various programs must provide for. That is exactly what the Eisenhower administration is currently doing with the Congress in this campaign which has received so much public notice recently in searching to find ways and means of reconsidering existing programs so as to make substantial reductions in Government spending without either impairing our security or the necessary services to be rendered the public.

"Whose job is it to cut Federal spending? It is everybody's job. It needs the active support—not just the approval—of the public. Basically, it is the job of the American people, for it is with the people—at the thousands of crossroads over the Nation—that the pressures for spending begin. A group of people who want some assistance or who get into trouble of some kind turn to the Federal Government for help on the mistaken theory that money from the Federal Government does not cost anybody anything. The pressures applied are well known and are visible in Washington every day. * * *

"We need a campaign of public education so that the public will better understand the facts of life about Federal spending. They must realize that there is no bottomless well of unlimited money in Washington. * * *

"There is all too prevalent an attitude of 'getting our cut so long as everyone else is getting theirs.' "

That's the real story of why Federal budgets are high. But the picture isn't as black today as it has looked in the past. For 2 years the Treasury has taken in more than it has spent—and there is the same outlook for the coming year. This, as the Secretary of the Treasury points out, is "the first time we have had a real prospect of three balanced budgets in succession for more than 25 years."

Also in terms of prewar dollars—that is, in the 60-cent dollars of today—the budget can be regarded as approximately $43.2 billion and not $71.8 billion. Inflation works both ways—it sends Government expenses up even as it calls for a larger volume of more dollars in tax receipts. What's dangerous is not the size of the present budget by itself but what it may portend.

The current budget can be cut by perhaps 2 or 3 billions—which is something. But what is more important is to prevent the budget from going even higher next year.

This is everybody's job, which means the electorate really has to keep informed so that political demagoguery doesn't produce a rivalry in spending for welfare purposes and exploitation on the stump by one political party of the cuts made by the other party. Mr. Eisenhower isn't going to run for office again but the Republican Party in Congress faces an election in 1958. It can be defeated once more as it was in 1956 in the West because the Democrats deliberately blamed low farm prices on the failure of the Republicans to spend more money to subsidize agriculture. Only last week the Democrats were trying to push upward in Congress the soil-bank payments despite

all the talk about cutting the Federal budget. It's the uninformed or shortsighted, selfish voter who really is responsible for past failures to cut the budget.

Union Books Open to Public

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 13, 1957

Mr. SHEEHAN. Mr. Speaker, the press recently has been giving extensive coverage to the labor hearings being conducted by the special Senate investigating committee under Senator McCLELLAN and there is danger that the American public might jump too hastily to the conclusion that the bulk of the leaders of the American labor movement are dishonest. Such is not the case and many outstanding examples could be cited where labor unions and their leaders do a distinct public service in running their union in an upright and businesslike manner.

One of these unions, of which the whole labor movement could be proud, is Local 705, the Independent Truck Drivers Union in Chicago, of which Mr. Edward Fenner is executive director. Mr. Fenner's whole philosophy was well explained when he recently expressed in a newspaper interview that:

We think that as union officials we are responsible not only to our members, but also to the public.

We think we should make a public accounting.

Mr. Fenner's union covers over 12,000 members and he negotiates with over 1,600 employee organizations. Annually local 705 publishes a financial statement in the Chicago newspapers which statement has been audited by a firm of public accountants. The contribution in the union health and welfare fund is administered by a 3-man board consisting of Mr. Fenner representing the union, Mr. George W. Dixon representing the employers and Dean John Fitzgerald of Loyola University Law School representing the public interest. The Chicago Daily News, in a news article on Friday, March 8, pointed out the highlights of local 705's responsibility to the public as follows:

UNION EXPECTS NO TROUBLE—ITS BOOKS OPEN TO PUBLIC—TRUCKDRIVERS PUBLISH FISCAL FIGURES IN PAPERS

One truckdrivers' union with a welfare fund expects to have no troubles, because it makes a periodic accounting to the public. Edward Fenner, executive director of Local 705, Truck Drivers' Union (independent), explained:

"We have felt that a union is partly a public institution because it is tax exempt. Therefore we think that as union officials we are responsible not only to our members, but also to the public. We think we should make a public accounting. We publish our fiscal transactions periodically in all the metropolitan newspapers, in space we pay for. We have done this since 1947."

The union negotiates collective bargaining agreements with 1,600 employees, covering 12,300 truckdrivers, said Fenner.

It has a health and welfare fund, employer-financed at a current rate of $2.75 per union member per week, and self-insured.

The union has been receiving contributions since January 1, 1953.

From that time to this the fund has been adminstered by a three-member board, representing union, employers and the public.

On this board Fenner represents the union, the employer member is George W. Dixon, president of the Dixon Transfer Co., and the public member is Dean John Fitzgerald of Loyola University Law School.

"Administrative costs have been 6.66 percent of contributions received," said Fenner.

The union also has a pension fund, set up January 1, 1955, now reporting net assets of $1,129,399.

Like the welfare fund, it is self-insured and is administered by a tripartite board.

Fenner is a graduate of Columbia University, where he majored in English literature. He has worked for the union since 1930.

His first job, however, was as a salesman of men's furnishings. He says collective bargaining is a selling job anyway.

Independent Editorial Policy of Knight Newspapers Commendable

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 29, 1957

Mr. FASCELL. Mr. Speaker, under unanimous consent, I include in the Appendix of the RECORD an editorial entitled "Ike's Changing Course Alters First Term Aims," published in the Miami Herald on Sunday, February 3, 1957. Mr. John S. Knight, author of this editorial, is one of the country's best known and most widely respected editors and publishers. He has also been an enthusiastic supporter of President Eisenhower in both 1952 and 1956.

Mr. Knight rightly points out that, although we "all dislike petty sniping at the President, this does not mean there is no room for conscientious differences of opinion." This is a position with which a Democratic Congressman can heartily agree. A responsible Congressman, like a responsible newspaper, will support the President so long as he honestly thinks the President is right; but will not be afraid to differ with the President on other issues of the day.

I think that Mr. Knight's editorial independence is a very commendable policy. In recent congressional campaigns we have heard too much of promises to be "one thousand percent for Ike." No ordinary mortal, however well intentioned, can be infallible. The Congress and the newspapers are two of the principal means of enlightening public understanding of the great issues of the day. In a democracy this is a vital function which should not be replaced by an attitude of meekly "following the leader" without question.

Mr. Knight's editorial follows:

IKE'S CHANGING COURSE ALTERS FIRST-TERM AIMS

A charming lady mildly reproved me the other day for criticizing the President.

Very politely, she inquired why such an ardent Eisenhower supporter should now be writing editorials questioning the wisdom of administration policies.

I replied that my affection and respect for the President remained undiminished, but that enthusiastic support of the President in two campaigns did not inhibit me from disagreeing with him when I thought he was wrong.

Every President is surrounded by well-wishers who laud his policies and echo his words. Few are so fortunate as to have members of the Cabinet, such as George Humphrey, who are able enough and honest enough to express their convictions.

But the independent newspaper, which seeks no favors, can and does speak up.

The great issues of the day should be debated and clarified, if we are to have a better public understanding of what is involved.

President Eisenhower's tremendous popularity should not suggest that he is immune from criticism. We all dislike petty sniping at the President but that does not mean there is no room for conscientious differences of opinion.

UNITED STATES TROOPS PLEDGED TO SAVE EUROPE'S OIL

Here, for instance, are several of the questions which are concerning the people:

1. The Eisenhower doctrine, designed to fill the power vacuum in the Middle East.

2. The President's concern over inflation, accompanied by a whopping $72 billion budget request.

3. The unlimited scope of pledges and promises contained in the President's inaugural address.

In essence, the Eisenhower doctrine asks Congress to give the President unrestricted authority to block Soviet aggression in the Middle East.

If approved, as now seems certain, this means that American troops will be used, if necessary, to protect the Middle East supply of oil which is vital to the survival of Europe.

If Russia moves against any country in that area which has requested our assistance, it means war.

It is my personal view that this policy is too rigid; that it would have been better to have declared our interest in the Middle East without actually charting step-by-step future procedure.

I also disagree with the $600 million program of economic aid, of which $200 million is to be spent during the balance of this year.

Many of these countries, dripping in oil, have not yet been able to spend all of the money we have furnished them thus far.

Nor is the Middle East situation comparable to the defense of Formosa where our objectives were limited.

Handing the President blank-check authority to act in this highly sensitive and complex area is a grant of power never contemplated by the founders of our Republic.

Moreover, by stating flatly that we will defend any nation requesting assistance in the Middle East, we enable Russia to trigger a war at a time of her choosing.

At best, this is questionable strategy and certainly bad diplomacy.

RECORD BUDGET IS INFLATIONARY FACTOR

On the home front, the greatest danger to our economic system is the slow but unhalted march of inflation.

Commendably, but late, the President has warned of that peril and counseled restraint in wage demands unrelated to productivity and in the pricing of manufactured goods.

He has urged individual "economic discipline" to arrest further depreciation in the value of the dollar.

Yet he has submitted to Congress the largest peacetime budget in history—itself an inflationary factor.

Granting that military defense, social services and fixed interest charges comprise a huge chunk of the budget, its enormousness hardly squares with the President's own admonition that "the Federal Government shall utilize only a prudent share of the Nation's resources."

CONGRESS SHOULD MEET SPENDING CHALLENGE

In defense of his budget, the President has explained that it contains "thousands and thousands" of details. He suggested that anyone examining it "seriously ought to find some place where they might save another dollar."

Mr. Eisenhower said further: "If they can, I think if Congress can, it is their duty to do it."

But is it not the duty of the administration which compiles the "thousands and thousands" of items in the budget to challenge these details at the time the budget is prepared?

The task forces of the Hoover Commission have reported that four to five billion dollars could be saved by placing their recommendation in effect.

Why can't the President and Congress cooperate in getting this done?

In 1953 the House of Representatives cut President Truman's budget estimate by $4 billion. If the budget makers can't find out how "to save another dollar," Congress should accept the President's challenge and do it for them.

We can't curb inflation by telling labor and industry to be good boys or urging economic discipline upon the individual if the Government goes all out for bigger and better spending.

UNIVERSAL MORAL ORDER IS UNLIKELY

A third point of disagreement with the President arises from what Walter Lippmann calls the unlimitedness of his inaugural address.

While the address was largely a statement of the President's ideals and his hopes, his opposition to isolationism was carried to the other extreme when he said "we accept our own deep involvement in the destiny of men everywhere."

Does he really mean that it will be the policy of our Government to become involved in the destiny of men everywhere?

If so, many of us are not prepared to accept that view.

We do not believe that American foreign policy can ever bring about a universal moral order, nor that the alternative to isolationism is involvement everywhere.

ALTERED DIRECTION CAUSE OF CONCERN

Four years ago, President Eisenhower conceded the desirability of limiting our foreign commitments.

Today, he seems intent upon expanding them.

Four years ago, the President promised to cut Government costs and to reduce taxes. This was done.

Today, Government expenditures are at an all-time high with no tax relief or reduction of the national debt in sight.

True, the budget is balanced but so precariously that even a moderate drop in business could throw it out of kilter.

This high-spending, save-the-world concept is what we might have expected of Adlai Stevenson, but not from Eisenhower.

It is the administration which has altered direction since the turn of the year, and not those of us who preferred the first-term Ike and are sorry to see him change.

We Have No Alternative

EXTENSION OF REMARKS
OF
HON. ISIDORE DOLLINGER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 13, 1957

Mr. DOLLINGER. Mr. Speaker, it was my great privilege to hear a splendid address made to the Bronx Bar Association on November 28, 1956, by Mr. Louis Nizer, an outstanding attorney of New York City.

The speech was most thoughtful and penetrating. Because of the timeliness of the subject, I am anxious that all Members of Congress should have the opportunity to read and study it, and I am, therefore, including it in the RECORD:

WE HAVE NO ALTERNATIVE

(By Louis Nizer)

Ordinarily, I would deem it my first duty to disavow the general compliments and the obituary which have just been read about me. I shall not do so, however, because your chairman has such a fine reputation for accuracy that I would not insult him by suggesting that anything he said about me was not precisely true. Indeed, he also has a reputation for understatement. If I were hard pressed, I might confess to you that if it were not for that frailty he would have done me more justice.

It is good on an evening like this to share the dais with so many judges. In France the identity of the lawyer is preserved by his costume. The French lawyer wears a gown with a red velvet collar. In England the barrister wears a wig. In this country democracy has denuded us, and we do not wear a gown or a wig, although we are sometimes permitted to wear our masks.

In any event, it is good on such an evening to catch the judges with their robes off; it gives us an external appearance of equality.

When you invited me to address you this evening, I had thought it was to be a meeting only of the members of the Bronx Bar Association, and, therefore, I intended to address you on a subject of technical professional interest.

Then I learned that this was to be a social gathering; indeed, as I now know, preceded by a cocktail party designed, I suppose, to dull the razor-sharp brains of many counsel here. I also learned that it would be an occasion which was to be graced by beauty other than that which can be found in a legal syllogism.

Therefore, I decided it would be wrong to talk shop, just as if you had a lady speaker—it would be wrong for her to talk shopping.

Instead, I choose this opportunity to address you on a subject which has pressed upon my mind and is very dear to my heart. I hope you will find it appropriate, because it does involve the subject of international law. I assure you, though, it is a subject of profound interest to every person alive today, for it involves nothing less than the survival or extinction of the human race.

I do not like suspense, except in stories. When an associate of mine comes from the law court, I implore him to tell me the conclusion first, and then he can sit back and tell me, at great length, how he brilliantly bested his adversary. Therefore I shall state my conclusion first.

President Eisenhower should address the United Nations and propose a new Constitutional Convention to amend the Charter of the United Nations. Such procedure is authorized (United Nations Charter sec. 109, subdivision 3) at any time after 10 years existence of the United Nations.

The calling of such a convention to amend the charter need be passed by only a majority of the Assembly, and seven members of the Security Council.

The objective would be to create an effective instrumentality for the preservation of world peace.

In making this proposal, I do not share the view of those who think that the United Nations is an impotent, helpless organization, which might mercifully be put to death.

On the contrary, to have a shelter where all the nations of the world can gather and listen to each other, and pass resolutions which at least have the moral grandeur of an international assembly meeting in democratic process, is the hope of the world. It is because, in our desperation, we reach forward to that hope and find it a mirage, that we must take steps to make it real.

In discussing this proposal, I shall drink heavily from the fountain of our constitutional history. For there is a remarkably apt analogy of our own ineffective Constitution which was later revised to make it workable.

In 1776, when this country was founded, we drew the Articles of Confederation. They were so ineffectual that the Republic foundered. Eleven years later, in 1787, though there was no authority to do so, we called a Constitutional Convention. We transformed the Articles of Confederation into the Constitution as we know it today.

Notice even the similarity of the lapse of time, 11 years between 1776 and 1787, and it is 11 years since the United Nations Charter was drawn in 1945.

Why did the Articles of Confederation turn out to be inadequate? Chiefly because each of the 13 States deemed itself to be an independent nation, and would not surrender its sovereignty to a Federal Government. Article II of the Articles of Confederation read: "Each State retains its sovereignty, freedom, and independence."

This meant that the Federal Army was subordinated in effectiveness to the State militia. Massachusetts and other States had their own armies, while the Federal Army constituted only a token force. Notice the new United Nations token army we have just founded for the Mideast crises.

Under the Articles of Confederation there was no effectual means to raise money. The Federal Government levied a tax of $8 million. Only $420,000 could be collected.

Congress consisted of 1 House, and each State had 1 vote, just as each country has 1 vote in the United Nations. Nine out of thirteen States had to assent to make possible a decision. This was equivalent to veto power.

Indeed, each State considered itself so much an independent sovereignty that it would not even yield to the Government the right to declare war or make peace. Georgia declared war on 2 Indian tribes, used its own Georgia army to win, and then made 2 peace treaties, ignoring the United States Government.

Four States—Maryland, New Jersey, Pennsylvania, and Virginia—entered into treaties with each other, without the consent of Congress.

Many States taxed imports across their borders. New York, for example, imposed a tariff on wood and cabbage which came from Connecticut.

There was no Federal judiciary. There was no Supreme Court until 1787. When there was a dispute between the States, Congress would appoint a committee to determine it, and, sometimes, the States would not even subject themselves to the jurisdiction of that congressional committee.

The result was that our Federal currency failed, our laws were unenforceable, and there was chaos in our Republic. This great and noble experiment in modern democracy almost collapsed during the first 10 years of its existence.

When John Shay, a hero of the Revolutionary War, led an army in revolt, due to the desperate condition of farmers and debtors, the time had come for some radical measures.

Alexander Hamilton, practicing deception, got together the representatives of the 13 States on the theory that they would make some minor amendments to the Articles of Confederation. Previously, in 1785, he tried to convene them, but only 5 States agreed to attend.

Then it was that out of a cauldron of fierce debate, resistance and compromise the Constitution of the United States emerged.

What were the changes of the Articles of Confederation which transformed it, 11 years later, into the Constitution? As we analyze them, keep an eye on the present situation in the United Nations, because the parallel is striking.

First, we made possible, through effective taxation, the maintenance of a Federal Army to enforce the edicts of the Federal Government.

We changed the voting, so that representation was based on population. But we created a bicameral legislature so that, in the Senate, each State would still have an equal vote with any other.

Finally, we created the United States Supreme Court over such protests as that of Mason, the delegate from Georgia, who said: "I will not permit a foreigner from New York to determine the rights of the sovereign State of Georgia."

We think of our Constitution as an inspired work designed by great minds. So it is, but those who drafted it had misgivings, for they were compelled, by fierce opposition, to compromise their convictions.

Patrick Henry is often quoted, approvingly, for "Give me liberty or give me death," but listen to him, as the delegate from Virginia, oppose the Constitution: "I would rather infinitely have a king, lords and commons, than a government so replete with such insupportable edicts."

A Delaware delegate said: "We are told that although 3 large States form a majority of the people in the 13, yet these 3 States will never do any harm to the rest of the States. Gentlemen, I do not believe you."

Jefferson said about the Constitution: "There are, indeed, some faults which revolted me a good deal in the first moment, but we must be contented to travel on toward perfection step by step."

The delegate from South Carolina said: "What is liberty? The power of governing yourself. If you adopt this Constitution, have you this power? No. You give it into the hands of a set of men who live 1,000 miles distant from you."

There were also predictions that the Federal Capitol "would be a walled or fortified town with an enormous standing army to sally forth and reduce the people to submission."

Yet the new Constitution was adopted and, from a faltering Republic, a steady and powerful Nation emerged.

How shall we now amend the United Nations Charter to transform an ineffectual symbol into the reality of international power?

First, the veto must be abolished.

Russia is guilty of many, many iniquities, and communism is the shortest distance between the cradle and the grave, but let us not blame the existence of the veto upon Russia. The truth is that the United States, as well as Russia, had to have the veto. Without it the Senate would not permit us to join the United Nations and surrender our sovereignty to foreign powers.

We did not join the League of Nations because of article XIII, which was deemed to impinge upon our sovereignty. President Roosevelt, mindful of that experience, took the precaution of designing the veto, so he could say to the United States Senate: "You are not surrendering your power; you can always veto a decision which you, in your sovereign powers, deem should not be made." Thus, we were lured into the United Nations. But the time has come to eliminate the veto, which immobilizes any effective action. How, for example, could any judicial system operate if the losing litigant could veto a decision rendered against him? We can no longert permit the paralysis which the veto imposes on international conduct.

We might realistically take a new look at the outmoded notion of sovereignty. Sovereignty means free and independent choice of action. Have we real sovereignty with respect to taxation, or is it determined by Russian policy, and the necessities for defense? Have we real sovereignty with respect to our domestic program, or is it determined by what happens in the world about us, over which we have no control? Is it not true that sovereignty can actually be enlarged by each nation diminishing the extreme concept of its sovereign rights, and pooling it for the common good? The greatest sovereignty of all is that of the human being. We speak of the rights of nations but who speaks for man, and his self-preservation?

The Charter of the United Nations should be amended so as to excise the veto, and subject all nations to the will of the world assembly. Only in this way can sovereignty be preserved at all.

Second, we must amend the charter so that voting power will be more representative. Today, 20 South American nations, representing 7 percent of the population of the United States, control 40 percent of the votes in assembly. Russian satellites carry an artificial voting power. In dealing with Mid-Eastern crises, 24 Afro-Asian votes, can defeat any resolution which requires a two-thirds assent.

I have no precise blueprint to submit on this difficult question, but let me suggest a few thoughts to stimulate a solution.

Would it not be wiser to have voting power which reflects four combined and weighted elements—population, industrial output, food production, literacy, and education?

Such a yardstick for voting would more realistically measure the size and power of each nation.

To those idealists who believe that raw power should not be afforded so much consideration, I would commend Churchill's statement: "Only if you make a political organization which has an alinement between the reality of power and politics can you achieve an ideal ultimately. * * * We may deplore, if we choose, that there is a difference between the strong and the weak in the world, but there is undoubtedly such a difference, and it would be foolish to upset such arrangements in order to try to attain immediately what is a hopeless ideal."

Third, we must create an international supreme court with power to enforce its edicts. The judges should be chosen as were those of the International Court of 1921; each country nominated one of its own nationals, and two from other countries. National partisanship was thus reduced to a minimum. This device had all the ingenuity which is attributed to the Greek generals who, after their victory over the Persians at Salamis, voted to select the best among them. Each general voted for himself, but each chose Themistocles as the second best. It was he who was declared the winner. It is possible to establish a tradition of impartiality, freed from national bias, just as we have achieved such a tradition in the United States Supreme Court, notwithstanding the dire prediction of State prejudice.

Finally, we must create a United Nations military force to implement its decisions.

There have been many cogent proposals for a world army. I submit only one: That each nation give 20 percent of its military power to the United Nations, and the collective 20 percents would be greater than any country's individual army.

The byproducts of such an international military body would be to encourage genuine disarmament among the individual member states. We would not have to resort to such circuitous plans as air inspection—Russian planes flying over America, and American planes flying over Russia. On the contrary, United Nations representatives would have free access to all countries of the world, to every city, nook and cranny of them.

Would Russia continue to belong to a United Nations which had been so revised? The probability is she would. Self interest, rather than good faith, might compel her to. For Russia has always wished to be in contact with world opinion. She has always respected military and political power. Russia may want one world which is divided but she does not want two worlds. I think she would fear to be outside the pale of international justice as organized in the United Nations.

However, let us suppose that Russia, and her satellites, chose to quit a vetoless United Nations. Would we be worse off?

Let us make a few comparisons of power:

The United States and the United Nations would have a production of 165 million tons of steel, as against 50 million tons for Russia, and her satellites;

Six hundred and ninety billion dollars of gross national products, against $155 billion for Russia.

Three hundred and twenty-three million tons of oil production, against 68 million tons.

Fifty-eight percent of the world's total power consumption, against 19 percent.

Our farmers are five times as productive, per man, as Russia's and her satellites.

Our rate of increase of surviving population is twice as great as Russia's and her satellites'.

Another advantage to the free world would be that our military position would be improved by the cooperation of all members in the United Nations against any nonmembers. No longer would it be necessary for us to implore distant countries to afford us bases or sell our soul for such privileges. The United Nations would have the right to call upon every nation to make available sites for United Nations bases.

Even if Russia and her satellites withdrew from the United Nations, the possibilities of peace would be better than they are today.

I come, then, to the final inquiry: Is it possible to achieve this utopian scheme, as many will call it? Shall we yield to the cynicism that one cannot hope to organize international society to stop war, because, by precedent, nations have always had war?

The answer—and I ask you to note it deeply in your hearts—is that we have no alternative. We have no alternative.

The peoples of the world are not fully informed concerning the power of annihilation which now exists. The bomb at Nagasaki had 20,000 tons of TNT power, and today there are hydrogen bombs of 10 million TNT power. Indeed, we have had to coin the word megaton to measure a million tons of TNT power.

The fallout destruction of one such 10 megaton bomb could extend to 100,000 square miles—twice the area of the State of New York.

We have no alternative.

We have now learned how to make hydrogen bombs of limitless power because we case them in U–238, a uranium isotope easily created.

Scientists now tell us we can combine a hydrogen bomb with cobalt, a common ingredient available cheaply which has the characteristic of becoming radioactive, and floating for long periods in the air currents, until it descends to lay waste to vast areas. Indeed, it is no longer an imaginary concept, that we could destroy not only all human life on this earth, but every insect, invisible microbe and every blade of grass and vegetation.

We have no alternative.

Even hydrogen bombs give only a glimpse of the potential horror. It is now possible to wage biological or germ warfare. Without use of intercontinental missles an enemy can destroy, selectively, the complete cattle or wheat supply of another nation, not to talk of the human supply of any nation.

Even this is only the beginning of the obliterating power which now exists. There are the G gases, nerve gases, which can destroy anything they touch, in 45 seconds, and they are invisible and unstoppable. One of our allies shunned possession of these gases after the last war ended and sunk them in the middle of the Atlantic.

We have no alternative.

Perhaps the rules of physics which threaten our destruction may also teach us how to survive. In releasing the energy from atoms, we have progressed from fission to fusion. Atom bombs split the larger atoms. This process is fission.

Hydrogen bombs, which use the atom bomb as a detonator, force together the smaller atoms of hydrogen so that they join together to become larger and larger. This process is fusion.

Perhaps this foretells the destiny of the world. For centuries we have proceeded by fission, splitting the Adams of the world into different countries. The power released from this fission has been hatred and war.

Now, we must turn to fusion—the joining together of the Adams of the world, into a larger unity, into an international society. The power released from such fusion could be beneficial. If the United States could have rid itself of the burden of $300 billion spent in the last 10 years for destructive and defensive armaments, and a current average expenditure of $35 billion each year for the same purposes, what glories could be achieved.

We could build medical centers the size of cities to eradicate the scourges of mankind—cancer, heart disease, and high blood pressure.

We could organize psychiatric clinics in all the cities of the Nation so that, instead of having 1 child psychologist for every 46,000 school children, as we have today in a few of our cities, we could provide adequate care for all emotionally disturbed children. We could wage war successfully against juvenile delinquency.

We could apply all the new techniques for healing the mind, so that we would no longer have 1 out of every 10 Americans at some time or other occupying a bed in a mental hospital.

We could build geriatric institutions to study the aging process, and provide dignified and serene surroundings for the aged so that they would live out their lives, rather than die out their lives.

We could construct an adequate and completely new educational system, both in bricks and mortar and in teaching personnel, adequate to the needs of a new society.

We could offer subsidies to all gifted children, so that they could follow careers in the arts, whether music, painting, or writing and thus develop to the full potential the genius of our youth.

We could give subsidies to scientifically inclined children, so as to create a new class of physicists and engineers to usher in the new era of atomic energy and automation and, similarly, a new and adequate group of doctors, nurses, and psychiatrists.

We could construct new housing for all classifications of income, with installations of the new miracles of science to control light, temperature, and entertainment facilities.

We could do all this, and have billions left over to balance our budget.

Yes, we could create a veritable paradise on earth.

We have no alternative.

I cannot believe that the destiny of mankind is international suicide.

If you will look at the map of the world, you will see that the bulge of Africa and the bulge of South America fit together. Apparently, they were once one continent. Perhaps what tore them apart millions of years ago was the same power which man has discovered today.

Shall nihilism be our unseen epitaph? Shall we look backward and say peace cannot be won because it has never been more than a temporary interlude? If we look backward, we will move backward. Nothing is inevitable that is resisted. Mankind faces the greatest of all dilemmas, the most fearful of all challenges, the most sublime of all choices. Will we end the story of man, in one final suicidal holocaust which obliterates all living things and perhaps,the planet itself? Or will we vindicate the evolution of reason and erect a peaceful society, blessed with the joys of noblest fulfillment?

It is a moment for religious evocation. Isaiah prophesied that "Nation shall not lift up sword against nation, neither shall they learn war any more."

Perhaps an allegory points the way:

The master of the library was asleep, and the books in the library took to quarreling with one another as to which was the most important in the library. The dictionary argued that he was the king of the library for, without him, there would be no language. The book of science said that he was the king of the library, because without him man could not have progressed to the heights he now enjoys. The book of poetry said he was the king, because he gave peace and surcease to people who read him. The novels claimed that they were the masters, because they had the most expensive gold backing, and described the foibles and joys of mankind.

And so, the din rose, and the fury of argument grew greater and the shouts and noise were deafening.

Then, from an old worn book on a table in the center of the room, there came a thin voice which said: "The Lord is my Shepherd; I shall not want." All the noise and fury ceased. There was silence in the library, for everyone knew who the real king of the library was.

We have reached the stage in international affairs where, despite all the din, contentiousness, confusion, and threats, we must resort to the one hope that there is a true Master of the world, and that He has decreed for us a fate of peace and existence.

Civil Rights and Civil Liberties: Select Bibliography

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 13, 1957

Mr. ROOSEVELT. Mr. Speaker, the House will soon be called upon to debate one of the great issues of our time—how to bring the Bill of Rights back to life and thus give all Americans their civil liberties. In preparation for this debate, I have asked the Library of Congress to prepare a representative list of readings on this subject. Such a list has been compiled, and under leave to extend my remarks, I include it in the RECORD.

Statement of Hon. William H. Natcher, Before the Subcommittee on Tobacco of the Committee on Agriculture, House of Representatives, in Support of House Joint Resolution 195 and H. R. 4690

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 13, 1957

Mr. NATCHER. Mr. Speaker, on Wednesday, March 13, 1957, I appeared before the Subcommittee on Tobacco of the Committee on Agriculture, House of Representatives in support of House Joint Resolution 195 and H. R. 4690.

House Joint Resolution 195 restores the acreage reduction for dark air-cured and dark fire-cured tobacco ordered by the Secretary of Agriculture on January 25, 1957, and relates generally to dark air-cured and dark fire-cured tobacco acreage allotments and marketing quotas. Under the terms of this resolution the 1957 State acreage allotments of dark fire-cured and dark air-cured tobacco would be the same as the 1956 allotments. H. R. 4690 amends the Soil Bank Act with respect to its application to producers of fire-cured and dark air-cured tobacco, and under the terms of this bill any and all acreage reductions in the 1957 allotment for dark air-cured and dark fire-cured tobacco will automatically be placed in the soil bank, and for this our farmers will be paid 50 percent of parity instead of the present parity rate of 37½ percent.

Under leave to extend my remarks I herewith include the statement I made to the committee:

STATEMENT OF REPRESENTATIVE WILLIAM H. NATCHER, SECOND DISTRICT OF KENTUCKY, BEFORE THE COMMITTEE ON AGRICULTURE OF THE HOUSE OF REPRESENTATIVES

Mr. Chairman and members of the committee, for the record my name is WILLIAM H. NATCHER, and I have the honor of representing the Second District of Kentucky. I am very grateful for the opportunity to appear before your committee in support of House Joint Resolution 195 introduced by me on January 28, 1957, and H. R. 4690, introduced by me on February 11, 1957.

House Joint Resolution 195 restores the acreage reduction for dark air-cured and dark fire-cured tobacco ordered by the Secretary of Agriculture Ezra T. Benson on January 25, and relates generally to dark air-cured and dark fire-cured tobacco acreage allotments and marketing quotas. Under the terms of this resolution the 1955 State acreage allotments of dark fire-cured and dark air-cured tobacco would be the same as the 1956 allotments.

H. R. 4690 amends the Soil Bank Act with respect to its application to producers of fire-cured and dark air-cured tobacco, and, under the terms of this bill, any and all acreage reductions in the 1957 allotment for dark air-cured and dark fire-cured tobacco will automatically be placed in the soil bank, and for this our farmers will be paid 50 percent of parity instead of the present parity rate of 37½ percent.

Kentucky is one of the great tobacco-producing States of this country. During the calendar year of 1955 the farmers of our State produced $533 million worth of agricultural commodities with tobacco representing 44.9 percent of this amount.

It is a recognized fact that the family-size farmer is today bearing the brunt of the postwar decline in farm income. The net income of Kentucky farmers was off some $100 million during the year 1955. The farmer's costs have soared and his gross income has diminished.

The dark tobacco farmer of Kentucky has suffered acreage reductions amounting to approximately 36 percent during the past few years and the reduction order, entered by the Secretary of Agriculture on January 25, is not necessary. Our tobacco farmer is not in a position financially to take an acreage reduction at this time, and I still am of the opinion that an orderly removal of present surplus stocks can be effected if the 1956 allotments for dark tobacco are retained.

The 1956 dark tobacco crop was a dry-weather crop. Most of it was thin, sunburned, yellow, white faced, and very coarse. Only a small portion of it was graded in straight grades, and the poor quality resulted in the Government's purchase of some 29.66 percent of the entire crop. This dry-weather crop and the 1946 production has placed our dark tobacco stocks temporarily in bad shape. The Department of Agriculture knows full well that in 1946 our dark tobacco farmer, against his best judgment, was induced to increase production. Sufficient time has not expired to work off this increase which was forced on the trade at that time. If given a chance the soil bank will correct this situation.

From 1951 through 1955 we have 46,700,000 pounds of type 36 dark air-cured Green River tobacco produced, and our disappearance during this period was 47,700,000 pounds. During this time all types of dark tobacco produced in Kentucky suffered acreage reductions. Between 1946–55, 17,000 acres were cut from the allotment on types 35 and 36, and the production fell from 45,600,000 pounds to 27,800,000 pounds. Type 35 one-sucker acreage was reduced from 23,000 acres in 1946 to 12,800 acres in 1955, and this brought about a reduction of 10.4 million pounds. Type 36 Green River tobacco acreage was reduced from 14,000 acres in 1946 to 7,200 acres in 1955 bringing about a decline in production of 7,400,000 pounds.

According to figures submitted to me on March 1, the total production for type 22 dark tobacco for 1956 was 40.8 million pounds; for type 23, 14.7 million; for type 35 one-sucker, 19.8 million; for type 36 Green River, 10.5 million; for types 35 an 36, 30.3 million.

One of the most practical ways to assist in solving the surplus problem would be to increase the soil-bank payments for dark tobacco. Twelve cents per pound for dark air-cured tobacco and 13 cents per pound for dark fire-cured tobacco is inadequate. A reasonable increase of the soil-bank price per pound for dark tobacco will place it in line with prices paid for other commodities. We should further remove the dollar limit per acre restriction. The time for placing dark tobacco in the soil bank should be extended to April 1, 1957, since it is admitted that the present limit of February 28 will not allow growers sufficient time to become familiar with the provisions of the law and to determine what they should do with reference to taking advantage of provisions of same.

It is necessary that the authority provided for under Public Law 540 for a payment of the fair amount for tobacco acreage be utilized immediately. Forty-five million dollars was set aside in the soil bank for tobacco for fiscal year 1957. Only a small portion of this amount has been consumed. It is admitted that the amount set aside for burley to be placed in the soil bank will not be consumed. The number of applications now pending in most counties requesting permission to place dark tobacco acreage in the soil bank consumers more than the allotted money set aside for dark tobacco. According to figures recently submitted to me, the number of applications now pending for dark tobacco seeking admission into the soil bank together with the 10-percent acreage reduction for dark fire cured and 15-percent acreage reduction for dark air cured will make the total reduction for 1957 amount to some 35 percent. Certainly no such reduction should be brought about during the year 1957.

Since the introduction of House Joint Resolution 195 and H. R. 4690, the Secretary of Agriculture has removed the ceiling on the amount of a grower's tobacco acreage allotment which may be placed in the soil bank. The order provides that in counties with acreage allotments under 2,000 acres, growers will be permitted to place up to 100 percent of their allotment in the soil bank, and in the major producing counties with more than 2,000 acres of allotments, growers will be permitted to bank up to 100 percent of their allotments if the county and State agricultural stabilization and conservation committees certify that it will not injure the area's general economy. This action was proper and now places the dark tobacco farmer in a position where he can help correct any surplus problem with which we are now confronted.

I believe that our export market for dark tobacco will improve during the next few years. Public Law 690 of the 83d Congress transferred the agricultural-attaché program from the State Department to the Department of Agriculture, and this transfer, in my opinion, will continue to facilitate trade with foreign areas as the direct result of the coordinated effort of our present worldwide system of agricultural attachés and with our commodity and country specialists working in full cooperation with our trade and Government contacts. Improvement in the staffing and general overall accomplishments of the Foreign Agricultural Service will bring about improvements in our export trade for dark tobacco and our other agricultural commodities.

Exports of unmanufactured tobacco from every source during fiscal year 1956 amounted to 578 million pounds-export weight, and this was 25 percent larger than the amount exported during the previous year. In fact, this was the largest amount exported since the fiscal year of 1947. According to my information, the value of exports for this particular year amounted to $379 million. The factors involved which stimulated United States exports during the past fiscal year included the following: Sales for foreign currency as provided for under Public Law 480; low stocks abroad in relation to consumption of tobacco products; increasing world consumption of cigarettes manufactured from light tobaccos; high levels of economic activities abroad; expanded imports of foreign goods into the United States; and improved gold and dollar reserves position in a number of important foreign markets.

The domestic export market for dark tobacco shows a total of 23,125,000 pounds sold during the fiscal year 1955–56.

We will be confronted with a 35-percent reduction in dark tobacco in the year 1957 if

the Secretary's acreage order is sustained and the applications now pending for admission into the soil bank are accepted.

I respectfully urge that this committee take the necessary action favorably reporting House Joint Resolution 195, restoring the acreage reduction for dark air-cured and dark fire-cured tobacco ordered by the Secretary of Agriculture on January 25. If the committee deems this action inadvisable, then a favorable report should be given to H. R. 4690, which amends the Soil Bank Act to the extent that any and all acreage reductions in the 1957 allotment be automatically placed in the soil bank with the farmers being paid 50 percent of parity instead of the present rate of 37½ percent of parity.

Again I want to thank you, Mr. Chairman and the members of your committee, for the opportunity to appear before you in support of House Joint Resolution 195 and H. R. 4690.

Urban Highway Units

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 13, 1957

Mr. AVERY. Mr. Speaker, the following editorial appearing in the Topeka Daily Capital, Tuesday, February 26, 1957, points out a very important problem regarding the expanded Federal-State highway system. The matter of coordinated activity between State highway departments and city authorities is of extreme importance if the road program is to satisfactorily progress. As the editorial states, probably one-half of the new highway program will involve urban areas. For this reason it is important to have an authority to settle disputes which might arise. I believe the suggestions presented in this editorial are worthy of the close attention and study of all Members of Congress.

The editorial follows:

URBAN HIGHWAY UNITS

The hassle over location of the U. S. 75–U. S. 40 bypass road west around Topeka's main residential districts focuses attention on a problem being studied by the United States Senate Subcommittee on Roads. This group has announced the intention of carrying on a continuing program appraisal of progress being made under the Federal-aid highway program enacted last year.

One of the main traffic problems confronting the country has to do with the urban areas, which probably will benefit to as much as one-half of the vast Federal-aid highway program. It has been suggested by Mayor John B. Hynes of Boston, president of the United States Conference of Mayors, that special urban units be established in all State highway departments.

This would require an amendment to the Federal-State highway legislation, and the Senate subcommittee is said to have the proposal under consideration. Obviously, if these superhighways that will form a network of traffic lanes extending outward (and inward) from all the principal cities are to be subject to the whims of local or special interests, some sort of legal authority must be provided to settle disputes.

Although the Federal-State highway program has been under way a relatively short time, much progress has been made. Topeka is getting some fine new roads, and the bypass lanes must be built in order to route heavy traffic outside the business and residential districts. The United States Bureau of Roads believes that fully one-half of the highway funds will be spent in urban areas, extending from 10 to 20 miles around the cities.

These urban areas are of extreme importance in the interstate system. They present problems not encountered in rural highway construction. All the cities are expected to cooperate wholeheartedly with the overall Federal-State program. Perhaps the suggestion that special urban units be incorporated in the various highways might avoid disagreements such as this one here in Topeka between the highway department and city authorities.

Repassing a Passed Buck

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 13, 1957

Mr. CURTIS of Missouri. Mr. Speaker, I would like to insert in the CONGRESSIONAL RECORD an editorial which appeared in the St. Louis Post-Dispatch of Tuesday, March 5, 1957, entitled "Repassing a Passed Buck":

The so-called budget-cutting drive in Congress is as amusing, in its way, as the administration's stern admonition that somebody else should do the trimming job it failed to do.

If a man wants to reduce weight, the direct way to go about it is to eat less. If Congress wants to cut the budget, the direct way to go about it is to enact smaller appropriations for the various departments and agencies.

But this, apparently, is too simple—or too painful—for some Congressmen who are a little bothered by the heavy mail they are said to be receiving from citizens who don't like the administration's heavy spending plans for next year. And so the economizers are falling back on the old stratagem—the mandatory expenditure ceiling. A move to limit total expenditures to $65 billion—as compared with estimated spending under the Eisenhower budget of $71.8 billion—is taking form in the House.

The overall budget ceiling is a device by which Congress can adopt appropriations to satisfy all the agencies and interests that want to spend the money, and then turn around and effectually forbid the carrying out of its own laws.

The procedure, in short, is just another "let-George-do-it" evasion of responsibility. Where the administration recommended spending of $71.8 billion and piously advised Congress to vote less, Congress by this device would vote $71.8 billion and piously instruct the administration to spend less.

Budget ceilings have been tried before, and they never work well. The best and most effective ceiling is the sum of the appropriation bills themselves. If Congress is serious about budget-cutting it ought to do the job item by item, bureau by bureau, department by department, function by function. That is the hard way, but the only honest way.

Mr. Speaker, although the editorial is directing its attention to a Republican-inspired resolution pending before the Rules Committee its logic, which is good logic, also applies to the Democrat-inspired resolution which passed the House yesterday.

It is not by chance or whimsy that some of the loudest voices in support of both these resolutions are those of Congressmen who almost invariably vote for all measures increasing Federal expenditures and against those which reduce it. They want their cake and eat it, too.

There is only one way to reduce Federal expenditures and that is to vote that way on the specific bills and amendments before the Congress. Voting for specific programs certainly gains the support of the citizens specifically interested in these programs; just as voting against these programs incurs their political wrath. Furthermore, many of the programs are good and can be truthfully presented to the general public as good. Being a spender has great political advantages. Being an economizer has great political disadvantages. Let those who have been pursuing the more popular cause have the honesty to stick to it and defend it. Let those who have the more difficult position to maintain be permitted to present it without having the issue confused by the proposal of meaningless resolutions designed to preach economy, but in no sense to practice it. The Post Dispatch is in error in saying it is the economizers who propose the old stratagem. It is the spenders in disguise.

Resolution by St. Patrick's Day Parade Committee of Newark, N. J.

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 13, 1957

Mr. ADDONIZIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following resolution adopted by the St. Patrick's Day parade committee of Newark, N. J. As we approach the feast of the great St. Patrick, it is appropriate that attention be called to the conditions described in the resolution:

At a meeting of the St. Patrick's Day parade committee, held at Newark, N. J., on March 3, 1957, the following resolution was adopted:

"Whereas the British army, acting on orders from the British Imperial Parliament, unlawfully and against the will of the Irish people, occupies six counties of the Irish nation; and

"Whereas the young men of Ireland, with every moral and historical justification, resist such occupation; and

"Whereas the rules of war, as laid down by the Geneva Convention of 1949, state that the status of prisoners of war be granted to such fighters, provided that the following conditions be fulfilled: (1) that they wear distinctive dress; (2) that they carry arms openly; (3) that they are responsible to an officer in charge who in turn is responsible for his subordinates; and

"Whereas these conditions are being carried out by the Irish resistance fighters in occupied Ireland; and

"Whereas the British Empire continues to ignore the Geneva Convention and treats

the captured Irish republican army men as criminals;

"Therefore, we, the members of the St. Patrick's Day parade committee, demand that the British military commander be requested to comply with the rules of war as laid down by the Geneva Convention in 1949 and grant all captured Irish republican army men their rightful status as prisoners of war."

ST. PATRICK'S DAY PARADE COMMITTEE,
JOSEPH F. FARRELL, *Chairman.*
HELEN C. CURRAN, *Secretary.*

Pity Poor Congressmen

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 13, 1957

Mr. AVERY. Mr. Speaker, the following editorial appeared in the Topeka Daily Capital. It appears that one of the most discussed issues of the day is cutting the budget. This, of course, pleases me because I feel that all citizens must be alert to the matter of Government savings. However, cutting the budget is not as simple as some think. This editorial presents some of the reasons why the job is not easy.

The editorial clearly presents a challenge. It is up to each and every one of us to meet the challenge and to exercise the proper self-restraint as outlined in the editorial.

The editorial follows:

PITY POOR CONGRESSMEN

Uneasy lie the heads that wear the United States congressional crowns.

Confronted with Federal expenditures that the U. S. News & World Report estimates at $83 billion for the nert fiscal year, Congress is hearing from the taxpayers. The volume of protests is growing steadily. The Eisenhower administration, which submitted a $71.8 billion budget to Congress, also is startled at the rising tide of letters urging cuts to allow reduction of taxes.

The Chamber of Commerce of the United States and the National Association of Manufacturers have called for cuts of $5 billion and $8 billion, respectively.

Secretary of the Treasury Humphrey has advised Congress to cut the budget, but doubts if it can be done if the President's spending program is to be continued. Economy-minded solons, economists, and laymen shout to high heaven for cuts, but none of them know where to begin. Some few reductions are being made, but the sum total of eliminations probably will be no more than a drop in the $71.8 billion bucket.

Herbert Hoover has said that reductions in unnecessary and wasteful expenditures are opposed by some Government employees. He added: "But the most important opposition is the pressure groups who operate among our people. There are probably more than a thousand of these pressure groups, working day and night to get what they call 'theirs.' So far as I know, there is not a name among the registered lobbyists whose purpose is to decrease public expenditures."

These pressure groups are guilty of forcing the Government to spend more money than is necessary or safe. But who is going to stop them? The answer, of course, is obvious. Nobody is going to stop the continuous clamor for Federal spending, regardless of the howls from the suffering taxpayers.

What Member of Congress would dare ask for withdrawal of proposed appropriations for his State or district from the budget? It would kill his political career if he denounced the $14 billion welfare costs, or the $43.5 billion defense expenditures. What Senator or Representative could return home if he aided and abetted the elimination of flood control projects for his bailiwick, or asked that all military installations be removed from his State?

Senator BYRD says that "37.8 million Americans are receiving direct payments from the Federal Government. If we consider the dependents, it is possible that half of our population is affected by regular Federal payments."

How does anyone expect the administration and Congress to slap down these wards of the Government? For example, who has the effronty to deny nearly 22.4 million veterans the benefits they enjoy? Or the nerve to stop all subsidies, soil-bank payments, and other relief to 5 million farmers?

The firm of Management Engineers (Stevenson, Jordan & Harrison, Inc.) has something to say about the continuous clatter for bigger spending: "If the people want these things, if they want to avoid the serious economic collapse of which Secretary Humphrey, Mr. Hoover, and other wise and courageous leaders have warned—they must, as citizens, taxpayers, businessmen, labor leaders, and voters, practice intelligent self-restraint and self-reliance, and they must refrain from trying to secure personal advantages for which others must pay, and they must insist that those who represent them in the Government do the same."

Sound advice, but we doubt if very many of us are willing to follow it. We are too eager to make sure we "get ours."

Letter From 77-Year-Old Resident of Florida

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. SIKES. Mr. Speaker, each of us in Congress receives a great volume of correspondence. Naturally this correspondence adds to our work, but we welcome it as being an expression of the thinking and of the welfare of the people we represent. Some of the letters stand out for the simplicity of their expression and the strength of the views they carry. One such letter I received a few days ago from a 77-year-old resident of Monticello, Fla. I think it deserves reprinting in the RECORD. The letter follows:

MONTICELLO, FLA., *March 7, 1957.*

DEAR BOB: We are glad you represent us so well in Washington. One particular thing I hope you can help eliminate is so many favors. We may like to get money which we do not earn and have exemptions in our income tax, etc., but our nice Uncle Sam has to collect the money from someone. I am glad to get double exemption on income tax (I am 77) but I think we older ones get more favors than we deserve. I think the farm price supports may be hurting, rather than helping farmers. I think you stated that Monticello might get help in sewage disposal but I do not think the United States Government should do such things. It is much better to let the local taxpayers take care of it. We spent a lot for irrigation in the West and we already have a surplus of food.

I hope that you can avoid United States aid for our schools but it may be hard with the big welfare state we are now getting. The local government should pay for the cost of the schools but here we pay about a tenth of the cost now.

Sincerely yours,

W. I. PHELPS.

If Anyone Can—

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 13, 1957

Mr. KEOGH. Mr. Speaker, if anyone can accomplish the mission on which he has been sent, it will be our former colleague—presently Ambassador James P. Richards, for those of us who had the opportunity to serve with him know that he will bring to his obviously difficult and delicate assignment all the ardor, experience, and aplomb that are obvious requisites for the successful accomplishment of what undoubtedly will go down in history as one of the most important missions that has ever left this country. I am sure that he takes with him the good will and good wishes of all of his colleagues.

I am pleased to insert the following editorial which appeared in the Washington Evening Star on Tuesday, March 12, 1957:

MR. RICHARDS' MISSION

Former Congressman James P. Richards has not exaggerated in declaring that his mission to the tense Middle East is going to be rugged. As the President's special representative, with the rank of ambassador, he will spend the next 2 months visiting perhaps as many as 18 countries primarily for the purpose of explaining what the United States hopes to accomplish with the so-called Eisenhower doctrine. Above all, he will seek to win as much Arab support as possible for the doctrine's projected program of aid and cooperation.

The program's chief objective, of course, is to head off the danger of Soviet penetration and ultimate domination of the entire Middle East. Accordingly, with $200 million already available for allocation, our country is prepared to extend economic and other forms of assistance to any nations in the area requesting and needing it to strengthen their economies and their political independence. In addition, as made clear in the joint congressional resolution on the subject, such nations, if they are threatened with overt Communist aggression, can count on getting American armed help if they ask for it.

Ambassador Richards may be received cordially enough by all the Arab governments as he undertakes to discuss these matters with them. But only three—Iraq, Lebanon, and Saudi Arabia—have thus far endorsed the Eisenhower doctrine or shown an active and affirmative interest in it. Among the others, Syria seems to have rejected it completely, while reactions in Jordan and Egypt have been less than enthusiastic, ranging

from lukewarm official curiosity to open hostility in some of the press. So not the least rugged feature of Mr. Richards' task will be the problem of countering Soviet propaganda and clearing the air of suspicions and misconceptions regarding the President's proposals. Unless he can succeed in that, the program's effectiveness is bound to suffer for want of sufficient support from the countries of the area.

That is why President Eisenhower has made a special point of emphasizing that he regards the Richards mission "as an essential and important first step in carrying out the policies set forth in the joint resolution. As those policies are based on the concept of cooperation, and as the assistance contemplated by the resolution will be extended only in response to requests from Middle Eastern governments, we must achieve the greatest possible measure of understanding and recognition of common interests with the area governments and their peoples."

This is something that may be more easily said that done. But Mr. Richards' experience as Democratic chairman of the House Foreign Affairs Committee should help him in the job. He brings to it, as the President has said, "the integrity, ability, and sound judgment that have marked his long and distinguished career in public life." Certainly, as he heads now for the Middle East, he can be sure that his country's best wishes go with him.

Feed Grain Price Supports and the Size of the Federal Budget

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. PELLY. Mr. Speaker, it is being said that everybody is for economy but no one will say where the budget should be cut.

I am one who has urged a reduction in Federal spending, and thus far 69 other Members of the House of Representatives have responded to my invitation to join in a letter to the Committee on Rules in support of the objectives of House Resolution 170 which would set a limit on appropriations.

In my case, however, I have not only supported the principle of this resolution but I have spoken out as to certain areas where Federal spending might be held within certain limitations. I have said, as is obvious, that there are certain fixed obligations of the Government such as interest on the Federal debt, which cannot be cut. Furthermore I am not in favor of curtailment of normal functions of Government, and as I stated when I appeared personally before the Rules Committee I will always support a pay scale for Federal employees which is in line with private business.

Notwithstanding, Congress has two general areas of governmental expenditures which are flexible—defense and foreign aid. These latter two must be fitted into some overall pattern in relation to fiscal responsibility. I do not think a meat-ax operation is desirable, but we all know of instances of extravagance and waste, and I am hopeful the Committee on Appropriations will eliminate as much of this so-called fat as possible.

One spot we could cut spending is own own swollen legislative budget. Why not call off construction of the new office building? We can get along without it.

Another area for reductions is the farm program. I voted last year for the soil bank; but with great misgivings. My conscience told me I was right, but I wondered if possibly the high sense of right and wrong influencing the decision was completely separated from the sense of what was politically right and politically wrong.

The American farmer can take care of his natural enemies such as oversupply by planting less, but who is to deliver the same farmer from his friends who would kill him with kindness and other people's money.

Last week, Mr. Speaker, prior to the consideration of H. R. 4901, the price-support program for feed grains, I went on record as opposing this legislation. Now again I call attention to the fact that this bill, H. R. 4901, would increase the authorized spending over and above the Eisenhower budget—the very budget we seek to reduce.

Of course I do not think the public has any idea of the amount the farm program costs. For example, H. R. 4901 will cost nearly $1 billion a year. I think just the corn part of the bill will cost that. Why, I thought it was pretty shocking that since April 1954, or in just short of 3 years, the price-support program on corn alone has resulted in a loss of $261 million to the American taxpayer. On top of that we are asked to legislate an emergency program on corn to cost almost $1 billion a year. Add all this to the loss in supporting prices of the other basic commodities—in the case of wheat a 3-year loss of $550 million—and it is no wonder that Government spending increases.

Mr. Speaker, the happiest year of my boyhood was on a farm, and I have never ceased to feel that farmers and farm families are wonderful people. But my adult years have been in urban life, and I know that folks who live on and by the soil have no monopoly on worthy qualities of human character and good citizenship. Nor does the rural population have an exclusive burden of problems such as the acreage allotment plan under H. R. 4901 would attempt to eliminate. Every time Congress passes legislation to limit farm production and thereby raise prices, similar to this corn and feed control measure, the city wage earner faces an increased responsibility of paying in part directly, in part indirectly, for the plan. It is robbing Peter in the city to pay Paul on the farm, because not only are Federal taxes increased but also the higher cost of the product is reflected in the cost of food. Because he grows much of his own of the latter, the farmer pays less proportionately of the cost. In fact, the inflation which results from these agricultural programs hits the wage earner and older retired people while the farmers' land and produce will adjust in value. Furthermore real estate taxes on farms are rarely comparable to city homes or businesses, and while work on the farm is hard in cases such as with the wheat growers, it is seasonal. The farmers increasingly spend the winter months in Florida and California. So frankly I do not think all farmers are entitled to too much sympathy as against other worthy groups such as small-business men and workers in cities and towns.

Furthermore programs where the individual gets the profit if there is one while Uncle Sam takes any loss are not my idea of free enterprise. Nor can I comprehend why we support the price of tobacco at all. But be that as it may, the urban dweller and wage earner in the city—not the farmer—is more the forgotten man in my book.

Thus, Mr. Speaker, I suggest we reduce Federal expenditures by stopping the plowing under, painting potatoes type of legislation. Let us remove peanuts, for example, as a basic crop. Does the public realize the price support program on peanuts has cost $133 million and that the Commodity Credit Corporation has loans on 131,652 tons of peanuts? This on a crop which represents less than one-half of 1 percent of the national farm income. All the housewife knows is she must pay 45 cents a pound for peanuts. Naturally the consumption has gone way down. Do the taxpayers want their tax dollars used this way to boost the price of these nuts to themselves?

If the public had the facts, the size of the budget would come down. And then taxes and the size of the national debt would follow suit. On the other hand the buying power of wages would go up.

Now, Mr. Speaker, returning to the immediate matter in hand, namely H. R. 4901, I urge, in the interest of the housewives of America, the defeat of this costly and inflationary measure. Vote against another increase in the family cost of poultry, pigs, and food bills—against a rise in the people's taxes, too.

Representative Colmer Cited

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 13, 1957

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New Orleans Times-Picayune of March 11, 1957:

REPRESENTATIVE COLMER CITED

Congressman WILLIAM M. COLMER, of Pascagoula, Miss., a Member of the House of Representatives for more than 24 years, recently was chosen to receive the George Washington Day dinner award of the American Good Government Society. The award was merited not only by the Congressman's long and effective service, but also by his dedication to cherished principles of American Government. He is an advocate of sound financing; a defender of States rights; an opponent of the expanding power of Government, centralized through legislation, executive action, or court decision.

In his acceptance speech, Representative COLMER pointed out that continued centrali-

zation can only end in totalitarianism. He admitted the current trend is discouraging. "But," he added, "surely we, the beneficiaries of the labor and sacrifice of those who founded the Republic, have the courage, the will, and the patriotism to see to it that this Republic, embodying the most perfect form of liberty ever-conceived by the minds of men, shall not perish from the earth."

If more men shared the dedication of Representative COLMER, continued government by, of, and for the people would be assured.

Massachusetts Farms Known for Quality, Not Acreage

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, February 19, 1957

Mr. LANE. Mr. Speaker, of the 48 States, Massachusetts ranks among the high 5 in the cash receipts per acre of cropland and pasture.

Our farmers do not look to the Federal Government for perennial subsidies, even though farm wages in Massachusetts and in all New England are much higher than in the Midwest. Real-estate taxes are double those levied on farmlands elsewhere.

Many Bay State farms are family-type operations.

This explains the typical independence and self-reliance of the New England farmer, which is a quality to admire.

To give you the picture of agriculture in Massachusetts, I insert in the RECORD the second of a series of articles published in the Boston Herald on March 11, 1957, under the byline of Peter Barnicle:

ACREAGE NO MEASURE OF FARMING

(By Peter Barnicle)

Acreage alone cannot be used as an accurate measure in a consideration of either the value or extent of farming in Massachusetts.

More than 75 percent of the nearly 500,000 acres under cultivation in this State are given over to hay. The vegetable crop takes up about 10 percent of the cultivated area.

Unlike the huge sprawling farms of the Midwest, the agricultural holdings in the Bay State are small in acreage. The Massachusetts farmer carries on a highly intensive farming, growing crops which have high market value. The average income from Massachusetts farms is much larger than people realize, when compared with the rest of the Nation.

AMONG HIGH FIVE

New Jersey usually leads the 48 States in the cash receipts per acre of crop land and pasture, according to a survey by the Federal Reserve Bank of Boston. Delaware is occasionally second, but Massachusetts, Rhode Island, and Connecticut are among the high five.

The 3 southern New England States usually rank second, third, and fourth, or fifth, and frequently change places from year to year.

In a closer look at Massachusetts farms it was discovered that those in Middlesex County are among the richest in the country. The 1950 Census of Agriculture covering farms with cash receipts from marketing of over $10,000 disclosed that the family-type poultry dairy and market garden farms of Middlesex are among the leaders. The census showed that 23.3 percent of the Middlesex farms have cash receipts of over $10,000 compared with only 9.2 percent in the same category throughout the United States.

The great difficulty in analyzing the farmer's true economic position lies in the field of net income. Most agricultural sources admit that it is almost impossible to get a clear picture of the farmer's cost, investment, and monetary return, particularly on the family-type farms.

One farmer when asked his net income explained that he had none. He insisted that he lived not on his income but on "lack of expense."

The farmer pointed out that he owned his own farm. If he did not own the property he would be paying more than $600 a year in interest. This money, coupled with repairs he did not make, he said, was the "lack of expense" he was living on.

In 1955, Massachusetts farmers grossed $171,449,000. Expenses that year were $147,600,000. These varied from farm to farm in such a way that a complete breakdown is impossible. Replacement of crops after frosts, complete loss of a crop by flood and various other factors had to be added to original planting costs and care of the farm.

The farmer also has to figure in the large acreage given over to hay which is not a market crop. It eventually brings back a monetary value when it reaches the consumer in the form of milk, beef, and veal. The 350,000 tons grown in this State last year would have a value of about $10 million at a market price of $35 a ton.

TRUCK CROP VALUES

Truck crop values are more readily analyzed. Here again the acreage is a minor factor. In a recent year 730 acres of celery were planted in Massachusetts and had a cash value of $974,000. This is one of the top money crops of the State.

The plants grow close together and more than 1,000 boxes per acre can be harvested. In comparison only 200 boxes of corn can be harvested per acre; and the State has about 10,000 acres of corn. The asparagus grower can only get 100 boxes an acre.

In monetary value, without regard to the acreage concerned, sweet corn tops all Bay State crops with an annual value of over $2 million. Close behind are tomatoes with a value in 1954 of $1,728,000. Other leading crops are squash, carrots, lettuce, cabbage, and onions.

The growers of these crops are operating in a highly competitive market. They have a great advantage by being close to a premium market area, but the advantage is sometimes lessened by other factors. Farm wages in Massachusetts, and in all New England, are much higher than in the Midwest. Real-estate taxes here are about twice those for farmlands in other parts of the country.

FAMILY FARMS

The wage problem is partly offset by the fact that so many Bay State farms are family-type operations. A farm survey shows that of the 43,874 farm workers in Massachusetts, 23,700 are family workers. The farmer also has another problem in investment. Analysts have shown that it costs $22,000 to put a farm worker in the field, while industry invests $14,000 on each worker.

All crops were substantially smaller last year because of a series of hardships, including a late spring, a killing frost in May, and a summer drought.

One of the hardest hit was the apple grower. The 1956 apple production in this State was estimated at 1,640,000 bushels, a drop of 44 percent from the 1955 production of 2,940,000 bushels, and 28 percent less than the 10-year average yield. Baldwin production was maintained, but all other varieties suffered.

This year, however, Louis A. Webster, director of the division of markets of the State department of agriculture, estimates that more than 3 million bushels will be harvested in Massachusetts.

The 12,000 acres of orchards in this State yield about 200 bushels per acre, he said. He is of the opinion that the yield could be increased considerably, pointing out that in other apple States a yield of 800 to 1,000 bushels is not uncommon.

Next: The advantages of prepackaging and new developments which will affect the future of the Bay State farmers.

In the Interest of Good Government

EXTENSION OF REMARKS
OF
HON. JOHN V. BEAMER
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. BEAMER. Mr. Speaker, it is interesting and, also, encouraging to receive letters from people who live in our district. The refreshing part of so many letters is that many of these expressions are in the interest of good government and expressed in all frankness. This privilege is an American heritage to be guarded.

Under unanimous consent that I may extend these remarks in the Appendix of the CONGRESSIONAL RECORD, I include a letter signed by 55 employees of the American Playground Device Co., of Anderson, Ind.:

AMERICAN PLAYGROUND DEVICE CO.,
Anderson, Ind., February 21, 1957.

Hon. JOHN V. BEAMER,
House of Representatives,
Washington, D. C.

MY DEAR CONGRESSMAN: Because all of us are deply concerned regarding the rapid concentration of power in the executive branch of the United States Government, we look to you as our Representative in the House of Representatives to give you full support to the following proposals:

(1) Adoption of the Byrd budget or any other recommendation that will cut a minimum of $10 billion from the budget proposed by President Eisenhower.

(2) Continue adequate foreign aid to South Korea, Nationalist China, and any other country that demonstrates their desire to stand with us against the spread of national or international communism. End immediately all aid to countries not willing to stand and be counted as opponents of this vile system.

(3) If necessary, withhold further appropriations until the executive department initiates the economies in Government recommended by the Hoover Committee.

(4) Substantially cut the United States Government civilian payroll in every department. This should include the 50-percent increase in the White House work force since President Eisenhower entered office.

(5) Oppose all further encroachment by the United States Government into those activities traditionally reserved to the various States and local communities: So-called Federal aid to education and Federal highway construction being but two examples.

(6) Enact legislation to substantially reduce the strangling Federal tax load upon private business and the individual taxpayer. This would enable the various States and cities to support their normal function. If necessary, repeal of the 16th amendment to the Constitution.

(7) Enact into legislation the Bricker amendment.

(8) Support the Knowland doctrine opposing sanctions against Israel unless they are applied to Soviet Russia. If necessary, withdraw from the United Nations in order to advance the policies that are best for the United States.

(9) Finally, resist the assumption of power in the Republican Party by those supporters of President Eisenhower's phony new republicanism. Invite them to join forces with their blood brothers, the leftwing, commie-loving New and Fair Deal Democrats.

If this is not possible, join with others from both political parties to form a group opposed to further concentration of government in Washington, thus giving the voters in 1960 the opportunity to make a real choice.

Our sincere thanks for your continued effort to preserve constitutional government for us and for all the people of our beloved United States.

Warren P. Miller, president; Ralph E. Williams, treasurer; Charles L. Cummings, production manager; R. R. Jehn, general manager; James W. Reeder, purchasing agent; William G. Gamble, Wellington B. Sanford, Henry E. Grant, Morris E. Gaddis, Roland Lechlitnes, Charles W. Doherty, Edwin C. Wright, Reggel B. Marshall, Kenneth E. Nieum, James Scherer, David Phalen, Francis Turep, Ernest J. Smith, shipping department; Donald L. Gallamore, Neva C. Shirley, James E. Stookey, Ray W. Larsam, R. L. Bociort, Alice J. Alatza, Lillian I. Boles, office force; Jack M. Petry, Clarence J. Menary, Edward Grant, Ralph Parker, slide department; Roy M. Cole, Jack E. Barkdull, Ralph Robbins, Jr., Clifford W. Swift, Jack Pierce, finishing department; Franklin Benchubicher, Vance C. Downey, Wm. L. Williams, Robert D. Ritter, Ovid Perry, Virgil T. Jarvis, Neil Sefcik, Victor Thibault, John Funk, mill room; John V. Hebert, Victor L. Wulle, Francis I. Green, Roy L. Robbins, David R. Shock, Virgil Williams, machine shop; Emil Juneau, Charles Barrett, William French, George Blowers, Hilmer Larson, night force.

Side Effects of Drugs Used in Treatment—Possible Effect on Claims—Part II

EXTENSION OF REMARKS

OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 13, 1957

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following medical bulletin issued by the national rehabilitation commission of the American Legion:

SIDE EFFECTS OF DRUGS USED IN TREATMENT—POSSIBLE EFFECTS ON CLAIMS—PART II

(By Irving B. Brick, M. D., medical consultant)

DRUG REACTIONS

Of the diseases that are believed to be caused by drugs, it is interesting that one of the collagenous diseases, periarteritis nodosa, which we occasionally see in cases of veterans, is believed to be a hypersensitivity type of reaction. The use of sulfonamide drugs, penicillin, and various serums have been related to this type of fatal disease.

DISEASE OF HYPERSENSITIVITY

The basis of this relation is not too strong but there is some evidence that it is a sensitivity type of reaction. Another medication that causes a disease of the collagenous-disease group is a drug called hydralazine which is used in the treatment of high blood pressure. It has had some popularity in the treatment of high blood pressure, and it occasionally is followed by a disease manifested by arthritis, resembling rheumatoid arthritis, and then by lupus erythematosis, which is another one of these hypersensitivity diseases. Now the importance of this type of disease is that in service-connected hypertensive patients or patients who are service connected for various things and receive these different types of drugs and develop these peculiar diseases, of course, we should know about it.

DRUGS CAUSING NEURITIS

Neuritis may come from arsenicals which we don't use much nowadays but which used to be very popular for syphilis treatment. Arsenicals can also cause tubular vision. Stilbamidine is a drug that is used in the treatment of some of the tropical diseases, particularly leishmaniasis, which is very rare. It can cause facial paresis and other neurological entities. Also, serums of various kinds may cause neuritis as serum-sickness reaction, but this clears up usually after a while.

EFFECTS OF DRUGS ON THE BLOOD

Blood reactions from drugs are not uncommon and even some of the common drugs that you can buy over the counter may sometimes cause drug reactions in sensitive people. It is fortunate, of course, that most of us are not sensitive to the usual common drugs that we encounter, but every once in awhile someone is sensitive to aspirin, someone is sensitive to very common drugs that are taken in patent medicines and they may have bad reactions.

White cell depression or leukopenia

There are a good many drugs that have caused white cell depression. The white cells of the blood stream are the defense mechanism in the blood against infection and these white cells may be affected by a good many drugs. In service-connected lymphatic diseases such as Hodgkins or leukemias, there are a whole series of drugs now that are being used in the treatment of these diseases. It started with the nitrogen mustards and now there are many other types of drugs that are being used in the treatment of these conditions which also cause depression of the white cells. A whole list of drugs can be given: sulfapyridine which was one of the early sulfonamides was implicated in this; antithyroid agents, drugs used against thyroid disease such as thiouracil, propyithiouracil are implicated. A drug which we talked about previously as possibly causing gastric ulcers, butazolidin, which is used in rheumatic diseases and gout, may cause depression of the white cells.

Chloromycetin

Chloromycetin had a very bad reputation early in the course of its usage and in this town all the medical profession knows that the daughter of a doctor was given this drug and developed this depression of the white cells and died. There were quite a few deaths and the drug manufacturer, of course, was very concerned. It was found out later, the proper usage of the drug does not lead to this. Now it is a very valuable drug and used quite widely when it should be used for the infections against which it is effective.

Rating action

Now of course, it could happen that a veteran goes into a VA hospital for a service-connected condition or for a non-service-connected condition and this type of thing can happen. It could happen to the non-service-connected veteran if there is an indication for its use and this was a drug that might have been helpful. Of course, we wouldn't have much claim for a section 31 case because this is known complication of this drug. However, the medical profession has been alerted to this danger and uses this drug very much more cautiously than it used to. Even streptomycin sometimes causes this and all of us know that streptomycin is probably the widest used drug in the treatment of pulmonary tuberculosis and other forms of tuberculosis and a very good drug. Occasionally streptomycin can cause this depression of the white cells. So, here you see a whole list of drugs, including drugs that are used in the treatment of blood conditions themselves, such as leukemia, which can cause further disease.

DRUGS USED IN EPILEPSY

Dr. SHAPIRO. I'd like to mention some drugs that are used very extensively in the condition in which we see service connection frequently, in the epileptics. Two drugs, especially, have been known to affect the white cells depressing them, with death sometimes occurring. One is the drug used in the treatment of petiti mal epilepsy—tridione. Mesantoin is used mainly in psychomotor epilepsy. We know of one death of a middle-aged woman who came to the clinic, got mesatoin, didn't come back and be observed, with the precautions used. We check the blood periodically to see the effect on the white cells. She later was admitted in an emergency many months later and died shortly thereafter. The autopsy showed the depression of the bone marrow. We had one experience with a 7-year-old child whose mother was warned about tridione. It was controlling her convulsions. When she called up the clinic, one of the students answered and said that the mother said the child had a runny nose and a little breaking out of the skin, he said to get the child into the clinic at once. He found her with red spots on the skin, and the white count was down to about 2,000. If the drug hadn't been stopped immediately and if she had taken it another 2 or 3 days, she may have died.

Dilantin

In epilepsy the other drug that is used very extensively, sodium dilantin which is used in all types of epilepsy, mainly in the grand mal, is a drug not without dangers. It can occasionally produce symptoms of intoxication in addition to skin rashes so that they may resemble even a brain tumor and we have had two cases that were picked up staggering, having neurologic signs with choking of the optic discs and were thought to be brain tumor cases. In getting our records from the clinic it was found they were on dilantin and didn't operate on them but took them off the drugs. These are very valuable drugs that can stop attacks of epilepsy for months or years, but occasionally haven't. At our clinic when we find an individual who is sensitive to one of these drugs, we write across the chart in big letters, dilantin sensitive, tridione sensitive, etc. I am mentioning these drugs because of their wide use and the fact that we have so many service connected epileptic cases which may be on these drugs.

Dr. BRICK. These three drugs actually cause bone marrow depression in all of its elements. You may get anemia, white count depression, and platelet depression.

COMPLICATIONS OF SURGERY

Occasionally, too, getting away from drugs for the moment, operations sometimes cause complications. For instance, after surgery certain complications arise. When you do a gastric resection you can get several types of anemia because you have bypassed or eliminated part of the stomach and the healthy red cells in your bloodstream have to have from the stomach a certain factor. When

this factor becomes minimal or absent you may get anemia. The rating schedule takes cognizance of this in rating subtotal gastric resections. In other operations on the colon and the small intestines, when you get a bypassing of certain parts of the small intestines and the large intestines, you may not only get anemia but you may get diarrhea. When this is bad you may get what is known as steatorrhea, diarrhea which simply means one loses a lot of fat as well as protein and even carbohydrates in the stool. You eat a lot and it goes out in the stool because of this inability of the small intestines to absorb. All of us, of course, in rating practice are aware of the fact that residuals of surgery are noted throughout the rating schedule and may cause disability. This is important because you may run into a revision of the rating schedule.

Gastric resection

Dr. SHAPIRO. One of the things that has been brought to the attention of the VA has been that certain consultants complained about the rating for resection of the stomach. They have actually stated they are going to refuse to do resections because they claim that once they cut out the ulcer and improve the man, he gets a higher rating because of resection of the stomach. I think it is important to bear in mind that you are mentioning what may happen to a man with this resection and maybe that is the reason for keeping that rating. I'm merely mentioning it because that has come up and they have contacted the rating people protesting of actually refusing to do surgery on that account.

Dr. BRICK. Well, of course, when you get a good result, as I have said here before, it does seem rather silly to give a man a higher rating after his surgery than before his surgery for the disability that he was being operated upon. Now, after a subtotal resection there are many other complications that may arise and of course these complications would warrant even a higher rating than the automatic 40 percent. I would be more satisfied, and this is off the subject, in that particular section of the rating schedule if they were given a rating based strictly on the symptomatology of his surgery. I think it would be well to give an automatic 30-percent or 40-percent rating for 6 months to a year because there is a period of adjustment during which there is undoubtedly disability. However, there have been surgical attempts to try to overcome some of these difficulties after resection and one of the current surgical efforts is not taking out as much of the stomach and doing vagotomies, that is a nerve cutting operation. This of course is something that we will have to wait 5 or 10 more years before we can evaluate properly.

Mr. POOL. When you take out a piece of equipment from a delicate piece of machinery because it is damaged and then you bypass that and set it up so it runs without replacing that part it will never work the same. I can take a clock and take out one of the wheels and rearrange it so it will run and keep good time.

Dr. BRICK. This is not particularly true of all subtotal resections because you can take out in some patients a part of the stomach and they can do better than they did before. Is it going to hold up forever? It may. The rating action I think should depend upon whether it does or not.

Mr. POOL. In other words, you would say that the rating schedule then could only rate the individual in that case if he gets along all right, cut him down, but you can't set up a rating schedule for an individual case.

Dr. BRICK. That's right. Well, this gets into the general subject of other operations which are done and the patients are much better after an organ is removed, as a diseased kidney, and yet this is an automatic rating that goes along with the disease.

Recurrence of ulcer after gastrectomy

Mr. AGOSTINELLI. What are the statistics of a recurring ulcer and result of a gastrectomy?

Dr. BRICK. Well, that's an interesting point. We get them rated after they have a recurrence. That is no problem from there. The statistics are to the effect that probably about 10 percent of the patients who have a stomach operation that ulceration will occur again. If he has another ulcer in the resected section of the stomach, it's part of the same original disease.

ANTICOAGULANT DRUGS

One other situation that we ought to talk about briefly is the use of the anticoagulant drugs. These are drugs which are used to thin the blood. The most famous patient taking this drug on an apparently permanent basis, it appears from the newspapers, is our President. You know, that after his coronary occlusion he was given an anticoagulant drug, and there are quite a few on the market, like dicoumarol. There are several others with different names but they have the same property causing coagulation of the blood to be diminished so that the blood does not clot as readily as it would normally. There is still a great deal of controversy about whether use of these drugs is the appropriate and correct thing to do in coronary thrombosis. There is good evidence that it is helpful and on the other hand there are a lot of good doctors who think that this should not be done.

Use in heart attacks

There is an English doctor, for instance, who thinks it is wrong to give these drugs. Yet, on the other hand, there are a group of doctors within the American Heart Association in our country that feel that every patient who has a coronary occlusion should have these drugs and possibly that a good many should have them on a permanent basis. You can get the medical literature in the past few years and can get both sides of the argument. We really don't know, as I sum up the situation, whether or not these drugs will really prevent future occlusions. We do know already there have been many reliable cases reported of patients who have had coronary occlusions who stayed on the drug, who have had other coronary occlusions so that it certainly isn't a 100-percent proposition.

Other uses

Now, these drugs are used for other things other than coronary occlusions. They are used for pulmonary embolism and infarction, postoperatively. They are also used and advocated by some neurologists for cerebral thrombosis. Of course, one of the problems here is to make sure that it is not a cerebral hemorrhage rather than a thrombosis and that may sometimes be a very difficult problem. They are sometimes used in certain conditions such as phlebothrombosis or thrombophlebitis to prevent embolization. Now what is the danger in all of these situations?

Danger of use

This is the important thing, what is the danger in all of these situations. The danger is that these substances thin the blood so much that the blood does not coagulate properly and therefore you get bleeding. If you get a cut you keep on bleeding and it won't stop. But more important than that is that spontaneously you may get bleeding in the urinary tract and the only way you are able to pick it up is by microscopic examination of the urine. Red blood cells, showers of red cells come forth. However, occasionally, unfortunately, the bleeding is of greater severity and subarachnoid hemorrhage, actual bleeding in the subarachnoid space of the brain, may be found.

In the treatment of myocardial infarction, treatment of this heart condition that is the primary reason for its use in heart disease, it is to be noted that since the use of these drugs that hemopericardium occurs. Hemopericardium simply means blood in the pericardial cavity. The pericardium is a thin, transparent membrane which encloses the heart in two layers. In between these two layers is a little fluid, pericardial fluid. Now, if you have the unfortunate sequel of these anticoagulant drugs of getting blood or bleeding into the pericardial cavity, you not only get blood in there, but it clots and eventually it restricts the movement of the heart. So you actually have compression of the heart. There have been a not insignificant number of cases who have died as a result of this complication of the use of these drugs. These drugs may be quite valuable but we must always remember that these drugs are not harmless drugs.

Contraindications to use

In certain conditions these drugs should not be used. For instance, with a patient who has a peptic ulcer who has ever bled these are drugs not to use because it may start bleeding again. In a noncomplicated peptic ulcer, the risk may be a little greater than in normal persons, but if there is an indication, such as a pulmonary thrombosis or embolism, it is probably all right to use them. In patients who have liver disease, these drugs are not very safe to use. In patients who have various blood diseases, these drugs may be dangerous to use. So you see, there is a whole list of conditions in which these drugs may actually be hazardous. One last word, in certain rat poisons they are using an anticoagulant called warfarin. What happens is that the rat eats this drug and then he bleeds internally and dies. The rat poison takes advantage of the toxic effect of these anticoagulant drugs. It is true, too, that there has been quite a few suicides reported already in which these drugs have been taken and caused internal hemorrhage and death.

Dr. SHAPIRO. In a service-connected case that dies or gets a complication from these drugs, there would be no difficulty in getting service connection for the complication. In a non-service-connected case a section 31 does not apply unless poor judgment was used in using it in liver disease or an ulcer or in other conditions in which the drug is generally contraindicated.

Dr. BRICK. If there is not the indication, a lifesaving indication for its use or if there was a contraindication to its use, the doctors exercising this reasonable caution should have known about, then there would be the possibility of a section 31 case. But if a non-service-connected veteran goes into the hospital with a myocardial infarction and the judgment of the doctor taking care of him as used in average civilian practice, the drug is commonly used. If he gets a complication of it, there would be no section 31 case. Many doctors are being pressured into using these drugs by families because they read about it in the newspapers, they go to the doctor and say, "Why isn't my relative getting an anticoagulant?" Many doctors use them routinely because of this very fact, and also because of the apparently favorable medical reports.

How Big Is the Federal Budget?

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1957

Mr. McDONOUGH. Mr. Speaker, today there is one topic that is of prime

importance to every American taxpayer, and that is the size of the national budget. The taxpayer today knows the effect of the size of the budget upon his own pocketbook, and he realizes as never before in American history that the tremendous tax load he is carrying can never be lightened unless the national budget is drastically reduced.

But just how big is the budget today? How can it be judged by simplified comparison?

John D. Garwood, professor of economics at Fort Hays State College, Kans., has undertaken the task of such comparison to show exactly how large the budget is in terms that can be clearly understood now at a time when even the word "billion" has ceased to have meaning, and I believe Professor Garwood's article which follows deserves the thoughtful consideration of all Members of Congress:

HOW LARGE IS THE BUDGET?—MEASURING THE SIZE OF OUR NATIONAL DEBT

(By John D. Garwood)

In the last 3 fiscal years, 1954, 1955, 1956, the United States Government spent $193 billion. In 152 years from the time of George Washington's first inauguration in 1789 to 1940, the Government spent $167 billion.

In a single month in 1956, the Government spent almost twice as much as the total costs of the Government during the 4 years of the Civil War.

In the fiscal year closing June 30, 1956, Federal spending exceeded the combined cost of all United States wars prior to World War II. The 2-year cost of World War I was $31 billion. The Government now spends more than that in 6 months.

History tells us that Government functions and costs never stop growing. Postwar spending never goes back to prewar spending. Nine million dollar budgets were the rule prior to the War of 1812. The budget was twice that following the war.

After the Civil War the budget was over 3 times the prewar budgets of $60 million to $70 million.

Federal expenditures were about $350 million annually before the Spanish-American War, more than a half billion dollars annually following the war.

Before World War I, United States Government spending was about $700 million per year. It was about four times that after the war.

Before World War II, during the thirties, spending by the Government ranged from $6 billion to $9 billion per year. From 1946 to 1950, following World War II, expenditures were in the neighborhood of $40 billion per year.

Following Korea, expenditures rose to around $65 billion per year.

Proposed expenditures for the fiscal year 1957 (July 1, 1956, to June 30, 1957) are set at approximately $66 billion. The President's budget set forth in 1,534 pages of finely printed material, weighs in at about 6 pounds or about three-fourths of a billion dollars per ounce.

It is so large, it covers so many fields of human endeavor, put together through tens of millions of man-hours, that no one, not even the Budget Director, can possibly fully comprehend it.

How large is the budget? How much is $66 billion? Large is a relative term. Anything is large or small only when compared to something else. Thus, the point of a pin is large when compared to an atom, an elephant when compared to a cat, etc.

The magnitude of the budget is indicated when we realize that the budget is large regardless of the economic unit we use for comparison. It dwarfs other economic institutions and functions with which we are familiar. It is like comparing the Hoover Dam to a child-made dam in the gutter of a street after a rain.

If total Federal spending were made in dollar bills, laid end to end, they would reach 6,250,000 miles. This would encircle the earth 250 times or make 13 round trips to the moon.

Federal spending for the fiscal year 1956 is equivalent to the income made by people in the Pacific Coast States, the Rocky Mountain States, plus the States of North and South Dakota, Nebraska, Kansas, Oklahoma, Texas, Minnesota, Iowa, and Missouri, or a total of the income of the people in the 20 Western States.

It is over twice as large as the amount of currency in circulation. It is three times larger than the amount of gold held in Treasury vaults.

If paid out as a bonus to every wage earner, it would put more than a $1,000 in every wage earner's pocket annually.

It is over eight times the amount spent for all purposes for elementary and secondary education in 1 year.

It is between 6 and 7 times greater than the income before taxes of all corporations in the United States with earnings of $10 million or more during the year.

It is over three times larger than the profits before taxes of all manufacturing companies in the United States for 1955. It is between 6 and 7 times as great as all automobile, motortruck, and bus sales in the United States in 1955.

Federal spending is over four times as great as all spending for housing in the United States in 1955.

The interest on the national debt alone, an annual charge of between $6.5 and $7 billion, is greater than all money spent on private education and research and religious and welfare activities for a year.

In the past decade, we have been assailed by billion-dollar figures from governmental sources so frequently that the figures have little meaning. It is only when we translate these figures into comparisons with other economic data that they become meaningful and capable of understanding.

The Federal budget remains the giant among the pygmies. It is so monstrous as to defy reasoned comment. There is no way to get hold of it. It is too complicated and vast for any one mortal mind to conceive it in its entirety.

The Frankenstein monster of our own creation has escaped the bonds of control. It dominates rather than being dominated. It commands rather than responding to commands. It governs the economy with its taxes and concomitant expenditures. It stands as an incomprehensible monstrosity of America's creeping retreat from political and economic control to tyranny through ignorance and bureaucratic control.

Some Have False Idea of Power Preference Clause

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. ENGLE. Mr. Speaker, the private power companies recently have been publishing advertisements attacking the power preference clause in the reclamation law. This power preference for municipalities, irrigation districts, and other public agencies has existed in our law for over 50 years and has been reaffirmed some 13 times by Congress in separate enactments. A good deal of misconception exists about the preference clause, and the private power companies have done their best by high-paid advertisements to make the confusion worse. The Sacramento Bee of March 5, 1957, had an excellent editorial on the subject, and I include it in the RECORD for the information of the Members:

SOME HAVE FALSE IDEA OF POWER-PREFERENCE CLAUSE

Perhaps the most misunderstood provision of Federal reclamation law is the so-called power-preference clause. This is so because a false conception of it has been nourished and encouraged by the private-power lobby.

The statute, enacted more than 50 years ago, provides that in the purchase of electricity generated at the Government's reclamation projects, preference shall be given to Federal agencies and to public districts.

This determines only who has first call on the power. The provision has nothing to do with the price or other conditions.

In the Central Valley project the Reclamation Bureau, in accordance with law and policy, established a power-rate schedule sufficient to pay back the Government's investment in 50 years, plus 3 percent interest, plus operation and maintenance costs, plus depreciation.

This is the price of the power whether it is purchased by the Mare Island Navy Yard, a public agency such as the Sacramento Municipal Utility District, or by the Pacific Gas & Electric Co.

Until recently the PGE was the largest purchaser of CVP power and still is a major customer.

The rate schedule for firm CVP power is the same for all customers, private or public. The only difference is that public agencies, such as SMUD, have a priority in the right to buy the low-cost energy.

The PGE, incidentally, has been purchasing dump power at Shasta at less than half the price of firm Shasta power sold to SMUD.

And how much the retail customer pays for CVP power depends on the profits exacted between the time the power leaves the Government busbars or transmission lines and the time it reaches the householder's meter box.

The contention that the people of Vermont or Missouri are helping to pay for the low power rates enjoyed by the customers of SMUD, a large Shasta purchaser, is just private power company propaganda.

Fact is Federal power and water projects cost the Government nothing, for the cost of each is repaid by the power and water customers.

Actually the Government makes a profit from the power projects because money advanced for these projects draws 3 percent interest which is paid into the United States Treasury.

Revolt of Public Opinion

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1957

Mr. MULTER. Mr. Speaker, the following article which appeared in Congress Weekly of March 4, 1957, makes interesting reading.

REVOLT OF PUBLIC OPINION

We are witnessing these days a remarkable phenomenon on the American political scene: An administration which has long basked in the sun of public approbation and whose foreign policy has hitherto been virtually immune to criticism has suddenly had to contend with an aroused public opinion protesting its Middle East policy. Few crises in recent years have stirred the American people as has the one involving Israel, and there is no denying the fact that the weight of opinion is against official administration policy, despite the huge personal popularity of the President and his active intervention to win public support for the policy line conducted by his Secretary of State.

We believe the conscience of America has been troubled by this issue because the problem goes beyond the usual considerations of power politics and the conflicts of nations. There is a moral issue involved here to which, more than anything else, the American people has responded. Since the early days of November, when Israel crushed the hostile Egyptian forces poised on her borders only to have the political fruits of victory snatched from her hands largely through United States intervention, American public opinion has moved steadily toward the realization that, far from being unjustified aggression, Israel's action was dictated by the fundamental law of nations—the right to survival and defense against the threat of annihilation.

In face of the stubborn and shortsighted administration policy of appeasement of the Arab rulers, which has risked the alienation of our closest allies and large bodies of opinion in the free world, American protests have grown steadily stronger until they resulted in the loud outcry in the Congress and the press against pressuring Israel further to give up her demand for security guarantees. The issue became crystallized and sharply etched when the Afro-Asian bloc in the United Nations proposed the imposition of worldwide sanctions against Israel—an action which would in effect punish a nation for the crime of insisting on nonbelligerency. An excellent gage of popular opinion in the United States is provided by the statement of our former Ambassador to Italy, Clare Boothe Luce, whose support of the Eisenhower Administration has been consistent and whose husband's publications have not been noted for partiality to Israel. Mrs. Luce, moving directly to the heart of the problem, told the press:

"The specific issue is whether it's moral or immoral to protect one's self. All this talk in and out of the U. N. about the immorality or morality of firing the first shot seems to me to fly in the face of history, commonsense, logic, and patriotism. The cardinal principle of a statesman is that his nation has a right to survival and if survival depends on its getting there 'fustest with the mostest' for the sake of its own nationhood it must take the offensive. The question is not the morality of the Israeli offensive but what Israel should do and what we intend to do to guarantee its survival in the future.

"On principle the question of defensive and offensive war has been much confused since every nation must go on the offensive if it feels that to go on the defensive would cost its survival. * * * In the case of Israel, the imposition of sanctions would be to brutally punish a small nation which has been counted among our friends while condoning larger nations whose aggressive actions have not depended on survival."

The spectacle of the nations of the world imposing their power on a tiny country fighting for survival while the larger powers ignore U. N. resolutions with impunity was apparently too much to stomach and a wave of protest has consequently swept the nation. But we need to remember the essence of both the moral and political problem in the present crisis concerns not so much the Soviet Union or Hungary or India—legitimate as our protests here are—but Egypt. It is Egypt which has led the campaign of murder and terrorism against Israeli citizens; it is Egypt which has repeatedly broken international law by blockading international waterways; it is Egypt which has time and again violated U. N. resolutions and defied the world community; it is the Egyptian dictator who by his inordinate ambitions and unconscionable manipulations has thrown the Middle East into a turmoil inviting another world war. The real moral outrage has been the spectacle of Egypt being assigned the role of the innocent victim awaiting justice from the world. It is this incongruous reversal of roles and of values that needs to be righted.

This task will confront the international community—and our own Government in particular—even if the threat of sanctions against Israel is allowed to die the death it deserves. The revolt of American public opinion is aimed at the entire record of the Eisenhower administration in the Middle East, a record of appeasement of and capitulation to the violent passions of an Arab nationalism whose essential character is anarchic and xenophobic.

Revised Federal Land Policy Denies Development

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 13, 1957

Mr. METCALF. Mr. Speaker, an outdoor writer spoke for conservationists everywhere when he told delegates to the 22d North American Wildlife Conference that the agreement under which the Departments of the Army and Interior are failing to acquire land for public recreation development around Federal reservoirs should be voided and we should return to the multiple-use concept of resource development.

George X. Sand, of Deerfield Beach, Fla., also called for complete revision of the Coordination Act to give the Fish and Wildlife Service a voice equal to the Corps of Engineers in public-works project planning.

We will be hearing more from conservationists as a result of Mr. Sand's paper which, edited to conform to the allowable limit on extension, follows:

REVISED FEDERAL LAND POLICY DENIES DEVELOPMENT

(A paper presented by George X. Sand at the 3d general session of the 22d North American Wildlife Conference, Washington, D. C., March 6, 1957)

I am grateful for this opportunity to discuss one of the important problems facing conservationists today.

I come not as an expert legal or administrative adviser, or as a qualified fish and wildlife biologist.

However, I do feel that I can speak for many of America's 25 million sportsmen. For the past 17 years, as a freelance outdoor writer for the national magazines, I have hunted and fished with these men and women.

Because my income depends upon it, I have listened closely whenever and wherever I met them.

And I can tell you today that a great many of these voting citizens are not only troubled, they are angered, by the new joint land acquisition policy of the Army Corps of Engineers and the Department of the Interior. They don't like it.

That's why I felt justified in traveling several thousand miles to show you why this joint policy for land acquisition on reservoir projects, as it was approved by the Secretary of the Army and the Secretary of the Interior on January 13, 1954 (Order No. 2744), is both unfair and unsound.

In fact, many of our aroused sportsmen feel that the Congress should examine closely not only this joint policy (which is, after all, but an interagency agreement, and not a law) but also, while they are at it, the entire 1946 Coordination Act (Public Law 732).

But let's begin by considering the controversial new land policy.

First, it robs our citizens of the many existing Army engineer and Bureau of Reclamation projects, public projects which their taxes have already paid for.

* * * * *

By means of reconveyance bills that can be, and several of which already have been, presented to Congress * * * this joint policy encourages the selling back of these tremendously improved, and very valuable, Federal reservoir lands to a favored few original owners at a very small fraction of their present worth.

The new policy makes no provision for even the choicest of these irreplaceable wildlife and esthetically invaluable sites to remain in public ownership (except it be the wish of the Secretary of the Army for them to be so retained, and I intend to give you a classic example a little later of exactly what type of cooperation we Florida sportsmen got in this regard).

Nor does it permit all interested parties, without distinction, to enter competitive bids, should they desire these attractive residential and commercial sites that have been created at public expense.

Secondly, not only does the new policy provide for getting rid of our present priceless wildlife and recreational areas, it deals an additional crippling blow to conservation by providing inadequate public use of any new project that may be built.

The Corps of Engineers will acquire only flowage easements for lands that will be periodically inundated. Henceforth they can purchase in fee title only those lands that will actually be flooded permanently.

No longer will there be acquisition of reasonable surrounding land areas in depth above the high water mark to offer prime wildlife management opportunities for State and Federal wildlife agencies.

Instead, a small number of fortunate property owners will own and control most of the shorelines of such large reservoirs built at public expense in the future. One can almost see the marching array of no trespassing signs as they hold at bay our steadily increasing populations from such vitally needed recreation sites.

Let's review briefly what led up to this serious state of affairs.

As we know, the Democratic administration fathered a comprehensive plan for the multiple use, and hence the maximum good, of all the lands and waters of this Nation.

This program, which began in the late thirties and reach full bloom in the period 1946–52, saw the passage of a series of laws which expanded significantly the Soil Conservation Service, the Forest Service and other Federal agencies.

One of these, Public Law 732, popularly known as the Coordination Act, was to prove a particularly good law. It provided, for the first time that the other Federal agencies should "consult" with the United States Fish and Wildlife Service whenever a Federal project was undertaken.

In other words, the idea—and surely it was a sound one—was to encourage an

"equal partnership" for fish and wildlife in water resources development, along with flood control, navigation, drainage, irrigation, power, and other uses.

Unfortunately, Public Law 732 did not then, nor does it today, go far enough. Instead of providing for the United States Fish and Wildlife Service to stand on its own two feet and demand that our priceless wildlife resources be given equal consideration along with flood control, navigation and all the rest, the Service is obliged to still ride along today on the "shirt-tails" of such other Federal agencies, accepting their handouts of operating funds and similar assistance, if and when given.

Nevertheless, this weak Coordination Act did set the stage for the multiple-use concept of advancing fish and wildlife. I'd like to cite one quick example of just how much this could mean.

I recently read an old report published in 1953 by the Office of River Basin Studies, United States Fish and Wildlife Service. This report dealt with Harry Strunk Lake, a Federal project area located in a small tributary of the Republican River in southwestern Nebraska.

This was the area of the dust bowl of the thirties, an area subjected to occasional flash floods which damaged life and property in the small farming communities located along the stream courses.

Harry Strunk Lake was not spectacular. Built in 1949 for flood control and irrigation purposes, it boasted less than 2,000 acres. There are many more impressive examples of Federal reservoirs.

In line with the liberal land-acquisition policy of that era, a generous purchase of peripheral lands (subsequently transferred to the Nebraska Game, Forestation, and Parks Commission) provided the United States Fish and Wildlife Service an outstanding opportunity to plan and develop this area for wildlife benefits.

The reservoir was opened to fishing for the first time in 1952. During that first year, an estimated 55,000 fishermen took advantage of this new recreational opportunity.

Happily, they spent about $174,000. A survey made in the nearby town of Cambridge (population 1,352 persons) revealed that out of the 50 businesses of every kind located there 41 stated that their volume had been directly, or indirectly, affected by the new fishery.

In fact, the community's gross business increased approximately $50,000 in that 1 year. This, no doubt, exceeded the combined flood-control and irrigation benefits. And the excellent hunting of that year was not evaluated and included.

This was a good Federal project. Should one travel Nebraska's Republican Valley today, he can see how this project has made verdant the lives and increased the joy of living for thousands of people in that vicinity.

Yet, under today's new policy, this project could not be built in this manner.

Harry Strunk Lake is butone example. You can find many others in our 95 Federal reservoirs, with more than 1,600,000 acres of land around them available for fish and wildlife management.

And keep in mind that not one of those acres was purchased under authority specifically granted for wildlife purposes. It was all purchased for flood-control, navigation, or other so-called primary purposes as authorized by the Congress.

(Incidentally, about 70 percent of the total was already public lands.)

Most of us agree today that probably more land was condemned for Government use at these projects than was primarily required to complete them. Local governments complained as these federally acquired lands were removed from State and county tax rolls.

Despite the great public good being done, thousands of the one-time owners understandably resented the enforced sale of their land for Government use, even though they were fairly paid, and many of them subsequently benefited from now owning remaining properties that adjoined the improved Federal reservoirs.

Probably the TVA stands out as the greatest example of this multiple-use program. Whether we agree with the TVA in principle or not, this physically, economically and socially eroded valley was converted, as a result of complete control exercised by Federal agencies, into a system of land use and natural resource development which was most comprehensive in its approach. Surely, public use of the fishery in the TVA reservoirs, for example, has since become world famous.

Nevertheless, when a Republican administration took over in 1952, the TVA was described as "creeping socialism." Apparently, the new administration felt that the old system led to large bureaucracies, that the construction agencies were usurping the rights of the Congress.

Perhaps they were, I don't feel qualified to say.

As a result of the administration change, however, we got this new Federal land acquisition policy (which, as I've said, is merely an interagency agreement, not a law). Henceforth, it was made clear, when the Congress appropriated any money, it, and it alone, would say who was to benefit from such money.

Well, that surely is American and the way it should be. Unfortunately, however, just like the original Coordination Act of the Roosevelt administration, this new setup is not nearly so sound for us sportsmen and conservationists as it could be. In fact, it offers several big problems.

First, it seems hardly short of asinine that we should even think of selling the wildlife and recreational values of our hard-earned Federal project sites, or giving them away, if you prefer.

On April 25, 1956, the Department of the Army proudly proclaimed in a news release that public use of recreation opportunities provided by its Corps of Engineers at such civil works projects had reached an all-time high of 61,132,000 persons during the calendar year 1955.

That is a lot of people, well over one-third of our entire national population. These millions of Americans, both local and tourist, engaged in such outdoor activities at the project sites as camping, picnicking, swimming, fishing, boating, sailing, water skiing and hunting.

Further, the Army admitted that the available facilities were being "outstripped by the increasingly large numbers of people," who continued to come to these projects. And during these past 2 years the number undoubtedly has increased considerably.

On top of that, under the present joint policy agreement between the Secretary of the Army and the Secretary of the Interior no access lands whatever are to be provided at future projects to accommodate those "increasingly large numbers of people."

Does that make sense to you? It doesn't to me. Nor does it begin to make sense to the many angry citizens whom I meet in my travels about this country.

Theoretically the reconveyance program has been set up to provide an exception and no sale in the case of those lands which, as determined by the Secretary of the Army, are needed for "public purposes."

But let's examine how this one-man power so given can work out in actual application. I am sure that many of you recall that recent situation wherein the bullheadedness of Army Secretary Wilber M. Brucker and others in the Department of the Army nearly cost us Florida sportsmen our wonderful 7,000-acre Jim Woodruff wildlife management area.

Two reconveyance bills had been enacted during the first session of the 84th Congress. One applied to the Jim Woodruff Reservoir, the other to Alabama's Demopolis Reservoir. Conservation groups had not protested either one because the language specified that lands required for "public purposes" should not be reconveyed.

It seemed clear that Congress previously had provided for recognition of wildlife management and public recreation as "public purposes" in the Coordination Act (Public Law 732) and in section 209 of the Flood Control Act of 1954.

The Army insisted, however, that under Public Law 300 of the 84th Congress, 1st session, even the lands licensed to the State of Florida had to be sold back to the former owners.

As the Wildlife Management Institute pointed out at the time, the Secretary of the Army should have decided that this small part of the shoreline was needed for public purposes. His refusal to make this decision meant that the Army was now contending that the "public purposes" specified in its approved general plan and license to the Florida agency was not "public purposes."

In sticking to this questionable interpretation of the meaning of public purpose, and reneging on its approved general plan, the Army was overruling the urgent pleas of Governor LeRoy Collins, of Florida, the Florida Game and Fresh Water Fish Commission, the forceful Wildlife Management Institute, the State-affiliate of the nationwide 3-million-member National Wildlife Federation, members of the Florida Outdoor Writers Association, and any other conservationist group who might choose to join in the battle, and there were plenty who did join.

Because the Secretary of the Army refused to budge from his unpopular position, and would not comply with the directive which several prominent attorneys agreed is in Public Law 300, Florida Congressman BOB SIKES was left with no alternative but to introduce another bill, which was subsequently approved by the Congress and which mandated the Army engineers not to reconvey these lands desired for public purposes by the Florida Game and Fresh Water Fish Commission.

Following this startling incident there were those of us who found ourselves wondering whether this wasnt' exactly the type of bureaucratic behavior that the present administration had vowed to eliminate.

I mentioned earlier that there are many conservationists who feel that the Congress should not only correct such conditions as these but should also overhaul the entire Coordination Act while they are about it.

Let's look at the weakness of this act in terms of what it does for the United States Fish and Wildlife Service. The Service is, after all, our logical representative before the Congress.

As nearly as I can determine, the Fish and Wildlife Service does not now have, nor has it ever had, the organization, nor the funds, nor the legal prestige to enable it to go before the Congress with a report comparable to the Corps of Engineers, as well founded as the Corps of Engineers, or with the backing that the Corps of Engineers enjoys.

It is always a case of "too little, too late" for two reasons: First, insufficient funds; second, insufficient cognizance in the law of the right for fish and wildlife to receive equal consideration.

Under the present law, the only thing the Fish and Wildlife Service can do is to recommend measures to mitigate losses. There is nothing in the law to insure that the other agencies must accept these recommendations.

The law just states they have to consider the Service's recommendations.

I have often wondered how many times they actually do give such consideration.

The Congress has indicated that it expects the Fish and Wildlife Service to stand on its own two feet as a planning agency.

How? I'd like to know.

For an effective equal partnership, it seems to me you must have not only comparable operating funds and manpower, but also equal knowledge.

For example, the Fish and Wildlife Service cannot say what effect a specific project will have upon fish and wildlife until they actually see the plans of how a river or other water surface is to be diverted or changed. Yet the Corps of Engineers, as soon as their plans are completed, usually sends them immediately to the office of the Chief Engineer to Washington.

This same brand of limitation applies often where finances are concerned. Last year in my State the corps got about 30 times the Fish and Wildlife Service appropriation. I'm speaking of funds for planning. How can you be equal partners on that basis? And I can only guess how many more employees they have, or how many more years they've been in office.

Why should this be? Why should the fate of our tremendous wildlife resources be so determined by the Corps of Engineers, which admits its primary concern is navigation and flood control?

This, I'd say, is something for Congress to think about.

Also, in fairness, while we have spoken mainly here of the role played by the Army engineers' the Congress should by no means see the Corps emerging as the greatest and almost sole barrier to future success.

Detrimental disputes often arise with other concerned Federal agencies. Many of these interagency difficulties the Congress could resolve with a strong national water policy that would insure multiple-use development.

Bad, too, are those cases where our State game and fish departments (and even questionable policies of the Interior Department, itself) fail to take advantage of lands already acquired by the Corps of Engineers.

Regardless whether loyal members of the Fish and Wildlife Service will admit it, the fact remains that they—and therefore we millions of sportsmen who logically look to them as the champions of our cause—must remain content today with such often reluctant handouts, both financial and otherwise, from other Federal agencies.

The truth of this was hinted at in a talk made by James T. McBroom, Coordinator, Office of River Basin Studies, Fish and Wildlife Service, Department of the Interior, before the International Association of Game, Fish, and Conservation Commissioners at Augusta, Ga., on September 12, 1955.

Said McBroom: "The Coordination Act provides simply that an investigation and report shall be made by the Fish and Wildlife Service and the affected State fish and game department, and that this report shall accompany the engineering agency's project report transmitted to the Congress.

"The decision basic to wildlife conservation in these projects is made in the final analysis by the Congress. But Congress is not in the business of formulating plans for projects. That is the job of the engineering agencies.

"The decisions on wildlife conservation aspects of a project are made by the same engineers responsible for the rest of the plan.

"In short, our results under the Coordination Act must be obtained largely by successful negotiation with the construction agencies, who are well aware of their legal option to adopt or reject any particular conservation measures that may be recommended."

That was the admission of the man whose very river basin studies office was first established by this basically good, yet sadly weak, Public Law 732, passed by the 79th Congress in 1946.

In view of these and other existing circumstances, which jeopardize conservation and our priceless fish and wildlife resources, we millions of sportsmen nationwide should recommend forcibly to the Congress the following:

(1) That the joint policy for land acquisition on reservoir projects, order No. 2744, as approved by the Secretaries of the Army and the Interior Department, be declared void and a return made at once to the multiple-use concept.

Meanwhile, it should also be recommended that the Congress amend the Coordination Act, so that:

(2) The Fish and Wildlife Service can be recognized under Federal laws as having an equal voice in all public-works projects.

Let's see conservation, and, hence the Service, "standing on its own two feet," as the Congress has decreed. Yes, but let the Congress first make provision for this.

You can't be an equal partner when you actually remain "the flea on the tail of the dog."

(3) Let legislative and administrative machinery be set up to provide the Fish and Wildlife Service, and the interested State agencies also, both the time and the funds to prepare effective fish and wildlife plans—correlated with other agency plans as these are submitted to the Congress.

And take all necessary steps to encourage the Federal and State agencies to accept the responsibility of administering new fish and wildlife projects. Right now they are often unprepared, and, hence, understandably reluctant, to do so.

As a result, we don't get these badly needed wildlife and recreational areas.

(4) Make certain that the cost of such necessary developments for fish and wildlife be a project cost.

Why We Lost China—The Inside Story

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 25, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, the tragedy behind the loss of free China to the world is well told in an article that recently appeared in Human Events of March 9. Mr. Don Lohbick, in a biography on Patrick J. Hurley, tells the story in a concise manner. The article in question is included at this point:

WHY WE LOST CHINA—THE INSIDE STORY

Pat Hurley's purpose in going to China, first as personal representative of the President and later as American Ambassador, was to uphold the political independence and territorial integrity of China—and directives so ordered. But at Yalta the principles of liberty, self-government, and territorial integrity had been abandoned by the United States; the career diplomats (George Atcheson and John Stewart Service) that Hurley had relieved from duty in China because they were undermining the American policy were not reprimanded by the State Department, but were instead promoted to supervisory positions.

Within the State Department in Washington, personnel changes had been taking place among those persons directly concerned with the conduct of far-eastern affairs. Joseph Grew had resigned as Under Secretary, to be replaced by Dean Acheson; John Carter Vincent was advanced from Chief of the Division of China Affairs to Director of the Office of Far Eastern Affairs; George Atcheson, who had been relieved from duty at the Embassy in Chungking, was Vincent's special assistant; John Stewart Service, recalled from China at Ambassador Hurley's insistence, was in the Personnel Section. Now, in September 1945, it was announced that George Atcheson and John Stewart Service were being sent to Tokyo to act as diplomatic advisers to Gen. Douglas MacArthur.

This meant more than the fact that two men who had been sent home because of their lack of sympathy with the American policy were being advanced to potentially important positions where they could exercise control over American policy. Of even greater significance, it was an indication of the administration's attitude toward the whole policy of loyalty to the United States. In Washington, on June 7, 1945—just a matter of weeks after Hurley demanded that John Service be recalled from China, where he was visiting Communist headquarters in Yenan—the FBI arrested 5 men and 1 woman on charges of conspiracy to violate the espionage laws. These six persons were: Philip Jaffe, publisher of a small Communist magazine called Amerasia which was used to promote the cause of the Chinese Communists and criticize the Chinese Nationalist Government; Kate Mitchell, editor of Amerasia; Mark Gayn, a free-lance journalist who specialized in Asiatic affairs; naval lieutenant John Roth, who had been a research worker on Amerasia and had recently served in Naval Intelligence; Emmanuel Larsen, a specialist in the State Department's China Affairs Division; and John Stewart Service.

For some time, documents labeled "restricted" and "top secret" had been disappearing from the files of the State Department and other Government agencies. More than 1,700 such documents had vanished. Then material from these secret files began appearing in articles in Amerasia—in some cases entire documents appeared verbatim—and in articles written by Mark Gayn which appeared in other magazines. When arrested, these persons had some of the secret stolen documents in their possession.

Service was not indicted, and the whole affair was buried under a cloud of secrecy.

The appointment of Service and Atcheson to General MacArthur's staff was of considerably more political importance in China than it was in the United States, it showed plainly, to both Chiang Kai-shek and Mao, what Asia could expect from the State Department and the administration.

Shortly after his return to Washington, in a meeting with President Truman and Secretary Byrnes, on October 13, 1945, Hurley said that he wanted to resign as Ambassador to China—because he was not receiving proper support for the American policy which he had been sent to China to make effective. Truman and Byrnes both urged Hurley to reconsider, to return to China to finish the job of transition from war to peace in Asia. Concerning the diplomats with whom he had difficulty, Truman said that Hurley could fire anyone that interfered.

"Why?" Hurley asked, "I only make them stronger by firing them." And he reminded the President that the men who had been relieved from duty in China had all been transferred to positions from which they were able to nullify his efforts to make effective the policy which Truman said he approved for China.

In their several conferences, Pat Hurley again and again asked the Secretary of State for either a public statement or a written statement of American policy in China, but no such definitive statement was issued.

On Monday, November 26, 1945, a series of events united to bring to a climax the con-

flict between Pat Hurley and the forces operating within the State Department, between America's traditional policy of supporting Chinese independence and the Yalta policy of restoring imperialist control over that country:

1. Secretary of State Byrnes had declared privately that he would prefer to have an Ambassador in China who agreed completely with the Yalta and Potsdam policies.

2. The Secretary of State had stated to a member of the Chinese delegation to the United Nations that, now that the war was over, he was thinking of giving the Chungking diplomatic post to a deserving Democrat. When Wang Shih-chieh returned to China from a conference of the Foreign Ministers of the United Nations, he stated that Byrnes had made it known that Hurley would soon be replaced by a deserving Democrat who would go along with the present American policy in China.

3. An article appeared in the Communist Daily Worker, based on secret and confidential information sent from China by the Ambassador.

Here was a clear indication that it was impossible to send confidential information to the President or the Secretary of State without the danger of having it turned over to propagandists to be used to defeat American policy. What, Hurley asked himself, was an American's duty in such a situation?

Byrnes tried to persuade the Ambassador not to resign. Byrnes again insisted that both he and the President upheld traditional American policy toward China. But no public announcement or written statement of policy could be procured, so Hurley handed the Secretary his letter of resignation:

"MY DEAR MR. PRESIDENT: I hereby resign as Ambassador to China. In tendering my resignation I wish you to known that I am in agreement with the foreign policy outlined by you in your recent Navy Day address.

"In the higher echelon of our policy-making officials, American objectives were nearly always clearly defined. The astonishing feature of our foreign policy is the wide discrepancy between our announced policies and our conduct of international relations.

"The professional foreign service men sided with the Chinese Communist armed party and the imperialistic bloc of nations whose policy it was to keep China divided against herself.

"The Hydra-headed direction and confusion of our foreign policy in Washington during the late war is chargeable to the weakness of our Foreign Service. If our Foreign Service had been capable of understanding and sympathetic effectuation of our announced war aims, it would not have failed so completely to couple our logistical strength with our foreign policy to obtain commitments to the principles for which we claimed to be fighting from the nations to which we gave the strength of our productivity and manpower.

"America's economic strength has been used all over the world to defeat American policies and interests. This is chargeable to a weak American Foreign Service."

By his dramatic method of resigning, Ambassador Hurley made a bold attempt to focus the glaring light of publicity on the shadows of subversion within the gloomy State Department Building, and thereby to force a thorough investigation. The only solution to the situation, the only effective solution, would be a nonpartisan congressional investigation of the entire foreign-policy dilemma—an investigation that would have the support of both political parties, the President, and the Secretary of State.

Realizing that merely his own word-of-mouth charges against the career diplomats would not be enough to overcome the inertia of the administration and force the Senate to authorize an investigation of the Nation's foreign policy, Hurley presented to the Committee on Foreign Relations a list of 13 classified and encoded documents that would prove his accusation of anti-American influence within the Department of State.

The documents were furnished to the Senate committee by the State Department—but with the statement that it would be detrimental to national security if they were released to the public. So Pat Hurley was denied the use of these reports and letters, some of which he had written himself, and all of which had been among the Amerasia papers which had been given or sold to the Communists and used by them. He was denied the use of the evidence that would have proved his charges and denied access to these documents by the very persons who would have been shown by them to be guilty. Of this action, Hurley says, "I say that these secret documents are available to all who oppose the principles that have made America great. They are available to all who favor communism, imperialism, and all forms of totalitarianism, but none of the Amerasia papers are available to the American people."

The proposed investigation died, stillborn—and when, on December 28, Secretary of State James Byrnes returned from the Foreign Minister's conference in Moscow (where, as President Truman admitted, "we gained only an empty promise of further talks"), Pat Hurley had been so discredited—"plowed under" was his own description—that the press services refused to print one word of a statement that he issued concerning the Moscow conference.

To his countrymen, Pat Hurley could have asked, as did the Apostle Paul: "Am I therefore become your enemy because I tell you the truth?"

Do We Need United States Aid to Schools?

EXTENSION OF REMARKS

OF

HON. COYA KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 23, 1957

Mrs. KNUTSON. Mr. Speaker, our Nation's schools are in great need of some types of Government aid. A good friend of mine, Mr. Ernest Tucker, has done a series of articles on this subject for the Chicago American.

Because these articles have a bearing on the bill I introduced for student loans, I ask permission to insert this excellent series of three articles into the RECORD.

The articles follow:

[From the Chicago American of January 3, 1957]

DO WE NEED UNITED STATES AID TO SCHOOLS?

(By Ernest Tucker)

Biggest debate at the upcoming session of Congress won't be foreign policy, arms reduction, or even tax cuts. The hottest fight will center around that perennial hot potato, Federal aid to education.

Both administration and opposition leaders predict that a school aid bill in some form will be passed this year. It is virtually certain that the United States, for the first time, is going to step into the business of building schools.

The fight will revolve about these questions: Who will get the money? How much? For what? How will it be given? What strings will be attached?

PROPOSALS DRAW PROTESTS

Proposals for Federal subsidies to States for building schools always have provoked loud roars of protest from those who feared the heavy hand of Washington in local problems of education.

They see Federal interference on every level, from setting up reading programs to standards for accrediting teachers. The wealthier States—Illinois, Pennsylvania, New York, California, among others—are afraid Federal aid will mean they will be taxed to build schools in Mississippi and Arkansas.

It has been increasingly obvious that something has to be done. There is a nationwide shortage of 300,000 classrooms. In spite of feverish building programs, the shortage is increasing at the rate of 50,000 a year.

Causes are not hard to find. During the depression years there were few schools built and during the war years practically none. When the postwar baby boom arrived, the country found itself with too few schools, and many of those old, obsolete or unsafe.

EFFECTS OF CROWDING TOLD

Results of the lack of school buildings are apparent in the Chicago area, especially in the mushrooming suburbs: Double-shift schools, overlarge classes, kindergartens eliminated, classes held in stores and basements.

New classrooms are being built at a rate of 50,000 to 60,000 a year—but this just barely meets the swiftly growing school population and doesn't reduce the overall shortage.

It has been estimated that to provide adequate school space for the country's children would cost between $10 billion and $12 billion. Obviously, say the legislators, this vast sum means some help from the National Government is needed.

President Eisenhower has repeatedly asked for school aid in his annual messages. Up until now, every measure has been defeated, but in every year since the war, pressure for some kind of aid has mounted until it looks now as if 1957 is the year.

Estimates of the amount and nature of aid differ, but legislators and spokesmen for the States agree on one thing: Any law should carry the strongest possible guaranties against a bureaucratized national school system directed from Washington.

In recommending passage of a school aid bill introduced at the last session by Representative KELLEY, Democrat, of Pennsylvania, the House Committee on Education and Labor said:

"The primary purpose is to find a method whereby the Federal Government can help States meet the classroom shortage and, at the same time, insure against Federal control or interference in the operation of school systems."

One of the biggest problems confronting those attempting to work out a bill is the wide variety in needs and resources among the States, and among the school districts in each State.

As the school aid bill is shaping up, to become eligible for money the chief education officer in each State would have to submit a list of needs, giving each one a priority rating, and specifying what local funds are available and what local plans are.

Federal aid, according to plan, would be made available in three different ways:

1. By Federal purchase of school bonds.

2. By Federal help to State officials or agencies concerned with building schools; the Government would meet up to one-half of the basic debt service due for 1 year.

3. By direct grant on the familiar matching-fund basis, under which the State would equal the Federal contribution.

Loudest argument is likely to revolve around two opposed plans for distribution of the money.

One, favored by the President and his spokesman, Welfare Secretary Folsom, calls for aid to be given on the basis of need.

Under this scheme, the poorest States would get the most money. Congressmen from wealthier States are extremely chilly toward this idea. They claim the end result would be that Illinois, for example, would be paying far more in taxes than it got in aid—in effect, no help at all but rather a drain.

They favor aid on the basis of school population, the number of children between the ages of 6 and 17. If a State had 5 percent of the total number of children between those ages in the country, it would get 5 percent of available Federal money—as simple as that.

Possible solution is some formula based on the number of children in a State, funds available, percentage of the State budget normally devoted to education, and need.

Although conceding that Federal money to build schools is badly needed and probably will come this year, some Congressmen fear that providing funds for construction will be only the first step in an ever-expanding program of funds for education.

Another grim specter is the shortage of teachers, a specter growing grimmer as more and more children pour into the schools. The shortage extends from kindergarten level through the universities.

Another is the crying need for more scientists and engineers of all kinds. Our increasing lack of chemists, physicists, and researchers is especially appalling to those who view the number of scientists being developed by the Soviet Union.

One of the basic causes for our shortage of both teachers and scientists, according to experts, is the high cost of a college education. The problem of financing compels an estimated 200,000 college students per year to drop out of school.

Several schemes have been advanced to correct the situation. All involve Federal money but not in the form of grants. These proposals, designed to let more young Americans complete their education, will be examined in the next article in this series.

[From the Chicago American of January 4, 1957]

THREE PLANS FOR UNITED STATES AID TO COLLEGE STUDENTS

(By Ernest Tucker)

With the opening of the new Congress, one of the most complex problems it has to face is: What will we do about our schools?

President Eisenhower has shown his interest in the problem by summoning a second nationwide conference on education this year, following the first White House Conference of 1956.

Public interest is demonstrated by the ever-increasing avalanche of letters and wires pouring in on the legislators, demanding United States action on every phase of education, from whether Johnny can read to financial support for small colleges.

The whole question of Federal aid to education is a hot one. The Federal Government has been asked for direct grants to school systems, for a matching-fund deal with the States, for construction funds, and for money to pay teachers more.

Opponents of Federal aid to education maintain that grants of money would be followed immediately by Federal control, and the schools and colleges subjected to political pressures and whims.

Those pressing for some form of aid cite desperate shortage of classrooms and teachers, especially teachers of technical subjects; the plight of the smaller colleges, many of which are closing their doors; and the inability of some States to provide adequate schools.

One problem engaging the attention of both legislators and educators is the growing cost of higher education, which is preventing many brilliant students from going to college.

Oddly, three different people have come up in recent months with a carefully worked out answer to this problem. None of the 3 knew about the other 2, but all arrived at the same conclusions through independent study.

Their plans differ in detail, but are essentially similar.

The three are Representative COYA KNUTSON, Democrat, of Minnesota, a freshman Congresswoman last session; E. D. Odenbaugh, a Pittsburgh accountant; and William W. Cavanaugh, a Cleveland attorney.

Mrs. KNUTSON introduced a bill, H. R. 11414, in May 1956, which contained three major provisions of the scheme. Odenbaugh and Cavanaugh have been working independently to find support for their plans.

All three plans are designed to help superior students finance college educations through loans from the Federal Government.

Basically the plan works like this:

A Federal agency would be set up to handle the matter. Any young person wanting to go to college could apply to the agency for a loan. To be eligible, he must qualify as to ability.

When he passes, he may be given a loan to attend the college or university of his choice.

All three plans emphasize that the student may attend any school meeting educational standards. In the case of Illinois the standards are set by the North Central Association.

This would prevent funds from going, for example, to a quack school of the type of some of those set up after the war to get fat on GI loans.

The top amount the student could borrow varies among the three plans, but would be about $1,500 a year. The student could borrow part of that if he needed only a few hundred.

All the plans stress that this is a loan, not a gift, and would be repaid by the student during his working life. Major features of the plans are the long time of repayment and the low rate of interest.

Cavanaugh figures:

"Say you borrow $4,000 from the Government for 4 years of schooling. If you retire at 65, as most people do who get to retire, that gives you about 43 working years.

"Divide the $4,000 by 43 and you come up with somewhat less than $100 a year, say $95. Of course, there would be in addition a small charge for interest and insurance."

The insurance would cover loans unpaid because of death or disability.

Representative KNUTSON's plan calls for 3 percent yearly interest. Some financial experts call these rates of interest far too small.

Odenbaugh's idea envisions the whole thing handled through the social security office; the borrower is issued a special social security card.

This device, Odenbaugh feels, would keep close track of the borrower throughout his career and make defaulting next to impossible.

Mrs. KNUTSON's bill provides for establishment of a national student loan board, consisting of three members appointed by the President from among "persons who are learned in the social sciences or are experienced student counselors."

Cavanaugh believes repayment should be made through the Internal Revenue Bureau, with the loans taking the form of a lien on the person or his property, similar to a tax lien.

Odenbaugh said:

"I have been getting opinions from college presidents on the plan, and they are all enthusiastic.

"It would help the hundreds of thousands of young people whose talents are undeveloped because of lack of opportunity for higher education.

"It would provide financial help to many colleges which are struggling to make ends meet. In view of the lack of college space, it is a tragedy to see some of these colleges close their doors.

"The plan would take a crushing burden from parents who are sacrificing their own comfort to send their children to college."

Value of a college degree, Odenbaugh said, has been estimated at $100,000 to its possessor. He asked:

"Where could anyone get such repayment on an investment?"

Cavanaugh stressed the benefit to the country of tapping the pool of brainpower and added:

"How many potential engineers, scientists, doctors, teachers, or students of the humanities are in menial jobs because of lack of money?"

Representative SIDNEY YATES, of Illinois, said in a letter to his constituents:

"We want our sons and daughters to be well educated. And yet fully half of our young people having the intellectual capacity to continue their education beyond high school do not do so, for one reason or another.

"Until this percentage is greatly improved, we will still have our Achilles' heel."

[From the Chicago American of January 5, 1957]

NEED FOR STUDENT-LOAN PLAN

(By Ernest Tucker)

Statistics showing the number of young Americans unable to finish their education are giving increasing concern to national leaders.

Perhaps 200,000 a year drop out of school because of financial difficulties. Surveys have shown that of the top 20 percent in high school—the ones who must furnish leaders of the next generation—two-thirds never finish college.

Of these above-average students, 1 in 5 doesn't even finish high school. Two more don't enroll in college.

In testimony last summer before the Democratic national platform committee, former Senator William E. Benton of Connecticut said:

"The central and immediate challenge to America is to check the vast and tragic leakage of so much of our best talent from our educational system."

NEED GROWS

After World War II, the GI Bill of Rights invested $14 billion in education for veterans. GI benefits have ended, legislators point out, but the need for education continues to grow.

More and more Members of Congress are looking for some new formula which will give help to those young people who need it, without the shortcomings of the GI bill and without undue Federal interference with schools.

Leaders of the administration are eyeing with concern the mass production in the Soviet Union of engineers and scientists particularly. All agree that the answer of the United States cannot be state-controlled or compulsory college education.

One possible answer has been found in a plan conceived independently by a Congresswoman, Representative KNUTSON, Democrat, of Minnesota, and two private citizens, E. D. Odenbaugh, of Pittsburgh, and W. W. Cavanaugh, of Cleveland.

FEDERAL LOANS

In general terms, all plans provide for Federal loans at low interest to qualified high-school graduates wishing to continue in college.

The loans would permit the student to attend any accredited institution of his choice, State supported or private, and would be paid back by earnings after graduation.

Representative KNUTSON has introduced a bill calling for a National Student Loan Act to set up an agency for such loans. Cavanaugh and Odenbaugh are seeking public support for their ideas.

All admit the measure would mean creation of another Federal agency or at least vast expansion of an existing one—perhaps Social Security—but all say that the plan would eliminate the greatest objection to direct Federal aid to schools: increasing Government control.

Each student loan would be a transaction between the Government and an individual, in which the school would not be involved.

Sponsors stressed other benefits of the scheme:

The money is not a give-away by a loan, which in time would build up a large revolving fund.

Small colleges now threatened with extinction would be helped by the student loan money. They would be enabled to reverse the spiral which is heading them into disaster: lack of money forces them to curtail courses and hire fewer teachers. Fewer students are attracted, which in turn reduces the money coming in.

A great many young men and women now unable to attend college would have become teachers; the student loan scheme would enable more teachers and college-level instructors to be trained, filling a crying need.

SALARIES SMALL

Small liberal arts colleges now depend largely on liberality of alumni and private donations. Recently the Associated Colleges of Illinois, representing 23 institutions, acknowledged receipt of their millionth dollar from corporations in the State.

Such gifts help pay faculties, but even with outside aid faculty salaries remain small—average faculty salary in Illinois liberal arts colleges is $4,856. Instructors leave campuses each year by the thousands to take much better paying jobs in industry.

Proponents of the student loan program believe the pumping of Federal money into the colleges, via the loans, would enable them to raise instructor salaries and stop the drain.

The plight of colleges, and the shortage of teachers, are of course not the only problems in education confronting the country.

PLAN INCOMPLETED

Funds also must be found to build more classrooms. Desegregation continues to concern a large segment of the population. Underlying it all is the battle of what constitutes education—traditional versus experimental teaching and subject matter.

But backers of the plan are convinced that the student loan program would help the whole situation.

Certain things remain to be worked out, they admit—for instance, an actuarial survey would have to determine the rate of interest to be paid by the borrower.

The plan might bring many more students into already overcrowded colleges, particularly in view of the rapidly increasing number of youths of college age.

But, originators of the idea say, the fact that colleges might be overcrowded is not excuse for denying a college education to a qualified student. Besides, the rebuttal is, loan money would help schools expand.

WHO PAYS?

There is one question in the student-loan idea to which no one has yet provided a satisfactory answer: What about girls?

It would be manifestly impossible to restrict loans to boys. Yet of the young women going to college, the vast majority get married within a few years and cease to be money earners.

Who, then, assumes the burden of their debt? Will a prospective husband be scared away if he learns he must take over as much as $6,000 his fiancee owes the Government?

Still, those favoring the plan are confident that such "bugs" can be worked out by experts before the plan is legalized.

The student-loan idea has won endorsement from a large number of educators and political leaders. In the coming session of Congress, Representative KNUTSON'S bill, which is now in committee, probably will be heard.

Whether or not it goes any further, there is one thing sure: the student-loan idea, or a variation of it, is going to provoke wide discussion in 1957.

The Arab States: Syria and Lebanon

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article which appeared in the March 4, 1957, issue of Congress Weekly:

THE ARAB STATES: SYRIA AND LEBANON

(By Joseph B. Schechtman)

Long outdated western semantics still occasionally refer to Syria and Lebanon as "those twin Levant states." In fact, however, there is very little in common between the two neighboring republics. Indeed, there are many more elements of variance, even of contradiction and conflict, than of similarity between the two countries.

The only feature common to both states is the utter heterogeneity of their respective populations. The 3,670,000 Syrians (among them 500,000 nomads) are a hodgepodge of at least 20 ethnic and religious groups, with the Arabic language as the strongest unifying link. The Moslems are split into Sunnites, Shi-ites, Allowais, Druzes and Ishmaelites; and the Christians go even further in sectarianism; Maronites, Greek Orthodox, Greek Catholics, Jacobites, Protestants are but a fraction of the long register.

The 1,300,000 Lebanese present no less motley a picture: the largest group are the Maronites, then come Sunnites, Shi-ites, Greek Orthodox, Greek Catholics, Druzes, Armenian Orthodox, Armenian Catholics, Protestants. The ingredients are largely the same, but their proportion is different in each country. Syria is predominantly Moslem, while Lebanon maintains a precarious balance between her Christian and Moslem components.

There is little charm in being a minority in Syria. Minority groups are regarded as "fifth columns," and serve as scapegoats of every emotional outburst of Arab nationalism. Early in November last year a Day of Algeria was proclaimed throughout Syria as a demonstration of Moslem solidarity with the Algerian rebels. In Aleppo the Moslem mob, with the connivance of the authorities, attacked and plundered local Catholic institutions, both religious and lay. Convents were destroyed, religious schools and the French Lycée laique were burned, 2 persons were killed and 19 wounded.

Mass arrests among the Druzes and Allowais are common occurrences. Whole villages have been razed and property confiscated. The army has received a free hand in areas populated by these two minorities. Unrest among them is widespread, and the government is well aware of it. Of the 47 men on trial in Damascus for high treason, more than half are Allowais and Druzes. Significantly enough, the 60-page committal order charges the accused with intention to seize the Druze Mountains in southern Syria under the leadership of Emir Hassan al-Atrash, and the Allaweyeen Mountain area in northern Syria under Mohammed Marouf. Christians in Lebanon and Druzes in Israel have naturally protested against Syrian persecutions of their coreligionists.

The overwhelming majority of Syrians, in particular the peasantry, are simple and tenacious people, whose main concern is to be left alone. But most of the intelligentsia and the small upper and middle classes live in a delusionary world which recalls the glorious past when, under the Ommeyad dynasty, Damascus was the center of an empire larger than Rome's. Their ambition is to play a leading role in the Arab national movement. The relative smallness and backwardness of their country they try to compensate for by the violent passion of their nationalism and xenophobia. The Syrian Government is busily outdoing even its Egyptian and Saudian allies in the vehemence of its "Arabism" and its denunciations of western imperialism and Zionism.

It is also outdoing the Nasser regime in the directness and intensity of its pro-Soviet policy. The ruling military junta, though heavily leftist, is not Communist, nor are, of course, the majority of Syrians. But the Syrian Government has gone much further than any Middle Eastern country in endorsing the Soviet line and severing all ties with the Western World. At the conference of the Arab League states in Beirut last November, Syria adopted an all-out pro-Soviet stand even stranger than that of Egypt. Even the usually reticent State Department officials, who have long been depreciating all reports about Soviet penetration into Syria, felt compelled to admit that the Damascus regime was "already a virtual Soviet ally any may topple all the way into the Soviet camp."

For months, Soviet (predominantly Czech) arms have been pouring into Syria at an alarming rate. Their worth has been conservatively estimated at $56 million, almost 60 percent of the country's total 1956 budget; in 1957 the percentage is expected to be still higher. The quantity and intricacy of the weapons delivered appear to be beyond the capacity of Syria's small and relatively untrained army of 25,000 men. Soviet technicians and instructors in considerable numbers have been reported in several parts of the country. In addition to the regular army, about 6,000 members of a quasi-military organization called the Young Valiants have been provided with short-barreled Czechoslovak tommyguns and took 3 weeks of military training seasoned with a heavy dose of leftist ideological indoctrination.

Government spokesmen deny having made commitments to Soviet Russia. But they frankly admit their strong sympathy for and gratitude to the Soviet bloc for its espousal of the Arab cause. The most powerful man in Syria, Lt. Col. Abdel Hamid Serraj, chief of army intelligence, divides his admiration between Nasser and the Soviet leaders. London sources claim there is evidence that leading members of Syria's military junta are actually in Soviet pay. President Shakri al-Kuwatly visited Moscow and was assured by Chief of State Voroshilov that the Soviet Union is prepared to give Syria "the necessary assistance." While on a visit to India, Kuwatly reciprocated with a vigorous attack on "Western imperialism."

This strong pro-Soviet line has not been taken for foreign consumption only. Broadcasts from Damascus preach to the Syrian people the virtues of Soviet Russia. Of the capital's 27 dailies 9 are strong advocates of the U. S. S. R., many others are sympathetic, and none in recent months has opposed communism. Syrian papers printed nothing

but Tass accounts of what was happening in Hungary. Soviet periodicals, distributed by the Soviet Embassy, can be seen on all newsstands, while virtually all Western publications are banned. Soviet motion pictures are shown everywhere. Free scholarships are offered to Syrian youth for study in Russia and East Germany.

As against this Syrian picture, Lebanon shows quite a different political orientation.

Though a member of the Arab League, Lebanon refused to follow Syria's example in breaking off diplomatic relations with France and Britain after their attack on Egypt. Foreign Minister Charles Malik only recently told the Paris daily Le Monde that Lebanon's relations with France were excellent and will even get better in the future. He also welcomed the Eisenhower doctrine, which Syria had indignantly condemned.

Recent reports from Teheran hint at the possibility of Lebanon's joining the Baghdad Pact. A considerable section of Lebanese public opinion, both within the country and abroad, is outspokenly opposed to Nasser's attempts to draw Lebanon into his own military grouping. Particularly vocal are Christian groups. Sheik Pierre Gemayel, the leader of Al-Kataeb, the National Youth Organization, publicly declared: "We didn't fight the French mandate in order to accept the Arab one." The paper Lisan-al-Adl openly denounced flirtation with pan-Arabism, inside and outside the Arab League and accused the aggressive Egypto-Syrian group of striving to do away with Lebanon as a state, as a Christian nation, as a bridgehead of the West, to use Nasser's words.

The Maronite patriarch called on the Lebanese Prime Minister not to let Lebanon be dragged after Egypt, so as not to forfeit her ties with the Western Powers. Al Nehar recalled that although 64 U. N. member states censured Britain, France, and Israel for their military action against Egypt, "all these 64 countries do recognize the existence of the State of Israel," and, therefore, "peace with the safeguarding of honor and sovereignty" is the need of the hour. Al Hayat insisted that the Arab States must "at once start reconsidering their plans and drop the policy of words and declarations." Beirut asked bluntly: "Are the Arabs ready to solve the problem once and for all? The solution means peace, with all its implications." Lisan-al-Adl went even further and boldly formulated Lebanon's new policy of alliances:

"What Lebanon needs right now, and very badly, is alliances, closer connections with those who share her ideals of human dignity and her vital interests as a non-Moslem state.

"First and foremost, such connections should be sought on the one hand with the French, who are our traditional well wishers, and with the Israelis on the other hand. Indeed, the latter are our nearest geographical and historical neighbors. They form a bridgehead of the West like ourselves. And they have proven their ability not only to withstand but to roll back the hordes of Egypt's self-appointed Mohammedan pharaoh. * * *

"Only thus can Lebanon, like all Christian and all other minorities in the Middle East, hope to survive the dreadful upsurge of Arab-Moslem fanaticism, of Soviet-sponsored Nasserism.

"Lebanon is western in spirit and orientation, apprehensive of the mounting wave of Arab-Moslem fanaticism which is threatening to engulf her, wary of her 'twin sister' Syria, afraid of being completely isolated, desperately looking for alliances but still not daring to take a bold step, because she is a country divided against herself, half her population being Moslem and pan-Arab in their allegiance.

"Syria and Lebanon are wide apart in their spiritual personality, in their attitude toward the world of today, in their geographical aspirations. Syrian leaders are longing for a union with Egypt and have already started negotiations to this end. Lebanon's future is intrinsically linked with that of Israel."

The Welfare State in Great Britain

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 25, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, there are many signs which indicate that the United States is on a toboggan to the welfare state. Mr. Colm Brogan, a well-known British writer on political and economic subjects, has prepared an article for Human Events, and under date of March 9 he indicates that Britain is fleeing the welfare state.

Under leave to extend my remarks, I am including this article:

FLEEING THE WELFARE STATE—A REPORT FROM BRITAIN

(By Colm Brogan)

A sample survey recently conducted in the University of Cambridge revealed a remarkable and disturbing state of affairs. Of the students questioned, 38 percent said either that they were seriously thinking of emigrating as soon as they had completed their course, or else had already firmly decided to do so. Among the women students the proportion was very much higher.

These figures must be taken very much more seriously than the figures for a survey, among the mass of the population, which showed that much the same percentage would like to emigrate "if they could." This can be taken as no more than an expression of vague dissatisfaction. The great majority of those who said they would like to leave knew very well that there was not the faintest chance of the opportunity coming their way, and more than likely they would turn it down if it did come. When they said they would like to leave "if they could," they meant if some benevolent authority did everything for them, including paying their fares and settling them comfortably and securely on the other side. This is not the stuff from which pioneers are made.

But the response of the Cambridge students was something quite different. These young people are among the most intelligent, the most highly educated, and the most enterprising in the land. They are perfectly willing to make their own arrangements and take their own risks, and they are under no illusions about life in a strange land. Many of them on the scientific and engineering side have worked in Canada during their long vacations and they are familiar with the disadvantages and possible hardships that emigration might entail. Nevertheless they will go, and go on an informed and realistic decision. (It may interest Americans to know that most of them believe Canada offers better opportunity than the United States of America.)

The position is serious. Britain is spending large sums on providing the best education for the best brains, and the service of the best brains is urgently and increasingly needed at home. There is a great deal of anxious talk about Britain's lagging behind Russia and the United States of America in technical education, and ambitious plans are being put into effect to increase the supply of highly trained scientists and technicians. However, it will be of small advantage to Britain if nearly half of those trained at the public expense immediately take themselves somewhere else and add to the prosperity and progress of some other country.

These young people are different from the mass of the discontented, not only in the fact that they know clearly what emigration means, but also in the fact that they know clearly why they want to emigrate. They are flying from the welfare state.

They are flying because they feel sure that the welfare state is here in Britain for good. There might be 30 prosperous constituencies in Britain where a Conservative candidate who declared himself boldly against the welfare state could still secure election to Parliament, but in every other constituency his opposition would be the equivalent of political suicide. That is why the young people have "voted with their feet," as Lenin put it.

They have strong practical objections to the welfare state, which is, of course, financed out of crushing taxation. They know from the experience of their fathers that the weight of tax comes most heavily on people like themselves. For example, the level of income at which surtax begins to be paid is the same as it was when the pound was worth three times what it is worth today. As soon as any man begins to make a real advance in his profession, the tax collector steps in to skim off his earnings. At the same time, millions of manual workers have been progressively exempted from paying any income tax at all.

The cost of education is a special grievance. Most students in Britain now go to universities on grants made by the state or a local authority on the basis either of high performance at school or of success in a competitive examination for the number of scholarships available. But there is a means test. If a boy wins a state scholarship worth, say 300 pounds a year, he will get no more than 30 pounds if his father's income exceeds a certain level.

As a consequence, men known to me have refused promotion in their profession because the higher salary which went with promotion would mean a financial loss: they would be debarred from getting the benefits of university scholarships for their sons and daughters. This especially embitters the sons and daughters. They see their own parents living in something like genteel poverty to pay for their education, while the parents of lower income who get the whole state scholarship are spending money freely and having a good time. One man whose daughter won a more modest scholarship simply pays the money into her bank so that she can use it to buy clothes for herself. (Students at London University have claimed that their grants from public funds should include 50 pounds a year for entertainment. They think that the State should pay for their cigarettes and an occasional sherry.)

By contrast, the mass of voters regard a means test on council housing as an outrage against themselves. There is now a large population living in houses built by the local councils and subsidized both from local rates and from taxes. When a council decides to pay the subsidy only to those tenants who have a low income, there is an immediate and angry outcry.

The leading Socialist spokesman in Parliament has openly said that subsidies should be paid to all house tenants, whether they are in need or not. If this is the philosophy that the Labor Party expounds, it is scarcely surprising that one council tenant refuses to seek accommodation at an economic rent, even though he can afford to run his own airplane.

The system of taxation, rebates and subsidies works against the educated and enterprising middle class. Worse still, it is meant

to work that way. Although the job of every man in Britain is becoming increasingly dependent on the skill, the training and the willingness to accept responsibility of the vital elite, they receive no sympathy at all from those whose own skill is primitive, if they have any skill at all. One informed journalist who wrote about the difficulties of the educated middle class was startled to get a flood of letters from manual workers. Some of these men expressed themselves as completely indifferent to the woes of the middle class, while many more expressed great pleasure that these superior people with their high and mighty airs were having a hard time.

The welfare state is not only a fiscal and social machine. It is also a state of mind, and it is that state of mind more than anything else which is urging the young people of Cambridge (and elsewhere) to seek their fortunes abroad. In contemporary Britain it is considered only just that any man whose services to the community are of such value that he earns a high income should be stripped of most of it, not only to provide benefits for others, but also to show that he is really no better than the man whose contribution consists of sitting at a factory bench and pressing a button. Any man who conveys the impression that he is better than any other in any respect is regarded as the enemy of the egalitarian people.

In the heyday of Victoria's reign, the man who forged ahead and made a great name and perhaps a great fortune for himself was admired and regarded as one who had made a great personal contribution to the strength and prosperity of all. Today he is regarded with envy and resentment, and it is widely accepted that he has become wealthy only by exploiting the toiling masses.

Much more than the monetary penalties of our fiscal system, it is this envy, this assertion of the superiority of the mediocre, which is driving young people of talent and vigor abroad. They want to go to a country where they can forge ahead without provoking sulky hostility. They want to feel that a life's work of exceptional quality and usefulness will not be held against them. They want to escape from a socially stifling atmosphere, to get away from a country where no exceptional talent is gladly recognized, except the talent of comedians and crooners, boxers and football players. If the draining away of our best brains and training continues to increase, then the mass of the British people will be brought in the end to recognize that while they cannot do without the direction and the services of the elite, the elite can do very well without them. The elite can always move out to some country where envy is not selfrighteously disguised as egalitarianism or democracy, or some other cant word which makes a vice a virtue.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Address by Hon. William F. Knowland, of California, at Long Island Charter Day Banquet

EXTENSION OF REMARKS
OF
HON. WILLIAM F. KNOWLAND
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Thursday, March 14, 1957

Mr. KNOWLAND. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an address I delivered last night at the annual Charter Day banquet of Long Island University.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY UNITED STATES SENATOR WILLIAM F. KNOWLAND, AT LONG ISLAND UNIVERSITY CHARTER DAY BANQUET, WALDORF-ASTORIA, NEW YORK, N. Y., MARCH 13, 1957

President Conolly, your eminence Cardinal Spellman, distinguished guests, students, and friends of Long Island University, this Nation of ours has grown from a weak colony of 3 million on the Atlantic coast to a great power of 170 million people, the most productive nation the world has ever known.

Other nations have been or now are larger in land area, in population and in natural resources. Yet they have not been able to give to their people the freedom and the standard of living Americans have enjoyed.

As important as is the productive capacity of our Nation and its military strength, these are not the factors which alone could preserve our freedom or enable us to help maintain a free world of free men. The inner strength of America has not been its great cities, its huge industrial plants, its extended transportation systems, or its variety of natural resources.

The factor which made America an inspiration to the rest of the world grew out of our Declaration of Independence, the Constitution of the United States, and the spiritual values which the founders of our Republic recognized and by which they were guided.

We have recognized that there was a higher moral law to which governments were also accountable. We have humbly acknowledged the divine inspiration which made and preserved us as a nation.

We have read of and been inspired by the action of George Washington in kneeling in prayer during the dark days of Valley Forge, and of Lincoln doing the same during his lonely vigil in the White House through the darkest days of the Civil War.

Instinctively we know that human freedom is a greater force than tyranny.

We also instinctively know, though at times our allies and our own Government may for expediency attempt to satisfy a potential aggressor that there are some things in life which cannot be compromised. Munich and Yalta should have taught us that much.

We know that no international organization and no government can long survive a double standard of international morality. We cannot have one set of rules for the law-abiding nations or the small or weak ones, and another set for the aggressors or the big powers.

The failure of the Soviet Government to pay any attention to the 10 resolutions passed relative to their aggression in Hungary brought home again to the people of the United States and, I believe, the entire free world the admonition in Second Corinthians:

"Be ye not unequally yoked together with unbelievers. For what fellowship has righteousness with unrighteousness and what communion has light with darkness?"

For our country the priceless ingredient has been our constitutional form of government which guarantees our religious, personal, and economic freedom.

The incentives furnished have constantly opened new horizons.

In this atmosphere Americans of each generation have sought to leave to their children a better land than they themselves found. Not just better in a material way but in the educational and cultural developments that make for better family and community life.

New inventions in various industrial fields and the tremendous potentials of the peacetime development of atomic power are bound to challenge us for many years into the future.

We must not take our constitutional form of government or our free enterprise system for granted. Neither fall into the category of something that can be locked in a safe-deposit box and kept forever secure. Each generation must be prepared to make the necessary sacrifices to maintain them that our Founding Fathers were prepared to make in the first instance.

We are constantly faced with the threat of international communism to destroy human freedom everywhere in the world. Against this external danger we must maintain strong and adequate defenses—air, sea, and land—at home and abroad as long as the menace continues. This may well be for a decade or more.

There is also the danger that every free government around the world faces. This is internal subversion, sabotage, and espionage by the international Communist conspiracy.

Government, industry, and labor must be constantly on the alert against this termite menace which could do great damage though the outer structure might seem to be unimpaired.

Mr. J. Edgar Hoover, Director of the Federal Bureau of Investigation, has clearly outlined and documented the fact that the Communist New Look is a study in duplicity. The domestic Communist Party as with the Kremlin has a fixed objective though the tactics remain fluid.

We also confront a danger of another sort. This does not come from an armed enemy from without nor from a foreign led conspiracy from within. This springs rather from our own people and the institutions we have created. Apathy on our part or an inclination to let the other fellow assume the responsibility that each citizen has an obligation to undertake, could well lead to a chain of events that would undermine both our governmental and economic systems.

The founders of this Republic knew well the history of the world up to their time. They knew that where there was a concentration of power in a single agency of national government that the freedom they sought to guarantee could easily be lost.

As a result, they not only created three great coequal branches of the Federal Government, the legislative, executive, and judicial, but they also made the Federal Government one of limited and of specified powers and reserved all other powers to the several States and to the people thereof.

The Congress is a coordinate and not a subordinate branch. It was made the repository of all legislative power.

If we are half as wise as the men who gave us our Republic and as those who helped to maintain it, we will see to it that no administration, Republican or Democratic, departs from the letter or the spirit of the American Constitution.

In the year 1926 when your university was founded, the population of the United States was estimated at 117 million and today it is over 170 million. During that same period of time the annual cost of the Federal Government has gone from $2,888,000,000 to over $81,000,000,000.

The national debt has grown from $19,643,000,000 to over $270,000,000,000. The annual interest alone on the debt is now greater than the total cost of all functions of the Government (including national defense) as late as the fiscal year 1938. The annual interest charge is larger than the total tax receipts of the Federal Government in any year between the organization of our Government under the Constitution in 1789 and when we entered World War II in 1941.

Frankly, I do not subscribe to the theory that if individuals or business organizations spend their own earnings it is inflationary whereas if the Government takes it from them and spends it that is not inflationary.

I believe that Government spending has been and remains one of the major inflationary factors in the country today.

The challenge we face is how to meet the large defense expenditures necessary for the preservation of our way of life, to take care of our growing needs for public and private facilities and to avoid the tendency to solve the problem by concentrating more and more power in the Government at Washington.

This will take some voluntary restraint on the part of citizens generally, businessmen, farmers, and labor in scrutinizing new and additional programs until we can digest programs now under way or complete certain of the projects before undertaking additional ones.

Continuous inflationary pressures could lead to demands for price controls which in turn would result in controls over wages and profits and the allocation of both manpower and materials.

There are those in this country who would welcome the opportunity for the imposition of such controls.

It is my strong belief that this Nation of ours is too large geographically and too complex economically to be either effectively or efficiently run by any group in Washington.

If we ever let our economy slip under such controls in peacetime we may not get out from under them again in our lifetime. Any prolonged period of such controls in peacetime would fundamentally change not only our free enterprise economic system but the vast concentration of power that would be necessary in Washington would have the gravest type of repercussions on our constitutional system as well.

For that reason this is the time for prudent and responsible citizens in private industry, in labor, in agriculture, and, indeed, throughout our entire population to take a look at the growth of the Federal Government. Constructive support is needed for the efforts which will be made to reduce nonessential spending, to apply some payments on the national debt, and to lay a foundation for some further tax reductions next year.

The strength of our country depends, of course, on far more than our Armed Forces alone. It rests upon a sound national economy and a solvent Federal Government.

The developments that take place in other sections of the world are bound to have an impact upon this country. In this day and age of the airplane and the atomic weapon, we can no more return to isolationism than an adult can return to childhood regardless of how pleasant the recollection might be.

Foreign policy is too important to be left to Government alone. It is of concern to all of our people. In order to have a sound foreign policy it is necessary to have an informed public.

Our objective in the world is to maintain peace with honor.

We cannot buy international friendships any more than personal friendships can be purchased.

Nor should we attempt to remake the world in our economic or political image.

Our efforts should be directed toward helping others to help themselves. In this private investment should play a major role.

In the period since the close of World War II, the United States has provided over $50 billion in economic, military, and technical assistance to aliens, neutrals, and former enemy countries outside of the Iron Curtain.

There has been nothing comparable in the world history of civilization to this program.

It was a matter of mutual interest to help rehabilitate the war-devastated areas of the world both allied and enemy alike, not only as a matter of humanity but because it was in our own interest as well not to have the Soviet Union or international communism take advantage of the economic and political chaos which otherwise would have existed.

With the danger of overt Soviet aggression which was demonstrated by the taking over of Czechoslovakia, the Berlin blockade, and the aggression in Korea, it was also in our mutual interest to bolster the defense forces around the periphery of the Soviet Union.

Many of the newer nations of the world having resources of their own are at a disadvantage because they lack technical skills in public health, agriculture, industry, or education. We have done much to encourage the exchange of technical information and have brought students from many lands to the United States so that they might gain knowledge with which they could assist their own countries when they return home. This program, I believe, is highly desirable and should be continued and expanded.

A new issue has recently been presented to the American people and the American Congress. This is the question as to whether or not the United States should undertake an economic-aid program to the nations behind the Iron Curtain and under Soviet military occupation. A Communist Polish delegation is here seeking $350 million in grants, loans, and credits. If, as many believe, the Soviet Union is stripping Poland of agricultural and industrial production, United States aid would, in effect, be indirect assistance to the Soviet Union.

If, on the other hand, the Soviet Union is having to give economic support to the Communist government of Poland, we would be relieving the Soviet economy of that burden and making available to them additional resources.

I do not believe that it is in our national interest to furnish such economic assistance to Poland until or unless the Soviet military forces are withdrawn from that country and the people have an opportunity through free elections to select a government of their own choice.

If there is hunger in Poland, I would support our Government furnishing whatever food is necessary to meet this problem. There would be no political conditions attached to the aid, and the only assurances we should seek is that the distribution be made by the International Red Cross or by recognized nonpolitical, charitable, or religious organizations, so that the food sent would not be used by the Communist government as a weapon to reward Communists and to punish non-Communists. The American people have always had a strong humane impulse, and we sent food into the Soviet Union in the period of the 1920's under the Hoover relief program to relieve the famine conditions that then prevailed.

But over and beyond such relief, is it wise to make Marxian communism workable with funds from our Government provided by taxes levied on our overburdened people?

Will we be strengthening the warmaking potential of the Soviet world?

Will we be giving a new propaganda weapon to the Communists so that in the next general elections in Italy or elsewhere they can say:

"You have nothing to lose by voting Communist. America will still help build our economy if we make Italy into a Marxist nation."

How can you start such a program in Poland and deny aid to Rumania, Bulgaria, Albania, Czechoslovakia, and Hungary?

At least in the doubtful case of Yugoslavia that country is not occupied by Soviet divisions.

If we have poured over a billion dollars into the Communist regime of Tito how many more billions will be required to sustain the so-called national Communist governments behind the Iron Curtain as each pretends to be slightly independent to qualify for funds?

Will this be added to our present high budget or will we more deeply cut our allies and non-Marxian neutrals to save the Communist regimes behind the Iron Curtain from collapse?

These are questions that have deeply troubled me.

I have raised them now before we embark on such a program so that the Congress and the country may debate and make a determination before we are confronted with a fait accompli.

While the 5 Communist Polish negotiators were in Washington negotiating for over $350 million their representative at the United Nations was 1 of 8 voting for the Soviet resolution to condemn the United States for aggression in the captive nations.

If they had indeed secured the slightest independence they might have abstained.

This much consideration on the resolution to condemn us we received from Yugoslavia after $1 billion of economic and military aid. That may seem to others to be an act of Yugoslav generosity and friendship, but I must frankly say it does not to me.

We have had to face up to the fact that up to the present, at least, the Soviet Union has not shown any major change in its long-term policy of the destruction of human freedom. Their most recent activity in this regard was the ruthless suppression of the effort of the people of Hungary to gain national independence.

Nations can die while delegates talk. In World War II Holland was attacked and surrendered to Nazi Germany in 6 days, Belgium in 20 days.

From October 27, 1956, to January 10, 1957, a period of 76 days the General Assembly passed 10 resolutions while freedom in Hungary was strangled to death.

We have joined with others in a series of defense pacts covering the Western Hemisphere, the North Atlantic Alliance, the bilateral and multilateral defense pacts covering the nations of Asia and the Pacific. To these have been added the recent Eisenhower doctrine covering the Middle East in which the Congress joined in a statement of national policy that we could not permit Soviet aggression against the nations of the Middle East.

There are many historians who believe that World War I, World War II, and the Korean war might have been avoided had the aggressors in those three instances not miscalculated on what the United States would do. The Middle East resolution was to make clear that such a miscalculation should not take place again.

The Government and the people of the United States have no aggressive intent against any nation anywhere in the world. Our efforts have been and will be directed, I believe, toward the establishment of a system of international law and order that can preserve the peace of the world for ourselves and for our children.

But we must be realistic enough to understand that as long as the present rulers of the Kremlin follow their existing policies it would be the height of folly to weaken our defenses and depend only on their word.

The fact of the matter is that the Soviet Union has violated every international treaty or agreement it has had with a non-Communist power during the past quarter of a century.

With this record before us we have a right to expect that the Soviet Union will demonstrate by deeds and not by mere words that it is prepared to take steps to lessen international tensions. The job ahead of us will not be an easy one and we cannot expect to accomplish all of our objectives overnight.

The Communist world has preached for many decades that the capitalistic system and free governments must fail because they contain within themselves the seeds of their own destruction. I think it is far more likely that the Communist world contains within itself the seeds of its own destruction.

Our Less Glamorous Roads

EXTENSION OF REMARKS

OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, March 14, 1957

Mr. CASE of South Dakota. Mr. President, interest continues to grow in the gigantic highway-building program upon which our Nation is now embarked.

Primary public attention is quite naturally focused on the Interstate System, for we must admit there is great anticipation for the day when these superhighways will stretch across our country from coast to coast and border to border.

But the same act of the last Congress that provided for the interstate improvement also provided for great expansion in our other category of roads—the so-called ABC roads. These are the roads that our farmers use to take their produce to market, which link the smaller communities in our Nation, and which carry the bulk of the traffic. There are 715,000 miles of these roads

as compared to the 40,000 miles in the Interstate System.

In a recent address to the American Road Builders Association in Chicago I devoted my remarks to this subject. I feel they point up the importance of this less glamorous but equally important segment of our roads program.

I ask unanimous consent that the address delivered on January 28, 1957, be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR FRANCIS CASE

Mr. Robertson, my colleagues of the Congress, and ladies and gentlemen, when "Cap" Curtiss was speaking about the starting of roadbuilding with the old teams and scrapers, it reminded me of the first road work I ever did. I had not thought about that for a long time. The first road work I ever did was when we were living on a homestead in western South Dakota, and one of the neighbors came and told Dad that he could work out his poll tax if we would take a team and a scraper to help him fill up the approach to a bridge that had washed out.

You know, when we lived on those plains, we were frequently beyond the end of any surveyed road, and there was very little grading. It was simply a place laid out for a road.

My roadbuilding, therefore, started not quite as early as your association did. I notice by the seal that you started in 1902. As nearly as I can remember, my first roadbuilding started about 1910, but it is evident that we have all been at this job for some time since.

There have been several landmarks. In 1916, there was the original highway act. In 1921, there was the followup to the 1916 act, which started systems of roads as we know them. There was the start of the primary and the secondary system.

Then I feel that in 1954, we had another landmark.

I was chairman of the Senate Public Works Subcommittee on Roads in 1954, and may be pardoned perhaps for a little prejudice on that score, but I recall saying at that time that the time had come for us to make available for apportionment for highway aid to the States an amount equal to the amount that the Federal Government was collecting in the Federal gasoline taxes, and the tax on motor oils. So, I introduced a bill which proposed to raise the level for the ABC roads from the $550 million mark, which had been prevalent for several years, to an amount which, with the other road funds for the roads on Federal lands, and an increase in the interstate system, would approximate $1 billion, which was about the amount that we were getting in the tax revenues from the sources I have mentioned.

I pointed out that the Federal highway statutes for a number of years had said to the States, "You must not impose taxes on highway users and divert the proceeds to purposes other than roads, or you will suffer a penalty in your apportionment." We felt that the time had come for the Federal Government to make that step forward.

As a result of the deliberations of the committees of the Congress, the amount for the ABC roads was stepped up from $550 million to $700 million in the 1954 act. The amount for the Interstate System was stepped up from $25 million to $175 million. Then we had something like a hundred million dollars in the amount for the Federal roads, that is, the roads on Federal lands. With the small items like the assistance for the Inter-American Highway, and so forth, we came up to practically a billion dollars.

Some of us have been told if we presented a bill like that to the President he would veto the bill. I did not think that he would, and several others did not think he would. We presented it to him. We were down at the time he signed the bill, and he said, "Well now, that's a start, but we must do more."

PRESIDENT'S PROGRAM

I think none of us there that day realized exactly what he had in mind, for it was a few weeks later when Vice President NIXON, speaking for the President at a conference of the governors, threw out his challenging proposition that we should build the Interstate System up to the standard that would be required to meet the needs 20 years from now, and do it in a period of 10 years.

Now, I am certainly not going to quarrel with my very good friend and great chairman of the Public Works Committee, Senator CHAVEZ, in saying that the Federal Act of 1956, which is a great landmark in highway authorizations, was a "congressional bill." Certainly it was worked over, and it was the product of many minds and a great deal of work and testimony and deliberation and conference work, and so forth.

The great challenge, however, that we should step up the Interstate System, the rate of building, and get it done within a period of 10 years, was a challenge that was thrown out by the President in his proposal. I can say that perhaps with good grace—perhaps—because I was one of the Republicans who did not like the bill that was first presented to accomplish the purpose. I did not support the bonding provision, the financing provision as it was suggested in the so-called administration bill at the time.

There were 2 or 3 reasons for not doing so in my judgment, and it is not necessary to recount all of them at this time; but I do want to point to one reason because that fits very well with what Burt Miller said he would like to have me talk about this morning, and that is the ABC roads.

One of the things I did not like about the so-called administration proposal so far as the method was concerned. I did not object to the objective of building the Interstate System at an accelerated pace. I did not like the idea that we should freeze the amounts for the ABC roads for a period of 30 years in order to have revenue to retire the bonds for the building of the Interstate System.

LARGE SYSTEM

Under the systems as they are set up today there are approximately 235,000 miles in the primary system, of which 40,000 have been designated as the Interstate System. There are 520,000 miles in the secondary system, which would make a total of 755,000 miles in the primary and secondary systems. That embraces the 40,000 in the interstate.

If you subtract the 40,000 from the 755,000, you have 715,000 to the 40, which means that there are about 18 miles of primary or secondary roads on a recognized system in this country for each mile of Interstate System.

So, I should like to state, as a proposition which I could prove at some length, I think, if it were necessary, that any Federal highway program which overlooks roads for rural America is doomed to congressional failure. That is just a simple fact of life.

You know, the old saying is that all roads lead to Rome. But had you been in Rome and looked out from the center of those roads where they came together, from that point of view it might just as well, or might better have been said, that all roads lead from Rome to the interior of the Empire.

So, while we all take pride and admiration in the Interstate System our roadbuilding plans must also take note of what is happening to the so-called ABC roads, the primary, secondary, and urban systems.

In the 1954 act, when we stepped up the Federal aid from $550 million to $700 million, you will note that was an increase of about $150 million. We did step up, also, the interstate from $25 million to $175 million. The rate of stepup was much steeper on the interstate than on the others but the insistence on ABC increases reflected a congressional realization that there are many areas in this country yet that do not have good country roads or do not have roads on the interstate system, and yet they are a part of a system which serves many of the principal cities of the States.

With this roadwise audience I do not need to get specific about that.

Congress has, however, in this legislation sought to protect those other types of roads, so it was a matter of interest in thinking of what I might talk about here today to ask the Bureau for the figures on the contracts that had been let. I have some tables here, and if I may I would like to exercise the congressional privilege of extending those in the written remarks, and give you just a total which I think will be of interest to you.

[The complete text of the tables referred to above is as follows:]

FEDERAL-AID PRIMARY, SECONDARY, AND URBAN FUNDS

Contracts advertised and funds obligated

A comparison of contracts advertised and funds obligated during each of the calendar years 1954, 1955, and 1956 is provided in the attached series of charts. The 1956 total for primary, secondary, and urban funds combined is $751 million. For 1955 the total was $716 million, and for 1954 the total was $647 million.

Data for each of the 3 years are as follows for each class of funds separately:

[Million dollars]

Class of funds	Contracts advertised and funds obligated		
	1954	1955	1956
Primary	300	345	354
Secondary	169	197	228
Urban	178	174	169
Total	647	716	751

For primary and secondary funds the amount covered by contracts advertised and funds obligated during 1956 is greater for 1956 than for either of the 2 prior years. For urban funds the amount obligated during 1956 is $5 million less than for 1955 and $9 million less than for 1954.

Progress during calendar years 1955 and 1956

The attached table provides a comparison of progress during 1955 and 1956 for each of several steps of project advancement. For each step, progress during 1956 exceeds accomplishments during 1955.

Federal-aid highway funds, comparison of progress during the calendar years 1955 and 1956

[Federal funds, millions of dollars]

	Primary, secondary and urban funds combined		
	1955	1956	
		Amount	Percent increase over 1955
Total programed	753	772	3
Contracts authorized	716	752	5
Contracts awarded	680	799	18
Placed under construction	676	772	14
Earned	600	700	17
Paid	619	670	8
Completed	604	659	9

Status of the Federal-aid primary, secondary, and urban highway programs combined as of Jan. 1, 1957

	Number of projects	Total cost	Federal funds	Miles	Number of bridges
Programed only	3,587	$729,000,000	$381,000,000	11,389	2,170
Authorized:					
Plans approved	288	162,000,000	83,000,000	715	223
Contracts awarded	482	178,000,000	95,000,000	1,337	382
Under construction	5,297	1,727,000,000	880,000,000	16,522	4,143

Total programed and authorized, not completed	897	851,000,000	426,000,000	700	934
Unprogramed balance			251,000,000		

FEDERAL-AID PRIMARY, SECONDARY, AND URBAN FUNDS

Balances of apportioned funds

Balances of primary, secondary, and urban funds not covered by contracts advertised and funds obligated (approved plans) amounted to $1.185 billion on December 31, 1956. This amount is equivalent to 139 percent of the amounts apportioned on August 1, 1956, for the fiscal year 1958.

Corresponding data separately by classes of funds are as follows:

Class of funds	Balance not covered by contracts advertised and funds obligated (plans approved) as of Dec. 31, 1956	
	Million dollars	Percent of 1958 apportionment
Primary	441.6	115
Secondary	415.2	164
Urban	328.6	155
Total	1,185.4	139

Corresponding data are shown in the attached tables separately for each State.

Also shown in the attached tables are data covering unprogramed balances as of December 31, 1956. The unprogramed balances are included in the balances not covered by contracts advertised and funds obligated, the differences representing programed projects for which plans have not yet been approved nor contracts advertised.

In 1954, the primary, secondary, and urban systems were advertised and obligated in the amount of $647 million; that is, calendar 1954, or is that a fiscal year, Mr. Curtiss?

Commissioner CURTISS. I think it is a calendar year.

Senator CASE. It is a calendar year, $647 million.

In 1955, $716 million. In 1956, $751 million.

All categories show an increase except urban. The urban did not increase, but the primary and secondary did.

The primary system contracts went from $300 million to $354 million in the 2 years.

The secondary went from 169 million to 228 million.

FUNDS ARE PROTECTED

During the consideration of the legislation which we speak of as the Federal Highway Act of 1956, there also were two specific instances where Congress acted to protect the funds for the ABC roads. I might say there were three.

The basic one was, of course, where we increased the allocation for them and set up the plan to which Congressman FALLON has referred, whereby there would be an increase of about $25 million a year, but the basic amount we also stepped up from the $700 million to about $800 million, the first year, and then $825 million I believe it was, for the fiscal year 1958.

There were, however, two other crucial instances where the ABC roads came to the attention of the Congress. The first one was when the Senate was considering the bill which it passed in 1955 as a preliminary for the 1956 act. An amendment was presented on the floor of the Senate the night we were obtaining consideration which would have prorated the receipts from certain revenues to the entire Federal aid program for highways.

After having brought in the Interstate System and having stepped it up from $175 million to a rate which would run to a billion or $2 billion before the 10 or 13 years were completed, that is, after having brought in a guest, a new factor into the high rate program, which would get as many dollars or more dollars than were being made available for the three ABC roads all put together, then it was proposed by an amendment on the floor of the Senate that if the receipts were deficient for supplying this doubled total, then all programs would be cut the same percentage as the deficiency bore to the total amount.

That night I recall trying to make vivid to some of the Senators who had not followed the story too well, just what this would do to ABC road program. I said it was as if you brought an unexpected guest to your table at home, when you had only enough potatoes for your own family, and you find out, one day, a giant had come in to sit down, and lo and behold he eats as much as all of your family. Next year you plant some extra acres, but if the yield does not come up to expectation, should your family suffer the same percentage of reduction as the new guest whose appetite was responsible for the shortage? That may have been a crude example but anyway we did get the point across, and the amendment was withdrawn.

We pointed out that at that particular time several State highway commissions had already announced their State programs on the basis of the announced apportionment for Federal primary and Federal secondary roads.

As an example, the State of New Mexico had issued a large bond issue, and it had issued pledges and programs for completing a certain system of roads. If we were to change ABC cash after those programs had been announced we would have had considerable confusion, to say nothing of some problems of perhaps a very practical sort in every State in the Union.

We had somewhat of a similar proposition come up when the bill, after it had passed the House, came over to the Senate, carrying the revenue features which were incorporated in the law as it now is.

To the Senate Committee on Finance, however, an amendment was proposed which would have had the effect of saying that if the money that comes into the trust fund is not sufficient to take care of the total amount planned for a given year, that all categories of roads should be reduced in the same percentage that the deficiency was of the total amount.

There again, however, it was my privilege to point out to the Senate Finance Committee what that would have done to the advance planning that is done after the announced apportionment for the primary and secondary roads. The Finance Committee agreed that it was not wise to upset the ABC planning of the several commissions which, in some instances, went back several years. So, as the law stands while the trust fund does provide that if the money which comes in is not adequate to meet the apportionments, the subsequent apportionment for the next year for the interstate system will be reduced accordingly; the ABC roads are protected. There was no argument about it, particularly once the point was brought out. So, if there is any fact in congressional life that is sold, it is that Congress intends that the ABC program shall go forward.

In view of the fact that the American Road Builder Association for all of your life up to this time practically have grown—as you have grown—on the ABC system, it should not be a disappointment to you to learn that Congress intends the "bread and butter" roads of the country shall go forward and shall be accelerated along with the interstate system.

FUNDS NEARLY EQUAL

The 1952 act, as I said, provided $550 million. The 1954 act provided $700 million. The amount for fiscal 1958 is $850 million in Federal aid. That $850 million for the ABC roads, as you know, is matched by the States, or by counties, or by local government in one way or another, so that you can double that $850 million and say that for fiscal 1958 there will be a $1,700 million road program on the ABC roads, half of it by the Federal Government, and half of it by the local or State governments.

Oddly enough, that $1,700 million works out in highway construction exactly equal to the $1,700 million that is programed for apportionment for the Interstate System, for fiscal 1958.

And so to you who are roadbuilders, thinking in terms of the roads that you build, the machinery that is required, equipment, and items of that sort, I think it is worth recognizing that the ABC road program for fiscal 1958, the new fiscal year ahead of us, is in total dollars the same amount as the Federal aid for the Interstate System.

I recognize that the Interstate System money will be matched on a 90–10 basis; that is, with credit for the public land States so that there might be an additional 10 percent of the 1,700 million, which would be another 170 million on the Interstate System, but that, again, is equaled by the amount which the Federal Government is making available now for the so-called Federal land roads, the roads in the national parks, and in the forests, and on Indian land and public lands. That comes to about $125 million.

So that for the fiscal year ahead, fiscal 1958, there should be envisioned a roadbuilding program of approximately $3½ billion, the largest public-works program that has been launched, as has been said here this morning, in this country or any other country. That, of course, will be exclusive of the money that is spent directly by cities or by counties or by highway authorities for toll roads.

It is a great challenge, and without belittling in any event the importance of the Interstate System, I think it can be safely said that the people of the heartland of the country will measure highway progress by the quality of the roads from their homes to their neighbors, to the centers of community life, and to their markets.

In the interest of the common welfare, these ABC roads must never be neglected, and I am confident that Congress never will neglect them.

Prize-Winning Editorial by Tom Horner

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, March 14, 1957

Mr. CARLSON. Mr. President, the National Freedoms Foundation Award for the outstanding patriotic editorial written this year was awarded to Tom Horner, an editorial writer for the Ohio Beacon Journal, who is a former Kansan. The editorial appeared in the Beacon Journal in the issue of July 4 and placed first in annual competition of the Freedoms Foundation.

Mr. Horner was born at Atchison, Kans., where he spent most of his early years, and finished a course in Kansas University in 1929. He has had an outstanding career in the journalistic field.

Our Nation was founded by men and women with vision, and with courage to carry their visions into reality. The principles adopted by our pioneer forefathers must be preserved if we are to present to future generations the heritage we all enjoy.

I ask unanimous consent that the prize-winning editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

1776—INDEPENDENCE DAY—1956

When the Liberty Bell proclaimed the Declaration of Independence 180 years ago most of the American colonists had a fair idea of what "independence" meant to them individually and as a newly born nation.

The Declaration, in Thomas Jefferson's immortal words, asserted that "all men are created equal" and "that they are endowed by their Creator with certain inalienable rights * * * life, liberty, and the pursuit of happiness."

These were new and revolutionary concepts to men indoctrinated through generations to a belief in the rights and privileges accruing to royalty through accident of birth; these were strange-sounding precepts to men enslaved by the caste of poverty and schooled in oppression.

They were born of people yearning to be free, yet not fully comprehending the meaning of the word.

To millions of Europe's oppressed, "freedom" could mean plenty of food, adequate shelter, clothing, and warmth. To other millions, "freedom" meant the right to pray as they believed, without risk of punishment for refusing to conform to generally accepted doctrines and practices.

To still more millions "freedom" carried the promise of land ownership, a few acres, a house, and the knowledge that this land and all that it might yield belonged to the owner and his family without threat of seizure or confiscation.

The American colonists of 1776 and their parents before them had come to the New World to find this new life and opportunity. They may not have defined it as precisely as Jefferson, but they knew what they wanted. They knew, too, that they could not achieve these goals in their European homelands.

The Liberty Bell rang out another message in Philadelphia on that sultry July day; a message of a beginning—and an end.

No one at that time imagined the vast expanse and the unlimited potential of this great country. The frontier was only a few hundred miles from the coastline—the wealth of America was yet untapped.

But men of vision—men of the stature of Jefferson, Adams, Paine, Franklin, and Warren—realized that the new America must be freed from the old of Europe or the ancient and the backward would destroy the vitality and sap the growth of the young giant of progress.

They had read the future in the happenings of the present. Colonialism, parasitical and voracious, was already attempting to slow the march of progress in the Thirteen Colonies.

If this country and its people were to realize their ambitions to find a wholly new way of life, they must be released from the strangling tentacles of the mother country.

They knew the wealth, the products, the genius, and the strength of a vibrant, growing America must be channeled into the lifestream of that new country and not into the decadent, hardened arteries of the old.

The Liberty Bell of 1776 heralded more than a Declaration of Independence. It announced an entirely new concept in the development of human progress:

The God-given right of an American to stand on his own land, to build with his own hands, to keep his own profit, and to look up to his God and give thanks without fear, without oppression, and without hatred.

It is unlikely that many of the Americans who heard the bell or felt its echoes throughout the land grasped the full import of its joyful clamor.

To most of them it signaled the beginning of a war—a revolution which at that time seemed doomed and hopeless. The prophets of gloom forecast nothing but defeat; how could a handful of farmers and tradesmen stand against the best of Europe's mercenaries? How could a group of loosely knit colonies lacking resources and manufacturers contend with one of the world's greatest powers?

What they did and how they did it on battlefields and in the towns is history—glorious inspiration for those of us who face the open frontiers of atomic-age progress today.

What does the Declaration of Independence mean to us today?

On each anniversary of our birth of freedom, we, in America, recall with pride the

immortal words of this document. We evaluate, through generations, the importance of this statement to our national development and progress. We read editorials, such as this, and listen to speakers who praise the wisdom of our Founding Fathers and recite the benefits of their vision.

Then many of us tuck the Declaration of Independence into a mental pigeonhole and let it gather dust until another July Fourth comes around. Too many of us are more concerned with personal pleasure, recreation trips, etc., to give more than a passing thought to the day and its true meaning.

All of us need a little revitalization of American patriotism at least once a year.

The fundamental truths of the Declaration of Independence mean far more to us today than they meant to the colonist of 1776. For we have seen, in 190 years of growth and progress, the full import of these words to every American.

We are a free people, free to go and come as we please, free to work at the job we prefer, free to speak what we will and free to worship as we wish.

No law in America—no dictator can deprive us of these basic rights guaranteed in that holy and hallowed document, the Declaration of Independence. For from that day in 1776 we have known independence of the individual as well as independence as a nation. And while the Declaration protects our rights to life, liberty, and the pursuit of happiness, it also imposes the obligation upon all of us to insure those rights for our fellow Americans.

It is true that injustices still exist in this country. It is true that not all of us who proudly bear the title "American" have the same unlimited opportunity that is rightfully ours. It is true that not all of us enjoy the same standard of living.

But the cause of injustices, for lack of opportunities, for substandard living conditions is not in the basic right but in our failure to guarantee those rights to our fellow citizens.

The slum dweller swelters in a crowded, unsafe tenement and wonders "What does the Declaration of Independence do for me?" The sharecropper gazes at his drought-destroyed acres and mutters against seemingly unconquerable obstacles that bar his pursuit of happiness. The ambitious youth, who because of his race or accident of birth, is denied the opportunity of education and/or employment, may well ask "Who said all Americans are born equal?" The fault lies not with the document but with our failure to make the most of it.

If we are to keep faith with those who gave and preserved this priceless heritage of freedom, then we today must match their dedication to the principles of the declaration.

Where and when the full rights of an American are denied to an American and we allow it to happen or do nothing to change it, then we are parties to the denial of the declaration. When we perpetrate such actions ourselves—we are of the same stamp as the Tories who timidly traded their birthright of freedom for the pottage of security.

The Declaration of Independence is a living document. If we would preserve its life and its vigor, let us dedicate ourselves to the work of insuring the unrestricted right of all our fellow countrymen to "life, liberty, and the pursuit of happiness."

If the Liberty Bell is to echo today its joyful message of 1776 in all its meaning to Americans—we must keep the words of this guarantee of freedom not only in our minds and hearts but in our daily deeds.

Record Expenditures for Plant and Equipment in 1957 Forecast

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, March 14, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Wall Street Journal of March 14, 1957, entitled "Companies Expect To Spend Record $37.4 Billion on Plant Equipment in 1957, Federal Survey Finds."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COMPANIES EXPECT TO SPEND RECORD $37.4 BILLION ON PLANT, EQUIPMENT IN 1957, FEDERAL SURVEY FINDS—TOTAL WOULD BE 6½ PERCENT MORE THAN IN 1956, THE PREVIOUS HIGH YEAR

WASHINGTON.—A Government survey found businessmen expect to spend a record $37.4 billion for new plant and equipment this year—6½ percent more than last year's new high of $35.1 billion. This prospective gain comes on top of a sharp 22 percent increase in 1956 over 1955.

Plant and equipment is a key factor in the economy, explains one top-level economic planner. "If this spending continues at a high rate throughout the year, then there seems to be little likelihood of a marked drop-off in overall activity. In fact, there's a good prospect that there'll be a resurgence toward the latter part of the year."

For the past year or two, business spending for expansion has been one of the bulwarks of economic growth. Last year's 22-percent upsurge, according to economists, offset declines in such other key economic sectors as home construction and auto sales. These economists figure continued high plant and equipment outlays this year would again bolster the economy against possible disappointing results in other areas. Some economists had feared that business spending might reach a high point in the first half of the year and trail off in the latter half.

But the joint Commerce Department-Securities and Exchange Commission report—based on a survey taken in late January and February—projected business spending fairly evenly throughout the year. About $18.5 billion is expected to be spent in the first half, the report said, and the remaining $18.9 billion is slated for the latter 6 months.

On the less optimistic side, the two Government agencies noted businessmen have been finding it difficult to fully carry out programed spending plans in the past several months. The report attributed this to a tight supply situation on materials that was aggravated by last summer's steel strike.

Many companies and economists blame the slower increase in plant spending on the high cost of credit. The Federal Reserve Board, by authorising more expensive credit, would like to slow down plant and equipment expansion somewhat so as to spread out demand for the short supply of materials over a longer period of time.

Most major industries intend to increase their capital outlays this year, according to the report. Public utilities plan a 23.8-percent increase; railroads, 19.3 percent; and manufacturers, 9.8 percent. Exceptions to the upward trend are commercial companies, which figure on a 6.1-percent drop, and the mining industry, which anticipates a 1.6-percent decline.

Along with these planned increases in capital outlays, the Government said businessmen expect sales to rise to new highs this year. Compared with 1956, these are the predicted rises: Manufacturing, 8 percent; trade, 4 percent; and utility revenues, 9 percent.

While this year's projected 6½-percent spending increase may seem small in comparison with the 1956 climb of 22 percent, the report noted last year's rise was one of the largest ever recorded. Last year's spending of $35.1 billion compared with $28.7 billion in 1955 and $26.8 billion in 1954.

The report also noted last year's increase came within one percentage point of the figure projected by the annual plant and equipment survey a year ago. This year's further rise, the agencies said, would also reflect higher prices, though no more precise estimate of the effect of rising prices was given.

This is how businessmen have scheduled their capital spending for this year, compared with 1956 (in millions of dollars):

Industry	1957	1956	Percent change
Manufacturing	$16,414	$14,954	+9.8
Durable	8,498	7,623	+11.5
Nondurable	7,916	7,331	+8.0
Mining	1,221	1,241	−1.6
Railroads	1,468	1,231	+19.3
Nonrail transportation	1,826	1,712	+6.7
Public utilities	6,062	4,895	+23.8
Commercial and other	10,370	11,048	−6.1
Total	37,361	35,081	+6.5

Within the manufacturing industry, the Government noted a "considerable variation" among company plans and "some significant reversals in trend."

Auto companies, for example, expect to cut their expansion spending by 25 percent in 1957, to $1.3 billion. This follows a 50 percent increase last year, to $1.7 billion. Similarly, textile companies anticiapte a 20 percent reduction in capital outlays this year; outlays in this industry rose 25 percent from 1955 to 1956. Tobacco companies and producers of construction materials also expect to spend less this year.

On the other hand, these larger-than-average increases were projected by other manufacturers: Nonferrous metals, almost 100 percent; nonauto transportation equipment, 33½ percent; and steel, nonelectrical machinery and chemicals, all in the 25 percent to 30 percent range.

Petroleum companies plan to spend $3.4 billion this year, compared with $3.1 billion last year, the report added, and rubber and paper companies have scheduled moderate increases for 1957.

Among the nonmanufacturing concerns, the Government agencies said both electric and gas companies contributed to the 23.8 percent increase planned for public utilities. The report said the railroads' $1.5 billion expansion program this year equals the previous record outlay in 1951. Airlines account for the major share of the 6.7 percent increase scheduled for the nonrail transportation industry, the report added, and the 6.1 percent cut in commercial expenditures centers in retail trade and construction.

The report also showed business spending fell short of the level programed for last year's final quarter and schedules have been trimmed for this year's opening 3 months.

Last fall businessmen said they expected to spend at seasonally adjusted rates of $37.3 billion in October-December and $38 billion January-March. The new report said actual spending in the final quarter of last year was at the rate of $36.5 billion, and the expectation for this year's first quarter is now at the rate of $36.9 billion. The seasonally adjusted annual rate projected for this year's second quarter is $38 billion.

An Ounce of Prevention

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES

Thursday, March 14, 1957

Mr. POTTER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the Secretary of the Treasury, Mr. George M. Humphrey, at the Masonic Temple in Detroit, Mich., on March 6, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AN OUNCE OF PREVENTION

(Remarks by Secretary of the Treasury George M. Humphrey at the Masonic Temple, Detroit, Mich., March 6, 1957)

You have recently heard statements or seen such headlines as these:

"Runaway Inflation Here."
"Direct Controls To Be Imposed."
"Depression Predicted Soon."
"Washington Will Sit Idly By."

Runaway inflation is not here now. But, everyone recognizes that costs have been creeping up in recent months and might eventually get out of hand unless everyone concerned uses the proper restraints.

Direct controls are not under consideration now. They are utterly foreign to the American way of life except in war-time or other great emergency. To enforce such controls over a long period of time without the patriotic stimulus of war would be an almost impossible task. There is nothing to indicate that return to the controls which we so quickly eliminated in 1953 is either likely or warranted in the foreseeable future.

No one is predicting a depression now. There are no signs that the volume of business activity is about to decline in the near future. If all levels of Government, and the public in general, will control their activities at reasonable levels we can go on with a high degree of prosperity for a long time ahead. But, we can eventually have trouble, if, over a long period of time the Government keeps taking in taxes too much of the money that should be going into making the jobs to keep our growing population well employed.

Should a downtrend develop the Government would not, of course, sit idly by. It is dangerous to answer hypothetical questions about exactly what the Government would or would not do. The particular circumstances and conditions then prevailing would determine the course to be properly pursued. Certainly the Government might increase its activity within its means. It might well carry forward in times of downtrend certain Federal expenditures which should be postponed in a period of high activity. But such stepped-up expenditures should be kept within reasonable bounds and handled in such a way as not to shake confidence in the responsibility of the Government. The action of the Government, whatever it might be, should then be such as to stimulate the confidence of the people to expand their own activities, and thus expand private spending because it is obvious that if Government's activity should shake the people's confidence, then it might well retard private spending which in normal times is many times more than public spending can be.

However, rather than to spend time speculating on remote possibilities let us look tonight at where we are and where we can go from here. This is, of course, of great concern to you as leaders in Michigan of the Republican Party now directing the executive branch of our Government. For it is the Republican Eisenhower administration in the past 4 years which has been most successful in keeping our Nation's economy in a healthy and growing condition. And it is the Republican Party that can best continue to do so.

Where do we stand now?

We are the strongest Nation on earth. We have the greatest prosperity ever enjoyed by any nation. The overwhelming majority of our people now have the highest standard of living ever achieved by man, in peace and in freedom.

What is the outlook?

There is every reason why we should continue to be the strongest, most prosperous nation, with the best supplied people, on earth.

But it is always possible for us to dissipate our strength by unwise actions. The basic natural laws have not been, and never will be, repealed.

Let's always remember than an ounce of prevention is still worth a pound of cure. We are doing our level best by the use of prevention to avoid the necessity of a cure. And, we are encouraged to believe that our efforts may be effective.

Under the Eisenhower administration the position of the Federal Government has been so improved that it is now living currently within its income. We had a budget surplus last year. We will have another budget surplus this year. And we have proposed still another balanced budget for 1958. This is the first time we have had a real prospect of three balanced budgets in succession for more than 25 years.

It is the size of this budget, even though balanced, that concerns us. No man has worked harder than President Eisenhower to bring about a lower total of budget expenditures. This is equally true of all others in responsible positions in this administration who have given long hours of painstaking work in the budget's preparation. The fact is that the budget as we presented it to the Congress in January is the best that we could propose at the time, even though it provides for increasing Government spending.

In this connection it is important that the public understand fully just how the functions of Government are divided in connection with budget making and the authority for expenditures.

The law establishing this procedure specifies that "The President shall transmit to Congress during the first 15 days of each session, the budget," which "shall set forth * * * [the] proposed functions and activities of Government; * * * [the] estimated expenditures and the proposed appropriations necessary in his judgment for the support of the Government for the ensuing fiscal year, * * * [as well as the] estimated receipts of the Government."

But the final decision is the decision of the Congress. Its responsibility is established by the Constitution, which provides that "no money shall be drawn from the Treasury, but in consequence of appropriations made by law * * *." So that the Congress makes the final determination, not only of how much the Federal Government may spend but for what purposes all expenditures may be made.

It should, therefore, be clear that when the Executive asks the Congress, as we have done, to help to search out ways in which spending can be properly cut below what the Executive has proposed that we are acting only in strict conformity with constitutional processes in the way our Government is established.

It is also important to bear in mind where the money goes that the Federal Government spends.

By far the largest amount—63 percent of the total—is for security. That includes the amounts in the various programs which it is estimated we need to protect ourselves against aggression.

The second largest category of Federal spending is for programs fixed by various laws passed by the Congress. These programs, such as veterans' benefits, agricultural price support and soil-bank payments, grants to States for welfare payments, and the like, plus interest on the Federal debt, total about 25 percent of Federal spending. In these programs, after Congress passes the laws, the Executive has little opportunity to exercise any discretion, but merely administers the program and writes and distributes the checks which the various laws direct.

This leaves but 12 percent of Federal spending in which there is some elasticity in the opportunity to save money.

It, therefore, becomes quite obvious that while some savings can always be made by ferreting out waste, extravagance, and duplication, the really substantial reductions in Government spending can come only from changes in programs. These programs now in effect by decision of the Congress can be changed only by new decisions of the Congress. The executive branch must, of course, work closely with the Congress to arrive at the best judgments as to what the various programs must provide for. That is exactly what the Eisenhower administration is currently doing with the Congress in this campaign which has received so much public notice recently searching to find out ways and means of reconsidering existing programs so as to make substantial reductions in Government spending without either impairing our security or the necessary services to be rendered to the public.

The President in his state of the Union message said that he would insist that the executive department, in the next 4 years "search out additional ways to save money and manpower." There are 16 months remaining before spending under the proposed budget will be completed. We are working and will keep working on a day and night basis to find additional ways and places to save money so that we may come out with a lower spending figure at the end of the budget year. There is reason to be optimistic about the prospects for success in this effort as everyone is cooperating with vigor and sincerity. We have asked the Congress to cooperate with us to this end and it is doing so in its actions on the appropriation bills. We are confident that some specific and substantial reductions can become possible if the people of this country continue their insistence that Federal spending be brought under better control.

Whose job is it to cut Federal spending? It is everybody's job. It needs the active support—not just the approval—of the public.

Basically it is the job of the American people for it is with the people—at the thousands of crossroads over the Nation—that the pressures for spending begin. A group of people who want some assistance or who get into trouble of some kind, turn to the Federal Government for help on the mistaken

theory that money from the Federal Government does not cost anybody anything.

The pressures applied are well known and are visible in Washington everyday. If some Federal activity is to be discontinued because it is no longer really needed, the townspeople in the community where Federal spending is to be curtailed will organize a campaign with their chamber of commerce to continue the spending within their locality. They will take up the matter with their congressional delegations and the branch of Government which is trying to curtail the unnecessary spending comes under heavy criticism from them. It is these pressures for continuation of present programs or the beginning of new programs, for local groups or in many localities throughout the country, which, added together, result in the terrific sums of money the Federal Government is spending today.

We need a campaign of public education so that the public will better understand the facts of life about Federal spending.

They must realize that there is no bottomless well of unlimited money in Washington. The only Government money that any person can get must come from the taxes he pays whether the payment is by check from Washington or from the city or county treasurer or the town selectmen.

There is all too prevalent an attitude of "getting our cut so long as everyone else is getting theirs." There is a general feeling in many localities that "we must get our cut" of any Federal program or we will be cheated out of our rightful share of the money that the Government is spending and so many programs to spend Federal money are started and many local programs are thus abandoned at the local level and Washington is turned to for help that would otherwise be locally supplied. The people must come to understand that any program, if financed by Washington, can only be paid for by local tax money going to Washington, where some is used up for Washington overhead expense and what's left goes back to the local community which provided some or all of the money in the first place.

The public must understand better that local spending for local needs is more efficient and that Federal programs for local needs should be curtailed. Public projects locally determined and locally financed are likely to be more efficiently administered than any project which is put into effect and supervised by some distant agency. A town meeting is less likely to spend its tax money on some unnecessary programs than an agency in Washington a thousand miles away where a growing bureaucracy is entrenching itself.

President Eisenhower has often said and deeply believes that as Lincoln once said: "The legitimate object of government is to do for a community of people whatever they need to have done, but cannot do at all, or cannot so well do, for themselves—in their separate and individual capacities. In all that the people can individually do as well for themselves, government ought not to interfere."

Finally the people must be awakened to the true meaning of freedom. If the people of America are to have the benefits of freedom they must also bear the obligations of freedom. The Federal Government cannot absorb the obligations of the people and still permit the people to have and cherish the freedoms which have made this country great. The feeling is growing in this country that regardless of how careless you are of your own obligations and activities, if you get into trouble somehow or other the Government will take care of you and bail you out. If the people for themselves abdicate all self controls they can only have, in time, complete Government control.

As our economy produces more it does not mean that the Government must spend more, continually increasing the paternalism of Government. Just the opposite is true. The more we have the better able more of us should be to do for ourselves and be less and less dependent upon the Government.

High spending for our security will be required for sometime.

But that is all the more reason why our expenditures in many other ways must be curtailed and postponed until security becomes less costly and we are better able to afford more expense for some of the other things we might like to do.

When there is an unfortunate serious sickness in the home some of the things that would otherwise be nice for the family to do must be postponed and await their turn.

We must remain militarily strong. We must pay the cost of protecting our lives and way of living. But merely spending dollars does not guarantee this protection. The effective power of our defense is not measured only by its cost.

During the past few years lethal weapons have been developed which can destroy whole cities and nations. These weapons are new and they are very costly.

But the extremely high cost of new weapons simply increases the demand that we be highly selective and quick to abandon the expense of obsolete methods and equipment. We must, of course, always remain continually on the alert for the elimination of duplication and waste wherever it is found.

We must also remain strong economically for our greatest strength lies in our strong economy and the might of our great industrial machine.

No one can say exactly how much we can spend for defense before we risk serious injury to our economy. While military spending protects our lives it does not add to the permanent wealth of our Nation—to the new peacetime plants, machinery, farms, and homes which are required for our growing population.

The billions we pay for military items and personnel exert substantial inflationary pressures. The money goes into the spending stream but is not matched by production of goods which the people can buy. Monetary measures are helping to restrict these inflationary pressures. But, reductions in Federal spending would contribute greatly to the release of manpower and materials for increased production of peacetime goods and so help to hold down prices.

The toll of inflation falls with greatest impact upon the vast numbers of our citizens who are least able to protect themselves from its cruel effect: the millions of pensioners, life insurance and annuity holders, savings depositors, and others living upon fixed incomes or upon those who have prudently laid by some reserve for their future protection. That is why the Government must exert every effort to hold in check any new movement toward inflation.

Can we really reduce Government spending?

We certainly can, provided that we are willing to also reduce some of the services and contributions which the Federal Government is now making to various groups of our citizens. Three years ago we cut Government expenditures substantially and made possible the greatest dollar tax cut in our history. This stimulated the surge of national confidence which has spurred the prosperity of the past 2 years, the greatest prosperity we have ever known. These reductions in Government spending also helped to then stabilize the cost of living.

Another reduction in Government spending would not only tend to take some pressure off prices now and help to hold down the rising cost of living, but it would also lead the way toward another tax cut.

This can all be done if we continue to pursue with vigor and determination the Eisenhower policies which have guided us so well in the past and have the widespread active support of our citizens. Most people are in favor of strict economy for everyone but themselves and their own pet projects. It will take more than that to accomplish our purpose. We must have the unselfish support of all groups who are willing to demand somewhat less from the Federal Government for themselves as well as for all others for the great benefits that will surely result for all America.

We are Americans first. We are Republicans second, but we are absolutely certain that the Republican principles of the past 4 years have given us all more, better, and sounder conditions than we have known for years and that the best thing for all America is to have them continued.

So let's really go to work to strengthen and revitalize our party at the grass roots from whence all real power comes, and build an even better, stronger party beginning now to insure the continuation of the principles of proven worth which will maintain the safest, strongest, most prosperous America for all of us in the future.

The Words of a Carpenter

EXTENSION OF REMARKS
OF

HON. FRANCIS CASE

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Thursday, March 14, 1957

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a truly inspiring and outstanding address delivered today by the Honorable Boyd Leedom, chairman of the National Labor Relations Board.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF BOYD LEEDOM, CHAIRMAN, NATIONAL LABOR RELATIONS BOARD, BEFORE THE NATIONAL LABOR RELATIONS CONFERENCE OF THE CHAMBER OF COMMERCE OF THE UNITED STATES, SHOREHAM HOTEL, WASHINGTON, D. C.

Once upon a time there was a meeting of an association of businessmen known as the National Chamber of Great Industrialists. The time was in the year 2000, not 1957. The place was not Washington, D. C., but Utopia, U. S. A.

A FABLE OF LABOR LORE

The president of my make-believe association in this Foolish Fable of Labor Lore was a gentleman of many winters, kindly and dignified, stately in bearing, wise and perspicacious. The head of the Amalgamated Unions of the Universe, whose grandfather had been a labor leader before him, sat on the platform as the guest of honor.

He and the president of the association were warm personal friends and in their professional lives worked closely together in complete devotion to the common objectives of labor and management—the production of goods for the consumer at an ever-reduced cost but with an ever-increasing return to both labor and management.

The President was speaking: "First of all, gentlemen, I want to present my very good friend, the head of the Amalgamated Unions of the Universe, the greatest friend American industry ever had—bar none."

The rafters shook with terrific applause. Somewhere, the spirit of the old granddaddy of the union head was offended. Thinking his grandson had sold out to the enemy, he

called out loudly to St. Peter—I think it was—or possibly it was Satan—to call a general strike on earth.

"It seems strange," the association's president continued, "that only a half century ago American industry and labor were adversaries. In 1935 Congress passed the Wagner Act to protect unions from employers. Then in 1947 Congress passed another law—the Taft-Hartley Act—to protect everybody else from unions.

"Our members fought the Wagner Act with everything they had. They defied the law and heaped verbal abuse on the Government for interfering with management prerogatives.

"Then unions fought the Taft-Hartley Act with everything they had. They defied the law and heaped verbal abuse on the Government for interfering with union prerogatives.

"It was an age of miracles. The automobile, the airplane, and the radio had come to stay. Television—that ancient forerunner of our present process of disintegration, transmission, and reintegration of matter by supersideous electromagnetic waves—was already regarded as commonplace. Anything seemed possible—anything, that is, but collective bargaining. Collective bargaining, the old-timers among our members were sure, was an innovation of the ultra-liberals which would die if properly resisted. But somehow another miracle happened. Collective bargaining survived. Open defiance of law gave way to honest acceptance of the principle.

"Of course, there were evils in those days which are unimaginable today. Men had to work as much as 40 hours a week. Women took jobs in factories to better be able to keep up with the Joneses. The incentive to make a profit was shackled by a confiscatory income tax and by big Government because men hadn't learned to live together. Along about the middle of the century congressional investigations became popular. In one of the investigations it looked as though some segments of organized labor had moved into an area that was more fun than work; from that investigation it was said that the city of Philadelphia started on a decline, and Portland grew. It was known, of course, as the City of Brotherly Love.

"We even had a peculiar branch of Government called the National Labor Relations Board which—bless Providence—has long since disappeared and been replaced by a little-used special court."

BACK TO REALITY

Pardon me, gentlemen. Did I say the Labor Board had disappeared? I am completely carried away by my own fantasy. That line—that the Labor Board had been replaced by a special court, is a line from the 1957 report of the American Bar Association to Congress.

Hastily and abruptly, without further ado, I leave my fictitious president of noble mien to finish his speech as best he can, and I return to the happy land of reality, to the time of numerous willful unfair labor practices, of insulting attacks on the Labor Board, and the real joy of a government pay check twice every month. So here we are, back in the Shoreham Hotel in Washington, with lunch not more than an hour away—you hope.

The Chairman of the Labor Board should have been able to open a speech about the Labor Board with a couple of jokes on the Labor Board. I hate to make this confession. The fact is, however, that during 2 years in Washington I haven't heard any funny stories about the NLRB. It's an unhealthy symptom of something or other. Maybe my life is too sheltered. Or perhaps the Labor Board is so insignificant that the wits are saving their talents to use on more important agencies. More likely, I'm afraid, when people make cracks about the Labor Board, they're not fooling.

You should understand at the outset that the most difficult matters with which the Labor Board deals are not labor problems at all; they are problems in political science. Daily we come to grips with some of these eternal questions which trouble the philosophers of democracy:

HOW MUCH IS TOO MUCH?

How much Government regulation is too much or too little? At what point shall individual liberties be subordinated to majority rule? How can Government function swiftly enough to accomplish justice without denying all interested parties their full measure of due process? How can we effectively operate a "government of laws, not of men" without becoming so coldly impersonal that we ignore human factors which are so important in the Government-citizen relationship?

As these questions become interwoven with the case-handling work of the Board, I am disturbed to find that employers and unions too often are inclined to give them short shrift.

Perhaps it is too much to expect any party to a labor case not to pervert a rule designed to guarantee due process into a means merely of delaying the proceeding.

In the zeal of proving or defending a case it is difficult to take the long view—to look beyond the result sought in the case at hand. Employers who traditionally resist government regulation of business are most vociferous in advocating more regulation of unions. Unions insist upon freedom of speech for their organizers but would deny it to management. Management condemns the Board for taking jurisdiction over one company in a representation election from which it desired freedom and also condemns the Board for not taking jurisdiction over a smaller company which is being subjected to a ruthless secondary boycott action.

Similar anomalies can be found in the administration of almost every judicial system, but they seem to be more common at the Labor Board. I suspect that this circumstance results not so much from the nature of the cases which come before us for decision as it results from the attitudes of the parties.

It was just about 2 years ago that I left a State supreme court to serve on the NLRB. The story they told on me as I came to the Board of course was not true. It was said a reporter asked me what I thought of the Taft-Hartley bill, and that I replied, after a moment's serious reflection, "I think they ought to pay it."

BLAME THE COURT

I was no stranger to controversy, but nothing in my prior judicial experience had conditioned me for facing some of the facts of life at the Labor Board. One of those elementary facts is that no matter how sincerely a Board member tries to be objective, neutral and fair, the customers of the Board persist in attempting to classify him as prolabor or proemployer.

I practiced law and served on the bench long enough to realize that lawyers and litigants are inclined to blame the judge whenever they lose a case; but the problem at the Labor Board goes deeper.

We function in an area where intricate legal questions become intertwined with social and economic problems, where the parties are accustomed to resolve their differences by pressure, and where appeals to emotion often overshadow appeals to reason. Because the Board is not quite the same as a court, the parties to Board cases seem to feel free to castigate the Board with greater fervor than they customarily exhibit in legal proceedings.

Sometimes we are made to feel more like umpires at Ebbetts Field than quasi-judicial officers of the United States. In other words, the atmosphere is hardly conducive to detached contemplation of philosophical considerations.

Not long ago a lawyer opened his oral argument before the Board in Washington with a general denunciation of the Board for recent decisions which he considered proemployer, but which had little or no relation to the case under consideration.

When I read or hear such statements, I wonder if the spokesman is deliberately trying to intimidate my colleagues and me or if, unwittingly, he has borrowed the pressure tactics of more turbulent arenas in which employers and unions so often meet in combat and settle their differences more by might than by right.

MORE ORDERS AGAINST EMPLOYERS

If you hear a union spokesman denounce the NLRB as being promanagement, I hope you get no comfort from that circumstance. It would be a bad mistake to assume that you can count on a built-in bias of the Labor Board to bring about an employer's victory in any management-union controversy.

Last year we issued more than twice the number of orders against employers as we did unions, requiring them to cease and desist from unfair labor practices. But this apparent imbalance is largely accounted for by the relative numbers of cases filed against employers and against unions. So unions shouldn't depend on Board bias for victory either.

Businessmen, as well as a good many others, can help the NLRB become a better Board by cutting out this nonsense of trying to identify Board members individually or collectively as proemployer or prolabor. Labor Board cases are not so simple that their outcome depends on alleged bias by those who make the decisions. I don't deny that bias can affect a case, but there is ample opportunity for review of Board decisions by the courts; and a Board member ought to know that he cannot survive in the big leagues long or maintain even self-respect if he does anything other than his best in applying the law fairly to the facts in each case that comes before him.

SHOE ON THE OTHER FOOT

You can be sure that organized labor does not like the restrictions placed upon it by the Taft-Hartley Act any more than employers liked the restrictions placed upon them by the Wagner Act.

I suspect that history is repeating itself, only now the shoe is on the other foot. Labor transfers to those administering the statute much of its antipathy to the statute itself; and the more strictly the act is enforced, the more intense the criticism.

Against this background I find it somewhat ironical that the daily mail at the Labor Board invariably contains demands, especially from small-business men, for regulating union conduct in various additional ways. If the employer thinks a union's tactics are unfair, the assumption seems to be that the Labor Board should get after the union.

Lawyers usually are aware of the statutory limitations of the Board's powers, but many of their clients are inclined to think that the NLRB should do a policing job even in areas where Congress chose not to legislate.

I understand that employers nowadays are worried about a series of decisions which seem to have expanded the areas for collective bargaining and to have limited the freedom of management to make unilateral changes in policies and procedures. I refer, of course, to the Board and court rulings that profit-sharing, pensions, and stock purchase plans are encompassed within the meaning of wages, hours, and conditions of employment.

There has been no change in the law or Board policy in connection with these cases.

The alleged expansion of the area of bargaining has come about simply because unions insist on bargaining about more and more matters which not only the Board but the courts as well have deemed to be bargainable. You can make life easier for yourselves, and also for the Labor Board, if you reconcile yourselves to the proposition that the very nature of collective bargaining involves the participation of employee representatives in the formulation of policies or decisions affecting their welfare.

Rather than turn to the Government for protection of the so-called management prerogatives, therefore, employers would be better advised to learn to work effectively with employee representatives on all matters truly of mutual concern.

FURNISHING ECONOMIC DATA

Another series of cases which I understand make employers unhappy are the Board and court decisions requiring management to furnish economic data to employee representatives.

There are still some unresolved questions as to the precise showing of relevancy which must be made before employers can be required to supply information and as to the form and method of delivery; but the general outline of the law is clear. Where certain facts under the exclusive control of the employer are relevant to an issue in dispute the employer can withhold the information only at the peril of being found guilty of not bargaining in good faith.

Although situations may arise in which it would be unduly burdensome to give the union all the information which it seeks, I think employers would be well advised to bring facts into the bargaining process wherever possible, regardless of any legal obligation. Compromises sometimes may be reached in an atmosphere of bluff, bluster, and ignorance, but the chances of resolving disputes are increased when both parties deal frankly and fairly and face the facts.

RESOLVES DOUBTS TO FAVOR SPEECH

Another controversial issue at the Board nowadays is freedom of speech.

Under the Wagner Act there was an inclination to treat almost any management utterance to employees on the subject of union affiliation, such as, "good morning, Joe," as an act of interference constituting an unfair labor practice in violation of the statute.

Mainly in response to employer demands, Congress in the Taft-Hartley Act provided of an unfair labor practice if such expression or opinion shall not constitute or be evidence of an unfair labor practice if such expression contains no threat of reprisal or force or promise of benefit.

We have had a good many close cases come before us recently in which we have had to determine how this proviso applies to certain statements by employers to employees during the weeks prior to a representation election.

I have tended to resolve doubts in favor of freedom of speech. That fredom is one which I prize so highly that I hate to see it limited any more than absolutely necessary. But to this audience of employer representatives here today, I don't mind admitting that I have considerable apprehension about this problem.

Some employers who are clearly interested in discouraging their employees from joining unions seem determined to go as far as they can in violating the spirit of the law without violating the letter of the law.

If you prise the right of free speech, you can protect it best by seeing that it is not misused. I think the right is being abused when an employer uses innuendo to threaten employees with reprisals if they disagree with him.

Every now and then I am appalled by the age of some of the Board's cases. I am not implying that the delay is always the fault of one of the parties. Much of our slowness can be blamed upon the human shortcomings of the Board and its personnel who are usually struggling to move too large a load of cases. The wheels of government grind slowly at best; but I have little sympathy with recalcitrant litigants who deliberately throw sand into the machinery by making dilatory moves in the hope that they can postpone or evade a clear statutory obligation.

The regional offices of the Board have been remarkably successful in settling informally the bulk of the cases brought to the agency. But I have the impression from looking at the hundreds of cases which come to my attention each year that employers could settle more often.

THE VEGETARIAN SHEEP

Ambrose Bierce, a popular short story writer in our grandfathers' time, had a fable about two dogs who had been fighting for a bone, without advantage to either. They referred their dispute to a sheep. The sheep patiently heard their statements, then flung the bone into a pond.

"Why did you do that?" asked the dogs.

"Because," replied the sheep, "I am a vegetarian."

As a member of the NLRB, I sometimes find the Board in a role somewhat like that of the sheep. And on reflection that the sheep is often depicted as the dumbest of all animals, you may feel the role of the sheep for the Board especially significant. Unions and employers, when unable to resolve their differences, submit them to us. Often neither is happy with our resolution.

Perhaps it is inevitable that the Government will perform an increasingly important regulatory role as industrial society becomes more complicated. I merely want to remind you that every time you claim foul on the other side and ask the Government to intervene on your behalf—either by filing charges under existing law or by seeking additional legislation—you bring Washington to your bargaining table.

At the risk of seeming naive I would like to suggest that most of the problems with which we deal—freedom of speech and due process, as well as practice and procedure of collective bargaining with which the Labor Board is primarily concerned—can be solved by good will on the part of those who deal with labor problems as they arise. I believe in resort to the orderly processes of the Board in lieu of combat in labor relations; but I also believe that to as great an extent as possible employer and union should adjust their differences without seeking our help.

It seems the great guides for human conduct that have proved their value in the establishment of western civilization and American democracy may not be good enough for the 20th century leaders of labor and management. They insist on the right to lock out, to strike, to take advantage due to economic superiority, and they often still resort to violence and mob action.

FOLLOW SUNDAY'S SPIRIT

If all the members of the union were blood brothers of management, there would not be many serious labor disputes. And this would be so because of the way the parties would treat each other, and would have little or no relation to the provisions of Taft-Hartley. In this hypothetical situation the company wouldn't have to give away its last dime because, of course, the union would have no occasion either to demand or to take the company's last dime.

What a marvelous transformation we would see in industrial relations and in production figures if management people and union leaders would always deal with each other decently; if they would follow their Sunday urge throughout the other days of the week, and put themselves in the other fellow's shoes just a part of the time. But the more common approach is to treat the other fellow as a combatant in a dog-eat-dog process, not wholly unlike that of cutting off one's nose to spite the face.

The time will come when they shall treat each other as they should, but not soon—no sooner than truly selfless men with great knowledge of human values and with extraordinary vision, arise and exhibit a capacity to lead the masses of lesser men on both sides of the issue in the right direction. For many now in the labor-management field, to follow such lead would require at least a right-angle turn, for some a full circle.

Businessmen can help the Labor Board do a better job by giving at least as much attention to the spiritual concept of the labor-management law as they do to the letter of the law. They will help themselves if they will search for a oneness of purpose with their employees that will draw them together, rather than some provision of the law which, when urged as the basis of a dubious right, will tend to widen the chasm of dissention now separating management from labor.

You experts in labor-management relations on the side of industry can help the Labor Board do a better job and promote industrial peace if you will analyze carefully the decisions of the Board and the courts and predicate cooperative action with your employees on the positive implications of our words, rather than prepare defenses on their negative aspects. Unfortunately for all of us, these words are sometimes so complex we all have difficulty being sure of the meaning. And even more important than these interpretations of the Taft-Hartley Act are the interpretive words of a more fundamental law spoken by one who comes from the labor side—from one of the oldest crafts. True industrial peace will come to America, and I earnestly ask that you try to understand this simplicity, when many more men in both labor and industry carefully analyze and fully comprehend and sincerely try to implement in the field of labor-management relations these plain, uncomplicated words of a humble carpenter of Galilee. "And as you wish that men should do to you, do so to them," remembering that He also said, "For the measure you give will be the measure you get back."

General German Aged People's Home—Address by Governor McKeldin

---

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Thursday, March 14, 1957

Mr. BEALL. Mr. President, we all rejoince at the birth of a new project dedicated to service for our fellow man, and our joy is increased whenever such an undertaking expands and flourishes. It is with a deep sense of happiness, therefore, that I speak today of the progress of the General German Aged People's Home—Greisenheim—of Baltimore, Md. This home was founded more than three-quarters of a century ago, and its birth inspired the hope that it would grow through the years in accordance with the principles of humanity on which it was established.

Now that hope has been realized, and a new promise of additional achievements has been made through the laying of a cornerstone for a new infirmary wing

for the home. I should like to emphasize that this progress has been accomplished without State aid, but with only the generous assistance of the friends of Greisenheim. These results have stemmed from the devotion of numerous persons to the finest German traditions—a devotion which has not only benefited Greisenheim in particular, but our entire Nation in general. Unfortunately it would be an almost impossible task to name all of the individuals who have aided in the growth of this home for the aged, but I should like to mention a few, not only because they themselves have contributed greatly to the work at Greisenheim, but also because they typify the devoted service which has been rendered by so many others, too.

I should like to mention their names now, and I also ask unanimous consent that the remarks delivered by Gov. Theodore R. McKeldin, of Maryland, at the cornerstone-laying ceremonies, be printed in the Appendix of today's RECORD. The names are: Sister Herta Jurgens, matron; Sister Friedericke Cluss; Sister Louis Doepner; Mrs. Edwin Boesche, president of the Ladies Aid; Mrs. Henry Sincz, president of the Handicraft Club; George C. Stroh, president of the "greisenheim"; William E. Zschiesche, secretary; and the following members of the infirmary fund committee: Kurt H. George, chairman; Mr. Stroh; Hermann G. Sander, vice president; William E. Katenkamp; Albert Glombowski; Frank Zimmermann; Harry J. Klasmeier; William F. Stiegler; and Mr. Zschiesche.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF GOV. THEODORE R. MCKELDIN, CORNERSTONE LAYING, NEW INFIRMARY WING, GENERAL GERMAN AGED PEOPLE'S HOME OF BALTIMORE

It is a gracious privilege to participate in the laying of this cornerstone, for the building that will rise here is a symbol with many meanings, but all of them good and fair. A "greisenheim," a home for the aged, is a milestone marking man's progress up from the level of the brute. When it is the work of a group allied by ties of blood and nationality, it is also a symbol of the social bond by which we acknowledge our responsibility for our less fortunate neighbors. When it bears, at this one does, a name from the language of the mother country, it is a reminder of our debt to the great nations from whom we inherited our civilization.

Twice within this century it has been the unhappy fate of Americans of German blood to have to stand in arms against the land of their fathers. It has been a severe trial and it did not end with the clash of arms; for it has imposed upon our people of German descent a stronger obligation to preserve the memory of all those things that Germany has contributed to the enrichment of civilization. For it was through German immigration to these shores that the great values of the German way of life were brought to bless America. If the sons of the immigrants should allow the tragedy of the twentieth century to make them forget the glory of earlier days, not they alone would suffer, but all of us would be the poorer. British and Spanish and French and Italian—whatever may be the origin of our American families, we have all profited by what Germany has contributed, as we hope German-Americans have profited by what the rest of us have to give.

It is the great good fortune of the American that, in things of the mind and spirit, he inherits from all nations, regardless of his own descent. His ancestors may have roamed the Scottish Highlands, or the Russian steppes, or have built their homes around the Irish lakes, or in the African jungles. No matter. As an American he has fallen heir to the music of Bach, to the philosophy of Kant, to the science of Leibnitz and the poetry of Goethe. For those Americans who came originally from Germany have brought with them the riches of the German mind and spirit, to add to the common treasure.

All of us are under an obligation to preserve this treasure, but I think you will agree that a special obligation lies upon each group to preserve first of all the contribution that our own people brought. Certainly Beethoven must be studied by an Italian-American musician, Mommsen by an Anglo-American historian, Ehrlich by a Spanish-American physician. But while those great names must command the respectful admiration of an American named McKeldin, it is reasonable to suppose they arouse not only respectful admiration but also a warm glow of pride in an American named Eisenhower. A German-American should be duly grateful for all that other nations have given us; but he must be particularly proud of what Germans have given us.

Among the gracious gifts that have come from the Fatherland, none is better worth preserving than the tradition of compassion for the helpless that is conspicuous in the German character. The Christmas tree is an importation from Germany. It is the most beautiful of all symbols of our belief that the strongest of claims upon our generous sympathy is the claim of sheer helplessness. In the case of the Christmas tree it is the helplessness of youth. Children cannot command, they can only appeal; yet the glittering tree is evidence that their appeal has moved the German heart in a way that the commands of great Caesar never could.

The appeal of age is of the same kind, and for 75 years this institution has stood as visible proof that the German heart responds to helpless age as it does to helpless youth. Throughout its long history this institution has been supported by voluntary contributions. The tax collector has never exacted one cent for its maintenance, so it is our habit to say that there was nothing forced in the aid that has been given it.

But is that quite right? It is true that the power of the law has never been exerted in its favor, but there are other powers that operate upon men. A kind heart is a taskmaster, too, and it often drives men to action when all the forces of the State could not move them. I am inclined to think that in the long list of contributors to this institution the great majority gave because they had to give. Their own kind hearts commanded them in a way that all the laws ever enacted could never do.

The difference is that this is a happy servitude. The man who is driven by his own generous impulses toils as laboriously as any other, but he is rewarded with joy and pride; and his labor in the service of others, doesn't exhaust him, it refreshes him.

So I am inclined to say that this institution, although built and maintained without the assistance of the State, nevertheless had to be built and had to be maintained. I believe you will agree with me, if you think of the alternative. We have always had in this city a large population of German blood and many have gained wealth and power. If, then, there had been no expression of compassion, no evidence of sympathy for the unfortunate, no response to the appeal of the helpless—why, it is unthinkable. The very presence of a great many German people was a guaranty that there would be some manifestation of the kind German heart.

As a matter of fact the Greisenheim is only one of many such manifestations, but it is a particularly fine one and perhaps the finest thing about it is the fact that after 75 years it not only continues to exist but is in process of expansion. The spirit that animated the fathers and grandfathers has not been extinguished in their posterity; this facet of the German character, far from being dimmed, is polished until it attains a more brilliant sheen than it had long ago.

This care for the best part of our European inheritance is, however, not German. It is typically American, and of the best part of America. There is no higher loyalty to America than to preserve and cherish and strengthen every fine tradition, every generous impulse, every civilized instinct that was brought to us from the countries of our ancestors. It is, of course, also a part of loyalty to eradicate every ignoble element that may have been introduced from abroad, but that is too plain to need emphasis. The task of Americans, if we are to achieve our high destiny in the years ahead, is to select the best from all the national cultures that have been brought to this land. We have among us representatives of all traditions, of all manners and customs, of all intellectual disciplines. In each of them there is something excellent; and if we might select the excellent from each, we could weave them all into a tapestry of such brilliance and beauty as the world has never seen.

But to be able to do that we must first learn to recognize the excellent when we see it. And if we wish to recognize the excellent in an alien culture, the best preparation is to study carefully what is excellent in our own. This is why it is first-rate Americanism for Americans of German blood to study, and practice and strengthen all that is fine in German tradition, not for itself alone, but in order that America may profit. The German-American should study other cultures, too, but he will appreciate the others sooner if he first learns to appreciate all that is best in his own.

This institution stands as one of the fine flowers of German culture in America, for nothing that Germany has done redounds to her credit more than her long struggle to eliminate the fear of want among her own people. Age is the factor that makes all men vulnerable to that fear; hence, the protection of age is a triump of high civilization. The existence of this institution is more than a sanctuary of old people of German blood; it is also a stimulus and encouragement to all others to take thought of the same problem as it affects them. Therefore, this home is a contribution to American civilization, a bright thread woven into the great tapestry.

Hence the project that you are now undertaking, to expand the services of the home and to improve their quality commands my admiration and interest. First as an officer of the state, second as a citizen of the city, third as an American of German origin, I offer you my thanks and good wishes. For in proportion as your work is successful we shall all benefit, not so much in material things as in inspiration to higher achievement.

And, in the final analysis, an inspiration to higher achievement is the most valuable thing that any national or racial or sectarian group can contribute to America. Because so many groups have contributed in the past, our civilization has attained an extraordinary richness and variety. The hope of our future is that they may continue to contribute, so that someday, by selecting the best from each, we may at last put together the finest of all.

For what you have done toward this work in the past I offer you my congratulations; and for what you will continue to do in the future I offer you my warm good wishes, coupled with confident hope.

Atomic Power Development

EXTENSION OF REMARKS

OF

HON. CLINTON P. ANDERSON

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Thursday, March 14, 1957

Mr. ANDERSON. Mr. President, the able chairman of the Joint Committee on Atomic Energy, the Honorable CARL T. DURHAM, will make an address tonight in Philadelphia on the subject Some Realism on Atomic Power Development.

I ask unanimous consent that the text of his address may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SOME REALISM ON ATOMIC POWER DEVELOPMENT

(Speech before National Industrial Conference Board Conference on Atomic Energy in Industry at Philadelphia, Pa., on March 14, 1957, by the Honorable CARL T. DURHAM, chairman, Joint Committee on Atomic Energy)

The topic I have chosen for discussion this evening—on realism in atomic power—would appear appropriate for the aggregation of engineers and businessmen at this nuclear congress. Engineers are noted for getting down to brass tacks, and businessmen are known to be interested in the realities of profits and loss statements.

Now actually in making this kind of a speech, I am in a sense stepping a bit out of character. For I am one of the greatest optimists about the present and future prospects for atomic energy development.

I think we have made a great deal of progress since the first Atomic Energy Act was passed in 1946. I further believe that we have made considerable progress since the act was amended in 1954.

Perhaps the greatest single reason for this progress over the years has been that we have had a civilian Atomic Energy Commission responsible for the program, carrying out its activities through industrial and university contractors with administration in the field. More recently the 1954 amendments have encouraged greater private ownership and participation, permitted greater declassification of technical information, and provided the basis for the international atoms for peace program.

Tonight I want to take a somewhat different approach and review some of the hard facts and raise some of the hard questions which are necessary to an understanding and solution to the problems which face us. These facts and questions have for the most part emerged out of the open statutory hearings which the joint committee has recently concluded and other executive hearings which we have held.

In passing let me say that in bringing up these matters, I am following the tradition of the previous chairmen and past and present associates on the joint committee. As you know, our committee in addition to being the only joint committee with legislative functions, has a tradition of being a kind of watchdog for the atomic program. Moreover, we take real pride in providing encouragement and sometimes the spur for the executive branch to establish necessary policies and programs in the atomic energy field.

Our overriding problem as I see it, is how to maintain our world leadership in atomic energy. In the field of atomic weapons and military reactors that is necessary for our immediate survival. In the field of civilian atomic power, it is necessary for our world prestige and long-time survival.

First, I would like to touch upon our military atomic energy situation. Our scientists and engineers at our great Los Alamos and Livermore Laboratories have done a remarkable job in improving the weapon designs which are showing up in our stockpile.

Our vast plants for producing weapon material, U–235 and plutonium, are turning out record quantities of material. But here our first question arises. Are we producing enough plutonium, taking into account the revolution by which nuclear weapons are supplanting conventional weapons? Unfortunately our military planning is apparently geared to current productive capacity instead of our needs 3 or 4 years hence. This is obviously a subject which cannot be explored publicly in its entirety. Suffice it to say that it will be high on the list for consideration by the Joint Committee in coming weeks.

In the field of military reactors, we can take a great deal of pride in the outstanding success of the naval reactors program, under the leadership of Admiral Rickover. The *Nautilus* has been the prototype for the complete transformation of the Navy to nuclear propulsion. Currently we have the *Nautilus* and the *Sea Wolf* operating, with 7 other atomic subs under construction, and plans for 6 additional subs, a guided missile cruiser, and an aircraft carrier.

In the field of Army package power reactors, we also are making progress. The demonstration plant at Fort Belvoir is scheduled for operation this spring. Several other promising approaches are being explored.

In the field of aircraft nuclear propulsion we are also making progress. The AEC in its 21st semiannual report announced that the first jet aircraft engine powered by atomic energy went into operation at the GE Idaho site in January 1956.

But here we encounter our second question. For despite steady progress since a cutback in 1953, the Defense Department is again using the meat ax instead of the scalpel on the ANP program. Here is a program where the sound principles of management have constantly been violated. Management has been indecisive with authority spread out among several different offices and branches. In the current cutback, no objectives, schedules, or target dates have been set to provide guidance in the program. Here again, the Joint Committee is trying to help get the program back on a sound course.

Now turning to the civilian power reactor field, we can also point to considerable progress. We have a remarkably diversified program at the experimental level. Eight or more different reactor concepts are being developed to the experimental reactor stage by the Commission.

Moreover we have in the 5,000-kilowatt Argonne experimental boiling water reactor our first regularly operating atomic powerplant. I had the honor of pulling the lever that brought the plant up to power last month.

We are also looking forward to the 60,000-kilowatt Shippingport reactor coming into operation next fall. It will be our first full-scale atomic powerplant. The Joint Committee has consistently followed the progress of this project and its predecessors in the naval reactors program. From these projects we have gained some experience and insight into the problems facing the civilian atomic power program. Only last week some of my associates and I visited Shippingport and were greatly impressed with what we saw.

We can also take some encouragement in the response which private power companies, and State, municipal and cooperative power agencies have shown toward the Commission's invitations to participate in the power demonstration program, or to go out on their own hook in planning to build atomic powerplants. The responses which have occurred since the last session by such organizations as the Virginia-Carolina group, the New England Power Co., the Ohio Valley group, the Northern States Power group, the Pacific Gas & Electric Co., the Pacific Power & Light group, and the Chugach Cooperative, are gratifying, particularly in view of some of the problems I shall discuss later.

But as indicated at our recent hearings, we have run into some real problems and questions in regard to our program for the development and construction of large scale power reactors. At the outset of the hearings, I made two observations which were abundantly borne out during the hearings and subsequently. In my opening statement I said:

"Some of the things which perplex us are the following:

"1. Although we see steady progress in our technology, the technical and engineering problems encountered appear to be considerably greater than anticipated. This discouraging note applies to both Government-financed and privately financed projects. The Joint Committee was informed last Friday that cost estimates for 2 major power reactor projects—1 private and 1 Government-financed—have increased approximately $15 million, which amounts to 20 to 40 percent of original estimates. We have been informed privately of similar cost increases on other projects. Schedules of completion on some projects have also apparently been extended, or should be extended.

"2. Although the immediate financial incentives in this country for reactors does not appear good for the next 10 years, the need for reactors abroad is apparently very great and immediate. Thus the Three Wise Men of Euratom indicated that Euratom needed 3 million kilowatts of atomic power in 1963 and 15 million by 1967. This would mean 30 reactors the size of Detroit Edison by 1963 and 150 by 1967. This is a lot of reactors, but AEC and the State Department say the goal is feasible. I don't need to point any moral from the above."

A sample of statements during the hearings confirming these increases in cost and completion dates is as follows:

"The Yankee Atomic Power group reported that an estimate has been made which indicates that overall costs of the plant will exceed the original estimate of $35 million by a substantial margin. The completion date has been moved from late 1959 to late 1960.

"AEC indicated that the estimate for the Consumers Public Power District project had increased 80 to 100 percent from the original estimated $25 million. The completion date has been moved from 1959 to 1961.

"Westinghouse representatives stated that current estimates for the Pennsylvania Power & Light acqueous homogeneous reactor are appreciably higher than original estimates."

AEC Commissioner Thomas Murray indicated that estimates for small atomic powerplants had also gone up. The 10,000-kilowatt Wolverine Electric Co-op project had already increased about 25 percent." AEC representatives indicated that the original estimate for the Elk River co-op had been withdrawn by the equipment manufacturer, with an indication in later testimony of a 30 percent increase.

It should be noted that most of these increases are in estimated costs before even design is completed. Thus it is possible that actual costs might be reduced or, more likely, increased.

The reasons given for these increases in costs, in addition to normal price increases, were unanticipated development and engineering problems, usually in the non-nuclear portions. Admiral Rickover had some important things to say about these problems in a recent speech as follows:

"Many factors have been suggested as the major source of difficulty in achieving nuclear power. Secrecy, the novel scientific concepts involved, legal and governmental restrictions—each of these has been cited as the major stumbling block.

"The main problem is with materials and equipment generally considered as conventional, but which must conform to the exacting standards required of all components of a nuclear powerplant.

"It has not been difficult to focus the necessary attention on the novel features of nuclear power, such as the nuclear reactor itself. * * * But it has been very difficult to get sufficient effort directed toward the more conventional aspects of nuclear plants—the heat exchangers, the pumps, the valves, the instrumentation. Here normal engineering and manufacturing techniques have proved to be inadequate when applied to nuclear plants."

Admiral Rickover also had something to say about the management problems involved:

"We have found that before a company can produce heat exchangers, valves, pumps, instruments, or other components suitable for a nuclear powerplant, a complete revision of its normal organizational procedures is necessary. A full-time project manager responsible directly to top management must be placed in change of the nuclear products. He must establish new levels of engineering and scientific competence. This generally requires that personnel be given special education and training.

"New tools and procedures for inspection must be developed and put into use. Facilities for testing raw materials and the final product must be designed and installed. Often these are very expensive.

"In short, an entirely new level of technical and administrative competence must be built up for even the so-called conventional-type equipment."

Now I assure you that the reason I dwell on these problems is not because I want our program to look bad. I certainly do not. But these somewhat unpleasant facts raise a number of questions. Of particular interest are the following:

1. Who is going to pay these increased costs?

2. What are their implications as to the realities of private participation in atom-power development during the next 5 or 10 years?

On the question of who is going to pay for the increased costs, it is probably going to be primarily the equipment manufacturer. AEC by reason of its fixed contributions to demonstration projects, has encouraged the placing of the risk of loss on the equipment and component manufacturer. The same policy is standard practice among power companies and co-ops in contracting for commercial projects. Some of the additional costs will be shared by power operators to be charged off through their rates. The difference between the estimated cost of nuclear plants and the cost of a conventional plant of the same capacity will, of course, have to be borne by the power operator.

Perhaps it was looking at these hard facts and questions that prompted Mr. Frank McCune, vice president of General Electric in charge of their atomic energy work, to write to the committee that their number one problem is the following:

"Of primary importance is the present lack of economic incentive. Normally a business begins to grow rapidly when its products produce increased value for its customers. Presently there is much to do before atomic power is competitive in our normal markets; hence our customers are spending money on their projects rather than receiving increased value from them. I believe that it takes more than the usual faith and courage to invest heavily in such a business environment."

As you know, a recent survey by the Atomic Forum confirmed that industrialists believe that the lack of a financial incentive is their number one problem.

Getting back to my realism once again, I would like to make one further observation: Perhaps all of us in one degree or another have erred in treating the program as if commercial atomic power were here or just around the corner in this country. Actually all of the problems are normal for a large scale research and development effort. It is "par for the course" in development work to sometimes miss cost estimates by 100 percent and completion dates by a year or two.

A further question arises growing out of the above observation, to wit: Are we not applying methods applicable to a large-scale conventional power projects, rather than methods more attuned to large-scale research and development work in the atomic-energy field?

Thus, for example, the co-ops and private-power companies (with one exception) are contracting for the development and construction of their reactor plants on a turnkey basis to the private equipment company. This amounts to practically complete delegation of technical and administrative direction of the project to the equipment company. The co-op or private company have few supervisory engineers or management specialists assigned to supervise or bird-dog the project. Yet, in some cases, the equipment company has never before built a complete reactor.

In contrast, the AEC in building the Shippingport reactor has a complete technical staff under Admiral Rickover and extensive field management and procurement supervisory staff working with the prime contractor and subcontractors. Yet even here with an adaptation of an established design it is taking more than 4 years to complete the reactor project.

Now what are the implications of some of the above facts for you as engineers and businessmen? It seems to me that it raises the question of whether you should get stronger management and engineering personnel in the private utility groups, municipalities, and co-ops to direct and supervise the work of their contractors. Moreover, there should be greater recognition that the work is primarily at a research and development stage, and that this costs a great deal of money.

Now what are the implications of our realism for all of us as citizens. It seems to me that it means if we really want to accelerate our atomic-energy program under present conditions, it will take considerably more private and Government funds, risk taking, and effort by everyone concerned. It particularly means the training of many more people in nuclear work.

That brings me to the question of whether it is worth it. I think it is, if we are measuring its worth in terms of world leadership. For our atomic leadership has become a part of our foreign policy, whether we like it or not.

At the present time our present leadership is being seriously challenged. The British only last week announced that their already large-scale program has been quadrupled. This includes approximately 20 power stations involved 30 to 40 reactors for a total of 5 to 6 million kilowatts at an estimated capital cost of $2½ billion. These power reactors will begin coming on the line in 1960.

As I have indicated, the 6-nation European EURATOM group has plans for 3 million kilowatts by 1962 and 15 million by 1967. Japan is also interested in developing atomic power rapidly.

Although the Russians are undoubtedly behind us in technology, they have an ambitious program, both in terms of variety of reactor concepts and total number of plants and kilowatts produced. According to the statement of the Soviet spokesman, Dr. Ivan V. Kurchatov, and other Soviet announcements, the Russians expect to have between 2 million kilowatts and 2½ million kilowatts by 1960, with considerable capacity coming into operation in late 1958.

The joint committee reported last year that, based on Soviet achievements in other aspects of atomic energy development, and in other technological fields, there is no reason to believe the Russians cannot achieve their goal provided they give it top priority.

Then there are the Latin American and underdeveloped nations who are looking to us for help.

The challenge and opportunity is there. The question is, can we meet it? I believe we can. But we can't afford to wait another year or two.

One of the most challenging and, in a sense, encouraging things that came out of our recent hearings was that this urgent need for atomic power in foreign countries offers a great opportunity for our domestic atomic equipment industry to get some experience and make some money in foreign markets until atomic power becomes more economic here. But there are many complex problems to be solved in encouraging this international development.

Witnesses were practically unanimous that we need a far more aggressive program to back up our equipment suppliers in their efforts abroad. Red tape needs to be cut, and reactor projects need to be considered and sold as a package including fuel fabrication and reprocessing in order to compete with our friends abroad.

Now, in summary, what do we do about it? Taking the broad sweep of our world leadership in weapons and in military and civilian reactor development, I would recommend that we seriously consider the following (all subject to further study and consideration by the joint committee):

1. We should authorize construction of an additional plutonium producing reactor at Hanford, Wash. It would seem wise to also make provision for utilizing the waste heat for producing electric power.

2. We should authorize the development and construction of a Mark I flying prototype of a nuclear propelled aircraft with a realistic target date for completion.

3. We should substantially increase AEC funds for reactor research and development work.

4. We should inaugurate an accelerated domestic reactor demonstration program which will ensure that we will have a variety of operating prototype power reactors in this country by 1961 or 1962.

5. We must establish a foreign power-reactor demonstration program which will assist friendly nations abroad and help provide research and development assistance and a foreign market for domestic equipment manufacturers.

6. We should enact the indemnity legislation to cover liability for reactor accidents.

Finally, I would like to emphasize that time is of the essence at this juncture. I don't believe we need a "crash" program. But on the other hand we can't afford to wait too long where our national prestige and world leadership are at stake.

This is not the first time that the joint committee and the Commission have faced the need for urgency in our atomic energy program. I am hopeful that we can and will work out a program in this session

which will satisfy our needs and obligations as a world power.

Thank you very much for providing the opportunity to discuss some of these problems.

Contributions of Spain and the Spanish People to Christian Democratic Principles

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Thursday, March 14, 1957

Mr. MURRAY. Mr. President, last Sunday morning, March 3, His Excellency Don Jose M. de Areilza, Count of Motrico, Ambassador from Spain to the United States, delivered an address before the Washington League of Retreatants, Loyola Retreat House. The occasion was the annual communion breakfast, held at the Willard Hotel on that date.

The address by the distinguished Ambassador went at some length into the contributions of Spain and the Spanish people to Christian democratic principles, and the many problems which confront the Spanish nation today.

I ask unanimous consent to have this address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH BY THE SPANISH AMBASSADOR BEFORE THE WASHINGTON LEAGUE OF RETREATANTS, LOYOLA RETREAT HOUSE, MARCH 3, 1957

It is my great privilege to address today the League of Retreatants' annual communion breakfast, being, as a Spaniard and a Basque, a devout admirer of St. Ignatius of Loyola, under whose name and patronage this league is placed. I was born a few miles from Loyola itself, a small village on the green slopes of the Pyrenees, where you can still see the ancient castle of Loyola's boyhood. The most amazing trait of St. Ignatius' personality was not his will, which was gigantic, nor his sharp insight into the human soul, which was unsurpassed, nor his strategic sense of organization, which was comparable to that of the greatest military leaders of his day, but the indisputable feeling of God's presence throughout his earthly existence—the dramatic trajectory of his life. When you read Loyola's biography you have always the sense that God is there, present in an impressive way, at every crossroad of his early years, driving him toward his ultimate destiny—the foundation of the Jesuit order. And, as an instrument of God, he accomplished and fulfilled his historic task, fighting for the preservation of Christian unity, the reformation of monastic life, the renewed authority and moral strength of the Pope and the church.

I come to you today to tell you something about Loyola's country, which also happens to be mine. I wish to make a few remarks about Spain, which is today the least known and most misunderstood country of Western Europe, and about which one can still read unbelievable comments or listen to incredible statements. I have myself been through a curious experience: during the last 2 months I read 2 books by American authors, published in this country. They both tried to give an unbiased and an objective interpretation of Spanish life. If you believed one of them, you could not help but arrive at the conclusion that Spain was still in the Middle Ages, under the power of the Inquisition, in a state of frantic Catholic intolerant bigotry. Spaniards are—one of the authors states—living in a trance of fanatic faith. Their life is only religious and they do not care about anything else than eternal life and the risk of damnation. Then, I read the second book, published almost simultaneously. The title is enough to show you what is the line: It is called Pagan Spain. This time the author solemnly assures the reader that ours is a wholly pagan country, without any true religion. Spaniards are really nonbelievers like the old pagans, and their lives are adjusted to pagan principles. What an amazing contrast of judgment. Is it strange that public opinion in this country should be confused and frequently misled when it comes to Spanish problems and to everything related to my country?

It is true that our temperament is somewhat different and peculiar. It is also true that Spain has a well-defined personality as compared with the other Latin countries and that Spaniards have a hard core in their national soul, such as the British have. A dramatic episode occurred some months ago which proves what I am saying. During the Spanish civil war some thousands of children, many of them orphans, were shipped to the Soviet Union by the Red welfare organization. When they came back some months ago, to the utmost surprise of everyone, these boys, who had grown up and become men of around 30 years of age and brought back with them Russian wives and children, had never given up their original personality. They were true Spaniards and they immediately adjusted themselves to Spanish life after an absence of 20 years.

What can we learn from this lesson? I believe that the true explanation for this is the tremendous emphasis on individuality, typical of the Spanish race. We are a nation of 30 million individuals and, as some famous writer put it, "30 million absolute kings." Therefore, it is erroneous to speak about the lack of freedom or liberty in Spain under whatsoever political system it might be, because the Spanish emphasis on the individual and personal expression of everyone is never lost. We, Spaniards, could not live deprived of our essential need for self-expression.

We are evidently a Catholic country. Up to 90 percent of Spaniards are Catholic and the Catholic religion is intimately associated with our own historical existence. Since the Catholic faith came to Spain between the fifth and sixth centuries, it has become an essential part of Spanish life, and since 700, it was instrumental in the struggle that our country had to endure through 7 centuries against the Moslem invader. These 7 centuries of struggle crystallized our national spirit and strengthened the foundations of our Christian belief as against the fatalistic philosophy of the Moslem mind. It is a curious coincidence that in the same year that the Moslems were finally driven out of Spain, the Spanish naval expedition, headed by Columbus, discovered the new world. Therefore, the discovery and settlement of America, which lasted more than 200 years, was made under the sign of the cross. Spanish civilization in America was founded on the principles of the Catholic faith and the belief that all men are equal before God, though they may be different by birth or race. The Spanish kings refer often in their documents to the American natives as "our friends and brethren, the Indians," because of that fundamental conviction.

What Spain brought to this hemisphere was not only unity through language and culture, but also a way of life which has been widely despised and ignored in the last 100 years, and yet is very important in order to understand the Spanish-speaking world of 160 million people who are your neighbors. We have a definite common reaction to the true values of life, the ultimate goal of human destiny, the attitude toward life and death, as reflected in the calm and quiet expression of our "hidalgo," which has been pictorially interpreted by El Greco and Velazquez, our two master painters, and in the ironical twists of human behavior described in Cervantes' masterpiece, Don Quixote. We have a deep feeling that only eternal life is worth while and that human existence is the ways and means to achieve this goal.

This philosophy, which is inherent to the Spaniard, makes him different from the nationalistic-minded Western European. The Spaniard thinks that anyone who is guided by these principles belongs to the Hispanic world, regardless of his nationality or passport, which, in his opinion, has little to do with the value he gives to the human being.

Thus, the struggle which is now going on in the world between the two powerful antagonistic blocs is watched with eagerness by all the Spanish people. We cannot understand the criticism which we undergo frequently on the subject of complying, or not, with internationally accepted standards of democracy or liberal political systems, which have little meaning as such for the Spanish public opinion. We do believe, on the contrary, that above these formalities, which after all belong to the technical side of politics, there is a much more important thing at stake—that is, whether the philosophy of the system involved is founded on the belief in the existence of God, the value of human personality, the fight for eternal salvation of the individual soul, and the acceptance of Christian values as the ultimate motive of civilization itself.

Now let us look for a moment at various aspects of modern Spain, the Spain of 1957, and see what are the original circumstances which brought about our present situation. The distorted and ridiculous story that you have so many times heard about a wicked minority group of rioters who organized a conspiracy to take over the Government and establish a personal dictatorship has no meaning for any Spaniard, whether of right or left, who knows the recent history of his country. In 1936, the leftwing coalition in power was ready to give up control of the Spanish Peninsula to the pro-Soviet agents who had infiltrated our country and were occupying key positions in readiness for their ultimate purpose. When General Franco took over the command of the national rebellion, he was not a man looking for political or personal advantages. He had always been an honest professional soldier, who had kept away from politics and had declined every request made to him to join this or that party. Spain had no option in 1936 but to fight for survival in order not to become the first satellite state in the Soviet constellation. Although this fact has been widely discuseed, only recently there has been overwhelming proof of the truth of this assertion. I refer to the shipment of the whole Spanish gold reserve, worth $750 million, to Soviet Russia by the so-called Loyalist Government. Everyone in Spain knew this fact, though it was denied by the leftwingers, but which has now been confirmed in the documentation returned to the Spanish Government by the last Red Premier, Mr. Negrin, who passed away recently in Paris. This proves to you to what extent the Spanish civil war was a struggle of all the decent, honest, loyal people against the threat of a Soviet-imposed puppet government, which would have brought to Spain the horrors of Hungary and Poland. During the time which such a government actually was in power in Spain, they caused

the death by assassination of 11 bishops, 10,000 friars and clergymen, and more than 250,000 citizens, many of whom were killed only because they carried the cross or the scapular on their chest.

Our fight could have been finished in 3 or 4 months, with victory for General Franco's troops, who had arrived at the gates of Madrid in October 1936. But the Cominform had other plans and absolutely wanted the Spanish war to go on for international strategic purposes. Thus, 50,000 men, recruited from among all the Communist parties in the world, were sent to Spain with modern war materials, and the war was prolonged 3 years, with a tremendous loss of life and property. The big shots of international communism whose names we see now in the headlines, such as Tito, Togliatti, Thorez, Dmitroff, and Zieler, were the heads of the famous so-called international brigades. Their defeat was complete in 1939, but the Cominform would never forgive Spain for that enormous humiliation. So when the Second World War was over in 1945, though Spain had maintained a strictly neutral attitude, Stalin insisted at Potsdam that we should be treated as enemies and that Spain should be quarantined, with all the western countries severing off diplomatic and economic relations. The Spanish people endured this trial with unsurpassed courage and a sense of humor. They simply kept united under the guidance of General Franco and waited patiently for some years until all the foreign diplomats who had left under Soviet pressure, came back and reassumed their diplomatic posts, thus rectifying their mistake. In 1951, the Korean war opened the eyes of the free world to see not only where the true peril was, but also the meaning of the Spanish civil war itself. It has been the privilege of this great country to be the first to rectify the hostile attitude toward Spain, concluding an agreement in 1953 with the Spanish Government for full economic and military cooperation.

We are now in a position to offer to the defense of the free world in Europe a main bulwark to protect the American air and naval bases, and, therefore, to protect the whole European continent. Our country is unconditionally anti-Communist and needs no bribe to maintain her attitude. Even if we were alone in the world, we would take the same stand. The military agreements with the United States have been successful and I can announce to you that in 1957, the four major runways of the air bases now under construction in Spain will be inaugurated and ready for emergency use. I would like also to emphasize that under the provisions of the agreement, this has been the most inexpensive construction ever made by this country anywhere in the world.

As to the Armed Forces in Spain, their morale is excellent and we have now ready and fully mobilized 15 divisions, which constitute a major contribution to the ground forces in Europe. This means that if and when Spain is invited to join the North Atlatic Alliance, which is now undergoing a crisis due to well-known circumstances, our country can help substantially to bolster and strengthen this instrument for the defense of Western Europe.

Spain's contribution can also be significant in another sphere, due to the fact that we have kept a very friendly attitude during the last decades toward the Arab world. The centuries of struggle which I mentioned to you before left in Spain a deep impact of coexisting cultures. We have, therefore, had a good understanding of Arab problems. Our last point of friction could have been the Spanish Protectorate of Morocco, but General Franco, in a gesture of clear wisdom, yielded immediately to their desire for full independence—a gesture, I believe, which has paid excellent dividends in the improvement of our relations with the Moslem world. Moreover, our spiritual community with the Spanish-speaking countries of Central and South America gave us a friendly platform in the international assemblies of the world.

If I may reverse the image, I would mention to you in passing what would have been the impact on worldly affairs had Spain been controlled by a pro-Communist government. It would not only have avoided any understanding and cooperation with the United States and the Western World, but would have also promoted all kinds of trouble in the Arab countries and in Central and South America, under the instructions and guidance of international communism.

This is the situation in Spain today. We have not yet attained the main goals of our internal policy due to our previous international isolation and to adversities, such as bad crops and severe droughts. We still have to keep up our efforts to extend to the lower classes in Spain the enjoyment of a better standard of living and higher rates of wages and salaries. Our military obligations under the agreement with the United States taxes our resources and are a contributing factor to the trend toward inflation. The Catholic Church has made an all-out effort to promote a better social understanding among the classes, especially with regard to labor problems, and also to encourage the laymen to participate in religious activities.

Though we believe that we have been at times the instrument of God to fight important historical battles, not a single Spaniard would believe that his people are a chosen people, who are carrying out providential designs by special privilege. On the contrary, with a very accurate sense of realism and a deep feeling of universality, we know better than anyone our own liabilities and shortcomings. We only aspire to be respected by the rest of the world and understood as far as possible.

Our first discoverers left in this country a precious legacy of Christian values and beliefs, and ever to these shores of the Potomac, the Spaniards were the first to come in their vessels and establish missions under the guidance of the Jesuits, many of whom gave their lives through martyrdom for their faith. When I spoke with Father Martin about the new Loyola Retreat House, I told him of my desire that these unknown soldiers of the Christian faith, who were the real pioneers of modern American civilization, should be remembered in this edifice, which I hope will soon be inaugurated.

I wish to finish my words paying tribute to these anonymous pioneers, who brought to this new world the strength and the spiritual values of their true Christian faith.

War on Drought

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, March 14, 1957

Mr. CASE of South Dakota. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Let's Start a War on Drought," published in the Bennett County Booster, on February 14, 1957.

The editor, Wendell Long, discusses the problem of drought in the Middle West and suggests that it should be treated much as a plague of insects would be handled.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LET'S START A WAR ON DROUGHT

Of all the plights and plagues that have beset mankind since the beginning of time, none seems to be more disastrous or more disrupting to civilization than does drought.

No plague seems to strike at more unrecognized intervals or at more unexpected times.

A few areas of the world are free of the plague.

Some of these, however, cannot substantially support civilization because moisture is so abundant the areas have developed into tangled, massive jungles.

Others receive so little moisture that nothing grows.

It is the vastly greater areas of the world which sometimes get ample rainfall and sometimes do not, upon which has been founded the agricultural industry that has been the lifeblood of civilization since recorded history.

Throughout that recorded history, failure to receive enough rain to properly keep agriculture flourishing has been a constant threat to every group, every clan, every race, and every nation of people who have populated the earth.

An example of how far back this problem is known to have existed is the 7 years of plenty and 7 lean years during the days shortly after Joseph was sold into slavery in Egypt.

Undoubtedly, the recurrence of drought was commonplace long before Joseph's time.

And in the United States today—1957—the worst arid period in some 700 years is plaguing more than 700 counties in 15 States—an area of more than half a million square miles.

The past few years the area has been widening until it may take in South Dakota this year.

The entire Nation is beginning to become concerned about the situation and they might very well become concerned, for if the drought continues to spread and doesn't break soon, the entire world may feel it in their "breadbasket."

If this was a huge army of well-armed, well-trained infantrymen from some foreign land, what would Americans do? What would they have done long before one enemy soldier set foot on our sacred soil?

We'd have fought, of course. We'd have mustered all our human and material resources, we'd have thrown everything into the battle—including our "undying will to win and defend our native land" and, God help us, we'd have driven the enemy from our shores long before now.

If this plague had been an infestation of billions and billions of insects, slowly eating everything in its path, what would we have done?

Why, we'd have drafted every chemist, every scientist, and every would-be chemist or scientist to immediately find a chemical solution that would permanently rid us of this terrible plague.

Such would be the case with every plague—but one. That's drought. The plague we have here today. The one we may have here yet tomorrow—or again, next year and, just as surely as you are reading this, will recur somewhere in this world again after the present one is broken.

Nothing appreciably is being done about it today; nothing appreciably has ever been done about it in the past; and unless someone gets the "ball rolling" nothing will ever be done about it.

Many thinkers are offering suggestions as to how to meet the problems created by drought after the drought has already struck.

But the Booster has not yet read any good sound suggestions as to how to attac.. the problem itself.

The truth of the matter is: far too few thinkers and experts are giving any thought to finding a solution for the problem itself. There isn't enough time to be concerned with it—or there isn't any funds to finance any research.

This may sound like the Booster is advocating a lot of money and a lot of experts be assigned the job of figuring out how to make it rain. That is not the point at all.

The point is this: It's time to put the production of the world's food on a new, sounder, more reliable basis that does not depend on rain at all for moisture.

The problem should be solved with irrigation.

It would be a tremendous job, that's true, and it couldn't be accomplished in one or two generations, but in a world, the surface of which is three-fourths covered with water, there certainly should be no suffering for a lack of it.

Our great civilization can master the tasks of tremendous undertakings, it can unravel the mysteries of life itself, can tell us what occurred on this planet billions of years ago, can extract energy from matter in such violent forms that the entire planet could be exploded—but it can't keep us from dying of thirst right beside thousands and thousands of acres of water in streams, ponds, rivers, lakes and oceans.

The reason: Our civilization has been too busy with the other plagues.

The Booster thinks it's about time some generation got the "ball rolling" toward the elimination of the world's greatest and most everlasting plague—drought.

It'd be so easy and so cheap—in contrast to the tremendous cost of trying to stop war.

The Federal Interstate Highway System

EXTENSION OF REMARKS

OF

HON. EDWARD MARTIN

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Thursday, March 14, 1957

Mr. MARTIN of Pennsylvania. Mr. President, all of us are interested in the construction of our Interstate Highway System. Mr. Clifford F. Hood, president of the United States Steel Corp., gave some very interesting testimony on this subject; and I ask unanimous consent that his statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF CLIFFORD F. HOOD, PRESIDENT, UNITED STATES STEEL CORP., BEFORE THE PUBLIC ROADS SUBCOMMITTEE OF THE PUBLIC WORKS COMMITTEE OF THE UNITED STATES SENATE, JANUARY 25, 1957

Mr. Chairman and members of the committee, my name is Clifford F. Hood. I am president of United States Steel Corp., and I have here with me Mr. Richard F. Sentner, our executive vice president, commercial, and Mr. John S. Tennant, our general counsel.

You have called us here today to discuss the availability and the price of steel in relation to the new highway program which was authorized by Congress less than 7 months ago; and you have expressed the fear that a possible shortage of steel may seriously delay the orderly completion of that program.

Let me say at the outset, therefore, that—barring some unforeseen circumstance—I know of no problem in this area that cannot be surmounted by intelligent planning of the work and by the timely placement and scheduling of steel orders.

Many types of steel are used in highway construction; but the four most important items are structural shapes, plates, wire mesh and concrete reinforcing bars. United States Steel makes all of these items in large quantities.

With the increased capacity provided in recent years, wire mesh and reinforcing bars are in plentiful supply, and thus present no problem. Structural shapes and plates, however, are in much tighter supply; and it is these two items especially, therefore, that I should like to discuss with you today.

Now, as recently as 1954, demands for these heavy steel products fell substantially short of our capacity to produce them. In other words, our customers did not want as much of this tonnage as we could produce; and industry shipments declined to 10½ million tons, compared with then existing capacity of 14 million tons.

But early in 1955 our market surveys—which constitute a basis for all of our forward planning of production—began to foretell a sharp rise in the overall demand for steel. They also indicated an especially heavy concentration of demand in the field of structurals and plates.

As you know, these products are required primarily in the construction industry—for schools, hospitals, churches, factories, and other buildings of all kinds; in the transportation field—for freight cars, pipelines, and shipbuilding; and in public works for highways, bridges, and similar projects. In this connection, I might add that they are also a basic necessity in the expansion of steelmaking facilities.

So, forewarned of an upsure in steel requirements in all of these markets, United States Steel moved quickly to anticipate this need; and long before the highway bill was approved by Congress—long before the Suez crisis created the present unforeseeable demand for new tankers and pipelines—we embarked on a program of expansion designed to add 1,300,000 tons of new capacity for the production of structural shapes and plates. Some of that new capacity is already in operation; and we expect that all of it will be completed by the end of next year. According to announcements made by other steel producers, they will have added capacity of 1.5 million tons by that time.

Unfortunately, however, the benefit to be anticipated from this program of expansion is being delayed as a result of the 34-day nationwide steel strike which occurred last summer. Allowing for the time required to shut down our furnaces and to start them up again after the strike was over, our plants were out of production for about one-eighth of the entire year, and our total steel-making capacity for that year was reduced correspondingly.

The net effect of all this was not only to curtail substantially the availability of steel in 1956, but also to add to the backlog of pent-up demand which now falls as a double burden upon our facilities. Yet, despite the strike, the tonnage of steel actually fabricated and erected in 1956 reached an all-time high, and 1957 should move even higher.

Today, our forecasts indicate that production of plates and structurals—industry-wide—will amount to more than 16 million tons in the current year, an increase of nearly 50 percent over the demand that existed in this field only a little more than 2 years ago.

Only a small part of this increased tonnage, of course, will be required in connection with the new highway program. In this testimony before this committee Gen. Louis W. Prentiss, executive vice president of the American Roadbuilders Association, has told you that the total steel requirements for highways, this year, will be 2.3 million tons—or only 200,000 tons larger than those of last year, which were fully met by the industry. And in view of the rapid expansion which is occurring throughout the industry, it is evident that this rise in highway requirements should not in itself, create any great problem.

It is true, however, that pressure has been built up by the backlogs to which I have already referred; and this, I think, indicates the desirability of forward planning in the highway-construction program so that jobs may be taken and scheduled in order of their need. And this is just the sort of planning that is going on, as was made clear by the testimony which you have heard from the Federal Highway Administrator, the Honorable John A. Volpe. Pointing out that many States are placing their orders for steel while their project plans are still in the process of completion, he said:

"Even if the delivery should be 18 months, the construction operations itself on the project probably wouldn't start for 6 months to 10 months after that, during the period in which the plans are being completed and right-of-way acquired, so that by the time the contractor gets to the point where he needs the steel it will be available."

Indeed, a basic premise of the highway program from the start is that it be carried out in a planned fashion, year by year, and not that it be pushed through in haste, all at once. With such forward planning, there is no foreseeable reason why the highway program cannot move on schedule to its conclusion.

But I also note from the record, that you, Mr. Chairman, have expressed the fear that the rising price of steel may, in itself, constitutes some kind of a threat to the success of the highway program; and I should like, if I may, to offer a little perspective on that point.

It is true, of course, that the cost of making steel has risen persistently in recent years; and that the price of steel has had to respond accordingly. Mr. Volpe has testified, I believe, that the price of the particular types of steel which go into the highway program, had gone up about 10 percent in the past 18 months. As matters stand today our own figures indicate an increase of about 12 percent in the mill price of these products.

But he also testified that steel is a minor factor in the overall cost of a highway. In fact, he said that only about 5 percent of the total highway dollar would be utilized for steel and this is confirmed by our calculations.

Thus you will realize, of course, that a 12-percent rise in the price of steel means an increase of only a little more than one-half of 1 percent in the total cost of constructing a highway.

In the light of these facts, therefore, it would seem clear, I think, that the increase which has occurred in the price of steel has not constituted any threat to the success of the highway program.

In saying this, however, let me emphasize that I am not seeking to minimize, in any way, the dangers of continuing inflation. I am merely saying that if nationwide inflation persists throughout the life of this program, the inflated cost of the other elements which go into highway construction will pose 19 times as much of a threat as would a commensurate rise in the price of steel.

So to sum it all up, Mr. Chairman, I should like to repeat what I said in the beginning: That barring some unforeseen circumstance, I know of nothing in the steel picture that should impede the orderly progress of the highway program, provided that there is proper coordination of planning by the States, the contractors, the fabricators and the steel producers.

There may, indeed, be stresses and strains as there are today; and it would be something of a miracle if there were not—in

view of the recent boom in construction, in the freight-car program, in shipbuilding and tankers, and in pipelines. But United States Steel is accustomed to challenges of this kind. And so is the steel industry as a whole.

Our greatest challenge, perhaps, came in World War II when it seemed almost impossible for the steel companies to meet all the military and allied demands that were made upon them. Yet some of you may recall, possibly, that from the time we entered that war until its end, the plants of United States Steel alone produced more tonnage than all of the steel plants in all of the Axis nations put together; and it is a matter of record that during the entire war no American military project was ever impaired by a shortage of steel. Later, despite the alarms that were sounded of a steel shortage when the Korean conflict began, the steel industry proved its ability to meet the full military demands without seriously disrupting the civilian economy.

Despite these achievements, the authorization of the St. Lawrence seaway recently brought forth doubts and apprehensions very similar to those which have been expressed in this committee. Yet now, once again, it is a matter of record that the steel industry has fully met this demand.

Now it is no accident, Mr. Chairman, that challenges of this kind and magnitude have been met with consistent success. It is due to the fact that ever since the beginning of World War II, the steel companies of America have been engaged unceasingly upon a vast program of modernization and expansion.

Through that program, they have added 51 million tons—or 60 percent—to the prewar steelmaking capacity of the industry; and of this increase, about 12 million tons have been provided by United States Steel.

By way of comparison, it may interest you to note that the total reported steelmaking capacity of Russia—which is the world's second largest producer of steel—is 54 million tons. That means that the American steel industry has added almost as much capacity since the start of World War II as the entire Soviet nation has built in its entire history.

Today, our national capacity stands at more than 133 million tons; and it is currently expanding at a rate of 5 million tons per year. Moreover, I should point out, perhaps, that the 3-year, no-strike agreement which was negotiated with the steelworkers last summer, should have the effect of assuring that the full ingot capacity of the industry will be available for the next 2½ years.

Now, in all of these figures that I have just given you, I have been speaking, of course, in terms of ingot capacity—the capacity to produce raw steel. Some of the witnesses who appeared before this committee did not seem to understand apparently that the total finishing capacity of the industry—the capacity to transform raw steel into all of the various forms of finished products that are needed—is always in excess of ingot capacity. It has to be, in order to provide flexibility and to meet promptly the changing cyclical and seasonal demands of the Nation for different steel products.

Thus, while the finishing capacity in any particular product line may be fully utilized at certain times and for short periods, it would be unusual indeed if it were to operate at 100 percent over a sustained period.

And now, in conclusion, Mr. Chairman, let me simply say that United States Steel is deeply interested in this new highway program—not only because of its importance to the development of the country, but hopefully as a solution to the long-standing problem of inadequate roads. Beyond that, of course, we are in the steel business, and while only about 3 or 4 percent of our total output goes into highways, we naturally welcome a growth in this market for our products.

This highway program has been planned to extend over a 13-year period, and we at United States Steel are gearing our planning accordingly, so that we may participate fully in the success of this great undertaking. For it is our hope and our purpose that when the highways of the future have been built, we shall be able to look back upon our part in that job with pride and satisfaction.

Collision on the Delaware River

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, March 14, 1957

Mr. CLARK. Mr. President, last week I had occasion to call the attention of my colleagues to a shocking disaster in the Delaware River, when two ships collided in a narrow channel, not deep enough for their purposes; and in the collision a number of lives were lost.

Mr. President, in Philadelphia an investigation regarding that tragedy is now being made. A veteran Delaware River pilot who saw the collision testified yesterday that unless something is done about widening and deepening the Delaware River and Bay, tragedies of this sort will continue to occur.

In this morning's Philadelphia Inquirer, a leading editorial, entitled "Will the Bigger Ships Come Here?" is featured. In the editorial it is pointed out that—

> Only last week the latest tragic collision in the Delaware demonstrated anew that (a) our supposed 800-foot wide, 40-foot deep channel is not kept properly dredged.

The editorial takes to task the Bureau of the Budget.

Mr. President, I should say that the President of the United States should be taken to task for his neglect of the Delaware River channel, which is the only access to the sea from Philadelphia, an important port of the United States. Last year, Philadelphia had more import tonnage than any other city in the Nation.

I ask unanimous consent that the editorial to which I have referred, and also a news article from the same publication, be printed in the Appendix of the RECORD.

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Philadelphia Inquirer of March 14, 1957]

WILL THE BIGGER SHIPS COME HERE?

If a Federal Government program for building newer and bigger merchant ships was met with a declaration from Moscow that the Delaware River would be blockaded by Soviet gunboats to keep such ships from reaching Philadelphia—

Just imagine the nationwide howl.

Well, the Federal Government is going to finance a program for building such a fleet of newer and bigger cargo vessels. But it won't be Soviet Russia keeping those vessels from coming up the Delaware; it will be neglect of our channel by the very same Government which is going to finance the ships.

Says Maritime Administrator Clarence G. Morse: "You can look for the first ship built under this program by mid-1959. We hope to hit a steady rate of 20 to 25 new dry cargo ships a year."

That is good news for shipbuilders. It is good news for American commerce generally. But it will not be good news for Delaware Valley, U. S. A., unless our river channel is in shape to accommodate those new and bigger vessels.

The Wall Street Journal notes that Government's subsidies are given provided that the ship lines "keep their fleets up to date—with the help of shipbuilding subsidies dispensed by Uncle Sam."

It is interesting thus to see that Uncle Sam demands that the ship lines keep abreast of the times, and pays them to do so. Why isn't that same policy sound for one of our country's greatest commercial waterways—the Delaware River?

Over and above this program is the stepped-up construction of tankers. With Nasser again swinging his blackmail club in a westward arc, the need for more long-haul tankers and other shipping to bypass the Suez Canal is obvious.

Only last week the latest tragic collision in the Delaware demonstrated anew that (a) our supposed 800-foot wide, 40-foot deep channel is not kept properly dredged; and (b) that even those dimensions, promised in 1938, are out of date now, and pitifully obsolete in the face of a trend to bigger and better merchant ships.

Delaware Valley looks to Congress for action; particularly action in ending the long deadlock in the Bureau of the Budget. That is where the hopes of Delaware Valley for a modern channel have been grounded for a long while.

[From the Philadelphia Inquirer of March 14, 1957]

PORT IS OUT OF DATE, VETERAN RIVER PILOT TELLS CRASH INQUIRY

A veteran Delaware River pilot, a witness to the collision last Thursday below New Castle, Del., of the tanker *Mission San Francisco* and freighter *Elna II*, yesterday warned that worse catastrophes will occur unless "something is done about widening and deepening the river and bay."

Capt. James Johnson, of North Wildwood, N. J., who was piloting a Japanese vessel astern of the outbound freighter said at the conclusion of 2 hours of testimony before a Coast Guard board of inquiry:

"The crash and explosion were the worst I have ever seen in my 23 years as a pilot on the river, but unless something is done about widening and deepening the waterway more and larger catastrophes will occur."

FEW IMPROVEMENTS

"Modern-day ships and tankers, which daily travel to and from the port of Philadelphia, are 3 times the size of the ships of 20 years ago, yet there are few, if any, improvements in the river to provide for them."

Johnson, who is also a member of the Delaware River Port Authority, testified, in the Custom House during the third day of hearings before a three-man board, he was piloting the 500-foot *Tomishima Maru* when he saw the crash and terrific explosion.

He said he ordered the *Tomishima Maru* to a full stop three-quarters of a mile astern of the *Elna II* when he observed that collision was inevitable.

Johnson told the board he noticed the *Elna* swing to the right and saw the tanker negotiate its first turn, but the *San Francisco* failed to alter its course at the second turn." He said he was unable to observe "which ship struck which."

The pilot said after he was sure "adequate rescue efforts were under way," he ordered the *Tomishima Maru* on course, realizing that

a vessel of her size would handicap rather than assist rescue efforts.

Later, Capt. Alexander Kaare, of the ill-fated *Elna*, described the circumstances leading up to the crash which claimed the lives of 10 seamen at about 12:30 a. m. last Thursday.

Captain Kaare will be recalled to the witness stand when the hearings resume today.

Alaskan Against Statehood

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, March 14, 1957

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter to the editor of the Christian Science Monitor which was published in the February 20 issue of that distinguished newspaper.

The letter discusses the question of statehood for Alaska. It was written by Emery F. Tobin, editor and publisher of the Alaska Sportsman.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

ALASKAN AGAINST STATEHOOD

To the CHRISTIAN SCIENCE MONITOR:

In considering statehood for Alaska, very little is heard about the vital economic factors which are cited by the opponents of "Statehood Now for Alaska."

A recent survey has shown costs of living in Alaska to be from 21 percent to more than 50 percent higher than in Seattle, which is itself a city with a comparatively high cost of living. Because of these costs, the Federal Government grants its employees in Alaska a cost-of-living differential of 25 percent additional to their basic salaries or wages.

One of the reasons for the high cost in Alaska is the seasonal nature of the work here. Practically all of the year-round activities of wealth-producing industries are: One pulp mill, some lumber mills, and logging operations. The rest are seasonal industries, working for only a few months, consisting of the fisheries, some trapping, the tourist business, and mining. Actually, some 20,000 people leave Alaska every fall for lack of work. They come back in the spring but they do not make permanent residents.

Alaska, with its 586,400 square miles, has a population of only 208,000. Most people do not realize that of the 208,000, some 80,000 are military men in the pay of the Federal Government and their dependents. In addition, there are another 15,000 Government civil-service employees, plus their dependents. Of the total, also, about 35,000 people in Alaska are Indians, Aleuts, and Eskimos, many of whom are on welfare relief, and 30,000 are school children.

In the fiscal year ending June 30, 1955, there was an average of 26,500 persons in private industry, and even of these 6,715 were employed in contract construction, most of which was Government. Mining employed an average of 1,333; manufacturing, 4,476; transportation and utilities, 3,955; wholesale and retail businesses, 5,894; service industries, 2,732, and others, 1,395. These are averages for the year. The peak employment was about 40,000 in private industry in the summer; the low, somewhat less than 20,000 in winter.

It has been estimated that the additional costs of statehood may be as much as $14 million a year. Total, with what we are now paying for Territorial government, $28 million. These additional costs are for: Fish and wildlife administration, $2,500,000; operation of courts, nearly $1 million; support of the schools now operated by the Alaska Native Service, $2 million; borough government, $150,000; additional police system, $300,000; care and custody of insane, $500,000; roads, $7 million; operation of Governor's office, legislative expense and State buildings, $600,000.

Uncle Sam spends in Alaska for nonmilitary items every dollar that he gets from Alaska in income and excise taxes, nearly $100 million a year. On the whole the States are pouring into Alaska about $300 million more than they are taking out and this money is all reflected in Alaska's present economy.

Alaska's biggest industry—and it is booming—is military defense. We don't know just what the Federal Government is spending on defense in Alaska, but it has more than 50,000 men stationed here. It costs "Uncle" at least $400 a month a man. That's $240 million a year. Then he's spending from $50 million to $100 million a year on Army, Navy, and Air Force construction work.

An estimated 65 to 70 percent of Alaska's gross business depends for its existence on Federal money. Washington officials realize that Alaska's economy, tied up as it is with Federal spending, is unable to support a State government at this time without extraordinary Federal help. Various bills in Congress would ease the load by millions of dollars—some estimate by as much as $9 million a year—if Alaska takes on the responsibilities of statehood now.

Some Alaskans fear that if statehood were granted now Alaska would have to resort to some of Nevada's revenue-attracting ventures, such as gambling and easy divorce laws.

Alaska is the only State or Territory which has been unable to finance its unemployment security payments and had to obtain a loan from the Federal Government of $3 million in spite of assessments against workers as well as employers to finance the unemployment payments.

Higher taxes stifle initiative and discourage investment in new enterprises. If new businesses cannot compete here on the same basis as in the States they will not come. And if the Federal Government should reduce its military establishment, or discontinue military construction, what would happen to Alaska's economy? Can Alaska afford statehood now?

EMERY F. TOBIN,
Editor and Publisher,
The Alaska Sportsman.
KETCHIKAN, ALASKA.

Economy and the Federal Budget

EXTENSION OF REMARKS
OF
HON. BOURKE B. HICKENLOOPER
OF IOWA
IN THE SENATE OF THE UNITED STATES
Thursday, March 14, 1957

Mr. HICKENLOOPER. Mr. President, on March 12, 1957, Mr. E. T. Denise, chairman of the national policy committee of the American Farm Bureau Federation, made a statement on the Farm Bureau's position on the economy of the Nation and the Federal budget. I ask unanimous consent that this splendid statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The members of the Farm Bureau believe that Congress, in the fiscal year of 1957, should balance the Federal budget and also make a determined effort to pay off a substantial sum on our national debt. Prolonging such action, particularly with respect to debt reduction, will only make the job more difficult in the future and may cause repercussions that we certainly might not enjoy. We believe that both of these projects can be accomplished and still have sufficient money available for national defense, farm programs, foreign aid, and for the thousand and one other items necessary in the operation of our Government. If the tax money does not go around, then we in Farm Bureau would be willing to take our cut along with the rest.

We feel that the present high level of Government spending is contributing to an inflationary spiral. The course of our general price level has been and is presently affected by the huge financial operations of our Government. Our reasoning indicates that balancing the budget would materially help to level off this inflationary movement.

The past several years the American people have enjoyed a period of high employment and unparalleled business activity, with corresponding national income higher than at any other time in our history. We realize that balanced budgets are generally not possible during periods of war. We also recognize that unbalanced budgets or deficit spending might be widely employed to combat deflation. But with general prosperity as it is, we in Farm Bureau and many others out in the grassroots are beginning to question the financial reasoning of Congress. Ordinarily one of the cardinal principles of good business is to retire debts when times are good. We in Farm Bureau who have been farming for a considerable time and now possess some degree of financial security have certainly had to recognize this principle. We do not hesitate to suggest that this rule should be applied to the operation of our Federal Government, at once and emphatically.

The complexities of our present Government, along with the astronomical volumes of money required to run it, have many of our citizens completely bewildered. It certainly is different from the good old days of not too long ago, when government was not big business but small business, and efficiency was something to be proud of. Small wonder that many of our citizens have become perplexed and even, shall I say, suspicious, to the extent that they have lost faith in the ability of their elected officials to handle this big business of government. At the present time budget balancing and debt reduction are important if for no other reason than to create in the minds of the American public, confidence, a new confidence that our Government is being operated efficiently and wisely.

I wish to digress for a moment from the subject of balanced budgets to talk about something that has been bothering me for some time—something, I believe, that probably contributes to the thinking and action of you gentlemen in Congress. No doubt most members of the Farm Bureau are able to grasp the magnitude of your jobs. But to many of our citizens the problems involved, the amount of money involved, and the decisions facing you are incomprehensible. And to many of these citizens our Government exists only in their minds as some fabulous, big-hearted Santa Claus.

Then again I wonder if many of our Congressmen, as they are newly elected and arrive in Washington, don't soon become indoctrinated with the idea that each and every voter out in his State is clamoring for relief for this and relief for that—for Federal aid right and left. I regret to admit that this is a true condition as reflected in the thinking of part of your constituents. Ironically, these individuals, though few in number, make a lot of noise, and they forcefully attract your attention. However, I truthfully believe that for every constituent of this type there are 5 or even 10 that go quietly about their daily business, never clamor for help unless it be for tax relief, and are, generally speaking, so quiet or mild that Congressmen are inclined to forget that such a creature actually exists. But we do exist, and I can guarantee you that there are many of us, both Democrats and Republicans, who know that this Santa Claus idea is a myth. We happen to understand that we as individuals are a definite part of the Federal Government, and, even though we have been apathetic, we recognize that we have a responsibility to our Government and to you men who are supposed to represent us in formulating such Government. We realize that, being the Government, we must furnish the capital, the money to operate said institution, and we also are vitally aware that said funds to operate our Government must come directly from any income that we produce or possess.

Government, as we think of it, and as we would like to keep it, can never be a profit-making institution. But good government can and ordinarily should live within its tax income.

We, the people who furnish the money for Government, being forced to comply with the fundamentals of good management and thrift in order to eat and maintain a roof over our heads, expect those in charge of our Government to pursue a like course.

Responsibility for such pursuit lies in the hands of our elected national officials. We would appreciate your sincere cooperation in dealing with this problem.

Postal Savings Should Go

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, March 14, 1957

Mr. CARLSON. Mr. President, there is much interest in Senate bill 1394, which I introduced on February 26, providing for a dissolution of the Postal Savings System.

The Post Office Department is operating with a very large deficit, and it is estimated that the expenses of the Post Office Department would be reduced approximately $2½ million per annum if we eliminated postal savings.

The depositors in the Postal Savings System have been gradually withdrawing their accounts since June 30, 1956, and the number of acounts have been going down at the rate of about 20,000 a month. The amount of the deposits have gone down at the rate of about $20 million a month.

Here is an opportunity for the Federal Government to save some money, and I sincerely hope we may secure early approval of the proposed legislation.

I ask unanimous consent to have an editorial from the Hutchinson News Herald of March 2, and an editorial from the Kansas City Times of March 12, printed in the Appendix.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Hutchinson (Kans.) News Herald of March 2, 1957]

POSTAL SAVINGS

The Eisenhower administration has done reasonably well in getting the Federal Government out of unessential businesses. It has, however, overlooked one of the largest. That is the Government's operations in the savings bank field.

The Postal Savings System was established in 1911. There was a place for it then. It was widely used until the end of World War II. Since then it has been on the toboggan.

Through the past 10 years postal savings deposits have declined almost half to a present total of $1¾ billion. For the past 3 years the System has been losing $200 million in deposits and more than 200,000 depositors annually.

The reasons for the decline are obvious. The interest paid on postal savings is no longer competitive. With the Federal guarantee of bank deposits up to $10,000, postal savings offer no greater safety than private banking. Customer convenience is not so great.

Left to itself it today appears that the Postal Savings System will gradually wither and finally die of its own accord. As a matter of Federal economy and to save the institution its final agonies, however, it should be promptly and quietly dispatched.

[From the Kansas City Times of March 12, 1957]

POSTAL SAVINGS SHOULD GO

Last year the Postal Savings System reported a profit of $6½ million. Nevertheless the House Post Office Committee has recommended that it be abolished. The reasons are clear and valid.

Postal saving is one of many Government functions that the Hoover Commission found in competition with private enterprise. Certainly it was started almost half a century ago for a legitimate reason. Thousands of persons in rural areas had access to post-offices but not to banks. A great expansion in the number of banking institutions and quicker means of transportation for farm families have erased that need. So postal savings is an anachronism.

The Constitution outlines a Government with regulatory and protective functions but which should not, except in emergency cases, enter the production of goods and services in competition with private enterprise. The amount of money involved in postal savings has been declining steadily and is no longer large. Generally the people have recognized that in this field they are served better by commercial establishments. The move to junk postal savings is simply another step toward removing our Government from competitive fields where it no longer has a valid purpose.

Freedom Foundation Award to A1c Mary Adams

EXTENSION OF REMARKS
OF
HON. A. S. MIKE MONRONEY
OF OKLAHOMA
IN THE SENATE OF THE UNITED STATES
Thursday, March 14, 1957

Mr. MONRONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter written by A1c Mary Adams, United States Air Force, who is stationed at the Oklahoma City Air Force Station.

The excellence of Airman First Class Adams' letter won her a trip to Gettysburg, Pa., where, on February 22, 1957, she was presented a Freedoms Foundation award by the Secretary of Defense, the only woman among 10 representatives of all branches of the armed services to receive similar awards.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

HEADQUARTERS 33D AIR DEFENSE DIVISION, OKLAHOMA CITY AIR FORCE STATION,
Oklahoma City, Okla., September 24, 1956.
FREEDOMS FOUNDATION AT VALLEY FORGE,
Valley Forge, Pa.

GENTLEMEN: I am writing today to Mr. Dunn, the town clerk in the little country town of Shirley, Mass., where I live, asking him about my absentee ballot. I've filled out an official looking "Official Election Balloting Material—Via Airmail" card which I got from my commanding officer here at headquarters, 33d Air Defense Division, where I've been stationed for the past 18 months. I'll mail that with a little note to Mr. Dunn—the note being for family friendship's sake.

It will be good to hear from Mr. Dunn again. And I know what he will say. He will say that he would expect I would uphold my family's tradition of exercising the voting privilege.

It will be good to vote.

My vote—freedom's privilege.

My vote, your vote, everyone's vote is important. To vote is to exercise a very great privilege indeed. Everybody has a birthday, and to an individual, his birthday is easily the most important day in the year, for it is his very own special day.

Election day is the birthday of the Republic. Though a presidential election day comes but once in 4 years, its importance is enhanced by this very fact. Four years till next time—from last November 4, 1952.

Suddenly it will be November 6, 1956. All over our great Nation the men and women and young adults will exercise their voting privilege.

In my hometown of Shirley the dear hearts and gentle people will come early and late to climb the one flight of stairs in the brick municipal building that was once the junior high school where I attended eighth grade. They will say their names, and receive their ballots, and go into the curtained booths to pencil the marks that will make history.

My election day will come long before November 6, and I will vote in the presence of a military person authorized to administer and attest this oath.

When I cast my absentee ballot in Oklahoma, and as I think of it going over the air miles to Massachusetts, I will surely have a feeling of pride that I have exercised my vote—freedom's privilege—in this great age.

A free nation draws it strength from its people. And it is the people—the voting people—who strengthen the fiber of America. The will of the majority is the mouthpiece of America's great song of freedom.

My vote—freedom's privilege—keeps America strong and great and star spangled and true.

You, too, are America. Only you, too, can vote.

Sincerely,

MARY ADAMS,
A2c., United States Air Force,
AA8–107–434.

Promoted to airman, first class, on December 1, 1956.

Increase in Applications for Admission to College

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Thursday, March 14, 1957

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Here Come the War Babies," published in the February 4, 1957, issue of Time magazine.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HERE COME THE WAR BABIES—UNITED STATES COLLEGES ARE ILL PREPARED FOR THEIR INVASION

As he gives informal talks to alumni across the United States, the dean of admissions of a famous Ivy League university likes to give the old grads a jolt. "If you were to apply for your alma mater today," he is quoted as saying, "only 20 percent of you would get it." In that particular ploy, the dean is not alone. Says Acting President Archibald MacIntosh, of Haverford College: "I have occasionally talked to alumni about getting into Haverford today and have told them, 'I sometimes doubt if I would have admitted myself.'"

Though both men are intentionally exaggerating, their words illustrate a point. Never before have so many Americans wanted to get into college, and never before has the competition been so keen. Last week the United States Office of Education estimated that before the school year is out, enrollment in United States colleges and universities will hit a record high of 3,250,000. This record comes at a time when the colleage-age population, which in 1955 sank to its lowest point in 25 years, is still made up mostly of depression babies. The crisis that the United States campus is now bracing for is the coming invasion of war babies.

THE PATTERN

So far, only the big name colleges, mostly in the East, have really felt the first impact of the great tidal wave. Though the number of high school students who go on to college has jumped from 15 percent in 1940 to 40 percent, the Nation's 1,800 institutions of higher learning can still keep up with the demand. But what of the years immediately ahead? By the time the present crop of first-graders is ready for college, says Dean of Admissions Arthur Howe, Jr., of Yale, enrollments may soar to between 5 and 8 million. What the favored campuses are going through now will soon become the standard pattern for all.

Last fall Oberlin College was able to accept only 1 out of 2 of those who applied. Since the 1940's, Yale's applicants have jumped from 1,500 to 4,000. Harvard's have more than trebled. For the 6,000 boys who say they want to get into Dartmouth next fall, there are only 725 openings. Says Dean Emery Walker, Jr., of Brown (present freshman class, 635): "Ten years from now we might have 10,000 applicants. That will be the real problem."

PANIC AND DEALS

Actually, the problem is all too real right now for thousands of high-school students. In their panic to get into college—and in their wild search for the best scholarship deals—today's youngsters have acquired the habit of applying to as many schools as possible. One Connecticut boy, for instance, was able to choose between Amherst, which offered him no scholarship, Bates, which offered $600, Wesleyan with a $500 offer, Holy Cross with $700, and Yale with $1,250. Another boy sent Princeton an irate letter after he was rejected, pointed out that of the 23 colleges he applied for, 22 had accepted him. What, the boy wanted to know, was wrong with Princeton?

Because of these multiple applications, the favored schools are haunted by ghosts. These are the students who are accepted but go elsewhere—the boys and girls, say the admissions officers, "who won't take yes for an answer." To make sure of an entering class of 1,200, the University of Pennsylvania accepts 2,100 students. Princeton accepts 1,200 to get a class of 750. Stanford estimates that 35 percent of those accepted will probably never show.

BRIGHTER AND BRIGHTER

By piling up the total number of applications, the ghosts tend to distort the demand for higher educatoin. But the demand is nevertheless there—and it has already begun to change the whole sociology of United States higher education. With more and more students to choose from, the big-name campuses are becoming more and more selective. At Harvard the number of students on the dean's list has gone up from 27 percent before World War II to nearly 40 percent. Indeed, says Amherst Dean of Freshmen Eugene Wilson, in 5 or 10 years we may have 80 to 90 percent of our students capable of honors work."

Not only is the gentleman's C beginning to disappear, but to some extent so is the gentleman. "A college education," says Headmaster Edward Hall of the Hill School, "is no longer a hereditary right like a membership in a club. It is a prize to be won against increasingly rigorous competition." Though the child of the old grad may still have a slight advantage, even top private eastern prep schools can no longer guarantee him a place in the college of his choice. Says Headmaster Hall: "It's kind of hard on the Yale alumnus who develops a kid as bright as his father but no brighter."

The emphasis on college board aptitude tests has hastened the change. Since no one can prepare for them, the extra cramming that a prep school offers can no longer get the dullard through. Furthermore, the top private colleges have become increasingly less parochial in their search for students. Though swamped by applications, they still send out recruiters to schools all over the United States. They want not only a bright student body, but a broad one; and wealth and background are less and less a factor. In 1910 only 10 percent of the men who applied for Harvard asked for scholarship aid; now 50 percent do. In 1947 the ratio of private- to public-school graduates at Yale was 3 to 2; today it is the reverse.

OPEN DOOR?

The approach of the tidal wave has also had an effect on publicly supported institutions. Those that are required by law or tradition to take in every taxpayer's child with a high-school diploma within their States have begun to wonder whether they can expand rapidly enough to maintain their open-door policy. Some have already answered "No."

Since California has the most elaborate junior-college system in the country, the university is able to require that applicants have a B average in high school. But in such States as Oregon, where junior colleges are rare, many educators have begun to worry about what the tidal wave of students will do to their schools unless admissions standards go up. "It seems to me," says Chancellor John Richards of the State higher education system, "that if the weight of numbers of students threatens college instructional quality, then it is our clear obligation to control the numbers." Adds President Jean Paul Mather of the University of Massachusetts, which is studying a plan to consider only the top 20 percent of State high-school students: "In the future, we are going to have to place a tremendous faith in tests. We are the first to admit that there are faults in this, but for us it is not a matter of expediency. It is a matter of necessity. We have to get the horde off our necks."

RETENTION VERSUS ADMISSION

As the standards go up at both private and public institutions, some educators have begun to worry about whether the emphasis on brains and tests might go too far. Many State-supported schools still feel they have a moral obligation to give every taxpayer's child his chance, even though he may flunk out. "We believe," says President Fred Hovde, of Purdue University, "in the doctrine of opportunity. If students fail, they at least know they've had their chance." To Headmaster Seymour St. John, of Choate, mere "quickness of mind" may become far too important. "Is there not a hazard," he asks, "of neglecting by default other vital factors in a student's makeup?" Adds Admissions Director Robert Jackson, of Oberlin: "You have to leave the door open for the Winston Churchills. It is said of him that on the basis of his school record, he wouldn't be admitted to any college today."

Unfortunately, there is no sure scientific way to identify late-blooming Churchills. But most campuses try their best to look for more than brains. "Today," says Director of Admissions Charles William Edwards, of Princeton, "we talk in terms of the ideal entering class, not the ideal individual candidate. We want a well-rounded class. We wouldn't want everybody to be geniuses in physics, or editors of their school newspapers" "We want," says Dean Walker, of Brown, "the brightest boys, but we want them balanced too." A typical well-balanced group is this year's freshman class at Yale. Of 1,031 boys, 506 were captains of varsity teams or won varsity letters, 228 were editors of their school papers, 114 were editors of their yearbooks, 178 were either presidents of their student councils or of their senior classes.

BRIBES AND PHONE CALLS

With all this emphasis on brains and balance, the competition to get into college sometimes becomes a desperate affair. Dean Robert Pitt, of the University of Pennsylvania, says that in 1 year he received phone calls or letters from 10 governors, as many Congressmen, and a host of board chairmen, all interested in pushing candidates. He has also been offered bribes ("O. K., how much do you want?" demanded one father as he whipped out his checkbook), has seen another father offer the university $3,000 if only it would take his son in. In Washington, D. C., the wife of a State Department official is even planning to move to France so that her two sons can learn French and German and thus have an advantage when the time for college comes. One Princeton alumnus hounded his alma mater to take in his boy, even though he knew the boy would probably flunk. The father's argument: unless his son got in, he wouldn't be eligible for the Princeton Club of New York.

To cut down on the number of student casualties and parental disappointments, city after city has organized elaborate counseling programs to try to identify the college material early and to steer students to the schools best suited to them. At the same time, private prep schools are trying to persuade ambitious fathers not to think only in terms of big-name colleges. "But," says Headmaster W. Gray Mattern, Jr., of Wilbraham (Mass.) Academy, "It's difficult to convince the third generation Harvard man that his obviously unqualified son just won't be admitted. After a while, you get tired of talking and say, 'All right, go ahead and apply,' even though you know it's hopeless."

GOODBY, LOAFER

No matter how much United States higher education expands or how many junior colleges the Nation builds, there will still be casualties, because the admissions standards of most colleges are bound to keep rising. But to Headmaster Lloyd M. Clark, of Pennsylvania's Kiskiminetas Springs School, the big competition for education is not a crisis but a cause for rejoicing. "This change at the admissions office," says he, "has altered the atmosphere all over the campus. In the classrooms the professors can insist on high-achievement levels and dismiss the loafer. * * * The time has come when the college student must really produce. * * * How the educators love this."

In Marin County, Calif., last week, young Mike Zeller, a senior at the Sir Francis Drake High School, added an observation of his own that is as good a summary as any of the plight of the American student: "We all have the feeling," says he, "that we're not going to get into the college we want to. When I was a sophomore, older kids told me that it was tough to get into college. But I didn't believe it. When you're a sophomore, you want to have fun. I wish somebody had made me believe it. I'm really sweating it now."

Southern Farmers Victims of Favoritism

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Thursday, March 14, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two editorials, the first entitled "Benson's Arithmetic Needs Overhauling," from the March 8, 1957, issue of the Atlanta, Ga., Constitution and the second, entitled "See Here, Mr. Benson," from the March 7, 1957, issue of the Atlanta, Ga., Journal.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Atlanta Constitution of March 8, 1957]

BENSON'S ARITHMETIC NEEDS OVERHAULING

The whistle H. L. Wingate is blowing at Ezra Benson sounds an accurate blast.

The Georgia Farm Bureau president accuses the Secretary of Agriculture of costing cotton producers this year a minimum of 120 to 150 million dollars.

Mr. Wingate says Mr. Benson did it knowingly and intentionally. Be that as it may, the Georgia farm leader's reasonable estimates obtained from exporters, the Cotton Council and others tear gaping holes into those of Mr. Benson.

The Georgian backs his stand with figures. He points out that the Benson estimate for fiscal 1956–57 placed exports at 6½ million bales, some 200,000 bales shy of the amount already exported.

Mr. Wingate also effectively ripped into the Secretary's crystal ball that anticipates production at 11,200,000 bales. The farm bureau president says the figure was based on land allotted for cotton before the soil bank removed so many acres from production. His estimate of 10,700,000 is more realistic. In Georgia alone, approximately 300,000 acres of cotton land, or nearly one-third of the State's cotton acreage, are going into the soil bank.

These factors add up to logical reasons that support Mr. Wingate's contention: cotton price supports should be from 83 to 85 percent of parity instead of 77 percent.

Mr. Benson, on the other hand, has been most generous in his dealings with commercial corngrowers in the Midwest. Chairman Harold D. Cooley of the House Agriculture Committee charges that the Secretary gave away $179 million to corngrowers last year in a fruitless attempt to reduce plantings.

Even as Mr. Wingate was warning against discrimination between regions and attempts in Washington to increase base acreage allotments for corn, a fight on the subject raged in the House.

Democratic forces favor extending the soil-bank provisions to growers of flaxseed, soybeans, rye, oats, grain sorghums, barley, corn grown outside the Midwest commercial area, and wheat on small farms without production controls.

That doesn't suit the Republicans. They want an emergency plan for corn alone, setting a national corn allotment of 51 million acres, production supported at 75 percent of parity, and subsidies for placing 15 percent of their cropland in the soil bank.

But the southern cotton farmers are still victims of favoritism to midwestern corngrowers. With Mr. Benson flipping the coin, the midwestern farmers can tell the southerners: "Heads we win; tails you lose."

[From the Atlanta Journal of March 7, 1957]

SEE HERE, MR. BENSON

H. L. Wingate, president of the Georgia Farm Bureau Federation, has leveled some serious charges at Secretary of Agriculture Benson.

While Mr. Benson and other administration leaders are scrambling around in Congress trying to push through emergency legislation to benefit corngrowers, Mr. Wingate charges the Agriculture Secretary with gypping cotton producers of more than $120 million this year.

The farm bureau chief says this has been done by setting cotton price supports at 77 percent of parity when, by all reasonable figures, the supports should be from 83 to 85 percent.

Needless to say, this is a matter of great concern and of great economic importance to Georgia cotton producers. Let us hope Mr. Benson can take time off from his corn chores to give the cotton situation some consideration.

Overseas Capital Could Injure United States

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, March 14, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Overseas Capital Could Injure United States," originally printed in the New York Herald Tribune, and reprinted in the Indianapolis News of Monday, March 11, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OVERSEAS CAPITAL COULD INJURE UNITED STATES

The Senate Internal Security Subcommittee, in its wide-ranging investigations, has uncovered a strang loophole in our securities regulations which conceivably could be used by the Soviet Government to gain a measure of control over important American defense industries and their policy making.

On the face of it the suggestion that the U. S. S. R. could become a secret partner in American industry might appear too fantastic to be taken seriously. But the record assembled by the subcommittee exposes a weakness in our securities regulations which cannot be ignored.

At the end of 1954 there were foreign investments in this country which totaled $26.8 billion, with almost $1.5 billion worth of stocks held by Swiss accounts. And the investment of foreign funds in the United States has been increasing steadily.

Who are the owners of the stocks purchased with foreign capital? No one in the Government knows—neither in the Department of Commerce, the Department of State, the Department of Defense, the Department of the Treasury or in any other department or agency in Government, including the Securities and Exchange Commission.

The subcommittee questioned witness after witness about the source of this mystery capital flowing into this country for investment. The subcommittee finally reports: "These witnesses testified there is no way under existing regulations to determine the source of foreign money being invested in the United States."

Director M. Joseph Meehan, of the Government's Office of Business Economics, told Senators in this inquiry that the $26.8 billion of foreign capital "could be withdrawn on very short notice at any time"—leading the subcommittee to conclude that the owners of this money have the power to cause considerable economic disruption in the United States.

The money which comes from Switzerland poses a special problem because Swiss laws even make it illegal for Swiss banks to disclose the owners of anonymous accounts.

Arthur I. Bloomfield, senior economist for the Federal Reserve Bank of New York, testified that if Soviet sources were buying American securities "it could be done in such way that it could not be traced by the Federal Reserve bank or any other agency."

This loophole also offers a tempting way for unscrupulous American investors to dodge their fair share of taxes. By purchasing stocks through an anonymous account in Switzerland, for example, the earnings and profits from sales could be hidden from the Bureau of Internal Revenue.

The subcommittee has reported that the hidden ownership of American securities is a cause for concern to officials of the Defense and Commerce Departments, as well as officials of the Securities and Exchange Commission.

There should be, as the Senate Internal Security Subcommittee suggests, a full investigation of this situation by the Congress—to determine whether or not Soviet Russia or any of her satellites are buying into the United States expanding industries.

Participation in American Government and Politics

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Thursday, March 14, 1957

Mr. HUMPHREY. Mr. President, in a recent article in the Christian Science

Monitor for March 4, 1957, Rev. Hartwell Daley, pastor of the Pleasant Street Methodist Church, in Waterville, Maine, discussed a very important matter—participation in American Government and politics.

Because I believe Rev. Mr. Daley's article so squarely hits the mark and discusses so forth rightly and effectively the reasons for wider participation of Government at all levels, I should like to call it to the attention of my colleagues.

Mr. President, I ask unanimous consent to have Reverend Daley's Parables of Democracy—II printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PARABLES OF DEMOCRACY—II

(By Hartwell Daley)

(EDITOR'S NOTE.—In his first article, Mr. Daley related why 1 year in public office as administrative assistant to the mayor of an American city had convinced him that "good Christian people are both the hope and despair of our democracy." His parables continue.)

"The Great American One-Way Street" makes a good title for parable No. 4.

This time I want to take you inside the mayor's office where from early morning until the close of day people clogged the waiting room on business of one sort or another. A big part of my job was to interview 50 or 60 every day.

It was a red-letter day if just one of these persons came with a constructive idea or a desire to do something for the city. The rest were there to get something.

These people did not, for the most part, make requests. They made strong demands. They were entitled to something and they were going to get it. Any reluctance to cooperate brought forth a warning that election day was not far off.

The demands were many: jobs, more welfare money, sidewalks, favors for friends, appointments for friends, a piece of the city's business, and on and on. Now among these seekers were many of the good people who had previously refused to give anything to government. Yet there was no reluctance to ask for what they wanted.

One afternoon a respected businessman came to ask a personal favor. What he asked could only be given at the expense of someone else. I told him I was surprised he would ask. If I expected him to be ambarrassed I was disappointed. He merely said, "Well, there's no harm in trying. I just figured everyone else is getting something, I might as well try."

That sums it up. "Everyone else is getting something." This is a prevalent idea of government. And it's a dangerous idea. It pictures democracy as a one-way street. It casts aside two important parts of Lincoln's description of democracy and leaves only government for the people.

The good people who expect so much from government are very often our church people. I call them dangerous Christians. And they live on a one-way street.

Our final parable we will call, "What's Your Racket?"

Before going into public office I was interested in the economic development of our area. Factories had been moving out. We needed to reverse that trend. There was some possibility of a steel mill locating nearby. Some of us went out to speak and to arouse interest. We were disappointed in the response we got, in the skepticism and the pessimism we met.

Then one night the truth came out. I was speaking before a chamber of commerce group. I had outlined what a community could do by working together. There was a question period. A man rose at the back of the room and said, "Before we go any further with this discussion, how about an honest answer to an honest question? If a steel mill moves into our area, what will you get out of it? In other words, what's your angle?"

Later, in public life, I was to hear this question again and again and to realize that something serious has happened to the Christian and democratic idea of service. The majority of people do not believe there is such a thing as a person who does things without thought of personal gain. I have heard people say of the churchmen, "They don't serve the church because they believe in it. They serve because it looks good and it's good business."

"Good" people have here a tough question to answer but one that cannot longer be put off. Do we honestly believe that there is no such thing as an unselfish motive? Do we really believe that there is no such thing as a person serving to make the world a little better? Do we believe that love is no longer an incentive for serving people? If we do, then all I can say is, "God help us." We are in bad shape. And I know of no more destructive force as far as the church and our country are concerned than a widespread belief that there is no longer such a thing as an unselfish motive.

Now, without moralizing, let me lay the facts squarely on the line. The only hope for freedom and democracy in our country lies in people of faith, strong character, intelligence, and concern who are not "too good and too Christian" to take some responsibility for government at all levels. And that means this:

1. We must stop being cynical about government.

2. We must be willing to serve in some capacity.

3. We must encourage and support good people in government.

4. We must restore the motive of service to its rightful place.

5. We must be willing to "dirty" our hands, if need be, so that America may be cleaner and better.

6. We must give as well as take in the matter of freedom.

7. We must reaffirm our belief in the basic goodness of people.

8. We must be not "too good" but "good enough" to be followers of Christ in a free land.

This is almost a creed for American Christians.

Not too long ago someone said to me, "if you believe all this stuff about participation in government, why did you get out to go into the ministry?"

Simply because I believe that the Christian Church offers the greatest hope of saving our country from ruin. Not long ago, I gave a questionnaire to our youth group. On it were many questions as to their views of their futures. One question was, "Do you believe that we can influence the outlook for world peace?" Every single youngster answered, "Yes." Another question was, "Do you believe that you as an individual can do anything to make America a better country?" Again, every answer was, "Yes."

A little farther down was another query: "When you are old enough (and they are now over 16) do you plan to take any part in local or State government?" Every single young person answered, "No."

So it looks as if we have in the offing another generation of Christians who are "too good to serve." And that means more bad government. For bad government starts on the local levels where "good" people are hurting America more than they know.

Commemorative Stamp Recalls Career of Idaho United States Senator Heyburn

EXTENSION OF REMARKS

OF

HON. HENRY DWORSHAK

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Thursday, March 14, 1957

Mr. DWORSHAK. Mr. President, I ask unanimous consent to have an article entitled "Commemorative Stamp Recalls Career of Idaho United States Senator Heyburn" printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Idaho Sunday Statesman, Boise, Idaho, of March 10, 1957]

COMMEMORATIVE STAMP RECALLS CAREER OF IDAHO UNITED STATES SENATOR HEYBURN—FOOD AND DRUG ACT CREDITED TO WESTERNER

(By Norman B. Adkison)

Recently the Post Office Department issued a stamp in commemoration of the 50th anniversary of the passage of the United States Pure Food and Drug Act, carrying the picture of Dr. Harvey W. Wiley, former Food Commissioner.

Those familiar with the enactment of that legislation might well argue that the place of honor on that stamp should have been shared with a great Senator from Idaho.

Few people in Idaho may remember that this Senator was instrumental in shaping the fundamental law of Idaho, perhaps more than any other person, in the constitutional convention, and that in the United States Senate he was one of the three great intellectual giants who for a decade or more molded the laws of the Nation. This man was Weldon B. Heyburn.

MEMORIAL WAS URGED

If Commissioner Wiley were alive today he would have insisted upon the recognition of Senator Heyburn, for upon the occasion of a visit to Idaho many years ago, he said: "I want to see the State of Idaho erect a monument to the memory of Senator Heyburn, that able representative from the Gem State, who, after one of the greatest and hardest fights ever made in the United States Senate, secured the passage of the pure food bill and who, after the bill had been passed, was the bulwark around which centered the storm for its enforcement. I want to see engraved beneath that monument the inscription, 'His greatest work for humanity was securing the passage of the national pure food law.'"

Manufacturers for many years had maintained a bitter fight against legislation to set standards for pure foods, food substitutes and preservatives. Even the public clamor following the food scandals connected with Army camps during the Spanish-American War failed to break down the opposition to food standards and regulation.

Senator William E. Borah, speaking on this subject, said, "There was and there had been for years a strong opposition to pure food legislation. But with tireless effort and exceptional determination he [Senator Heyburn] whipped a great principle into a practicable, workable measure and finally secured its enactment into law. It is a monumental piece of work. Its benefit and general good can hardly be overestimated. It is a lasting tribute to his efficiency, energy and courage as a legislator."

NATIVE OF PENNSYLVANIA

Weldon Brinton Heyburn was born May 23, 1852, in Delaware County, Pa., at the

home of his paternal ancestors. Both sides of his family were Quakers. His mother was Sarah Gilpin, the twentieth generation in direct descent from Sir Richard de Gilpin, knighted by King John in 1206. This line included the Washington and West families in England and America.

Young Heyburn was graduated from the University of Pennsylvania and was admitted to the bar in 1876. He practiced law for 2 years in Pennsylvania and for 2 years at Leadville, Colo. In the winter of 1883 he went to the Coeur d'Alene mining district in Shoshone county, Idaho, and continued his practice with emphasis upon mining law.

Northern Idaho in the Territorial days was a rough and tough section of the Northwest and mining litigation in the Coeur d'Alene attracted shysters as well as men of integrity in the battles fought over these incredibly rich ore deposits. There were several brilliant mining attorneys in that section but in a few years this young Quaker emerged as a leader. He was unusually successful and was identified with the most important mining litigations of that area to the extent that the mining law of Idaho stands as a monument to the penetrating genius, logic, and ability of Weldon B. Heyburn. In 1900 he edited and published Idaho's Laws and Decisions, Annotated and Digested.

However, the greatest service rendered to the State of Idaho by Weldon B. Heyburn was given during the constitutional convention of 1889 when he was chairman of the committee on judiciary, by far the most important committee of the conclave. Congressman Burton L. French, of Idaho, is authority for the opinion, "From the advantage of this position and from his own great ability he shaped in large degree the fundamental law of the Commonwealth of Idaho."

Heyburn was a member of the Republican National Conventions of 1888, 1892, 1900, and 1904, and a member of the Republican National Committee from 1904 to 1908. In 1898, he was unanimously chosen as the Republican candidate for Congress but was defeated by a fusion of the Democrat, Populist, and Free Silver groups. In those days, United States Senators were chosen by the State legislatures and in January 1903, against a field of former Senators and other strong candidates, Heyburn was selected as United States Senator from Idaho, succeeding Henry Heitfeld, of Lewiston. His first colleague from Idaho in the Senate was Fred T. Dubois of Blackfoot and in 1907 he was joined by William Edgar Borah of Boise. He was reelected in 1909 and died in Washington, D. C., October 17, 1912, of a complication of heart and kidney ailments. He was succeeded in the Senate by K. I. Perky and then by former Gov. James H. Brady, of Pocatello.

Integrity of character, great energy and courage, and exceptional mental abilities soon made Senator Heyburn one of the outstanding leaders of the United States Senate. Boies Penrose of Pennsylvania, Henry Cabot Lodge of Massachusetts, and Weldon H. Heyburn of Idaho became a powerful trio which guided the laws and destinies of the greatest deliberative body of the entire world. Heyburn was made chairman of the joint committee of both Houses to revise and codify the laws of the United States. From this committee he reported and succeeded in passing, first, the Criminal Code of the United States, and, second, the Judiciary Title, both of which with slight amendments are still in force.

As chairman of the Committee on Manufacturers, Senator Heyburn pressed the bill for pure food legislation in the 58th Congress, but was unable to secure a final vote. With typical energy and sacrifice of personal health, during the interval between the 58th and the 59th Congresses, he studied the problem in great detail and completely revised the measure, eliminating the setting of standards by legislation as well as the provisions for the establishment of a board to fix arbitrary standards that would be binding upon the courts, leaving the violation of the general rules laid down in the act to be determined by the courts. After one of the hardest fights in Senate legislation, this highly beneficial act was passed, primarily due to the sponsorship of Idaho's great Senator. After its passage he became the focal point around which surged all of the storm for its enforcement.

OPPOSED CONTROLS

While Senator Heyburn was a strong believer in the strength of the Federal Government, he believed that the State should leave to private initiative everything which it could do without Government ownership or control. He was deeply convinced of the necessity of conservation of the country's natural resources, but he urged "that the first natural resource to be conserved is the opportunity for a citizen to engage in productive enterprise, having such material as land, timber, power, and water sites and so forth, as his capital and basis of operations." He vigorously opposed more complete Federal management and control of the natural resources of the country and the accumulation of vast areas of public land by individuals or corporations. His great oratorical ability of being able to express the profoundest truth in perfect diction, was used in favor of the rights of the individual citizen to enjoy the blessings of his country.

Senator Heyburn poured out his great and seemingly tireless energy in research, long and arduous committee sessions and in debate on the floor of the Senate. In one session he spoke on at least 150 subjects and was distinguished for his great fund of factual information. Long hours of reading, study, and research gave him knowledge and judgment which he imparted in the Senate with sound reasoning and faultless diction. But his great heart was faltering under the tremendous strain. Heart specialists warned him that he must slow down even before the end of his first term. Close friends begged him to take it easy, to hoard his talents for the years ahead. But his brain would not slow down and he devoted himself, body and soul, to projects and legislation for his country with a zeal which was not to be denied. He knew that his days were being shortened but would not give up and worked even harder to reach his legislative goals.

During the summer of 1912, Senator Heyburn was confined to his home, attended by his wife, the former Gheretin Yeatman, of Chester County, Pa. He made heroic efforts to resume some research work, but the sands of life were running too rapidly and he died in Washington, D. C., October 17, 1912. Pennsylvania claimed the mortal remains of its distinguished native son and he was buried in the Lafayette Cemetery, Chadd's Ford, on the Brandywine River.

Memorial services were held for Senator Heyburn in the House of Representatives on February 23, 1913; in the United States Senate on March 1, 1913, and at Boise March 3, 1913. William Howard Taft, President of the United States, in his message of condolence to the widow, paid superlative tribute to the character of Senator Heyburn and his great contributions to his country. His most distinguished colleagues, officials, and private citizens eulogized his great abilities, courageous character, and his self-sacrificing devotion to his country's best interests.

TRIBUTES VOICED

In the Senate memorial service great tributes were paid to Senator Heyburn by his colleagues, but perhaps the finest was by his close personal friend, Senator Henry Cabot Lodge, who said in part: "It is his character and his moral qualities which come most sharply to my mind, and which in his life made a deep impression upon me. As I came to know him better, I learned to recognize his courage, his high principles, his loyalty to his beliefs, and his faithfulness to duty as he saw it, a fidelity which never faltered or grew pale. I learned, too, that, hard fighter as he was, no resentment ever lurked in his memory after the battle was over, and underneath the combativeness was one of the kindest and most generous hearts that ever beat. As he cheerfully faced criticism and attack for what he believed to be right, so did he meet the coming of the end. The hand of fate knocked at the door. He did not complain; he did not flinch; he did not retreat."

The National Pure Food and Drug Act is Weldon B. Heyburn's greatest and enduring monument. Few Idahoans realize that 50 years ago Weldon Brinton Heyburn stood as Idaho's giant in the Senate of the United States, a lofty peak of ability and integrity. If a statue of this leader were to be erected in Idaho to remind future generations of his service, it would seem appropriate to use the minerals of the three States most closely related to his life; the crystal clear marble of Pennsylvania, which gave him birth; the red sandstone of Colorado, which nurtured him as a young man; and the shining, silver galena of the Coeur d'Alenes of Idaho, the State of his maturity.

Of all the tributes paid to this leader by men of the East and the West, the North and the South, none was more sincere, none was more true than those by the men who knew him best in his adopted State of Idaho. Judge J. H. Richards, outstanding in the bar of Idaho, said on March 3:

QUALITIES TOLD

"He had the qualities which make for enduring greatness rather than for transitory praise and momentary popularity. It is not the person of Senator Heyburn that we honor here today, but it is those qualities which made his character great. These are qualities which we call noble and go to make up the man; these are the qualities which we call true and which made the late Senator brave and true to his convictions. He was the same always, not shifting with the winds of sentiment.

"It is not the man who always agrees with us that is the safest man for us to follow. It is not the man who rides along on the wave of popularity that does us the most good. The man who has the courage to stand up and tear from our faces the mask of hypocrisy so that we see ourselves as the world sees us, is the man that does the most good for his State and Nation."

In 50 years, Senator Heyburn's life has faded from many memories; many young people in Idaho need to be told of his life and work. Would we remember him better if he were buried along the Coeur d'Alene River in Idaho, rather than the historic Brandywine in Pennsylvania?

May we refresh our memories, in truth and justice, for Weldon B. Heyburn, who, a half century ago, was Idaho's giant in the United States Senate.

Georgia-Made Products Week

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Thursday, March 14, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an edi-

torial entitled, "Georgia-Made Products Week," from the March 7, 1957, issue of the Ocilla (Ga.) Star.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GEORGIA-MADE PRODUCTS WEEK

Today we salute Georgia's manufacturers, their more than 320,000 employees and the estimated 14,000 different products now being made in our State. By official proclamation Gov. Marvin Griffin has designated March 11–17 as Georgia-Made Products Week, and urged the full support of all citizens.

America's strength—the lifeblood of our Nation flows from our mines, mills, farms and factories. The value of total output of manufacturing establishments in Georgia for 1956 is now estimated at $4,350,000,000, an increase of $301 million over the preceding year.

Our industrial citizens have always given full support to their State and marched with it through the colorful years of its history.

United States Reports 612,000 Increase in Jobholders

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, March 14, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Washington Post of March 13, 1957, the headline of which is "United States Reports 612,000 Increase in Jobholders."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES REPORTS 612,000 INCREASE IN JOBHOLDERS

The Government reported yesterday that the number of American jobholders rose by 612,000 last month to a total of 63,190,000. It said the rise was larger than usual for this time of year.

The increase wiped out at least part of a big January drop in the number of employed. During the first month of this year, the employment total had declined by 1.7 million persons to about the same level as in January 1956.

In February the number of unemployed persons stood at 3,121,000, a decline of 123,000 from January.

The February rise in employment was larger than the decline in unemployment, because most of the people who got jobs last month had not been looking for work in January. Those not looking for work are not counted as part of the Nation's labor force.

The Commerce and Labor Departments said the February employment total was about 900,000 higher than in February 1956.

They said farm employment rose by 260,000 persons to a total of 5,195,000. The departments attributed the increase to a big improvement in weather conditions.

Nonfarm jobholders rose by 353,000 to total 57,996,000, a record level for February and about 1 million more than in February a year ago. Most of the increase was among self-employed and domestic service workers.

The number of factory jobs dropped slightly to 17 million, instead of increasing a little as usual. Job reductions were reported in some plants producing home-building materials, radio and television plants, and automobile factories.

Advertisements Welcoming Industry to Wisconsin

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, March 14, 1957

Mr. WILEY. Mr. President, I have been pleased to note recently a series of warm, factual advertisements carried in leading periodicals throughout our land welcoming American industry to the State of Wisconsin.

The advertisements highlight the outstanding attractions which the Badger State offers to individuals, to families, to business.

On previous occasions, I have personally been happy to cite many of these attractions in my comments in the CONGRESSIONAL RECORD.

I am pleased now that the Michigan Wisconsin Pipe Line Co., serving gas utility companies of my State, is, through means of these ads, further extending the latchstring for enterprising, forward-looking American companies.

Each of the ads features prominently, by a famous American artist, the drawing of a hand of friendship extended to a visitor, and beneath that hand of friendship, are carried the facts on a few of Wisconsin's many outstanding assets.

I send to the desk the text of each of these ads, and ask unanimous consent they be printed in the Appendix of the RECORD.

There being no objection, the advertisements were ordered to be printed in the RECORD, as follows:

COME TO WISCONSIN

A GOOD PLACE TO BUILD A BUSINESS

Wisconsin is the focus of one of the richest markets. Within 24 hours, by rail, air or truck, shipments span a 12-State area where 60 percent of the Nation's spendable income is earned. The area is tops in population, payrolls, retail sales, values added by manufacture and value of farm products.

Wisconsin's Great Lakes ports provide water routes to foreign markets—which the coming St. Lawrence seaway will vastly expand.

Skilled manpower abounds here, and it will continue. Wisconsin is largely peopled by descendants of the best of Old World craftsmen.

A GOOD PLACE TO LIVE AND RAISE A FAMILY

Here, mastery of his craft earns a man respect and dignity. His good citizenship guards Wisconsin's famous good government. He owns his home (in 6 cases out of 10), supoprts his church, obeys the law (from 5 to 80 percent better than the national average).

One more thing. In Wisconsin, when work is done, a family can be having more fun, in fewer minutes, in more ways, with less trouble, than almost anywhere else.

A GOOD—A WONDERFULLY GOOD—PLACE TO BE

More than 10,000 lakes and streams, unspoiled woodlands, fine climate, pure water, good roads—what more could one ask? Workers here lose 80 percent fewer work days from sickness or accident, than do workers of the Nation as a whole.

"The people of Wisconsin extend a most hearty welcome to you and to your business."

VERNON W. THOMSON,
Governor.

(For further data, write to the Wisconsin Division of Industrial Development, Office of the Governor, Madison, Wis.)

YOUR COMPANY, YOUR FAMILY, AND YOU WILL BE HAPPY IN WISCONSIN

Wisconsin offers in abundance the basic factors a business needs to grow and prosper. Specifically—

You'll be in the heart of one of the richest markets, served well by 17 railroads, 8 major airlines, 192 truck lines, plus direct water transportation to the markets of the whole wide world.

You'll enjoy year-round, temperate climate. Temperatures are moderate in summer and stimulating in winter. Statistics show Wisconsin's climate promotes good health. Wisconsin is officially rated the third healthiest of all the States.

Good water abounds throughout the State. Ten thousand lakes and streams, including Lake Michigan and Lake Superior, provide it, along with limitless pleasure.

Living conditions, native skills, educational, cultural, and recreational facilities, general prosperity, home ownership, law observance, good citizenship, good government—all are exceptional in Wisconsin. These are facts, backed by records. You'll agree that here, in fullest measure, are essential basic materials of commercial and individual well-being.

"The people of Wisconsin extend a most hearty welcome to you and to your business."

VERNON W. THOMSON,
Governor.

(For further data, write to the Wisconsin Division of Industrial Development, Office of the Governor, Madison, Wis.)

YOU'LL BE WELCOME IN WISCONSIN

WHERE BUSINESS PROSPERS

Scores of industries have grown to greatness in Wisconsin, many to world-leading stature and renown. They proclaim, by their very numbers, their diversity, their strength, that they have grown in an atmosphere conducive to prosperity.

The nationwide reputation of Wisconsin for good government and good citizenship is easily explained. The State has never been debt-ridden. It's against the law. And, speaking of law, Wisconsin's crime rate ranges from 5 percent to 80 percent lower than the Nation's, averaging 59 percent lower than the national rate.

Wisconsin knows how recreation re-creates jaded nerves. It's easy to relax here, with 10,000 fish-filled lakes and streams, unspoiled woods and play places, fine climate.

WHERE WHOLESOME FAMILY LIFE MOLDS THE COMMUNITY

Wisconsin citizens are home folks, and are thrifty. Of 967,448 homes, 613,959 are owner-occupied. That's 63 percent. The United States average is 51 percent.

Wisconsin people support churches and schools. In 1955 there were 2,120 churches and synagogues, averaging some 718 members each.

The State is authoritatively rated fourth in quality of public school education. There are 6,565 elementary and 581 secondary schools, 42 vocational schools, 65 institutions

of higher learning. This, you'll agree, provides an environment that makes life richer.

It is readily available in Wisconsin.

"The people of Wisconsin extend a most hearty welcome to you and to your business."

VERNON W. THOMSON,
Governor.

(For further data, write to the Wisconsin Division of Industrial Development, Office of the Governor, Madision, Wis.)

Ambassadors of Merit

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, March 14, 1957

Mr. CLARK. Mr. President, on yesterday there was published in the New York Times an article, written by James Reston, entitled "Ambassadors of Merit—An Analysis of Attempt To Select Envoys Regardless of Their Personal Finances." In the article there is pointed out the shocking fact that alone among the civilized nations of the world, the United States still is forced to choose her ambassadors for leading positions in the Foreign Service solely because they happened to have sufficient private incomes with which to carry but their responsibilities in posts such as those at London, Paris, Rome, and the like.

The article points out that the distinguished junior Senator from Montana [Mr. MANSFIELD] is opposed to that system, and is seeking to do his best to see to it that the Appropriations Committees of the Senate and of the House of Representatives at long last come up to date and make it possible for the United States to put the best brains of the country in the places where they are so badly needed.

Mr. President, I desire to commend my colleague, the Senator from Montana, for his effort in this regard; and I wish to indicate my full support of that effort. In that connection, I ask unanimous consent that the article by Mr. Reston be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times of March 13, 1957]

AMBASSADORS OF MERIT—AN ANALYSIS OF ATTEMPT TO SELECT ENVOYS REGARDLESS OF THEIR PERSONAL FINANCES

(By James Reston)

WASHINGTON, March 12.—Another one of those periodic, but usually fruitless, moves is under way in Washington to improve the quality of United States Ambassadors abroad.

This time, Senator MIKE MANSFIELD, the Democratic whip in the Senate, is suggesting the revolutionary principle that the United States Government can afford nothing less than the very best Ambassadors available and that it should pay for what it gets.

Specifically, he is drafting an amendment to the State Department's appropriation under which the Government would pay large enough ambassadorial living or representation expenses to enable any man, regardless of his private finances, to take the most expensive posts in London, Paris, Rome, and elsewhere.

Senator MANSFIELD's chances of getting anywhere with this idea, it should be said at once, are not very good, but he is getting close to the heart of a serious problem that disturbs all students of foreign affairs and leaves Congress cold.

CHOICE IS RESTRICTED

Under the present system, the President selects Ambassadors for the most expensive posts, not from a carefully selected list of the Americans best qualified for the job, but from a list of those who can afford to pay the increasing costs of diplomatic entertainment.

This does not mean that there are not many competent rich men available, but it does mean that the President is sharply restricted in his choice.

He may think, for example, that a brilliant Foreign Service officer without private means may be the best possible United States Ambassador in Paris, but without Government funds to pay the entertainment costs—or as they are delicately called, representation obligations—he has to turn to party contributors who will pick up the entertainment tab themselves.

Other governments with neither the finances nor the responsibilities of the United States somehow manage to afford to pay what is necessary to get the best man available. For example, the British Ambassador in Washington several years ago got a living allowance of $75,000. (It's probably more now.) The United States allowance for the American Ambassador in London this year is $12,000, which just about pays the cost of the annual Fourth of July party for Americans in Grosvenor Square.

The State Department has been trying in recent days to get a modest increase in these representation allowances, but it was turned down by congressional committee members who are perfectly satisfied with the system of having politically appointed rich men pay for the privilege of presiding over key United States embassies.

So far President Eisenhower has done nothing to urge a change in this situation. On the contrary, he has just appointed a new crop of political ambassadors to almost all the major posts in Europe, and has made several other political appointments that have aroused a great deal of adverse comment.

For example, he appointed to Paris Amory Houghton, chairman of the board of the Corning Glass Works, a large contributor to the Republican presidential campaign, though Mr. Houghton does not speak French.

For other political reasons he appointed James P. Richards, a former Democratic chairman of the Foreign Affairs Committee of the House, to a roving commission to put over the Eisenhower Doctrine in the Middle East.

Mr. Richards, who left here today on this delicate and important mission, knows virtually nothing about the Middle East, but he was chosen anyway on the dubious theory that the Democrats in Congress will follow his advice because they served with him for years and like him.

GEORGE'S POST IS CITED

With the same idea in mind, the veteran former chairman of the Senate Foreign Relations Committee, Walter F. George of Georgia, was made a special ambassador to study North Atlantic Treaty Organization problems, but he has not been active in this important post, and nobody here thinks it is fair to expect him to be.

Another move that is highly controversial is the scheduled shift of Ambassador Charles E. Bohlen, the administration's most experienced official on Soviet affairs, from Moscow to the Embassy in the Philippines.

This has naturally pleased the government in Manila to have this top Foreign Service officer given the task of filling the vacuum in the United States Embassy there, but the question is whether, on balance, this serves the best interests of the United States.

Nobody here has been able to reconcile the new Eisenhower diplomatic appointments with the President's promise to put the best men in the Nation into top Government jobs. Nor does anybody, including Senator MANSFIELD, know how this can be done unless the problem of living allowances for the President's Ambassadors is attacked vigorously by the President himself.

Some of the new appointments, it is widely conceded here, are improvements on those who held the posts in the first Eisenhower administration, but some are not, and anyway this does not meet Senator MANSFIELD's principle.

The Senator is not arguing a partisan point. He concedes that the Democrats played politics with the Embassies just as the Republicans are now doing. He is simply arguing that the Congress, which talks so much and appropriates so much to deal with serious overseas problems, should appropriate enough money to give the President a free choice to pick the best man, regardless of party and regardless of private funds.

Investigation of Labor and Management Racketeering

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Friday, March 8, 1957

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD certain articles written by Clark Mollenhoff, published in the Des Moines Register. Mr. Mollenhoff has been very helpful in advice and ideas in the committee's investigation of labor and management racketeering.

Through his stories in the Des Moines Register and Tribune and Minneapolis Star and Tribune, and through the conferences he has held at various times with the staff, this reporter first called to our attention certain questionable practices in the labor-management field in all parts of the country and pointed out the federal responsibility in these areas. He also called to our attention that prior investigations in some of these areas had been of a limited nature and that further investigation was in dire need because of indications of corruption and laxity in the financial affairs of some unions.

He has also pointed out some of the difficulty the AFL–CIO faces in handling certain of these cases of corruption, such as the million dollar "embezzlement" from the Laundry Workers International Union. In addition to that, however, Mr. Mollenhoff gave us examples of conditions prevailing in areas where action was warranted and possible.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Des Moines Register of January 30, 1957]

PROBERS SEEK UNION BOOKS ON SPENDING

(By Clark Mollenhoff)

WASHINGTON, D. C.—The Senate Government Operations Subcommittee is wondering how to revise the tax laws to cope with some union officials who appear to defy Federal tax authorities.

The committee, headed by Senator JOHN MCCLELLAN, Democrat, of Arkansas, has heard testimony to the effect that some union leaders suspected of racketeering have refused to keep adequate financial records. Some have refused to produce desired books, and there are reports that some records have been destroyed.

The committee seeks an explanation why certain labor leaders were not being prosecuted for income-tax evasion.

John P. Barnes, chief counsel for the Internal Revenue Service, declared it would welcome a spotlight on the lack of cooperation from certain labor officials.

LAW UNCLEAR

Barnes and Assistant Commissioner of Internal Revenue Justin Winkle declared that two court decisions, and the indefinite laws on keeping records, have hampered the work of tax investigators in dealing with those who obtain unreported benefits from union funds.

One circuit court decision last November in connection with an effort to investigate the income of Seattle, Wash., Teamsters Union leaders, held that Federal tax agents are not entitled to the same access to financial records of unions that they would have to the financial records of a business corporation. The unions themselves are exempt from Federal income taxes.

There is a long-standing Federal court decision that embezzled funds are not income. This hampers efforts to prove criminal tax evasion by some union officials who use union money to pay their personal bills.

RETAINED SO LONG

The regulations provide that "books and records required (by the internal revenue law) shall be kept at all times available for inspection by internal revenue officers, and shall be retained so long as the contents thereof may become material in the administration of any internal revenue law."

Tax officials say the law and regulations are so vague as to the length of time books should be kept that it would be difficult to prove a crime.

Under questioning by Committee Counsel Robert Kennedy, Barnes testified that he believed organizations such as labor unions should have a greater responsibility for making financial records available.

MIGHT SHOW INCOME

Though the unions themselves are exempt from taxes, he said, their records of disbursements would help determine whether their officials had paid taxes on all of their taxable income.

He said certain labor leaders were getting by with a defiance of Federal taxing authority that would amaze the average taxpayer.

Winkle and Barnes reported that only a very small percentage of the labor union tax returns are audited by tax officials. But they commented that "there are some investigations under way right now."

BREWSTER CASE

Frank Brewster, of Seattle, Wash., chairman of the 11-State Western Conference of Teamsters, has refused to produce financial records of Local 174 of the teamsters in Seattle or the books of the Western Conference of Teamsters.

Brewster refused to produce these records for Internal Revenue Service officials or the McClellan committee.

SOME CHARGES

Testimony before the McClellan committee has included the following allegations concerning Brewster and the president of the International Teamsters Union, Dave Beck:

1. That Brewster from 1943 to 1950 received at least $30,000 from local 174 in Seattle in addition to his salary.

2. That Brewster's personal automobile was purchased out of union funds, and the bills for its repair were paid out of union funds.

3. That union funds were used to pay for operation and maintenance of a horse stable partly owned by Brewster, and for repair and maintenance of vans to carry his race horses.

4. That Beck has used union funds for part of the cost of construction and repair of his mansion in Seattle, and that he later sold that home to the union for $162,000 with the provision that he could live in it rent-free for life.

5. That Beck in March 1953 had $8,826 in personal bills paid out of funds of the Teamsters Union in Seattle.

The McClellan committee was unable to get an answer from Brewster on the allegations that he had improperly used union funds. Beck failed to appear for the hearings.

REPORTS TO BUREAU

The committee said financial reports to the labor department by local 174 did not contain figures on benefits alleged to have accrued to Brewster and Beck.

It also said the financial reports filed with the labor department were not consistent with the reports filed with the Internal Revenue Service.

Tax agents in Minneapolis, Minn., were unable to obtain permission to examine the bank records of Sidney L. Brennan, a vice president of the International Brotherhood of Teamsters.

Brennan declined to discuss his finances before a congressional committee on grounds that to give such testimony might incriminate him.

Last September Brennan agreed with Internal Revenue agents contentions that he failed to report approximately $25,000 income in 1947, 1948, and 1949. He entered into a stipulated agreement with the Internal Revenue Service which set his tax deficiency for the 3 years at $6,834.15.

HOFFA FINANCES

James R. Hoffa, Detroit, Mich., who heads the Central States Teamsters Conference, states flatly that he has refused to produce financial records for Federal tax agents. He told a House committee 2 years ago that he ordered the old union books destroyed every year.

Tax investigators claim Hoffa owes an additional $6,059 in taxes for the years 1952, 1953, and 1954. This dispute is pending in the United States Tax Court.

The Senate Labor Subcommittee headed by PAUL DOUGLAS, Democrat, of Illinois, filed a report stating that Eugene C. "Jimmy" Janes, former secretary-treasurer of the Laundry Workers International Union, had been a party to diversion of approximately $1 million from the union's health and welfare funds.

TRACED TO BANK

More than $700,000 of this has been traced to a bank account which James controlled. He did not report this money as taxable income, and has refused to say what he did with it.

James has declined to cooperate with Federal tax officials in the 2 years this matter has been under investigation, but no prosecution has been undertaken.

Assistant Commissioner Winkle told MCCLELLAN that there are great handicaps in moving against union officials and "we would welcome any information from this committee or any other committee or any other source that would tend to pinpoint a particular situation that would be productive of revenue or indicate that the laws had not been complied with."

[From the Des Moines Register of January 31, 1957]

COURT CLOSES BOOKS TO TAX MEN

(By Clark Mollenhoff)

WASHINGTON, D. C.—In resisting demands of Federal tax officials, west coast Teamster Union boss Frank W. Brewster has found support in the Federal appeals court.

The ninth circuit court has held that internal revenue agents are not entitled to access to the financial records of Seattle, Wash., Teamsters Local 174, such as they would have to the financial records of a business corporation.

Federal tax officials, upset by the ruling, have told the Senate Government Operations Subcommittee headed by Senator JOHN MCCLELLAN (Democrat, Arkansas) that although unions are tax exempt, they should have a special duty to make their books available for examination.

There was a strong dissent to the 2-to-1 decision that barred Federal tax agents from examining the books of Local 174, of which Brewster is president.

SEEK APPEAL

Top internal revenue officials want the decision appealed to the Supreme Court.

Tax officials contend that the decision is an invitation to other union officials to refuse to allow tax investigators to examine union books for evidence of unreported payments to union officials and others.

Brewster also is a vice president of the International Brotherhood of Teamsters, and chairman of the 11-State Western Conference of Teamsters.

This dapper union boss has tastes that include a fancy for good clothes and race horses. For 3 years he has successfully stalled efforts of tax investigators to get an explanation of payments of his personal bills by the union.

BEGIN PROBE

In January 1954, tax agents started the investigation of returns filed by Brewster for the years 1949 through 1952.

A summons was issued to Local 174 and Nugent LaPoma, alias George Cavano, secretary-treasurer of the local, directing production of all records of financial transactions with Frank Brewster or his wife, Dorothy.

LaPoma and the union's attorney, Samuel Bassett, appeared with what they claimed was an abstract of the records. They refused to produce the original records.

In February 1955 tax officials took the matter to Federal court to try to force production of the records. The judge for the western district of Washington ordered the union books produced, on grounds that tax agents had showed a reasonable need for examining these records.

THIRTY-FIVE THOUSAND FIVE HUNDRED DOLLARS IN LOANS

Tax agents had filed affidavits stating that during the years 1949 and 1950, Brewster had received $35,500 in "unsecured loans" from Local 174 in addition to his salary. They said there was no indication he paid interest, or that he had repaid the money.

They also claimed the union had made payments of at least $3,248.64 to Brewster and his wife in November 1952. This was above Brewster's salary, and $1,500 of it went for the purchase of a car for Dorothy Brewster, the agents said.

On July 10, 1953, a G. M. C. horse van was repaired by a Seattle garage and the bill paid by Local 174. In 1951, a Chrysler automobile owned by the Brewsters was repaired by a Seattle garage and the bill was paid by Local 174.

Brewster purchased a home in California, on which $4,000 was paid from funds of Local 174, tax agents told the court. They also alleged that in 1952 and 1953, Local 174 had paid Brewster's personal bills at the Horsebreeders Club.

JUDGE DISAGREES

Judge Walter L. Pope, who wrote the dissenting opinion in the appeals court, commented that "on the whole the facts shown in the affidavit filed by the Government bristled with suggestion of irregularities and the trial judge was warranted in holding that there was probable cause to believe that further investigation of the books was reasonable and necessary."

However, the majority decision written by Judge James Alger Fee stated that tax agents must show that their demand for records is reasonable, and that the records sought were relevant or material to the tax matters of the Brewsters.

He declared that the demand for all the financial records of the union was too broad, because Brewster, not the union, was the subject of the investigation.

"The union was not itself subject to the investigation," the majority decision stated. "It was not here a taxpayer whose books and records were within the jurisdiction of the agency. The distinction often drawn between the rights of a corporation and an individual as to the extent of protection of privacy is not valid here.

"Here a union which has aspects of a secret order may have economic secrets or plans which it does not wish to disclose to agents of the Federal Government."

SUPREME COURT

The dissent by Judge Pope criticized the majority decision as completely missing the point and disregarding the Supreme Court decision in United States versus Morton Salt Co. That case was characterized as the leading one on the rights of a Federal agency to force production of information, and was quoted as follows:

"The only power that is involved here is the power to get information from those who best can give it and who are most interested in not doing so.

"Because judicial power is reluctant if not unable to summon evidence until it is shown to be relevant to issues in litigation, it does not follow that an administrative agency charged with seeing that the laws are enforced may not have and exercise powers of original inquiry.

"It has a power of inquisition, if one chooses to call it that, which is not derived from the judicial function. It is more analogous to the grand jury, which does not depend on a case or controversy for the power to get evidence but can investigate merely on suspicion that the law is being violated, or even just because it wants assurance that it is not.

"When investigative and accusatory duties are delegated by statute to an administrative body, it, too, may take steps to inform itself as to whether there is probable violation of the law."

POTENTIALLY LIABLE

In his dissent, Judge Pope declared it is obvious that the union here is just as much the subject of investigation and potentially as liable to penalties as is its officer taxpayer.

He declared that the majority ignores the public interest which lies behind the statute sought to be enforced.

Judge Pope's comments on the specific facts follow:

"The showing made before the district court was that Brewster * * * had numerous financial dealings with the union, indicating many transactions which were not reflected in his income-tax returns.

"CITES LOANS

"Loans of approximately $35,000 had been made by the local to Brewster, but his returns showed no payments of interest or deductions for interest expense on such loans, and the annual financial report of the local showed no such loans.

"The investigating officers found notes to the local signed by Brewster in the name of Clearbrook Stock Farm which provided for no payments of interest, and the records available to the investigating officers indicated that these substantial so-called loans from the local to Brewster were never paid.

"The evidence indicated probable cause for a belief that the so-called loans to Brewster were payments of income to him disguised as loans.

"Under those circumstances it was clearly the duty of the investigating officers to find out whether the loans were ever paid, and to verify their suspicions that they were never paid.

"WOULD BE RELEVANT

"In the event of an action to collect the taxes or of a proceeding for redetermination of an asserted deficiency, it would be material and relevant to furnish testimony that the books of the union failed to disclose, anywhere, the receipt of any repayment.

"The investigative officer should be able to testify that he had examined the books of the local and ascertained that they disclosed no such repayments. He cannot give this testimony without having access to the books listed in the court's order."

John P. Barnes, chief counsel of the Internal Revenue Service, and Assistant Commissioner Justin Winkle declare that if the majority opinion is allowed to stand, the investigation of the financial affairs of union officials will be seriously hampered.

[From the Des Moines Register of February 1, 1957]

OLD RECORDS DESTROYED BY HOFFA UNIONS

(By Clark Mollenhoff)

WASHINGTON, D. C.—James R. Hoffa, Detroit, Mich., chairman of the 13-State Central States Teamsters Conference, authorized teamster union locals in Michigan to destroy their financial records as soon as the international union has audited them.

That was Hoffa's explanation when a congressional committee found that financial records of Teamster Local 299 in Detroit for just 1 year earlier had been destroyed.

At that time, William McKenna, counsel for a House committee investigating racketeering in labor unions, read to Hoffa a section of the Internal Revenue regulations which said:

"The books of record required by this section shall be kept at all times available for inspection by Internal Revenue officers and shall be retained so long as the contents thereof may become material in the administration of any Internal Revenue law."

ADVICE OF LAWYERS

He was acting on the advice of his attorneys, Dave Previant and George S. Fitzgerald, Hoffa testified. He declared he wasn't familiar with Internal Revenue regulations.

Although the law states that it is a criminal offense to willfully destroy financial records required to substantiate expenditures, no action has been taken against Hoffa or anyone else in local 299 in connection with his testimony.

The Senate Government Operations Subcommittee headed by Senator JOHN MCCLELLAN, Democrat, of Arkansas, recently heard testimony from top internal revenue officials on this point.

THREE YEARS

John P. Barnes, chief counsel for the Internal Revenue Service, and Assistant Commissioner Justin Winkle said the law means that financial records must be kept at least 3 years for inspection by Federal tax agents.

The Federal tax law permits tax agents to go back 3 years in investigating records unless fraud is involved. If fraud is involved, there is no statute of limitations.

Barnes and Winkle explained that although the regulations appear to make it mandatory that records be kept at least 3 years, the Internal Revenue Service has never spelled it out.

REGULAR POLICY

Hoffa explained that the Teamsters Joint Council in Detroit had approved destruction of old records as a matter of policy.

"Assuming from the advice of counsel we had the authority, we notified the local unions that, at their option, if they desire, they did not have to keep their records," he said.

When Hoffa testified in 1953, a House Labor Committee had sought to obtain the records of expenditures by the union in pretty much the same way that the McClellan Government Operations Committee is seeking such records today from teamster unions from coast to coast.

WORKSHEETS LEFT

Hoffa told the committee the 1952 records had already been destroyed, and all that was left were the worksheets of the accountants who prepared the Federal income tax returns. Original vouchers were missing.

It is possible for internal revenue agents and congressional investigators to go to outside sources and piece together parts of the expenditure record, but it is a time-consuming problem.

Although labor unions themselves are exempt from taxation, internal revenue agents have sought information from their records to determine whether certain union officials have paid tax on all taxable income. Congressional investigators have sought access to union records for evidence of racketeering in welfare funds and other activities of certain union leaders.

Tax officials appearing before the McClellan committee stated that while citizens can refuse to testify about their finances on grounds that they might incriminate themselves, this right does not extend to corporations and tax-exempt institutions such as labor unions.

Mr. THYE. Mr. President, if the Senator from Arkansas will yield at that particular point, I wish to say that I am glad he has had inserted the articles in the RECORD. They were written by a reporter who is employed not only on the staff of Twin City newspapers, such as the Minneapolis Star and Tribune, but also affiliated newspapers in the State of Iowa. Clark Mollenhoff has rendered an outstanding service to the public in writing his articles.

Mr. MCCLELLAN. I thank the Senator from Minnesota. Mr. Mollenhoff has been very cooperative and helpful to the committee.

Eight Hundred Thousand Jobs Estimated in Road Plans

EXTENSION OF REMARKS

OF

HON. HOMER E. CAPEHART

OF INDIANA

IN THE SENATE OF THE UNITED STATES

Thursday, March 14, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the Washington Post of March 13, 1957, the headline of which is entitled "Eight Hundred Thousand Jobs Estimated in Road Plans."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EIGHT HUNDRED THOUSAND JOBS ESTIMATED IN ROAD PLANS

A private research organization yesterday estimated the Nation's 13-year highway program will generate an average of 880,000 jobs a year in 190 industries.

The Council for Economic and Industry Research, Inc. (CEIR), issued an analysis of the economic impact of the $50-billion program plus another estimated $50 billion worth of road work not aided by the Government.

The study indicated that highway construction will require, as an annual average, 28 percent of the country's 1956 output of cement and 12.8 percent of the entire production of paving and roofing materials.

It indicated also that the indirect consumption of some materials will far exceed the direct consumption. CEIR said the requirements of steel for roadbuilding machinery, equipment, vehicles, and other indirect items will be five times greater than the steel actually used on the job in bridges, culverts, and the like.

Truman Doctrine Anniversary

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, March 14, 1957

Mr. JOHNSON of Texas. Mr. President, one of the most important developments in American foreign policy took place 10 years ago this week when the Truman doctrine became the official policy of the United States Government. On that occasion, the Congress joined with the President of the United States in making clear to the world that we were determined to work with our friends in building a program of collective security against Communist expansion.

History will demonstrate that the Truman doctrine was one of the most important declarations of Government policy in our Nation's history. It was one of the most significant steps in the battle against Communist totalitarianism because from it stemmed a series of Communist defeats and democratic victories, the benefits of which we still enjoy.

There appeared in the Washington Post and Times Herald this week a letter written by a Turkish diplomat, Mr. Altemur Kilic, the press attaché of the Turkish Embassy. That letter is the symbol of a friendship which now exists between the people of the United States and the people of Turkey.

I ask unanimous consent that the letter be printed in the Appendix of the RECORD. I want to take this occasion also to extend my greetings to the people and the Government of Turkey for their steadfast resistance to Communist aggression and for their loyalty to the common beliefs and common aims which unite our two countries.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald of March 12, 1957]

TRUMAN DOCTRINE ANNIVERSARY

March 12, 1947, is a memorable date not only for Turkey, but for all the free world. The United States Government's decision, approved on that day by the Congress, to extend aid to the two countries under threat of aggression, was a milestone of recent history for many reasons. For us, in particular, it signified that we were not to be left alone in our efforts against international communism. For the free world, in general, it marked the beginning of a gigantic effort of collective security and collective determination against Communist expansion.

Much has happened in 10 years and the dramatic facts of the early 1940's, which led to the Truman doctrine, might have been forgotten by many.

For instance, perhaps few realize now that the whole thing most probably started with the emphatic and determined "No" of Turkey to the first deliberate Soviet attempts for expansion in the postwar period.

In 1945, when many people still believed in the good intentions of Stalin, Turkey was confronted with a preview of what was to follow in many other parts of the world. Russia denounced its agreement of neutrality and friendship with us and demanded bases on our vital straits. She also strongly hinted the cession of our two eastern provinces, Kars and Ardahan. Although virtually alone then, Turkey refused these demands and showed its determination to fight rather than become a Soviet satellite. This war of nerves continued relentlessly for 2 years, but we did not yield an inch.

I wonder how many people stop to think what the situation today would have been if we had buckled under Soviet pressure.

The United States decision to extend aid to us bolstered us economically and militarily; but most important of all, it meant that we were not alone in our struggle. From my own experience as a newspaperman in Turkey at that time, I can vouch for the dramatic impact of this realization and the sense of relief it created. The gesture of lending a hand to a country under pressure won America the everlasting friendship of the Turkish people.

I can also vouch for the fact, that due to this, the Turkish-American friendship rests on the firm foundation of common beliefs and common aims.

The "Truman doctrine" aid and other aid which followed under different programs and names, enabled us to modernize our armed forces and helped us in our economic development.

Today the Turkish Army with its 12 ready and 22 readily mobilized divisions constitutes the backbone of NATO forces and the most dependable fighting force in that troubled area. Our economic development which got a new impetus since 1950, has given many fruits: there is no comparison between the Turkey of 1957 and the Turkey of 1947. Results which are continuously being attained, dwarf the difficulties which are encountered. It is a fact that the economic foundations of our country is now in a much better position to sustain our military preparedness.

On the eve of the implementation of the Eisenhower doctrine, which is a new source of hope for the whole Middle East, these facts have much significance.

Allow me to point out also that Turkey, a forward-looking country, has not lost an iota of its spirit of resistance which she possessed when the Truman Doctrine found her 10 years ago.

ALTEMUR KILIC,
Press Attache, Turkish Embassy.
WASHINGTON.

St. Patrick and Lent

SPEECH
OF
HON. LEON H. GAVIN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 14, 1957

Mr. GAVIN. Mr. Chairman, Sunday is St. Patrick's Day, a great day for the Irish, therefore I want to call to the attention of the House a poem by Joseph Smith, late of Lowell, Mass., and delivered before the Clover Club, Boston, on March 17, 1915. It was sent to me several years as a St. Patrick's Day greeting by a distinguished gentleman of Irish ancestry—the Honorable "MIKE" KIRWAN of Ohio—an Irishman we all greatly admire and one who, by his work here in the Congress of the United States, has won for himself the hearty commendations of the members on both sides of aisle.

"MIKE," as we know him, is the exemplification of all that is fine in an Irish gentleman; a gentleman who is highly respected and regarded by the people of the great State of Ohio that he is proud and honored to represent.

ST. PATRICK AND LENT

(By Joseph Smith)

St. Patrick! Oh there was a saint with a heart
As soft as fresh butter and big as a cart;
And 'twas he that remembered the long 40 days
The weakness of men and their women and ways,
The diet of fish and the riot of prayer
And the sinners that sinned from Mayo to Kildare;
And says he to himself, "The day that I'm born
I'll pick out in Lent on some windy March morn,
When the Irish can have one long day's vacation
From fasting and fish and prayer and salvation;
When the boys may break loose and go hell-bent for leather,
And make their own rules, regulations, and weather."
And so in March gray, to drive care away,
God sends to the Irish the saint and the day.
So, tonight fill your cup, fill it up to the brim,
Jew, heathen or Baptist or Puritan grim,
For whatever you are, you are Irish tonight,
And it's better, by cripes, to be Irish than right!
Fill your glass and we'll drink to Sinn Fein and the sod,
To the name of the saint and the glory of God,
To the day of all days that is close to our heart,
To the dead that have died for the sake of ould dart.
Though the winter's winds blow, all around us is proof
That Ireland and sunshine are under this roof,
And this is the message the good saint has sent:
Eat, drink, and be merry—for tomorrow is Lent.

Mr. EDMONDSON. Mr. Chairman, will the gentleman yield?

Mr. GAVIN. I am glad to yield to the gentleman.

Mr. EDMONDSON. Mr. Chairman, I want to express my personal appreciation to the gentleman of his eloquence on this occasion and join with him in his expression of appreciation of a great gentleman and a great Irishman, the Honorable MIKE KIRWAN.

Mr. GAVIN. I thank the gentleman.

Can We Afford a $71.8 Billion Budget?

EXTENSION OF REMARKS
OF
HON. HOMER E. CAPEHART
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, March 14, 1957

Mr. CAPEHART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an advertisement published by the McGraw-Hill Publishing Co. in the Washington Post of March 13, 1957.

There being no objection, the advertisement was ordered to be printed in the RECORD, as follows:

CAN WE AFFORD A $71.8 BILLION BUDGET?

The budget submitted to Congress by President Eisenhower for the year beginning July 1 proposes Federal spending of $71.8 billion. In only 4 years, 3 during World War II and 1 during the Korean war, has the Government spent more. Under the proposed budget the Government expects to collect $73.6 billion, mostly through individual and corporation income taxes.

The principal reason for the size of the budget and for this year's increase is an expanding defense program. About 60 percent of all budget expenditures in the coming fiscal year will be for national-security programs. Moreover, this area accounts for about 90 percent of the proposed increase in Federal spending. In addition, there are large expenditures proposed for purposes other than defense.

Continued budgets of this size, some contend, will lead to inflation and wreck our economy. It has been suggested that they might lead to "a depression that will curl your hair." Yet many insist that the budget, large as it is, still is inadequate in many respects—for defense, schools, agriculture, aid to small business, health, research, indeed, for almost every activity in which the Government has become involved.

IS IT REALLY TOO BIG?

Actually, the proposed budget would place no greater burden on the economy than any budget in the last 6 years, because our economy has been growing. Federal spending per capita under the proposed budget will be about $416, or $10 more than this year; but our per capita income rose almost $80 last year. And, because of our increasing population, next year's expenditures will, in fact, amount to less per capita than in 1954 when Federal spending was $4 billion lower.

Another way of measuring the burden of Government expenditures on the economy is to compare the purchases of goods and services of all branches of Government—Federal, State, and local—with the total output of the Nation. The share of our national product taken by Government this year will be about the same as in the past 2 years and, furthermore, about the same as the average for the past 28 years.

By the standard of any recent year, the budget is within the means of the American economy. In this sense, we can afford it. But the prospect of steadily increasing budgets, requiring 20 percent or more of our national income, introduces another threat.

THE REAL THREAT

Large and rising budgets that do not balance Government spending with higher tax collections clearly would be inflationary and would destroy the value of the savings and income of all who lagged in the race with climbing prices. But serious dangers will still exist even if our budget continues to be balanced, as this year's is.

Budgets that require a large take in taxes eat up the savings required to finance private industry. What the taxpayers must give the Government they cannot save. This deprives private industry of the savings and resources needed to expand and modernize producing facilities.

High tax rates also undermine the incentive to save and invest in normal business enterprises by taking such a large share of any income gained. Taxes on corporation income now take 52 percent of all income over $25,000. And taxes on individual incomes can take as much as 90 percent of earnings that remain after this 52-percent bite.

High taxes encourage, on the part of both individuals and corporations, the search for "gimmicks" and special treatment. As a leading character in Cameron Hawley's novel Executive Suite observed: "To a far greater degree than most people realize, income tax has become a primary governing factor in corporation management." Indeed, it is only because of the numerous gimmicks and special provisions now available that high tax rates have not already inflicted greater damage to economic incentives.

These dangers comprise the real threat of large and rising Federal budgets. It is a threat to continued growth of our economy, and it is no less a threat merely because the budget is technically in balance.

WHAT SHOULD BE DONE?

In attempting to hold Government spending within reasonable bounds, we should not hold back on needed civilian programs. The heavy demands now being urged at all levels of government for roads and schools, for instance, are largely the result of failure to keep pace with the growth of the country. Furthermore, we cannot cut provisions for national security below the minimum level of safety. And unhappily, defense in the rocket and missile age is fantastically and ever increasingly expensive.

What we can do is enforce some financial discipline on our military leaders, and hold down our defense expenditures as best we can by making sure their demands are justified and by requiring efficiency. In the civilian programs, though some need to be increased to serve a growing economy, we can eliminate the outright waste.

We must also do something far more difficult, and that is to reduce Federal programs of aid to special groups at the expense of all the taxpayers. The new budget calls for over $5 billion for veterans, and another $5 billion for farmers. A number of industries and areas stand to receive aid in large amounts based less on necessity than on political pressure. These demands for increased aid, year after year, must be resisted if we are to have any hope of stopping a relentless rise in our Federal budget.

Then, as our national income increases, we can look forward to reducing tax rates and providing greater incentives for the private sector of the economy. Only in this way—by keeping Government spending in line with economic growth—can we prevent our Federal budget from being a crippling burden.

(These figures refer to the regular Federal budget and do not include operations of trust funds, primarily for social security programs and the new Federal aid program for highways, which are financed by special taxes.)

MCGRAW-HILL PUBLISHING CO., INC.
NEW YORK, N. Y.

Constitution of the Communist Party, U. S. A.

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. WALTER. Mr. Speaker, after the recent convention of the Communist Party held in New York, press services and newspapers informed the American people of what purported to be a different position taken by the party. It is indeed unfortunate that a check of other constitutions of the Communist Party were not examined before the misleading stories were published. I am therefore including in my remarks appropriate provisions of the Communist Party constitution in order to prove that there has been no change in any respect in any phase of activity of this international conspiracy:

CONSTITUTION OF THE COMMUNIST PARTY, U. S. A.

The 1957 constitution, in article VII, section 2, provides:

"Subject to the provisions of this article, any member shall be expelled from the party who is a strikebreaker, a provocateur, engaged in espionage, an informer, or who advocates force and violence or terrorism, or who adheres to or participates in the activities of any group or party which conspires or acts to subvert, undermine, weaken, or overthrow any institutions of American democracy through which the majority of the American people can maintain their right to determine their destinies."

The 1948 constitution of the Communist Party, which was reaffirmed in 1950, article VIII, section 3, provides:

"Any member shall be expelled from the party who is found to be a strikebreaker, provocateur, engaged in espionage, or who advocates force and violence or terrorism, or who adheres to or participates in the activities of any group or party which conspires or acts to subvert, undermine, weaken, or overthrow any or all institutions of American democracy through which the majority of the American people can maintain their right to determine their destinies."

The 1940 constitution of the Communist Party, article IX, section 5, provides:

"Party members found to be strikebreakers, degenerates, habitual drunkards, betrayers of party confidence, provocateurs, persons who practice or advocate terrorism, sabotage, espionage, and force and violence, or members whose actions are otherwise detrimental to the party and the working class, shall be summarily dismissed from positions of responsibility, expelled from the party, and exposed before the general public."

The 1938 constitution of the Communist Party, article X, section 5, provides:

"Party members found to be strikebreakers, degenerates, habitual drunkards, betrayers of party confidence, provocateurs, advocates of terrorism and violence as a method of party procedure, or members whose actions are detrimental to the party and the working class, shall be summarily dismissed from positions of responsibility, expelled from the party, and exposed before the general public."

It is noted that article VII of the 1957 constitution is entitled "Disciplinary Procedure and Appeals." Article VIII of the 1948 version is entitled "Appeals and Disciplinary Procedure." The 1940 title of article IX is "Disciplinary Procedure." The 1938 title of article X is "Disciplinary Procedure."

Ninety Percent of Parity Price Supports for Family-Size Farms

SPEECH

OF

HON. H. CARL ANDERSEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 13, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 5788) making appropriations for the Executive Office of the President and sundry general Government agencies for the fiscal year ending June 30, 1958, and for other purposes.

Mr. H. CARL ANDERSEN. Mr. Chairman, when we had the very important corn bill on the floor for consideration the other day, it was impossible for Members such as myself who had bona fide amendments to offer to secure more than 2½ minutes to even discuss the amendments we proposed to offer.

Being a member of the Committee on Appropriations I am taking this opportunity to try to say a few words as to what we should do this afternoon when the important corn bill comes before us for further consideration.

First let me say that, in my opinion, every man from our area will concede that the 51 million acres allotment is absolutely necessary, just as it is necessary to give a proper allotment to cotton and to wheat if the farmers of our great United States are going to have sufficient income so that they may earn their living.

Mr. Chairman, let me point out that because of the fact that the key provision, the 51 million acres, was in the Andresen substitute, that is the reason why I voted for the Andresen substitute when it was offered. I will support any reasonable proposal which contains that essential provision.

There is nothing whatsoever in either of the bills before us to offer an incentive to farmers to comply. Even though we do have a 51-million-acre allotment, what incentive is there for any farmer to comply when the support level is only 75 percent of a square deal? Will anybody tell me that? Have we sunk so low here in the great Congress of the United States that all we are prepared to offer to agriculture is 75 percent of a square deal? Are we sunk so low here that we must admit that we cannot even give family-sized farms the protection that they should have by at least protecting to a 90-percent level that part of their production, say, up to 4,000 bushels of corn, 25 bales of cotton, and 3,000 bushels of wheat? Why can we not get down to business and come to a compromise, my friends, a compromise which will pass the Congress of the United States, but most of all will do good for our agricultural economy? For 18 long years, as all of you know, I have been talking on the floor of this House for a fair deal for agriculture, and I am frank to tell you, my friends, that, to me, 75 percent of parity is not fair. May I remind you, my friends on the Republican side, that we have grounds to perhaps get a little disturbed at the fact that the parity level fell down to 80 percent on February 15. Yes; we saw during the Truman administration the beginning of the break where the parity-price level fell 19 points from the top level. But now where is it? It is down to 80. And corn is at 66 percent of parity in my particular congressional district.

Are we going to sit here and do nothing whatsoever except to provide for this allotment of 51 million acres, which we must have; do nothing whatsoever to help to improve the agricultural economy of our Nation? I am asking you that as a prelude to what we are going into this afternoon. I am asking of you, my friends, that we confine our remarks, if possible, this afternoon to matters having reference to the bill itself. Let us give to anybody who has an amendment to offer which he thinks might improve the bill an opportunity to offer that amendment and have more than 2½ minutes to discuss it. Let us give him an opportunity to discuss his amendment instead of on both sides of the House going into political discussions which certainly will not help the farmers of America in any way.

I am taking a few minutes now to discuss briefly the amendment I propose to offer this afternoon if the legislative situation permits. I hope every Member interested in good farm legislation will consider the merits of my amendment and give it the support it deserves.

FAMILY-FARM AMENDMENT

Mr. Chairman, my amendment is designed to provide necessary, minimum protection to the family-size farms of this Nation. I emphasize that term "family-size farms" because there has never been any question in the Congress but what these are the farmers we want to protect. In the past, there has been criticism of price supports because they seemed to help the big producers more than the small farmers who needed the protection the most. My amendment meets that objection.

Everyone wants to help the family-size operator without at the same time piling up huge surpluses in bins and warehouses all over the country. This amendment does just that.

Everyone wants to help the family-size operator at the lowest possible cost to the Government. This amendment does that.

It is a simple, sensible approach to an otherwise complex problem. It meets the objections of most of those opposing the 90 percent of parity price supports by limiting them to the small operators who do not actually produce the surpluses. It provides maximum protection where it is most needed, and also provides an umbrella over the market for all producers. It will do more than anything yet proposed to get our farm economy back of its feet without a tremendous outlay of Federal funds in price support operations.

The amendment contains five important provisions.

First, it provides a minimum acreage allotment for corn of 51 million bushels as proposed in the Andresen and other amendments.

Second, it provides for the apportionment of corn allotments on the basis of tillable acreage. This will correct a present deficiency in the law whereby the good farmers with balanced production have been penalized and the few who have mined their soil have been given an allotment bonus. Every good farmer in the corn area favors this provision.

Third, it provides 90 percent of parity supports on the first 4,000 bushels of corn, the first 25 bales of cotton, and the first 3,000 bushels of wheat per farm. This is the cornerstone of the whole amendment as it takes care of the family-type farms of this Nation without the burden of supporting at 90 percent of parity the great surpluses produced on the large farms. It is a well known fact that the family-size farms did not produce the surpluses now stored up in bins and warehouses all over the land, and it is grossly unfair for our average family-sized farmers to have to pay the economic penalty for those surpluses.

The corn provision will have a loan value of about $6,480. It will afford maximum protection to the average, family-type farm and will also have an indirect effect on all market prices by holding this umbrella of protection over the first 4,000 bushels produced on any one farm. We will have the protection without the cost of supporting the surplus production.

The cotton provision will have a loan value of about $4,125. It will also afford maximum protection to the average, family-type cotton farmer without the excessive costs of protecting all of the surplus production at that level. At the same time, it will hold a protective umbrella over all production at the lowest possible cost.

The wheat provision will have a loan value of about $6,720. This will take care of the average, family-type wheat farm at minimum cost to the price-support program. The same umbrella will have its protective effect over all production without the excessive costs of supporting the surpluses at the higher level.

One of the greatest farm Congressmen in history, Clifford Hope, of Kansas, sought a similar two-price plan for wheat and it would be a great tribute to his 30 years of service in this body to see this proposal approved today.

The fourth provision of my amendment is very important. It provides the price we are willing to pay in the commercial corn area for the protection we ask for at this time. It requires a producer, to be eligible for price support, to put cropland equal to 20 percent of his corn allotment in the soil bank. This is 5 percent more than has yet been proposed, but we are ready to make our contribution to the effort to reduce surpluses in order to gain the protection we seek for the family-size farms. By reducing corn or feed grain production 20 percent below the allotment level we will greatly reduce production and start the process of using up the surpluses now stored at such great expense to the Government. By so doing, we will minimize the need for price supports and thus

further reduce the costs of the entire program. By making this sacrifice we bring balance to the entire operation.

The fifth and final provision is identical to that approved by the committee last Thursday. It is simply a correction of an error in the soil-bank bill we enacted last year in that it opens up the low-costs conservation reserve to corn farmers who do not take advantage of the acreage allotment and price support provisions. It has no relationship to the controversial proposal to establish a feed grain acreage reserve program, but it will bring vast acreages now producing feed grains into the low-cost conservation reserve.

Mr. Chairman, this amendment offers a basis for compromise which should have approval across both political and commodity lines. It is a low-cost program which will do more than anything else to bolster our family-farm economy. It is equally fair to the North, South, East, and West. I hope it will be approved.

VALUE OF AGRICULTURAL ECONOMY TO INDUSTRY AND COMMERCE

The trade associations recognize the value of the rural market. All of the trade and commercial publications treat the subject—even the Wall Street Journal and the New York Times regularly carry articles on the farm economy.

Congressmen from nonagricultural districts may lose sight of the fact that rural America is their biggest and best market for the things their people produce. Take a look at the mechanics of the farm economy and you will see what I mean.

Last year, production costs in agriculture were over $22 billion. That was money our farmers spent merely for the production of our bountiful supply of food and fiber. That was money spent for tractors, trucks, fuel, fertilizer, chemicals, rubber, electrical equipment, and all the other manufactured and processed equipment produced in nonagricultural areas.

Add to that $22 billion the living expenditures of farm families. In 1955, farm families spent an average of $3,309 for living expenses. That is another $15 billion farm people poured into commercial and trade channels. Farm people spent $427 million for clothing; $378 million for transportation; and $453 million for other goods and services.

Even with a reduced economy the farm people of America last year spent almost $40 billion for production and living expenses. Think of that, and think what a tremendous market we provide for the goods produced in the nonagricultural areas of this Nation and see whether it is not to your own best interests to help us sustain our economy and our purchasing power.

Think also of the fact that we are spending about $40 billion for production and living expenses, according to the United States Department of Agriculture, and our cash income from marketings in 1956 was only $29,999,000,000. Even when you add to that the value of Government payments, home consumption, rental value of dwellings, and all the other elements our realized gross farm income was only $33,979,000,000 last year.

Any way you look at it, rural America is earning less than it is spending and that is why farm mortgage debt and other indebtedness of farm people is soaring. We are operating on credit, but our credit is running out. If you do not help us get our economy up to a fair level, we will soon be out of money to spend for the goods and services produced in the nonagricultural areas of this Nation. You stand to lose a goodly portion of a $40 billion market and I do not think your constituents want to see that happen any more than mine do. Approve my bill to sustain the family farms of this Nation, and we will not only keep your $40 billion market but we will shortly provide you a $50 billion market and your prosperity will rise to new heights.

Tribute to Hon. Lyndon B. Johnson, of Texas

EXTENSION OF REMARKS
OF
HON. JOSEPH S. CLARK
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Thursday, March 14, 1957

Mr. CLARK. Mr. President, on February 28, in the Pittsburgh Sun-Telegram, a newspaper not distinguished for its support of the views of those of us on this side of the aisle, appeared an editorial entitled "A Good Statesman." In the editorial the majority leader, the senior Senator from Texas [Mr. JOHNSON], was praised for his high level of patriotic statesmanship in connection with the passage of the amended Middle East joint reesolution.

Mr. President, I think the publication of the editorial in a large metropolitan daily newspaper in the North is an encouraging evidence of the unity of the country and of the place in the esteem of those of us north of the Mason-Dixon line in which our great majority leader is held. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A GOOD STATESMAN

The majority leader in the Senate, LYNDON JOHNSON of Texas, placed himself on a high level of patriotic statesmanship when he put all partisanship behind him on the issue of supporting President Eisenhower's Middle Eastern policy.

The vital thing that needs to be proved, as Mr. Johnson said, is that the American stand against Communist aggression is being taken "not by just one man, and not by just one branch of government, but by the institutions representing the united will of the American people."

Senator JOHNSON is so right about that.

Nothing would serve the Communist interests better than to have America divided on the issue of drawing a line in the Middle East where Communist aggression must stop.

Nothing would spur Soviet Russia to new aggressions in the Middle East and elsewhere in the world more than an American show of weakness at this critical time.

It would be a weakness of a most dangerous and destructive sort if Congress should repudiate the President on this vital matter or even indulge too long in indecision and delay.

Whatever political and partisan temptations may be in the face of what might seem to be an opportunity to at least make President Eisenhower squirm for a while, there is too much at stake to play political games at the expense of American security.

Senator JOHNSON is a big enough statesman and a good enough American to see this situation in its proper light.

So is former President Truman.

Both of these men know how to play hard and even rough at the game of party politics at the right time, but when the peace and welfare of America are on the line they stand up with the rest of their countrymen.

Corn and Feed Grain Program

SPEECH
OF
HON. AUGUST H. ANDRESEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 13, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 4901) to establish a minimum acreage allotment for corn, to provide acreage-reserve programs for diverted acres and for feed grains, and for other purposes.

Mr. AUGUST H. ANDRESEN. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, it is quite obvious that when we try to write complicated legislation on the floor of the House it adds to the confusion that already exists. Now, the gentleman from Texas has had at least 20 minutes to explain his amendment, and I am sure that most members of the committee do not understand it better now than before he started in. He has not explained his amendment.

I recognize some of the features of the original Cooley-Poage bill in it, because it deals with diverted acres. But, he has in no manner explained the provisions of his amendment. He has talked about other things and has not given the House an opportunity or the committee an opportunity to have his provisions explained.

Mr. SIMPSON of Illinois. Mr. Chairman, will the gentleman yield?

Mr. AUGUST H. ANDRESEN. I yield to the gentleman from Illinois.

Mr. SIMPSON of Illinois. All in the world that the Poage amendment does is completely change the soil-bank program that was passed last year before it ever becomes effective.

Mr. AUGUST H. ANDRESEN. There is no question about that. It tries to amend the entire soil-bank program so that under the guise of doing something for corn you are going to do something for the other basic commodities so they may come under the acreage reserve.

Mr. HALLECK. Mr. Chairman, will the gentleman yield?

Mr. AUGUST H. ANDRESEN. I yield to the gentleman from Indiana.

Mr. HALLECK. I ask the gentleman to yield only to direct a question to the

gentleman from Texas, the author of this pending amendment. What I cannot understand is, if you wanted to amend the committee bill, why do you not withhold your amendment until you have an opportunity to act on the committee bill?

Mr. POAGE. It seems that now is the last chance anybody is going to have, and I think we have offered you a most generous proposition.

Mr. HALLECK. What I am talking about is the parliamentary situation which is unfortunate. I am talking about what would be orderly procedure. In other words, there are some of us who believe that this legislation should be limited to the critical situation affecting the corn growers of this country.

Mr. POAGE. Then the gentleman would vote against my amendment, of course?

Mr. HALLECK. Yes. Then there are pending two substitutes or one amendment and one substitute, one offered by the gentleman from Nebraska [Mr. HARRISON], and the other offered by the gentleman from North Carolina [Mr. COOLEY]. Why was not the gentleman from Texas [Mr. POAGE] willing to let those be voted up or voted down, as we would vote first on the Cooley amendment to the Harrison amendment and then we would have a vote on the committee bill, and if that prevailed, that would be it. If it did not prevail, then it would seem to me that the gentleman would be in a much better position to amend the committee bill because then we could take it section-by-section and line-by-line and know what we were doing.

Mr. POAGE. Because we recognize that if the substitute is adopted, that ends the whole thing. There will be no further discussion and no further opportunity to make any kind of compromise here. Since the gentleman's side would not compromise we have offered to give you what you have asked.

Mr. AUGUST H. ANDRESEN. Mr. Chairman, I refuse to yield further. Speaking about compromises, the gentleman from Texas [Mr. POAGE] has assumed the attitude during the entire discussion on the corn program that he will either take over the soil bank or wreck it, one or the other. Some on the Committee on Agriculture. I would not say have as much brains as the gentleman from Texas [Mr. POAGE], but we do have a little intelligence. We have agreed upon the Harrison amendment or the Andresen amendment as two proposals that we need in this emergency to handle the corn situation in the commercial corn area. My amendment was defeated last Thursday, so we are offering the Harrison amendment today.

Any amendment offered by the gentleman from Texas is for the sole purpose of adding to the confusion and wrecking the soil bank program. You can take it for that. I do not say that out of any lack of regard for my good friend from Texas because I have a high regard for him and his sincerity in those things he promotes. But we are now dealing with the 1957 crop of corn in the commercial corn area. Either we are going to get an emergency program or we are not going to get one. The test is here today.

Mr. Chairman, I urge the membership to vote down the Poage amendment and adopt the Harrison amendment which I am supporting and which my colleagues on the Committee on Agriculture are supporting here today.

Mr. ARENDS. Mr. Chairman, would the gentleman yield?

Mr. AUGUST H. ANDRESEN. I yield to the gentleman from Illinois.

Mr. ARENDS. Does the gentleman agree with the position taken a moment ago by the gentleman from Illinois [Mr. SIMPSON], that this would completely rewrite the Soil Bank Act?

Mr. AUGUST H. ANDRESEN. There is no question about that.

Mr. ARENDS. In other words, we would be writing completely new legislation on a project which, as the gentleman from Illinois [Mr. SIMPSON] has said, has not yet been given the opportunity to function. Here we have an emergency in the corn area which apparently the gentlemen on the other side are not willing to face without doing something else about it, and I am going to oppose that.

The Railroad Retirement Act Is in Need of Further Liberalization

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1957

Mr. VAN ZANDT. Mr. Speaker, on Monday, March 11, 1957, I appeared as the first witness before the House Interstate and Foreign Commerce Committee regarding amendments to the Railroad Retirement Act.

My statement follows:

REMARKS BY REPRESENTATIVE JAMES E. VAN ZANDT, 20TH DISTRICT OF PENNSYLVANIA, BEFORE THE HOUSE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE, MARCH 11, 1957, REGARDING AMENDMENTS TO THE RAILROAD RETIREMENT ACT

Mr. Chairman, I am grateful to you and the members of this committee for the opportunity to appear before you and urge approval of the bills I have introduced at the request of thousands of active and retired railroad employees whom I have the honor to represent.

These bills, with the exception of one bill, H. R. 4530, have been introduced by me in previous Congresses, and they have the support of many individuals and groups among the railroad population of my district and the Nation.

The bills are as follows:

H. R. 3115, introduced on January 16, provides retirement on full annuity at age 60 or after serving 30 years; and further provides that such annuity for any month shall be not less than one-half of the individual's average monthly compensation for the 5 years of highest earnings of all.

H. R. 3116, introduced on January 16, provides full annuities, at compensation of half salary or wages based on the 5 highest years of earnings, for individuals who have completed 35 years of service, or have attained age 60.

H. R. 3117 and H. R. 3420 are identical and will repeal the prohibition against the payment of dual benefits to spouses thereby making them eligible to receive spouse benefits under the Railroad Retirement Act and earned benefits under social security.

H. R. 3118 and H. R. 3421 are identical and provide that an annuitant may be eligible for his retirement annuity even though he renders compensated service for an employer other than railroads, by whom he was last employed before his annuity became effective. These bills cover the situation where a retired employee is denied the opportunity to serve as a clerical employee of a church, civic, fraternal, or social organization.

H. R. 3422 provides a 25 percent across-the-board increase in widows' annuities.

H. R. 4530 is identical with H. R. 4353 and H. R. 4354, the so-called Harris-Wolverton bills, amending the Railroad Retirement and the Railroad Unemployment Insurance Acts. This legislation liberalizes benefits under both acts and was introduced at the request of railway labor organizations in my congressional district who subscribe to the views of the Railway Labor Executives Association who are the sponsors of this legislation.

Inasmuch as H. R. 4530 is identical with the Harris-Wolverton bills and having no pride of authorship, I join with the Railway Labor Executives Association in advocating favorable consideration of the Harris-Wolverton version of the legislation.

Before any further discussion of proposed amendments to the Railroad Retirement Act, I want to reaffirm the position I have taken annually before this committee to the effect that there is an absolute necessity of maintaining the stability of the retirement fund and keeping it in a solvent condition to guarantee the payments of present and future benefits with the highest degree of certainty.

In this connection, it should be recalled that when President Eisenhower—on August 7, 1956—signed Senate Bill 3616, known as the 1956 Amendments to the Railroad Retirement Act, he issued a statement calling attention to the fact that the cost of the 1956 amendments, estimated to be $83 million annually, would increase the deficiency of the retirement fund to $169 million a year. President Eisenhower further stated that corrective action was imperative in remedying the $169 million deficiency and that he was signing Senate bill 3616 with the understanding that the 85th Congress would take corrective action.

Mr. Chairman, the deficiency reported in the retirement fund is the stumbling block to our efforts to further liberalize the Railroad Retirement Act and increase its benefits. Therefore, Congress—as custodian of the railroad retirement fund—in finding means to liquidate the $169 million deficit and at the same time finance the cost of new amendments—is faced with the necessity of providing new sources of revenue, first, by either increasing payroll contributions, and allowing the employee to take credit for the increase on his income-tax return, or, secondly, to subsidize the railroad retirement fund by a direct contribution from the Treasury of the United States.

Mr. Chairman, there is a definite need for a further liberalization of railroad retirement benefits. This need is as great today as it was a year ago, if not greater, due to the fact that the cost of living is still increasing and monthly benefits have not kept pace with it.

Those of us who represent districts with a heavy railroad population—both active and retired—know whereof we speak when we say retired railroaders and their families or their survivors are finding it difficult to exist on the present scale of benefits.

Even the active railroad employees and their families are concerned about inadequate benefits because they are looking forward to retirement and to having a retire-

ment system that will provide them with security for their retirement years.

Last year, Mr. Chairman, you will recall Congress provided an increase of less than 10 percent for certain annuitants, pensioners, and survivors.

In my opinion, this increase should have been an across-the-board increase with no exceptions. As it is, there were certain groups of beneficiaries—especially widows—who received no increase whatsoever, in this day and age, with the cost of living at an all-time high, it is impossible to explain to these groups why they were not included in the legislation granting increases in retirement benefits.

Should the Harris-Wolverton bill be approved the proposed 10 percent increase should apply to all annuitants, pensioners or their survivors without any exceptions. To do otherwise, you are simply inviting the charge of discrimination against those excluded from receiving the increase.

Speaking of discrimination, I would like to see the Harris-Wolverton bill amended by including a provision that would repeal the prohibition against the payment of dual benefits to spouses thereby making them eligible to receive spouse benefits under the Railroad Retirement Act and earned benefits which they have paid for by payroll contributions under the Social Security Act. After all, these spouses paid for social security benefits in their own right and they are entitled to them. In this connection, I understand the cost of such an amendment is minute as compared to the moral obligation of giving a person benefits they have paid for and acquired in their own right.

Another discriminatory practice that should be abolished is the requirement that an annuitant must sever all connections with employment outside the railroad industry before he becomes eligible for railroad retirement benefits.

In the earlier part of my statement, when explaining the purpose of my bills, H. R. 3118 and H. R. 3421, designed to repeal the requirement, I stated: "Here is a situation where a retired railroad employee is denied the opportunity to serve as a clerical employee of a church, civic, fraternal or social organization."

Mr. Chairman, if it is not possible to repeal this provision, I urge that we write into existed law a provision that will permit these retired employees to earn up to $100 monthly in this particular type of employment. In other words, such a ceiling on income would be comparable to the income limitations placed on persons retired because of disability.

Here again the cost of my bill, H. R. 3118, I am informed, would be insignificant and would have virtually no effect on the retirement fund.

Over a period of years, I have been besieged by thousands of my constituents actively employed in the railroad industry urging enactment of legislation that would reduce the retirement age to 60 years or permit retirement after 30 or 35 years of service with the annuity to be computed on the 5 years of highest earnings.

As a result of the interest of my constituents, I introduced in previous Congresses legislation to effect earlier retirement and I hope that during your deliberations you will give consideration to my two bills on the subject—H. R. 3115 and H. R. 3116.

Mr. Chairman, I want to reiterate the compelling need to liberalize the provisions of the Railroad Retirement Act and to increase its benefits.

This committee has a herculean task in trying to amend the Railroad Retirement Act and at the same time find the means of paying the cost of such amendments, as well as liquidate the $169 million deficit referred to by President Eisenhower.

As in previous years, like other Representatives whose districts have a heavy railroad population, I await the results of your deliberations on the many pending amendments to the Railroad Retirement Act now under consideration.

Whatever your decision is, I know it will be in the best interest of the railroad population both active and retired.

Mr. Chairman, in concluding I would like to recommend that the Railroad Retirement Board and the railway labor organizations be encouraged to conduct a campaign of education regarding the Railroad Retirement Act, its origin, its purpose, and the financial condition of the retirement fund.

During my congressional career, I have never encountered so much confusion in the minds of active and retired railroaders and their families over the financial condition of the retirement fund and its inability to absorb the cost of increased benefits.

In addition, I am being constantly reminded of greater social security benefits at a lower cost than the benefits paid under the Railroad Retirement Act. Recently the Railroad Retirement Board made available a comparison of the benefits received under the Railroad Retirement and Social Security Acts.

The comparison reveals the more attractive features of the Railroad Retirement Act which, if generally known, would answer critics of the Railroad Retirement Act. It is information of this type that could be made part of an educational program that would be instrumental in clarifying many questions in the minds of our railroad population.

Mr. Chairman, I should like at this point to include in my remarks a copy of the comparison of the benefits payable under the Railroad Retirement and Social Security Acts:

"HOW RAILROAD RETIREMENT AND SURVIVOR BENEFITS COMPARE WITH SOCIAL SECURITY BENEFITS

"The railroad retirement and social security systems both provide protection against loss of income arising from the hazards of old age, disability, and death. Under the railroad retirement plan, amounts of benefits are generally substantially larger, and the protection is somewhat more comprehensive than under the social security plan. However, by the same token, the more liberal benefits under the railroad retirement plan are more costly; consequently, the railroad retirement taxes necessary to finance the system are higher than under the social security system.

"The major differences between the two systems may be summarized as follows:

"1. In general, railroad employees and their wives or survivors receive higher benefits. Moreover, in no case can monthly benefits be less than those under the social security formulas.

"2. Railroad employees with 10 or more years of service are protected against permanent disability for all regular work. Those with 20 or more years of service are also protected for work in their usual railroad occupations. In both cases, benefits may start at any age. Occupational disability benefits are also granted at age 60 to employees with 10 to 19 years of service. Effective July 1, 1957, social security employees may receive disability benefits at age 50, provided they are permanently disabled for all regular work; no provision is made for those only occupationally disabled.

"Nondisabled railroad employees may retire at age 60 if they have 30 years of service; in such cases, the annuity is reduced for men, but not for women. Under social security, no retirement benefits are payable to nondisabled male employees before age 65, nor to women employees before age 62. Furthermore, women who retire at age 62–64 must take a reduction in their annuities.

"3. Widows of railroad employees (even if not caring for eligible children) can receive monthly survivor annuities at age 60, as against age 62 under the Social Security Act.

"4. Railroad employees, but not employees under social security, are guaranteed that the retirement and survivor benefits paid in their cases will be greater than the taxes they contribute to the retirement system.

"It is natural that the more valuable protection railroad employees have would be more costly than that offered by the social-security system. At the present time, the railroad retirement tax rate (on employees and employers alike) is 6¼ percent of the employee's earnings up to $350 a month, while the rate under the social-security system is 2¼ percent on similar earnings. The railroad rate, however, has reached its maximum, while the social-security rate is scheduled to rise as follows: 1960–64, 2¾ percent; 1965–69, 3¼ percent; 1970–74, 3¾ percent; and 1975 and thereafter, 4¼ percent. In the long run, the tax rates under each system are designed to be sufficient to support the benefit structure.

"The data below compare the amounts of the various benefits paid under the two systems. The full effect of the disability freeze and dropout provisions of the 1954 amendments to the Social Security Act, and all of the provisions of the 1956 amendments to that law, are not yet fully reflected in the average benefits payable under the social-security system.

	Railroad retirement	Social security
RETIREMENT BENEFITS		
Present maximum to—		
Employee alone	[1] $184.30	$108.50
Employee and wife	[1] 238.60	162.80
Maximum benefit to—		
Employee alone with 40 continuous years of service after 1936	260.30	108.50
Employee and wife	314.60	162.80
Employee alone with 45 continuous years of service after 1936	294.50	108.50
Employee and wife	348.80	162.80
Average benefit awarded to—		
Employee alone	[2] 122.00	[3] 68.00
Wife or dependent husband	[2] 47.10	[3] 33.90
SURVIVOR BENEFITS		
Present maximum monthly annuity to—		
Widow	81.40	81.40
Widow and 1 child	162.80	162.80
Widow and 2 or more children	200.00	200.00
Insurance lump sum (payable under Railroad Retirement Act when no survivor is immediately entitled to a monthly benefit, but in most cases under Social Security Act).		
Present maximum to—		
Survivor of employee with 20 years of continuous service after 1936	[1] 701.00	255.00
Survivor of employee with 40 years of continuous service after 1936	852.00	255.00
Survivor of employee with 45 years of continuous service after 1936	856.00	255.00
Residual payment, which guarantees benefits greater than taxes payable regardless of employee's years of service, equal to 4 percent of taxable earnings 1937–46 plus 7 percent thereafter, less benefits previously paid	[4]	[4]
Present maximum assuming 20 years of service, 1937–56, and that $701 insurance lump sum was only other benefit previously paid	3,364.00	
Maximum assuming 40 years of service, 1937–76, and that $852 insurance lump sum was only other benefit paid	9,093.00	

[1] As of Jan. 1, 1957
[2] In January 1957.
[3] In October 1956.
[4] No provision.

(Office of Director of Research, United States Railroad Retirement Board, March 1957.)

Mr. Chairman, this concludes my statement.

St. Patrick's Day in America

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. COAD. Mr. Speaker, March 17 is St. Patrick's Day and we, all Americans, join in the celebration.

Your neighbor may come
From the Emerald Isle—
Let's all wear a bit o' the green.
He's homesick, perhaps,
For his old domicile—
Let's all wear a bit o' the green.
St. Patrick it was
Who started the style—
Let's all wear a bit o' the green.
For the Irish a cheer,
For the shamrock a smile—
Let's all wear a bit o' the green.

This little rhyme by the American poet, Grace L. Schauffler, expresses a feeling and a custom that has been typically American since Colonial and Revolutionary times. There is some Irish in the ancestry of most of us, and those who are privileged to claim some Irish blood are proud to celebrate the fact by wearing the green on St. Patrick's Day. And those in whom no genealogical research can discover one drop of Irish blood are yet glad, on this day, to put on a shamrock or other bit of green, in tribute to Ireland and to the Irish contribution to America's greatness.

St. Patrick's Day has presumably been celebrated in America, at least privately and individually, ever since the first March 17th that found an Irishman on this continent, but the first record we find of a public observation of the occasion is in Puritan Boston, in 1737. There, on March 17, a group of Protestant gentlemen, Irish and of Irish descent, met to form the organization then called the Irish Society, but later named the Charitable Irish Society. Though this society, in its original form, excluded Catholics, it is good to note that its rules and orders were soon amended to remove this religious restriction, and to admit all of Irish birth or ancestry to fellowship. The Charitable Irish Society, now celebrating its 220th birthday, is probably the oldest Irish society in the United States, and as such deserves a special salute on St. Patrick's Day.

Twenty years later, on March 16, 1757, the garrison of Fort William Henry, at the head of Lake George, celebrated the eve of St. Patrick's Day with an extra ration of grog, that garrison being largely composed of Irish troops—and on the next day, St. Patrick's Day itself, they repulsed an attack of the French stationed at Fort Ticonderoga, who were perhaps expecting to catch them in the midst of revelry. How much revelry was actually going on at the time is not disclosed in the historical accounts, but it is said that Stark, with his Provincial Rangers, from whom he had sternly withheld the grog, took a leading part in repelling the assault.

At Fort Pitt, where Pittsburgh now stands, the feastday was celebrated in 1763—a celebration, though not entirely quiet, at least not made uproarious by any armed attack.

St. Patrick's Lodge, Johnstown, N. Y., organized in 1766, is said to have been the first Masonic lodge organized in the New York Province, west of the Hudson River. The first master of this lodge was the famous Sir William Johnson, Indian agent for the British in colonial America, and a native of County Meath, Ireland. Colonel Guy Johnson, Sir William's son-in-law, succeeded him as master of St. Patrick's Lodge in 1770, succeeded him also as British Indian agent. It is to be regretted that Col. Guy Johnson, a native of Ireland, was restrained neither by devotion to St. Patrick nor by masonic principles from taking part, during the Revolutionary War, in Indian massacres of settlers in the Mohawk Valley.

Each St. Patrick's Day during the Revolutionary War was marked by enthusiastic celebrations on both sides. The British Army in America was filled with Irishmen, many of them obtained by conscription, and the Revolutionary Army contained an even larger proportion of Irishmen, enthusiastic volunteers impelled by the twin motives of American patriotism and resentment of the British rule whose harshness had caused them to leave Ireland. It is by no accident that Boston's patriotic observance, Evacuation Day, coincides with St. Patrick's Day. On March 17, 1776, George Washington, in camp at Cambridge, appointed Gen. John Sullivan brigadier of the day, and authorized as the parole for the day, "Boston," with the countersign, "St. Patrick." It was thus in a thoroughly Irish spirit that the American troops took over the city upon the departure of the British.

In 1778 the Irish soldiers in the British Army staged a St. Patrick's Day parade in occupied Philadelphia, marching with one of their number, on horseback, dressed to represent St. Patrick. At the same time, in Washington's camp at Valley Forge, the celebration of the day was interrupted by the antics of some troublemakers. The ensuing row was halted by the appearance on the scene of George Washington himself, who promised punishment to the parties who had given offense, and is quoted as saying, "I, too, am a lover of St. Patrick's Day."

On March 16, 1780, Washington issued an order, fortunately still preserved, warmly testifying to his regard for the Irish and for their national day. Dated from his headquarters in Morristown, the order reads:

The general congratulates the Army on the very interesting proceeding of the Parliament of Ireland, and the inhabitants of that country, which have been lately communicated, not only as they appear calculated to remove those heavy and tyrannical oppressions on their trade, but to restore to a brave and generous people their ancient rights and freedom, and by their operation to promote the cause of America, desirous of impressing on the minds of the Army transactions so important in their nature, the general directs that all fatigue and working parties cease for tomorrow, the 17th, a day held in particular regard by the people of that nation. At the same time he orders, that as a mark of the pleasure he feels on the occasion, he persuades himself that the celebration of the day will not be attended with the least rioting or disorder. The officers to be at their quarters in camp, and the troops of each State line, are to be kept within their own encampments.

A subordinate officer, on this occasion, issued this supplementary order, providing for the traditional festivities:

The commanding officer desires that the celebration of the day should not pass by without having a little rum issued to the troops, and has thought proper to direct the commissary to send for the hogshead which the colonel has purchased already in the vicinity of the camp. While the troops are celebrating the bravery of St. Patrick in innocent mirth and pastime, he hopes they will not forget their worthy friends in the kingdom of Ireland, who, with the greatest unanimity, have stepped forward in opposition to the tyrant Great Britain, and who, like us, are determined to die or be free. The troops will conduct themselves with the greatest sobriety and good order.

This day was ushered in, in the American camp, with music and hoisting of colors, the 13 stripes of the American States, the harp that symbolized Ireland's national yearning for independence, and the inscription, The Independence of Ireland. The parole assigned to the day was "Saint," and the two countersigns "Patrick" and "Shelah."

On March 17, 1781, the American Army encamped at West Point held a parade in honor of St. Patrick, conducted largely by the Irish Rhode Islanders stationed there.

New York City has, of course, long been a notable center of the celebration of St. Patrick's Day, but it may not be known to all that the tradition now marked by the greatest St. Patrick's Day parade in the world can be traced back as far as 1762, when a public notice was inserted in the New York Mercury, inviting gentlemen to attend the celebration of the anniversary feast of St. Patrick at the house of Mr. John Marshall, at Mount Pleasant, near the college. The same paper for March 24, 1766, has a fascinating account of the toasts drunk at the St. Patrick's Day celebration just past:

Monday last being the Day of St. Patrick, tutelar saint of Ireland, was ushered in at the dawn, with fifes and drums, which produced a very agreeable harmony before the doors of many gentlemen of that nation, and others.

Many of them assembled, and spent a joyous though orderly evening at the house of Mr. Bardin in this city, where the following healths were drunk, viz.:

1. The King and Royal House of Hanover.
2. The Governor and Council of the Province.
3. The glorious memory of King William, etc.
4. The memory of the late Duke of Cumberland.
5. The day; and prosperity to Ireland.
6. Success to the Sons of Liberty in America, may they never want money, interest, nor courage to maintain their just rights.
7. Mr. Pitt.
8. General Conway.
9. May the enemies of America be branded with infamy and disdain.

10. May the honest heart never know distress.
11. The Protestant interest.
12. May all acts of Parliament contrary to the American interest be laid aside.
13. Success to American manufacturers.
14. May the true Sons of Liberty never want roast beef nor claret.
15. More friends and less need.
16. Conquest to the lover and honor to the brave.
17. May we never want courage when we come to the trial.
18. The Lord Lieutenant of Ireland.
19. May the enemies of Ireland never eat the bread nor drink the whisky of it, but be tormented with itching without the benefit of scratching.
20. Our noble selves.

This list, aside from its intimidating character as a list of toasts drunk, is most interesting as indicating how the Irish, on this day of rejoicing, have always been able to meet in jovial goodwill, despite religious and political differences. There must have been, in this celebration, many a devoted Tory downing the toast to success to the Sons of Liberty in America and many colonists of revolutionary spirit drinking to British kings, living and dead. Many a Catholic surely drank on this occasion to the Protestant interest, and many a Protestant American, of Irish ancestry, learned to put his whole heart into the sentiment that included his Catholic neighbor in the toast, "Our noble selves."

Today, let all America wear green for St. Patrick, and for the Irish courage and laughter that is in us. Let each of us, in his own way, raise a toast or a cheer in the good old Irish and neighborly fashion, for "Our noble selves."

What To Do About Ex-Presidents

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include two informative articles, one written by John Harris and appearing in the Boston Globe of February 24, 1957, and the other written by Jay Walz and appearing in the New York Times of February 10, 1957:

[The Boston Sunday Globe of February 24, 1957]

WHAT TO DO ABOUT EX-PRESIDENTS—WHILE PRESIDENT PROPOSITIONS TRUMAN ABOUT TRIP TO GREECE, CONGRESS DEBATES RETIREMENT PAY FOR CHIEF EXECUTIVES—MOST NEVER NEED IT, SOME NEED IT BADLY

(By John Harris)

President Eisenhower's efforts to enlist Ex-President Harry S. Truman as a goodwill envoy to the Middle East invites attention to a century-long debate Congress has resumed—what the Nation should do about our former Presidents.

Many ideas have been advanced. They have ranged the gamut from making ex-Presidents nonvoting Members of the Senate to chopping off their heads when they finally leave the White House, a grisly suggestion once made by a former Chief Executive.

Congress is presently on the verge of solving part of this long-neglected problem. The Senate, with few dissents, has voted to grant pensions to these elder citizens of the republic and to their widows. An identical bill is now pending in the House, which last session permitted similar legislation to die in committee.

Gratitude, it is said, is not a marketable commodity. All too many of our former Presidents have sadly found this to be true.

Our two living Ex-Presidents, Herbert Hoover and Harry S. Truman, are fortunately not in want. This session's brighter prospects for the presidential pension bill, however, must be gratifying to all thoughtful citizens. Even more than insurance for the future, it is after a fashion a redress for our past negligence.

DEATH SAVED JEFFERSON

Witty Dolly Madison, who was to suffer, put it vividly as she looked out one day upon the trees at the side entrance to the President's house. "The President of the United States," she murmured, "usually comes in at the iron gate and goes out at the weeping willows."

A visitor today to the grandeur of Monticello would find it difficult to appreciate the anguish of its master, the author of our Declaration of Independence. Jefferson's dedication to public service caused him to neglect his private affairs. Only the generosity of a wealthy widow furnished him the ready cash to meet the demands of the Capital's butcher, baker, and candlestick maker so he could avoid the risk of debtor's prison when he left the White House.

"Nobody," said Jefferson, "was ever more determined than I was to leave this place clear of debt." Even worse debt was ahead. It has been blamed on Jefferson's incurable hospitality, though the cause was more the decline of Virginia plantations, a farm problem of its day.

He sold land, mortgaged Monticello to the hilt. To obtain funds, this man who said "I cannot live without books," sold his library he had been collecting for a half century. It became the foundation of our present Library of Congress. Finally, to satisfy creditors and to keep his family from penury, he resolved to sell his remaining holdings through a lottery and sent his grandson on a melancholy mission to obtain a lottery license from the State of Virginia. Death alone spared Jefferson from being evicted.

FIGHTING POVERTY

The fate of Jefferson's two disciples, James Madison and James Monroe, was similar.

Grants given Monroe by Congress did not adequately cover his claims and fell far short of meeting his debts. He lost his Virginia estate to creditors. He spent his final days living on the charity of relatives in lower New York City, and we have a pathetic picture of the author of the Monroe Doctrine walking Broadway—"a stooped old man, clothed in a shiny suit and battered beaver hat, giving every evidence in his facial expression of deep-seated unhappiness."

Madison, shocked by Jefferson's bankruptcy, tried retrenchments on his own Virginia plantation which his widow would one day lose. To provide her with some estate, Madison, despite failing eyesight and rheumatic hands, copied the precious notes he had made during the secret debates of the convention which drafted our Constitution.

Dolly Madison eventually sold them to Congress for a fraction of their worth.

She lived for years in the Capital in honored but genteel poverty, her food often supplied from the market basket of her neighbor, Daniel Webster.

Financial woes beset Andrew Jackson in his declining years. "Poverty stares us in the face," he wrote on one occasion. Though gravely ill, he traveled to New Orleans for the 25th anniversary of the battle, a trip made not to gather further honors but to raise money to meet the debts of his beloved stepson.

General Grant, second youngest of our Presidents with presumably many years ahead, was a man without an occupation when he left the White House. The collapse of his venture in Wall Street left him penniless. To satisfy creditors he even pawned the mementoes of a lifetime, his swords, souvenirs, and gifts.

The general's greatest battle was his final one. Despite the ravages of cancer, he struggled to dictate and write two volumes of memoirs to provide his family with funds.

"Every day, every hour, is a week of agony," he said; finishing his task 4 days before he expired.

Congress has been more kindly with presidential widows. Some, whose husbands died in office or were assassinated, were given grants of the remaining year's salary.

To some, beginning with Mary Todd Lincoln, Congress voted a $5,000 pension and the franking privilege—one first extended to Martha Washington. Mrs. Lincoln, after Lincoln was shot, went to Germany to recover her health. Finding herself in need, she wrote a most moving letter to the Speaker of the House to request a pension.

NATIONAL OBLIGATIONS

Teddy Roosevelt considered the disposition of ex-Presidents one of America's biggest problems. The pros and cons on it are threadbare from argument. Andrew Carnegie's offer—in 1912—to furnish $25,000 pensions through private benefactions did not meet with public approval. Great Britain has long provided pensions for its prime ministers. We have provided pensions for generals and admirals—but none for the Commanders in Chief.

Now Congress, about to act, has repeated all the favorable contentions in a report on the pending bill. They are commended reading for those who may still dissent.

Assurance of financial independence for our former Chief Executives, says the report, is more than a matter of equity. It is good business for the American people. Our interest in Presidents does not cease when they leave office. They have obligations which continue. So have the American people.

We should see to it ex-Presidents can be asked to render further public service without hardship to themselves or their families.

[From the New York Times of February 10, 1957]

WHY PENSIONS FOR EX-PRESIDENTS?—COUNTRY MIGHT USE THEIR SERVICES

(By Jay Walz)

WASHINGTON, February 9.—The debate over pensions for retiring Presidents has sent contenders to their history books. And, as usual, the histories are turning up something for all sides.

It can be argued that Presidents out of office have, on the whole, done pretty well on their own. But it can also be shown that a few needed a steady income in the worst way. A great many more might have been able to serve their country better as elder statesmen if they had been relieved of financial worries.

The Senate has approved a bill providing $25,000 a year pensions for former Presidents, as well as office space and clerical assistance. Speaker SAM RAYBURN has promised to get House consideration on it soon.

The fact is that no President of recent times has needed a pension in the strict sense, although some might have used one to good purpose.

COOLIDGE WROTE

Calvin Coolidge, a man of few words and modest means, turned to writing after leaving the White House. His autobiography, appearing both in magazine installments and book form, and a series of brief daily columns paid for a 12-room house in Northampton, Mass., and some stock invest-

ments. He also became a director of the New York Life Insurance Co.

One has to go back to President Grant for an example of a former President in dire need. A complication of misadventures threw him into bankruptcy in the early 1880's. To pull himself out of it he began writing his memoirs while fighting cancer of the throat. The memoirs, completed just before he died, realized about $450,000 for his family.

Both Washington and Jefferson ended their days as land-poor country squires. The first President, who had never accepted a salary, tried selling off sections of Mount Vernon. Jefferson, who twice sold a personal library to Congress, thought of liquidating Monticello in a lottery scheme. But public protests and private funds intervened.

MONROE WAS AIDED

James Monroe, after retiring to his Virginia home, suffered financial setbacks. In 1826 Congress voted him $30,000 in settlement of claims for services he had rendered overseas years before. Even so, after the death of his wife in 1830, he moved to New York to make his home with his daughter.

Andrew Jackson, after seeing Martin Van Buren elected in 1836, went home to the Hermitage outside Nashville. There Old Hickory lived and worked peacefully the remaining 9 years of his life.

But Andrew Johnson, a fellow Tennessean, on leaving the White House in 1869, returned to his native State itching for vengeance on his detractors. He quickly got back into State politics. After two unsuccessful tries for elective office he took his seat in the Senate he had left 13 years before. He felt vindicated, but died of a heart attack after the first session.

John Tyler, elevated to the highest office from the Vice Presidency in 1840, retired to Sherwood Forest in Virginia at the age of 55. He lived quietly as a farmer until the outbreak of the Civil War. His efforts at reconciliation failing, he became a secessionist and died a member of the Confederate House of Representatives.

HAYES' MANSION

Rutherford B. Hayes returned in 1881 to his home in Ohio, enlarged it to a mansion and devoted his remaining years to his library, to speaking engagements and to various humanitarian causes.

Many believe Grover Cleveland may have come as close as any former President to living the full life of a man who once held the highest office in the land.

He was in much demand for writing and speechmaking. Princeton made him a trustee. Later President Theodore Roosevelt sought his help on a public commission during a severe hard-coal strike. In 1905 he assisted in reorganization of the Equitable Life Assurance Society.

Other former Presidents, including Mr. Hoover and Mr. Truman, have stood ready to give the country the benefit of their experience in years of public service. Pension advocates believe their plans would make it possible for all veterans of the White House to do the same.

Corn and Feed Grain Program

SPEECH

OF

HON. AUGUST H. ANDRESEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 13, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 4901) to establish a minimum acreage allotment for corn, to provide acreage-reserve programs for diverted acres and for feed grains, and for other purposes.

The CHAIRMAN. The Chair recognizes the gentleman from Minnesota [Mr. AUGUST H. ANDRESEN].

Mr. AUGUST H. ANDRESEN. Mr. Chairman, we are in a confused muddle when it comes to this legislation with 3 or 4 amendments pending.

I am opposed to the Poage substitute. No one can predict, in spite of what the gentleman from Texas [Mr. POAGE] says, as to the cost of that program. No one can predict how much money will be diverted from one area to another area, to take care of the peanuts, cotton, tobacco, and ricelands in diverted acres. When the funds are allocated in the corn signup, which I have heard is to be around $149 million—if that increased acreage of corn is 51 million acres, it will mean they will have to extend the time of the signup to take in that new acreage, and the amount of new cornland going into the program may be increased to use the entire $219 million which will be appropriated. So that for anyone on either side of the aisle to make any accurate estimate of how much can go into this diverted feed grain area is beyond my comprehension, and I am satisfied that even the Department of Agriculture will be unable to make any estimate as to what the signup will be in the event we increase the acreage to 51 million acres.

Another thing, it will take thousands of employees of the Department of Agriculture, at a cost of at least $30 million, to go out over the country in the basic commodity areas to determine what acreage had been diverted from tobacco, cotton, and peanuts.

I am standing by my support of the Harrison bill. That is a sound bill and will not cost any more money than will be provided in the budget. It is a bill that the farmers want in the commercial corn area. We ought to give them what they want. As I said, it will not increase the expenditure of funds. It will not increase the appropriations this year, and if you are interested in economy you ought to vote down the Poage bill, vote down the Cooley bill, and vote for the Harrison amendment as it has been proposed to you here.

Mr. ARENDS. Mr. Chairman, will the gentleman yield?

Mr. AUGUST H. ANDRESEN. I yield.

Mr. ARENDS. I was called to the long-distance telephone and I did not get to hear the statement the gentleman just made, but someone informed me that the gentleman made the statement that it would increase the cost. Is it true that the best estimate you have available of the cost of the Poage bill will be an additional $30 million?

Mr. AUGUST H. ANDRESEN. That is right.

Mr. ARENDS. In other words, we are voting for $30 million more than we said we would vote yesterday?

Mr. AUGUST H. ANDRESEN. Thirty million over and above the amount requested heretofore.

Mr. HALLECK. Mr. Chairman, will the gentleman yield?

Mr. AUGUST H. ANDRESEN. I yield.

Mr. HALLECK. As a matter of fact, is it not inevitable that unless we are kidding these people who are going to divert acres and put them into the soil bank, in feed-grain areas, this program is bound to cost millions and millions of dollars?

Mr. AUGUST H. ANDRESEN. There is no question about that.

Mr. HALLECK. Otherwise they could not participate.

Mr. AUGUST H. ANDRESEN. That is correct.

The CHAIRMAN. The time of the gentleman from Minnesota has expired.

Yankee Homecoming

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1957

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a statement by Jack Frost, president, Yankee Homecoming, to New England Members of Congress, Thursday, March 14, Washington, D. C.:

WHAT IS A YANKEE?

To Europeans, any American is a Yankee; westerners call folks east of the Mississippi Yankees; and some southerners call all northerners Yankees. Back in the old days Yankeeland was that area touching Passamaquoddy Bay, on the northeast, and including all New England and that part of New York east of its first river.

But we feel Yankee is not a race, religion, or geographical designation; that it is a creed—a belief in American ingenuity, free enterprise, and respect for another's rights, property, and personal liberty.

Are you a Yankee? There is a big welcome awaiting you in the New England States in 1958. This is a year-long promotion beginning in 1958.

WHAT WILL THE PLAN COST?

Yankee Homecoming, impressive as it will be, should not cost one extra dollar of anybody's money. The entire project will cost over $1 million to promote, and it will have an incalculable impact.

The amazing thing about this promotion is that the dollars spent will not be extra dollars, but the same dollars usually spent separately by States and industries, directed now toward a central theme, namely Yankee Homecoming. So that instead of scattering dollars aimlessly with minor themes and minor impact, competitors, noncompetitors, State and local government agencies, and private industries channel the same money in dynamic fashion into a basic theme and thus make an effective impression on the entire country.

Businessmen realize that 2 or 3 department stores in the same area will individually do more volume than if one store were there alone, for the group makes the area a shopping center. Likewise, the New England States pooling their resources and working in unison can win more business for each State than through the lone-wolf approach used in the past. Everybody will want to be here in 1958.

The homecoming theme is big enough and poignant enough to sustain an entire year's activities, not just one season. Thus double benefits accrue by spurring offseason tourist travel—in magical winter, glorious spring,

and lovely Indian summer—when New England is at its best and accommodations are most plentiful. Just picture the autumn foliage pilgrimage up and down Yankee trails.

I personally have an investment equity of $34,000 in Yankee Homecoming. I hope to recover it and make myself a dollar, too. But my greatest satisfaction will be in stirring the pulse of my native New England.

Although one or two principals are not mentioned, the following firms and individuals are among the small nucleus responsible for helping me when my own resources became limited, so that we could continue with this plan. They are: Sherman L. Whipple, Jr., president, Wiggin Terminals; S. Bruce Black, chairman, Liberty Mutual Insurance Co.; New England Electric Co.; Joseph Sullivan, Lowell printer; Paul T. Rothwell. Without these civic-minded gentlemen who believe in volatile salesmanship to tell the New England story, Yankee Homecoming would still be just an idea.

INDUSTRY SUPPORTS THIS NOVEL INDUSTRIAL AND TRAVEL PROMOTION

Massachusetts industrialists are furnishing the secondary capital to get Yankee Homecoming rolling on a New England-wide basis after initial expenditures by Jack Frost. Major capital will come from similar sources throughout the six States because of the fundamental soundness of the plan. Its basic principle goes back to a fable writer of several centuries before Christ.

Aesop wrote of the farmer who called his sons to him and gave them a bundle of sticks to break . . . which none of them could accomplish. He then untied the bundle and gave them sticks to break one by one, which they did easily.

"Thus, my sons, as long as you remain united, you are a match for all your enemies; but differ and separate, and you are undone."

Yankee Homecoming organizes the New England States to work together and prosper together in such fashion, thus increasing the impact and decreasing the individual cost.

PUBLIC CAN BOOST HOMECOMING

The public, as well as State governments and industry can boost Yankee Homecoming a year in advance.

When a letter is written or a card posted, mention the grand pilgrimage of pageantry that will take place in 1958. Of course, official Yankee Homecoming post cards will be available in 1957 for certain areas, showing a picture and description of the forthcoming event in that area. Use these. There are other items of fine souvenir and gift value that will be made available to the public for 1957.

Everyone loves a parade or a pageant, but so, too, does everyone love to participate. So check with your local chamber of commerce, mayor, or homecoming committee and become a part of the festivities in your town. It is hoped that at least half the towns and cities in New England will participate in the effort. Because, no matter where a tourist may be during homecoming, we want him to feel welcome and a part of the community.

Its appeal to States is that each State will profit in its turn as this gigantic moving world's fair of New England rotates from State to State in its major activities, each of 52 homecoming weeks apportioned according to season and events. The homecoming committee will work with clubs, organizations, chambers of commerce, church groups, and other existing bodies and agencies, organizing the manifold field activities. Prominent Yankees in show business, the arts, and letters will be invited back to their birthplaces and add to the zest at welcomings and festivals.

WHO WILL BENEFIT AND HOW?

First, the touring American public as a whole will benefit from exposure while at their leisure—on vacation—to the basic concepts of free enterprise and individual freedom that began in the six New England States. It will be a sort of patriotic rebirth.

Secondly, New England as a whole will benefit, not only from the extra tourist dollars that will result, but from the rubbing of elbows with the rest of the world, and by having once again, as in olden times, a guest in the house.

Thirdly, hotels and restaurants will benefit, both from the tourists and industrialists who will return on vacation, and from the conventions of firms whose early beginnings were in New England. Travel and transportation people will benefit here and throughout the United States. The greatest benefit will come to the six New England States which, by working together like the husbandman's sons in Aesop's story, will learn the advantages of joint promotional efforts.

In addition to numerous reconstructions of old Yankee life such as the forthcoming Mayflower Passage, Old Sturbridge Village in Massachusetts, Shelburne Museum in Vermont, Mystic Seaport in Connecticut, we have Yankee villages that are shrines of themselves.

We have scores of "Williamsburghs," except they have been here, not funded by the Rockefellers, just parts of our living Yankee past from which many pioneers set out. Places like Nantucket and Cape Cod, Mass.; Camden, Maine; Old Lyme, Conn.; Portsmouth, N. H.; parts of Bristol, Old Newport, R. I.; Stowe and Peachem in Vermont.

Add local citizens in period costumes and you have an event; add mayors, governors or congressmen, famous citizens who've come home and you have a big event; add parades, pageants, and festivals, and good down-East food, and you have a festival.

We have lobster and seafood festivals; art and music festivals; ham and bean suppers and clam bakes; foliage and sugaring-off festivals; add to these scheduled family reunions, college reunions; seminars, symposiums, conferences, conventions, and grand tours; toss in a few delegations of distinguished guests from foreign countries, States such as California, New York, Florida, where there are myriad "expatriate" Yankees; a few steamshipsful of expatriates from abroad and European relatives of those who came here from Scandinavian nations, France, Germany, Italy, Ireland, and the British Isles, and you have a glamor and excitement that'll be hard to beat.

The industrial homecoming that is part of the plan (inducing New England's barefoot boys of yesterday, who have captained huge plants West and South to come back to their New England and build plants for 100 or 10 employees, and live while they work) will help reduce tax rates by increasing the number of local industries.

We'd appreciate your endorsement of our project, your collective good will, and a continuation of the enthusiastic individual support that we have already received from several members. Thank you for the pleasure and the privilege of speaking to you.

The Members of the New England delegation after Mr. Frost's presentation, unanimously adopted the following resolution:

Resolved, That we New England Members of Congress herewith pledge our active support to Yankee Homecoming and its program to bring many more visitors than usual to New England next year to enjoy our recreational attractions, to view our historical shrines and to learn our industrial progress and opportunities.

Resolved, That we also call on all New Englanders to join in this great enterprise and urge their relatives and friends outside New England to come and visit us next year and enjoy the famous open-door hospitality of our wonderful region.

Statement Introducing Secretary Folsom's Letter to the United States Chamber of Commerce

EXTENSION OF REMARKS
OF

HON. SAMUEL K. McCONNELL, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1957

Mr. McCONNELL. Mr. Speaker, Secretary of Health, Education, and Welfare Marion B. Folsom, on March 8, 1957, addressed a letter to John S. Coleman, president of the Chamber of Commerce of the United States, calling attention to certain statements in the chamber's publication.

In seeking to correct and clarify such statements, which Mr. Folsom believes to be misleading and inaccurate, he is rendering a real service to the American people and to us who represent them in Congress, and who will have to consider school construction legislation.

The letter is particularly significant in view of Mr. Folsom's long and close association with business organizations, including the Chamber of Commerce of the United States itself. A former treasurer of the Eastman Kodak Co., Mr. Folsom was for 6 years a director of the United States Chamber, and has served as president of the local chamber in his own city of Rochester, N. Y. He was a founder and chairman of the committee for economic development—CED, an influential business organization. He has served as Vice Chairman of the Business Advisory Council to the Commerce Department and is a leader in the National Association of Manufacturers, the National Industrial Conference Board, and the American Management Association.

UNITED STATES DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE,
OFFICE OF THE SECRETARY,
Washington, D. C., March 11, 1957.

The Secretary of Health, Education, and Welfare, Marion B. Folsom, today released the following letter to John S. Coleman, president of the Chamber of Commerce of the United States:

MARCH 8, 1957.

Mr. JOHN S. COLEMAN,
President, Chamber of Commerce of the United States, Washington, D. C.

DEAR MR. COLEMAN: Several Members of Congress, newspaper editors, and others have called my attention recently to publications of the United States Chamber of Commerce which discuss Federal assistance for public school construction.

From my experience as a director of the United States Chamber for 6 years, and as a former president of my local chamber, I know that you and your associates seek to uphold high standards of reliability in the basic information you present to the public.

I have, therefore, been surprised and deeply disappointed at certain seriously misleading and inaccurate statements in the chamber's publications. I feel that you would want me to call these inaccuracies to your attention.

I fully respect the chamber's right to oppose—and oppose vigorously—the President's school construction program. The public, however, is entitled to accurate basic information upon which to judge this significant issue.

Before discussing specific examples, I should like to emphasize that the Department's school statistics are compiled from data reported by the State education agencies. These agencies are closest to the situation and, I believe, best able to get the facts. The chamber's presentation reports some of this information incorrectly and ignores a major part of it.

The chamber's Washington report of February 1 undertakes to compare the number of classrooms built with the number of classrooms needed for enrollment increases in the school years 1947–1948 through the current year, 1956–1957. The chamber's conclusion is that 490,000 classrooms were built while only 291,000 were needed for increased enrollment.

This presentation is misleading and erroneous in several respects.

First, the Washington report ignores the new classroom needs resulting from obsolescence, population shifts, school consolidation, or losses due to fire and natural disasters.

All these factors combined represent a considerable additional need for new classrooms each year. By a conservative estimate these needs range from 14,000 to 20,000 classrooms each year. Thus, over the 10-year period, these needs alone amount to about 140,000 to 200,000 classrooms.

Second, the chamber makes a major error in comparing construction during one school year with the increased enrollment at the begininng of that same year.

The schools, of course, need to have classrooms available when the pupils enroll, not later. An accurate presentation would compare construction during one school year with the classrooms needed to meet enrollment increases at the start of the next year.

To illustrate this point, I cite the discussion in the chamber's February issue of News and Cues. This publication states: "In 1947, spiraling enrollments required approximately 9,500 new classrooms. School boards all over the Nation countered by building 16,000."

Actually, the need for 9,500 new rooms for increased enrollment in September 1947 should be compared with the 9,000 rooms built in the school year 1946–47. And the 16,000 rooms built in the school year 1947–48 should be compared with a need of 19,000 rooms for increased enrollment alone in September 1948.

Third, not only is the basis for comparison wrong, but some of the classroom figures cited by the chamber are inaccurate in themselves.

News and Cues states that "in 1955–56, 38,500 were needed—67,000 were built." Actually, the State education agencies report that 62,500 classrooms were built last school year, not 67,000.

News and Cues further states: "Topping this picture, the Office of Education's most recent estimate placed the need for 1956–57 at 41,300 classrooms—69,000 were built." In this statement the chamber is counting rooms that have not yet been built. The figure of 69,000 was an estimate by the State education agencies of the rooms they expected to be built by next fall. Whether this rate of construction will actually be achieved is, of course, not certain.

To summarize these points, the chamber does not present a true picture when it concludes that 490,000 classrooms were built while only 291,000 were needed for enrollment increases; a more accurate and complete presentation, corrected to reflect the factors I have cited, would show that needs for some 444,000 to 504,000 additional classrooms developed during the last 10 years, while only 406,000 were built.

These figures, of course, deal only with a specific 10-year period. A further important factor—omitted from the chamber's figures—is the backlog of shortage which first began to build up during the depression and World War II, when school construction was very limited.

The Washington Report states, "It is becoming increasingly apparent that demands for Federal school construction funds aren't the result of needs." The publication further contends that its presentation "shows clearly that local and State action is meeting needs."

For 3 years in a row, the Office of Education has asked the State school agencies to report on the number of pupils in excess of normal capacity of the schools in use. For 3 years in a row, the figure has been about the same—2¼ million children above capacity. These children, with millions of their classmates, have been forced into half-day sessions, makeshift facilities, or obviously overcrowded rooms. Since there has been no appreciable reduction in this figure over 3 successive years, it is obvious that State and local efforts are falling far short of meeting classroom needs.

To get more complete information on the total classroom shortage, the Office of Education last fall also asked the State education agencies to report on total additional classrooms needed at the start of this school year. The State agencies estimated 80,000 additional rooms were needed simply to accommodate the excess enrollment mentioned in the previous paragraph. Further, the States reported an additional 79,000 classrooms were needed to replace facilities now unfit for use. Thus the State agencies estimated the total backlog of shortage at the start of this school year at 159,000 classrooms.

Little progress is being made in reducing this shortage. The enrollment increase next fall will require 45,000 new rooms, and additional replacement needs will require 14,000 to 20,000, for a total additional need of 59,000 to 65,000 new rooms. Thus, even if the estimated 69,000 new classrooms are completed, the backlog of shortage would be reduced by only 4,000 to 10,000 rooms.

At this rate the classroom shortage, far from being solved, would continue to handicap the education of many children for many years.

Finally, Washington Report states that "Federal-aid advocates obviously are attempting to establish the principle of Federal financing and control from which they can leap into actual control of the schools."

There is no sound or justifiable basis for this statement.

The President has repeatedly stated his deep conviction that Federal support can and must be administered without Federal control of education. The Federal Government has financially supported education in various ways for over 100 years without imposing Federal domination. In recent years, for example, the Federal Government has invested $18 billion to help war veterans continue their education, and $1.2 billion to help build and operate schools in communities overburdened by nearby Federal defense installations. These activities have not resulted in Federal control of the schools. Furthermore, the proposed legislation specifically prohibits any Federal "direction, supervision, or control over the personnel, curriculum, or program of instruction of any school or school system."

In my long and pleasant association with the chamber, I have learned to appreciate the chamber's contributions over the years in calling attention to the value of good schools and in encouraging community support for improvements in education. I firmly believe that the primary responsibility for meeting classroom needs must remain at the State and local levels. The President has said many times, however, that Federal assistance is needed now on an emergency basis to help remove the backlog of shortage. Then States and communities can meet future needs as they develop. The administration's proposals are carefully designed to encourage greater State and local efforts.

In the interest of better public understanding of the classroom problem, I am making this letter public.

Sincerely yours,

M. B. FOLSOM.

STATEMENT BY MARION B. FOLSOM, SECRETARY OF HEALTH, EDUCATION, AND WELFARE, BEFORE THE GENERAL EDUCATION SUBCOMMITTEE OF THE HOUSE COMMITTEE ON EDUCATION AND LABOR, TUESDAY, MARCH 12, 1957

I am glad to meet with the subcommittee again to clarify certain points concerning the President's proposal for Federal assistance for classroom construction.

I have followed your hearings these past few weeks with deep interest, and, at times, with deep concern. I have been concerned because some of the statements to the subcommittee have been seriously misleading and some have been clearly inadequate.

One of the strange developments during the hearings has been the effort to picture the classroom shortage as a mirage or a figment of imagination. I wish it were possible to eliminate the shortage simply by adroit juggling of figures. But unfortunately the handicaps imposed on our children by a shortage of classrooms cannot be removed in this fashion.

We have here an anomalous situation. Those who deny the existence of a serious shortage offer no new or additional information of their own. They have accepted bits and pieces of data from the Office of Education and various other sources. They have used these data out of context, or only in part, to try to prove their theory. And yet they do not accept, in fact they dispute, the one clear conclusion reached by all the surveys from which they quote in part. Every responsible nationwide survey of actual conditions has concluded that there is a substantial, widespread, and continuing classroom shortage.

This was the conclusion from the data reported by State education agencies in response to the most recent questionnaire, last fall, from the Office of Education. This was the conclusion from the school facilities survey, undertaken more than 4 years ago, using quite different methods. This was the conclusion from independent surveys made for the White House Conference on Education and the National Education Association.

I will not repeat here all the data which show the gravity of the classroom shortage, but I would like to review a few principal points.

The Office of Education questionnaire last fall asked the States to estimate the number of children in excess of normal capacity of the schools in use. This was the third successive year in which the States have reported on this item. And for the third year in a row the figure was about the same—about 2¼ million children above capacity.

These children are not imaginary. They are in school today, and they can be counted with reasonable accuracy. It is very important to understand that not only this overflow of 2¼ million students but millions of their classmates are affected by the shortage. For example, in a class with 50 students, only 15 might be counted as excess enrollment. And yet all of the 50 pupils would be affected by serious overcrowding, by half-day sessions, by emergency use of makeshift quarters, or by whatever expedient the school is forced to resort to. And so the education of all these millions of children—not just the 2¼ million—is adversely affected by the lack of adequate facilities.

As you know, the States estimated 80,000 new classrooms were needed last fall just to accommodate this overflow of enrollment. Further, the States estimated 79,000 addi-

tional classrooms were needed to replace facilities which may not be overcrowded but which are simply unfit for use. Thus the State education agencies estimated the total shortage at the start of this school year amounted to about 159,000 classrooms.

I have been surprised that the reliability of data reported by the State education agencies has been challenged during these hearings. The State education agencies are closest to the situation and, I believe, best able to get the facts. If those who question the reliability of the State school agencies have a better source of information, I am sure the subcommittee and the Department would be glad to hear about it.

Since the existence of the classroom shortage has been challenged, the subcommittee may be interested in additional information about last fall's questionnaire. The Office of Education reports evidence that 28 States made a survey of local school systems to obtain the data requested. The other States apparently reported data on hand in the State education agencies.

The questionnaire was sent to the chief school officer in each State. The returns were signed by the chief official or his assistant in 7 States; by the chief of a major division, such as research and statistics, in 32 States; by a special consultant in 4 States; and by a statistician or research official below the rank of chief in 6 States.

In compiling results of the survey, the Office of Education sent 23 letters and made 12 long-distance telephone calls to confirm the accuracy of specific information reported. After all the data had been compiled in one complete testative table, this table was sent to each State department of education for final verification, and several adjustments were made then.

No survey should be expected to measure the shortage down to the last classroom. Estimates inevitably will vary according to the standards and methods employed and the circumstances at the time of the survey. There is no sound reason to doubt, however, that the results of this questionnaire confirm the broad outline of a very serious classroom shortage. And this shortage will not be erased by statistical legerdemain or by pretending it does not exist.

No one could be more anxious than I for the States and communities to solve this problem with their own resources. But they face circumstances they have never faced before—a grave shortage inherited from many past years, plus continuing enrollment increases which far exceed any in our history. It is time to face up to the hard fact that, despite strenuous efforts for many years, the States and communities are not solving this problem. Progress has been made, but a grave shortage still persists. Some communities simply do not have the resources to build the schools they need. Unless they get help, the education of children will continue to suffer.

The President, therefore, has strongly recommended that the Federal Government join with the States in helping financially needy communities eliminate their backlog of shortage. Once this backlog has been removed, the States and communities can and should meet future needs on their own resources. The administration's program, as you know, is carefully designed to encourage increased State and local effort for school construction.

One of the objections raised to this program is that it calls for excessive Federal spending and dangerously increases the size of the Federal budget. The fact is that the President's budget, including the school program, provides for a surplus for the third successive year. Surely the richest Nation on earth can afford to provide adequate schools for its children. In any age, to economize at the expense of the education of children is a false economy. Especially in today's circumstances, such a false economy could be detrimental to our national security and our expanding prosperity. I know of no sounder or more prudent investment, from either an economic or a social view, than the education of children.

The opponents of Federal assistance have renewed the old argument that this program somehow would lead to Federal control and domination of education in this country. There is no sound or justifiable basis for this contention. All that is proposed here is that Federal funds be allotted to the States over the next 4 years, to be administered by the States in helping financially hard-pressed communities provide bricks and mortar for more schools. But the important point is that once the schools have been built, the local authorities would take title to the buildings and the Federal Government would have no contact or connection whatsoever with the operation of the schools.

The opponents say: "Yes; but this program would be the foot in the door or the camel's nose in the tent." The answer is that the Federal Government has been financially supporting education in various ways for almost a century, and there is no Federal domination of education today. The President has repeatedly stated his deep conviction that Federal support can and must be administered without Federal control of education.

Another worn and fallacious contention has been that large amounts of the proposed Federal funds would be required for administrative expenses and somehow a large portion would never get back for the direct benefit of the people in the States and communities. Yet, the plain fact is that the budget provides only two-tenths of 1 percent of the proposed funds for administrative purposes. Even counting the cost of collecting Federal revenues and other overhead expenses, it is clear that 99 percent of the proposed funds would be distributed for actual use by communities to help build needed schools.

In developing its legislative and budget proposals this year, the administration carefully reviewed the school construction program. In his messages to Congress, the President reiterated his deep conviction that this program is urgently needed and that it would be a sound and prudent investment of Federal funds. I can assure the subcommittee that the President, while deeply concerned over the need for economy in government, still feels that the school program should have a high priority. He has recommended, as you know, that the program now be undertaken in 4 years instead of 5.

Our concept has been that Federal grants should be channeled to those communities which have the most acute shortage and the least local resources to build needed schools. We do not propose that the Federal Government should provide all the funds to eliminate the total classroom shortage. We believe Federal aid should be designed to encourage greater State and local effort, and to help bridge the gap where community resources are inadequate. In my opinion, certain proposals before the subcommittee call for a larger Federal amount than is needed. These proposals would double or triple the amount of the Federal grants proposed by the administration. Such large Federal grants are neither necessary nor desirable. Such large Federal expenditures would tend to discourage rather than encourage the maximum effort by States and communities.

The Federal Government has a responsibility, in the national interest, to help erase the classroom shortage. The Federal Government also has a responsibility, however, to spend funds to this end in the most effective and efficient manner. With this purpose in mind, I again urge the subcommittee to consider most carefully the proposed methods for distributing Federal funds among the States.

As you know, the administration's program would distribute the grants on the basis of both school-age population and relative financial income. Other proposals would distribute Federal funds according to population alone. The Office of Education has just completed a new analysis which illustrates strikingly the very important differences between these two methods.

This new analysis shows that the 12 wealthiest States in per capita income have an average of $10,655 in annual income to support each school-age child. These same 12 States have more than half of all the income in the country. They are now building, on their own, about 45 percent of all the schools being built in the country this year. And they have less than one-fourth of the actual classroom shortage this year.

And yet, under a distribution system based on population alone, these States would receive almost 40 percent of the Federal grants.

On the other hand, the 12 lowest States in per capita income have an average of only $4,416 income annually per school-age child. They have only 12 percent of the total national income. They are building only 16 percent of the rooms being built this year. And they have well over 35 percent of the current classroom shortage.

And yet, if grants are distributed according to population alone, these States would get only 22 percent of the Federal aid.

Under the administration's proposal, on the other hand, the 12 wealthiest States would receive 27 percent of the Federal grants. The 12 lowest-income States, where the shortage is most acute, would receive 32 percent of the Federal aid.

It is clearly unwise to concentrate Federal aid in those States which have far more income, which already are building far more schools on their own, and which have a relatively small portion of the existing classroom shortage.

Obviously, under such an approach the effectiveness of Federal aid in actually solving the classroom problem would be very limited. For much of the aid would go where it is needed least—and where it would accomplish the least in attacking the existing shortage. There is a serious question, I believe, whether the benefits of such a program would justify the expenditure of Federal funds in such a manner.

The administration's proposal is a reasonable compromise on this issue. It gives due weight to school-age population but also makes an adjustment to take into account financial need. This principle has been recognized to an even greater extent in such successful programs as the hospital construction program. The administration's proposal recognizes the simple logic of giving relatively more assistance where the needs are greatest. Under such a system, Federal funds would be most effective in accomplishing their purpose—to help relieve the classroom shortage.

I have mentioned these various points, Mr. Chairman, to try to clarify certain aspects of the classroom problem. I am confident that the record before this subcommittee, examined carefully and objectively, gives convincing evidence that the President's classroom construction proposal should be enacted promptly.

Los Angeles Mayor and Chamber of Commerce Arguments Supporting Establishment of Coast Guard Air-Sea Rescue Unit at Los Angeles International Airport at Earliest Possible Moment

EXTENSION OF REMARKS
OF

HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1957

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I call to your attention, and the attention of my colleagues, a letter from the honorable mayor of Los Angeles dated March 12, 1957, to the Secretary of the Treasury, and communication dated February 11, 1957, from the Los Angeles Chamber of Commerce setting forth arguments in support of the recommendation "that the transportation division of the Los Angeles Chamber of Commerce be authorized to request appropriate agencies of the Federal Government to take immediate steps to assure the installation of a United States Coast Guard air-sea rescue unit at the proposed Playa del Ray Marina facilities:

OFFICE OF THE MAYOR,
CITY HALL,
Los Angeles, Calif., March 11, 1957.

Hon. GEORGE M. HUMPHREY,
Secretary of the Treasury,
Washington, D. C.

DEAR MR. SECRETARY: Since the midair collision in January of a military jet plane with a commercial aircraft over this city, with its resultant loss of lives, including schoolchildren playing in the schoolyard where the transport plane crashed, I have been conducting a thorough investigation into all phases of safety in the air, as well as rescue operations resulting from aircraft crashes. This investigation brought out a startling fact, and one which gives me grave concern.

As you know, Los Angeles International Airport is located in close proximity to the Pacific Ocean. Ninety-four percent of the takeoffs at LAX are from east to west. The flight pattern, therefore, takes these planes directly over the ocean while they are still at a comparatively low altitude. Also, when it is necessary to "stack" planes prior to landings, such stacking operations are done over the ocean. To me, it seems not only advisable but imperative that the Coast Guard establish an air-sea rescue unit at LAX or in the immediate vicinity thereof for use in event of a crash in the ocean.

Since 1946 an active committee, made up of representatives of the Department of Airports of the City of Los Angeles, airlines, aircraft manufacturers, Los Angeles Chamber of Commerce, United States Coast Guard, United States Air Force, and the Los Angeles County sheriff's aero detail, has been trying to obtain an adequate air-sea rescue facility in this area. Much correspondence and many memoranda from conferences are on file in our airports department on this subject. In 1951 Admiral Richmond, of the Coast Guard, spent considerable time at the airport going over the problem, and, according to my information, reported favorably to his Washington headquarters on the establishment of an air-sea rescue unit at Los Angeles. Also, in 1951 the Los Angeles Chamber of Commerce adopted a resolution requesting Congress to provide facilities for air-sea rescue in this area. In January 1953 the problem was reviewed by the Board of Airport Commissioners and the chamber of commerce, and efforts were again made, without success, to obtain such a unit. In February 1957 the Los Angeles Chamber of Commerce recommended that its transportation division be authorized to request appropriate agencies of the Federal Government to take immediate steps to assure the installation of a United States Coast Guard Air-Sea Rescue Unit at the proposed Playa del Rey Marina facilities. (I shall touch on the Playa del Rey Marina in a subsequent paragraph.) Because the arguments upon which the chamber's recommendation was based are so compelling, I am attaching a copy hereto.

The responsibility for acquisition and maintenance of air-sea rescue equipment is, without question, vested in the Federal Government under the United States Code, title 14, section 29, re quote, in part:

"For the purpose of saving life and property along the coasts of the United States and at sea contiguous thereto, the Secretary of the Treasury is authorized to establish, equip, and maintain aviation stations, not exceeding 10 in number, at such points on the Atlantic and Pacific Oceans, the Gulf of Mexico, and the Great Lakes as he may deem advisable, and to detail for aviation duty in connection therewith officers and enlisted men of the United States Coast Guard."

Further, under Public Law 207 of the 81st Congress, chapter 393, 1st session, H. R. 4566, an act which may be cited as title 14 sets forth the primary duties of the Coast Guard, and reads, in part:

"The Coast Guard shall enforce or assist in the enforcement of all applicable Federal laws upon the high seas and waters subject to the jurisdiction of the United States; shall administer laws and promulgate and enforce regulations for the promotion of safety of life and property on the high seas and on waters subject to the jurisdiction of the United States * * * shall develop, establish, maintain, and operate * * * rescue facilities for the promotion of safety on and over the high seas and waters subject to the jurisdiction of the United States."

To me, the meaning and intent of the foregoing quoted section and enactment are crystal clear and place the responsibility for such safety measures on the Secretary of the Treasury and, under him, the Coast Guard.

In addition to the reasons indicated above for the establishment of an air-sea rescue unit in the vicinity of Los Angeles International Airport, there will shortly be constructed a yacht harbor at Playa del Rey, which is very close to the airport. When such harbor is constructed, there will be a still greater need for an air-sea rescue unit in the vicinity.

The city of Los Angeles has previously and again offers the facilities at Los Angeles International Airport of space for storage of aircraft and office space, free of charge, if the Coast Guard will establish and activate an air-sea rescue unit there. For the past 11 years we have been working on borrowed time, so to speak; however, the time has now arrived when positive and immediate action must be taken. I, therefore, respectfully request that an air-sea rescue unit be established at or near Los Angeles International Airport at the earliest practicable date.

With assurance of my continued high regard, I am,

Sincerely,

NORRIS POULSON,
Mayor.

COMMITTEE REPORT TO BOARD OF DIRECTORS,
LOS ANGELES CHAMBER OF COMMERCE

Committee: Maritime committee, E. D. Flaherty, chairman; aviation committee, W. W. Shepherd, chairman.

Subject: United States Coast Guard Air-Sea Rescue Unit.

Status: For action.

RECOMMENDATION

That the transportation division of the Los Angeles Chamber of Commerce be authorized to request appropriate agencies of the Federal Government to take immediate steps to assure the installation of a United States Coast Guard Air-Sea Rescue Unit at the proposed Playa del Rey Marina facilities.

BACKGROUND

The proposed marina for small craft at Playa del Rey has progressed beyond the talking stage, as Federal, State, county, and private funds have been allocated for the construction of the marina. Construction is scheduled to begin during the spring of 1957 and will accommodate approximately 6,200 small craft at slips and an additional 2,000 small craft to be launched from trailers. The increased facilities for small craft at Playa del Rey in addition to the expansion of the Redondo Beach marina, now under construction, will greatly increase the number of small craft navigating the open waters of Santa Monica Bay.

The proposed Playa del Rey Marina lies directly under the takeoff pattern from the Los Angeles International Airport and would therefore, be ideally located for immediate use in case a plane had to ditch immediately after takeoff. The Los Angeles International Airport has an enviable safety record, inasmuch as no commercial plane, both scheduled and nonscheduled has ever had to make a forced landing in the ocean after takeoff. However, the mere fact that an accident has never occurred should not blind us to the fact that should such an occurrence ever happen, the lives of the passengers and crew of the aircraft would depend upon adequate help being immediately available. The recent clamor for the Federal Government to force aircraft manufacturers to test aircraft over the ocean adds additional reasons for adequate offshore rescue facilities.

ARGUMENTS FAVORING THE RECOMMENDATION

1. The number of passengers utilizing the Los Angeles International Airport has risen from 1,233,619 in 1947 to approximately 4 million in 1956. An increase of 2½ million during the last 10-year period.

2. The number of commercial air carrier operations at Los Angeles International Airport has increased from 73,203 in 1947 to over 200,000 in 1956.

3. Nearest United States Coast Guard helicopter is located at San Diego, Calif., and the nearest United States Navy helicopter is located at Point Magu. United States Air Force helicopters are based, primarily, at the Air Force bases in the desert areas. These helicopters would be of little or no value in case a commercial air carrier had to ditch in the ocean after takeoff.

4. The nearest United States Coast Guard patrol boat is located in Los Angeles Harbor, approximately 2 hours from the scene of a potential ditching.

5. Modern aircraft cannot stay afloat for more than a half hour, except for extremely unusual cases. Many times it is a matter of only a very few minutes before the aircraft will sink. Unless rescue facilities, both air and sea, are immediately available, the resultant heavy loss of life would be inevitable.

6. The opening of the Playa del Rey Marina in addition to the expansion of facilities at Redondo Beach will mean that the Santa Monica Bay area will experience a tremendous increase in small-craft traffic. The Playa del Ray Marina will account for approximately 8,000 additional small craft and the Redondo Beach Marina expansion will accommodate several hundred more small craft.

7. The United States Coast Guard in the Los Angeles area does not have sufficient equipment at this time to adequately patrol the Santa Monica Bay area with the potential increase in small-craft traffic.

8. The addition of one helicopter and one 95-foot patrol boat would allow the United

States Coast Guard to provide facilities for:

(a) Saving of human lives in case of a possible aircraft disaster after takeoff.

(b) Saving of human lives endangered by small-craft accidents.

(c) Increase the security of the Los Angeles area through increased patroling facilities.

9. The cost of maintaining an air-sea rescue unit at the Playa del Rey Marina would be relatively minor in comparison to the value of human lives which could be saved in case of an aircraft emergency or small-craft accident.

ARGUMENTS OPPOSING THE RECOMMENDATION

There was no opposition to the recommendation from any member of the maritime committee of the aviation committee.

CONCLUSION

The maritime and aviation committees urge the board of directors to approve the above recommendation.

Excise Tax Hardship on Retailers

EXTENSION OF REMARKS
OF
HON. CHARLES E. CHAMBERLAIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. CHAMBERLAIN. Mr. Speaker, under leave to extend my remarks, I include herewith a letter from Mr. Arthur S. Boettcher, of Lansing, Mich., on the subject of Federal excise taxes as they affect his retail business in luggage and related items.

Since Federal excise taxes are now under study, I feel that Mr. Boettcher's letter sets forth clearly and forcefully the views of small independent retail business people. Certainly it should not be the wish of Congress to continue taxes which discriminate unfairly against this important part of our Nation's business structure. I urge that the matter set forth in this letter be carefully studied.

Mr. Boettcher's letter follows:

LIEBERMANN'S,
Lansing, Mich., March 12, 1957.

Hon. CHARLES CHAMBERLAIN,
House Office Building,
Washington, D. C.

DEAR MR. CHAMBERLAIN: In a release to the press on August 6, 1953, President Eisenhower stated, and I quote: "As I said in my message of May 20, the wide variety of existing excise rates makes little economic sense and leads to improper discrimination between industries and among consumers."

I am sure our President thinks the same way today. I am certain the Congress felt this way when the wartime tax was reduced from 20 percent to 10 percent.

We have struggled with this tax since 1942 when it was created as a wartime conservation measure, not as a revenue-raising measure. It has outlived its purpose, it exists only as a burden on the manufacturer who makes the product, the businessman who sells it, and the consumer who needs it.

Along with the excise tax handicap, higher freight rates, increased postage and parcel post rates, higher taxes, and higher wages, this industry is again "feeling the pinch." You can readily see that we have a real struggle to remain in business due to these increased costs, coupled with stiff competition from the big retail chains and the so-called wholesale houses which do not collect or pay excise taxes.

We hear of Federal aid to the small-business man in his attempt to remain solvent; and we ask only for an opportunity to compete for the consumer dollar on an equal basis with other retailers. We ask for this equality of enterprise, which is one of the fundamental features of our democracy, "equal justice under law." I am sure this applies also to taxation. Give us an opportunity to survive and prevent us from joining the ranks of retail business failures, which reached an all postwar peak last month.

We feel the Government will benefit by providing a healthier and more normal business climate in which small businesses like ours can prosper and grow. If the tax were removed, we feel the revenue would more than be equaled by taxes gained from increased business activity and additional employment.

We hope that we can count on you, as our Congressman, to do everything within your power to eliminate the inequities of the wartime excise tax, either through equal taxation, or through abolition.

Very truly yours,

ARTHUR S. BOETTCHER.

A Dependent Who Rebels

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. HOFFMAN. Mr. Speaker, while many of us receive well-reasoned and valid complaints because the Government has put citizens on a share-the-wealth program, with the benefits all going to Uncle Sam, we have as yet officially taken no effective action to lessen Uncle Sam's take.

The Saturday Evening Post of this week carries an editorial which reads as follows:

UNCLE SAM TENDS TO FORGET THAT HE IS OUR LEADING DEPENDENT

Recently, a young man toiling wearily over his income-tax form 1040, threw down his pencil in disgust and posed a rhetorical question: Why can't we enter Uncle Sam as a dependent?

He made a very interesting point. After all, the Federal Government is the dependent of every taxpaying American citizen. It could not buy a single plane, tank, or bazooka, print a Supreme Court opinion, hand a billion to a foreign potentate or provide a single school lunch without the as-a-rule unquestioning compliance of its citizens with the income-tax laws.

Too often, Uncle Sam does not act like a dependent, or at any rate a very grateful one. He acts as if he were entitled to all the income of his benefactors and demands that they drive themselves into dementia praecox in desperate efforts to translate the mysterious language of the instruction sheet into answerable shape. He grabs a hunk of the humble worker's pay even before the poor fellow has had an opportunity to count it or hand it over to his wife. And if a citizen has enough left over to employ a cleaning woman a couple of times a week, he is compelled to pay a tax for the privilege of paying her.

Furthermore if a taxpayer gets behind in his payments, he does not receive the kind of notice he sometimes gets from a department store, something like, "We are sure you have overlooked that little matter of $21.98 from your account of last July." Quite the contrary, the Internal Revenue is likely to put the bite on his salary or harass him with personal and embarrassing questions as to his income, household expenses and manner of life.

Good old Uncle Sam. He costs us more than our own children. He gets into trouble; we bail him out. He lives beyond his means and we make up the difference. He is a costly dependent, but we have to put up with him so that government of, by and for the people may not perish from the earth. But it would make for more contented taxpayers if Uncle Sam would acknowledge his dependency on us, maybe somewhere in the fine print of form 1040.

Alabama Education Association Takes Strong Stand for Federal Aid for School Construction

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. ELLIOTT. Mr. Speaker, under permission to extend my remarks I include in the RECORD an article from the February 12, 1957, issue of the Birmingham News:

AEA OUTLINES STAND ON FEDERAL SCHOOL AID

The Alabama Education Association took a strong stand in behalf of an unrestricted Federal aid school program at its annual business session in Montgomery last week. Among several policy recommendations adopted by delegates to the meeting was a statement urging members of both parties in Congress to join in a spirit of cooperative leadership to assure early enactment of emergency school construction legislation.

The organization's statement outlined a series of basic principles which, it was felt, should be among the salient features of such legislation. Federal grants for public school construction, it said, should be made to the States on an objective basis and funds should be administered by the United States Office of Education, channeled through State education agencies and distributed as provided by State law. Traditional local and State control over education, it urged, should be assured. Inclusion within the program of provision to enforce compliance with the decision of the United States Supreme Court on the issue of segregation in the public schools, it was held, would contradict the principles of Federal aid without Federal control.

The statement proposed that the bill provide for apportionment of funds to all States by using a formula that combines flat grants based on school-age population with equalizing grants based on State financial ability. It proposed that provision be made for Federal purchase of school bonds in districts where such bonds are not readily marketable at reasonable rates of interest. It suggested the inclusion of Federal funds to help the States administer the program effectively and to provide State studies as a basis of future solutions to problems of school needs.

The AEA's statement is similar to one adopted a few months ago by the third annual national conference of State Education Association chairmen for Federal relations and the National Education Association's legislative commission. It is essen-

tially in line with the basic principles which President Eisenhower recommended in his recent school construction program message to Congress.

It is earnestly to be hope that Congress will keep such principles clearly in view as it considers and shapes Federal school construction legislation.

Needed: Active American Leadership Abroad

EXTENSION OF REMARKS
OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1957

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by Mr. Dewey Anderson entitled "Needed: Active American Leadership Abroad."

In these days when the crisis abroad is foremost in the minds of our citizens, this article by Mr. Dewey Anderson is, I think, most informative and provocative and I am very happy to include it for the information of my colleagues:

NEEDED: ACTIVE AMERICAN LEADERSHIP ABROAD

(By Dewey Anderson)

Congressional mailbags for the past 6 months have bulged with one anxiety above all others: the fear of another war and the importance of American leadership. Most of these letters concern the Middle East, because that is where the headlines have centered, but the comments of citizens apply equally to tensions elsewhere. The mail comes to both political parties and from all sections of the country.

Our highest national officials have paid tribute to this yearning for peace in their recent speeches, calling for greater American leadership, but so far no particular plan has come into focus.

The public is apparently in a mood to react favorably to a concrete program for American leadership toward peace. And the Congress would certainly be helped if it knew where the public stands on such a program of leadership.

WHAT HAS BEEN WRONG WITH AMERICAN LEADERSHIP?

Since the beginning of the Korean war 6 years ago, the United States has gambled almost exclusively on the military containment of communism. Our diplomacy has been built around the creation of more and more alliances, and more and more overseas bases. About 90 percent of our international aid has gone for armaments and other army support. This deterrent strength, of course, is necessary. But a one-sided policy resting almost exclusively on military might is out of date because the primary danger has shifted from a frontal Communist military attack to Communist subversion and economic penetration in Asia and Africa.

The greatest missing component in the cold war is an effective program for political, economic, and social stability. This means realistic proposals to stimulate more private trade, more private investment, more loans, some grants, greatly enlarged training programs, better diplomatic approaches, greater personnel exchanges. This year the Russians are training 260,000 foreigners within their borders; the United States is training 40,000.

Imaginative action is most needed in Asia and Africa, because that is where American boys are most likely to fight Korea-type wars, and it is there that preventive action—so appealing to American families—could take hold.

BACKGROUND COMPLICATIONS

Eighteen new nations came into being in Asia and Africa during and after World War II. Two more independent nations are emerging this year (Ghana, Malaya). More will follow. These nations represent the balance of power in the East-West struggle. They control one-third of the votes in the United Nations.

Peoples in Asia and Africa are very sensitive about their former colonial status, fearful of any relations with the United States which might lead to domination. At the same time they are determined to raise their standard of income, now averaging considerably under $100 per capita per year. Their pent-up nationalist fervor can be turned against the United States and the West, as Moscow is trying to direct it, or it can be harnessed for internal economic growth. The chances for stability and peace—affecting one-third of the world's population—thus rests very literally on whether western cooperation can help guide economic and social growth.

AMERICAN INTERESTS AT STAKE

For Americans who measure our interest abroad only in terms of tangible profit and loss, there are very real stakes in this question of leadership:

1. To see that the present free countries of Asia and Africa stay outside the Iron Curtain, as a buttress to our own freedom.

2. To assure access to strategic raw materials, which we obtain in very large quantities from Asia-Africa, and which our defense establishment holds to be vital.

3. To increase our trade, which already rose on a 5-to-1 ratio during the modest development since 1938.

4. To hold down our defense costs, which assuredly would skyrocket if the Communists establish a base anywhere on the north African or south Asian coastline; and ultimately, to reduce our defense costs, which can yield only to increased stability in the world.

For many Americans there are idealistic reasons as well for leadership, and these are part of our national interest. Newly independent countries in Asia and Africa are following the pattern of our revolution and early freedom, and the desire to be helpful—not by charity but by practical educational and investment assistance—is widespread in America. The widening gap in personal income between Americans and Europeans on the one hand—and Asians and Africans on the other—also troubles many Americans, who would support any reasonable remedy that could show practical results. And finally, the pervading religious faith of America includes a belief that man's intelligence must be able to find a pattern for peace, and that the United States—one of the doingest nations in history—should be able to offer initiative.

PROPOSED PROGRAM FOR 1957

Here are six proposals for action, all politically feasible in 1957, all reasonable in the light of our national economy, all able to show some tangible results within a short period of time. And these small steps have the merit of testing as we go, proving what it would be realistic to do or not to do in the future.

1. Congress could vote President Eisenhower permissive authority to switch about $50 million in mutual-security funds to a special account for helping other countries to plan what developments they would undertake if greater investment and loans were available. Both economic and engineering plans are needed. The work should be done only by agreement with other governments, and at their request.

2. Contributions to the U. N. technical assistance program in 1957, both by the United States and other countries, should be doubled, in order to speed up this same kind of development planning in Asia and Africa. The U. N. is needed in this work for the practical reason that its services are more acceptable to most Asian and African countries. (Present United States contribution is $16 million, equaling 10 cents or 1 cup of coffee per capita per year.)

3. The American program for economic development in Asia and Africa should be separated from military assistance programs, and debated on its own merits before the public and the Congress. The amount of money proposed for this program, which has been running at about $400 million a year within the mutual security budget, should be doubled in 1957.

Plans for such expansion have already been laid before the Senate Foreign Relations Committee by nationally known advisers, employed by the Senate. These new funds can be directed toward: More training of needed technicians and managers abroad; and expansion of roads, power facilities, reclamation, and other measures normally required before private capital will flow in.

4. The training of foreign nationals in the United States should be stepped up markedly, as far as possible by private sponsors, but also through greater Government exchange programs.

5. Farm surplus disposal should be used to a greater degree in barter for economic development abroad, and for the expenses of training. Estimates submitted to the Congress indicate at least a quarter billion dollars in foreign economic development could be financed each year with farm surpluses, without increase in our foreign aid appropriations.

6. Renewed efforts to stimulate the growth of world trade should include American membership in the Organization for Trade Cooperation, up for decision in Congress this year.

ARGUMENTS AGAINST THESE PROPOSALS

Major arguments have been advanced against an active American economic leadership abroad. Here are several such arguments, and the answers to them.

1. More appropriations for international programs will mean more inflation.

Answer: A comprehensive study of the foreign aid program at the close of 1956 by the National Planning Association, at the request of the Senate, concluded that the inflationary impact of the present foreign aid program is negligible. In fact the study predicted that if the national economy continues to grow at its present rate for the next 10 years, foreign aid could be doubled without inflationary effect. The changes in program proposed above would represent one-tenth of 1 percent of the gross national product. This cost must be weighed against the possible, in fact probable, rising military costs if present instability is not met.

2. Economic growth abroad increases competition for American products, especially for raw cotton and textile goods.

Answer: History proves the contrary. The United States sells more products to developed countries like Canada and Great Britain than it does to countries like Mexico and India. Even major agricultural producers like Burma and Indonesia have been buying great quantities of American farm surpluses, including cotton, as their economies begin to grow.

3. We should not use the United Nations because we cannot control its activities for cold war purposes.

Answer: American leadership in Asia and Africa, if it is to attract the people of those countries, must be kept outside the cold war,

hence the U. N. is not a liability but an asset for this immediate purpose.

CONCLUSION

The American people admire a policy of imaginative leadership abroad.

History shows it was more effective to spend $100 million on economic aid to save the whole of Iran, than $10,000 million on a war to save half of Korea.

If we are to move from the fire brigade conception of fighting crises after they arise, and project actions ahead to prevent the recurring crises, here is a program for stimulating stability through economic and social measures, which the American people can respect.

MARCH 5, 1957.

Money Alone Can't Cure Farm Ills

EXTENSION OF REMARKS
OF
HON. JOHN C. WATTS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. WATTS. Mr. Speaker, in the Monday, March 11, 1957, issue of the Lexington Herald, there appeared an editorial entitled "Money Alone Can't Cure Farm Ills." Mr. Herndon J. Evans, editor of the Lexington Herald, has had a long acquaintance with the problems of the farmer. His editorial points up the apparent lack of imaginative thinking and leadership on the part of the Department of Agriculture in providing solutions to the problem of farm surpulses. At the same time, Mr. Evans recognizes that the ever-increasing efficiency of the American farm as a production unit is a part of the great progress being made by this Nation in improving the well-being of our people. Mr. Evans seems to say that any solution to this problem of surpluses must not discourage this commendable drive for greater productivity.

Under leave to extend my remarks, I wish to incorporate herein the splendid editorial of Mr. Evans:

MONEY ALONE CAN'T CURE FARM ILLS

If spending alone offered a solution, the Eisenhower administration, which has surpassed in this respect, long ago would have solved the farm problem, and there would be little need for a large part of the funds that the President has requested in the record high budget proposed for the Department of Agriculture.

Proposed expenditures in the new budget total about $5 billion. This is something like $300 million more than is being spent this year. More than $3 million of the proposed budget, or better than 60 percent of the total, will go for programs to meet the problem of overproduction. The soil bank will cost $1.25 billion; the price-support program, $1.24 billion, and sales of farm products abroad will result in a loss of $640 million.

The ability of American farmers to overproduce accounts for the great expenditures to dispose of surpluses and to support prices in face of the surpluses. However, in the President's proposed budget there are substantial increases of funds for programs to increase production. Funds for the Federal Agricultural Research Service would be 63 percent more than in 1953. Grants asked for State experiment stations would be 176 percent larger than in 1953. These funds will go for research and other programs designed to increase farm efficiency and production. Significantly lacking in the Eisenhower farm budget is any provision for meeting the need for adjustment that agriculture must make in the face of increased efficiency.

As farm efficiency increases there is need for fewer farmers. Unless people move off the farms in proportion to the rate of improved efficiency, production increases to more than enough to supply the Nation's demands for farm products. Consequently, farmers suffer from being unable to work at full capacity, and prices and farm incomes drop. Some will be forced to migrate to cities, but most farmers cannot see fit to do this. Anyway, it is a cruel and undesirable way of effecting adjustment.

The adjustment of agriculture to its ever-increasing efficiency is the crux of the American farm problem today. It cannot very well be solved by cutting down on research intended to increase production efficiency, for the Nation cannot afford to stop progress in this respect. However, it is not logical to spend more money for research to increase production unless attention is given also to the resultant needs for better methods of marketing, for finding new uses for farm products, and for adjustment of the farm population as demanded by rising efficiency.

The Eisenhower farm budget would be more promising if it called for more and new ideas to meet the complex farm problem. Just spending more money as it proposes may serve only to make the problem worse.

New Ideas for Solution of Middle East Problems

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mrs. KNUTSON. Mr. Speaker, a former constituent of mine has written me in regard to the tense situation in the Middle East. He has conceived an idea which, though certainly different, seems to me food for thought. I am very interested in any proposals which look toward solutions of international problems, not only because of our position of world leadership, but also because we must consider every possibility that might contribute to the easing of international tensions. We must necessarily expect changes in the next 50 to 100 years, as revolutionary as the changes which occurred from the 17th to the 19th centuries.

I have a bill designed to set up an international food and fiber reserve. This could be of help in the interests of greater stability in the world. Somewhat along the same line of thinking are the ideas of Mr. Hans R. Miller, excerpts from whose recent letter to me I insert in the RECORD under unanimous consent:

What would be wrong with the United Nations issuing a world credit dollar for value in place of for interest? The U. N. could in that way buy the area * * * under dispute by Egypt and Israel. The U. N. could issue a credit certificate against which rehabilitation projects could be undertaken and checks drawn to pay contractors and the refugees they might hire to build homes and farmsteads to rehabilitate a million or any other number of refugees. The U. N. could issue a credit certificate to pay for construction of the Aswan Dam or Egypt could take the credit it would receive for sale of the Gaza Peninsula and with it, build the dam. This money or credit would come back to the U. N. as the refugees and others pay for use of water, power, light rental-tax on the land they occupy, and depreciation on the homes they would receive. It would have several advantages:

First, Egypt would then have the much needed dam; the refugees would have the much needed farmsteads and occupation and Western Europe could have nonexplosive pipelines. * * * Schools could be built the same way and without bonds or interest and it could all be done without costing the taxpayers of this country a single penny.

Second, it would disprove the Russian propaganda that we are aiming to expand financial imperialism.

Third, it would begin to give the world a proper medium of exchange, issued for value that could be controlled so as to stabilize the overall price level.

Fourth, it would prove that there is no more need of having a hundred different countries issue as many different kinds of money. This modern world has now by modern invention become so small that such an old-fashioned money system is as ridiculous as if each village and township had insisted on its separate form of money after the days of George Washington.

General Government Matters Appropriation Bill, 1958

SPEECH
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 13, 1957

The House, in Committee of the Whole House on the State of the Union, had under consideration the bill (H. R. 5788) making appropriations for the Executive Office of the President and sundry general Government agencies for the fiscal year ending June 30, 1958, and for other purposes.

Mr. EDMONDSON. Mr. Chairman, I have supported and voted for this bill, and am glad to see a substantial reduction in any governmental expense, where a vital governmental operation is not injured thereby. The cut contained in this bill, of 24 percent below the Budget Bureau recommendations, is one of the most substantial reductions to be reported to the House by the Committee on Appropriations.

I sincerely hope it will not injure the efficiency of the Executive Office of the President and is not viewed as any kind of partisan action.

The absence of any argument against this cut by administration spokesmen in this body would seem to indicate that the cuts are not so regarded by the President, and will not result in damage to efficiency.

I will welcome the opportunity to vote for any reductions in the budget where similar conditions prevail.

I am not prepared to vote for any budget cuts that will result in reduced power or effectiveness for America's mili-

tary forces at this time, nor will I support budget cuts that slow down or halt the vital work now underway to control and conserve our Nation's most vital natural resource—our water supply. Economy that is not selective is a false economy we cannot afford.

David Marcus—Hero of Israel

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. SANTANGELO. Mr. Speaker, on February 27, 1957, I had the privilege of installing the officers of the Gibborim Society of the Department of Correction of the city of New York. On this occasion, which was celebrated by a dinner dance, a plaque in memory of the freedom fighter David Marcus, former commissioner of the department of correction, who died in Israel in the cause of freedom, was presented to the present commissioner of correction, the Honorable Anna Kross.

On this occasion, the following remarks were made which I believe made interesting reading:

TALK BY COL. CHARLES G. STEVENSON TO 20TH ANNIVERSARY INSTALLATION DINNER OF THE GIBBORIM SOCIETY OF THE DEPARTMENT OF CORRECTION, NEW YORK CITY, PARK TERRACE, BRONX, N. Y., FEBRUARY 27, 1957

Mr. Grasheim, Commissioner Kross, Mrs. Marcus, honored guests, members of the Gibborim Society of the Department of Correction, ladies and gentlemen, thank you Mr. Silberglitt for your warm introduction of me. I could think of no finer way to express my feelings toward Mickey and Emma Marcus than the simple, sincere, and heart-warming words which you used just now.

I also want to thank Al Chaison and Mr. Grasheim for inviting me to be here tonight to pay tribute to my best friend, Mickey Marcus. My friendship with Mickey goes back to Boys' High School days in Brooklyn 39 years ago, when we first met as members of the Boys' High baseball team.

It is a special pleasure to be here with Emma Marcus. I will not say how far back my friendship with her goes, but it goes back to West Point days when Mick and I were roommates at the United States Military Academy for 4 years. While Emma and I were dancing here earlier this evening, I remarked that it was like the old days when Mickey used to drag her at West Point, as the cadet slang goes, and we used to dance together at the hops in Cullum Hall. Mickey's friendship lives on with me and my family—as a vital force—along with Emma's friendship.

I think your society is to be congratulated on making the gift of a plaque in honor of Mickey's service as deputy commissioner and commissioner of correction and as one of the founders of your society. It is a most fitting tribute. His service in your department certainly was the high point of his career prior to World War II.

My wife and I will never forget the thrill we got while walking in Times Square during the last week of December 1933, and we saw the moving electric light news sign around the Times Building spell out the words: "David Marcus appointed deputy commissioner of correction." I recall we went straight to a Western Union office to send him and Emma a telegram of congratulations. One of the happiest days of my life was to go down to the Municipal Building on New Year's Day to congratulate Mick in person after he was sworn in.

Mickey has gone down in history as a great humanitarian. This is the word enscribed on his gravestone in the cemetery at West Point. His great humanitarian qualities were nurtured here in the department of correction.

There are many stories that could be told of his good deeds and of memories of good times we shared together. But the hour is late and I will end by saying: Thank you for the opportunity to be here to recall these happy moments; and I congratulate you again on this fine honor to the memory of Mickey Marcus.

SPEECH BY THE HONORABLE GIDEON SAGUY, CONSUL GENERAL FOR THE STATE OF ISREAL, AT THE INSTALLATION DINNER, DANCE, AND MEMORIAL TO THE LATE COLONEL MARCUS GIVEN BY THE GIBBORIM SOCIETY OF THE DEPARTMENT OF CORRECTION, CITY OF NEW YORK, FEBRUARY 27, 1957

Madam Commissioner, President Grasheim of the Gibborim Society, Colonel Stevenson, last but not least Mrs. Marcus, distinguished guests, ladies and gentlemen, you have probably heard it said by speakers before that it is a privilege to be with you; tonight this not only true but also an honor because I have come here very humbly to pay tribute to one of my commanders in the defense of the Army of Israel—I merit to say the people, the Jewish people of the world. The State of Israel has become a reality after so many centuries of what we sought in the beginning of 1948 out of the highways of the Middle East, the fury of flames and the underground. The many Irish know what it means to fight in the underground. Our great Colonel Marcus was a man of vision who came to us and said that the days of the underground will soon be over and you will have to prepare for bigger things to come and so in May 1948 Israel was attacked by five Arab States—and so a people driven by the spirit and tradition that was instilled in them by so many centuries were ready to fight, pressed with our backs to the sea but we are not going to be driven into the sea, and it was people like Colonel Marcus who made us fight to win a war against overwhelming odds. Perhaps among the Irish here there are fighters who know what it means to fight with the underground. It is therefore an honorable tribute that your society has as its name Gibborim (heroes) because to us, to the people of Israel and to all people wherever people are who believe in systems of rights and dignity, Colonel Marcus is a beacon, a beacon of light and hope and of such sustenance as he gave us as saw us through those dangerous days. Unfortunately the days of our fight in 1948 were concluded with an armistice but not with a peace and for the past 8 years the people of Israel have been terrorized by land and sea and by air because here was a new democracy, the only democracy in the Middle East that knew what it meant to exist under such circumstances. They built and they tilled the soil against those attacks, understanding as they were that these attacks were not against the people of Israel but attacks against the irrigation system which we set up all over the country. We have proven to the world, ladies and gentlemen, and even as told in the Bible—the land came to bloom and yet there were terrorists who came by night, pipelines were blown up, until October 29 of last year when the army of Israel took countermeasures for the security of its population against the Arab leaders who had made so many promises in their proclamations. In the spirit of Colonel Marcus we were successful because the spirit was still there, the same spirit which Colonel Marcus instilled in us early in 1948 and I am sure that were Colonel Marcus alive today he would have been proud of us as we fought against all odds for what you call Western democracy—because we fought for these three d's—defense, democracy, and development—a country of nearly 8,000 square miles and a population of less than two million. We have once again shown that we can do what is needed of us in such times of crisis because we do not want this to come down on our heads and annihilate us. As so today we stand at the crossroads. The U. N. is debating and studying and I can only conclude in the hope that I am sure was burning the Colonel Marcus' heart and that is that peace will rule over Israel, peace for the sake of Israel, peace for the sake of the Middle East and the whole world. God will give strength to his people and God will bless his people with peace. Thank you.

Diamond Anniversary of the Knights of Columbus

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 13, 1957

Mrs. GRIFFITHS. Mr. Speaker, the Legislature of the State of Michigan has transmitted to me Senate Concurrent Resolution 22 requesting Congress to issue a special commemorative stamp in honor of the diamond anniversary of the Knights of Columbus. I request that this resolution be printed in its entirety. It is certainly true that such a worthy organization deserves such recognition.

Senate Concurrent Resolution 22

(Offered by Senators Nichols, Beadle, Greene, Smeekens, and Roy)

A concurrent resolution requesting Congress to issue a special commemorative stamp in honor of the diamond anniversary of the Knights of Columbus

Whereas the Knights of Columbus are this year celebrating their diamond jubilee, having completed 75 years of service to God and man; and

Whereas it is fitting that on this occasion proper acknowledgment of the good works of the Knights of Columbus be made; and

Whereas in similar instances in the past, the Congress has authorized the issuance of special commemorative stamps: Now, therefore, be it

Resolved by the senate (the house of representatives concurring), That the Legislature of the State of Michigan hereby requests the Congress of the United States to authorize the issuance of a special commemorative stamp in honor of the diamond jubilee of the Knights of Columbus; and be it further

Resolved, That copies of this resolution with a record rollcall attached be sent to the Michigan delegation in the Congress of the United States.

Adopted by the senate, February 15, 1957.

Adopted by the house, February 25, 1957: Yeas—Representatives Anderson, Baird, Bassett, Blanchard, Bolt, Borgman, Bowerman, Bowman, Boyd, Boyer, Bradley, Brigham, Brown, Chapman, Cobb, Conlin, Cramton, Currie, deBoom, DeMaso, Diggs, Dingham, Dunn, Dzendzel, Eaton, Edwards, Emmons, Engstrom, Erlandsen, J. J. Fitzpatrick, Fletcher, Folks, Gilbert, Gillespie, Green, Hubbell, Hudson, Hughes, Hungerford, Huns-

berger, Mrs. Hunsinger, Jackson, Jacobetti, Jeffries, Kilborn, Lesinski, Litowich, Lohman, F. A. Mahoney, R. D. Mahoney, Marshall, Massoglia, Mrs. McCollough, McMahon, McNeeley, Meggison, Mezzano, Mielock, Morris, Morrison, Murphy, Newton, Nill, Novak, E. D. O'Brien, F. J. O'Brien, M. J. O'Brien Olsen, Parker, Pears, Peltz, Penczak, Phillips, Raap, Rasmussen, Roberts, Romano, C. H. Root, E. V. Root, Jr., Sallade, Sanborn, Sobieski, Stanislaw, Strange, Sumeracki, Waldron, Wales, Whinery, Wurzel, Yates, Young, Speaker Van Peursem; Nays—Arnett.

FRED I. CHASE,
Secretary of the Senate.
NORMAN E. PHILLES,
Clerk of the House of Representatives.

Man Who Lost Both Legs in War Makes Best of It

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. McGOVERN. Mr. Speaker, very few of us learn the secret of fully utilizing our physical, mental, and spiritual capacities. It is no easy task even for a completely normal human being to live in this complex world and maintain those qualities that we call the dignity of man. That is why we are doubly thrilled when a seriously handicapped person is able to rise above his handicaps to achieve the kind of abundant life that should be the highest goal of each one of us. I am greatly inspired by just such an achievement by Mr. Marvin Larson, of Aberdeen, S. Dak., a young man who has been named "young man of the year" by the Aberdeen Jaycees.

The heartwarming story of Marvin's triumph over the loss of both of his legs as a soldier in World War II is well told by Mr. Larry Desautels, veteran sports editor of the Aberdeen American-News.

The story is included as follows:

MAN WHO LOST BOTH LEGS IN WAR MAKES BEST OF IT

(By Larry Desautels)

"When you have a handicap, you can't waste time feeling sorry for yourself; you just have to make the best of it."

That simple philosophy has made Marvin Larson one of Aberdeen's outstanding young men, a leader in civic affairs, a noted outdoor enthusiast, and a successful businessman. He is a winner of the Aberdeen Jaycees "young man of the year" award, has held high offices in numerous organizations, and was even the subject of a minister's sermon.

And all this has been accomplished by a man who walks on a pair of artificial limbs, a man who decided to "make the best of it" and has become an inspiration to handicapped persons everywhere.

"Would you mind if your story was put in print?" he was asked.

"No; not if it would help someone else overcome a handicap and lead a normal life," he said. "Thanks to a great many people, I have accomplished that and I wish that every handicapped person could be as fortunate as I have been. Maybe my story will help someone else."

BASKETBALL STAR

The story starts in Glenham, S. Dak., where Larson was born and where he went to high school and became a basketball star on Glenham's most noted athletic team. In 1931 the little community had a basketball team that lost a heartbreaker to Wakpala by 1 point in the regional finals. The following year the Glenham quint defeated McLaughlin, 32–12, to win the regional title and a trip to the State tournament at the Corn Palace in Mitchell.

That was the year Mitchell had one of its greatest teams and Glenham drew the Kernels in the first round, losing the game, "but we were ahead of them once, and I think that's the only time Mitchell trailed in a game that season," Larson recalls. Marv was a regular forward those 2 years at Glenham and folks out there still tell about that great team that won a place in the State tournament.

Following his graduation, Larson moved to Aberdeen and went to work in the typewriter repair department of an Aberdeen firm. In 1939 he was married to the former Enid Johnson of Selby, and in September 1943 he was called to serve his country in World War II.

SENT OVERSEAS

He took his basic training in the Infantry at Camp Gruber, Okla., and went to England in April 1944. After going overseas, he was transferred to the Quartermaster Corps as an office machines service manager with the rank of sergeant. In September 1944, he was sent to the frontlines in Europe with a mobile repair unit.

A few days later came the tragic event that changed his entire life. Larson's unit was stationed between the frontlines and the artillery and subject to a constant strafing by enemy planes. One day he saw enemy planes approaching and ran into his shelter to get his helmet. Just as he came back out the door an antipersonnel bomb exploded approximately where he had been standing.

"I would have been killed if I had stayed where I was," he recalls.

Fragments of the bomb sheared off both his legs between the ankle and the knee.

He was taken to a field hospital at nearby Eupen, Belgium, for emergency treatment, removed to Liege, Belgium, then to a general hospital in Paris. On Thanksgiving Day he was taken to Southampton, England, and on Christmas he was put aboard a plane and flown to General Bushnell Hospital at Brigham City, Utah, arriving on New Year's Day.

OPERATION PERFORMED

There followed months of treatment and finally the operation that was to adapt his shattered legs to artificial limbs.

"The operation was performed by a Major Woughter, one of the most famous amputee surgeons in the country," Lars relates. "Everyone at the hospital was wonderful, and they did a great job of morale building. I couldn't thank too much the doctors, nurses, hospital personnel, and the chaplain who all helped me decide that a man with a handicap can go on living something like a normal life.

"It was in March or April 1945, that I was fitted with artificial limbs and at first it was discouraging. They seemed to weigh about 500 pounds apiece, but my strength gradually returned and with a lot of help I finally was able to walk with a cane. I came home on furlough about May 1 and received my discharge on July 5."

As a youngster at Glenham, Marv had loved to fish and hunt and when he expressed an interest in those activities again his friends were quick to see that he had an opportunity to do both. Lars is an excellent shot—he has three top marksmanship awards from the Army—and sitting at the end of cornfields in pheasant drives, or in goose and duck blinds, he was soon knocking down game just as he did before.

"You have to realize you have a handicap and make the best of it," Lars says. "There are some things you can't do and you have to find some way to replace them with something you can do."

REMARKABLE MAN

Well, hunting and fishing fell into the "things you can do" category. Maybe other people with Larson's handicap couldn't exactly take up outdoor sports—but he is a mighty remarkable individual. He builds his own boats and can launch them from the trailer into a lake by himself. He can walk weed patches for pheasants, "and you ought to see him run through a ditch to flush a pheasant," one of his hunting companions remarked.

One of his first projects after he came home was to build a boat. It was a mighty good one, but when his two children became old enough to go along, he decided the sides weren't high enough, so he built another.

Clarence (Dutch) Bies, one of Larson's many friends, tells a story typical of the determination that enabled Marv to "make the best of it."

"I took him ice fishing that first winter he was home," Dutch recalls, "and we had to cross qiute a large drift of snow to get from the car to the fishing spot.

"'I'll carry you through that snow,' I told him.

SOME HUMOR, TOO

"You won't carry me," he said. "I'll walk through that snow or I won't go fishing." He went fishing.

There have been some numerous incidents, too. There was the time Lars was in a hunting party along the Sand Lake refuge fence one especially frosty morning. Heavy clothing, boots and overshoes were the proper attire and one hunter kept looking at Larson's feet, clad only in a pair of dress oxfords.

"My gosh, you'll freeze your feet," the man finally exclaimed.

Then he remembered; and it wasn't the cold that made his face red. In case that fellow has been bothered about it, he can relax. Lars got quite a chuckle out of the incident.

Dell Dawson tells about the time they went deer hunting on the Sand Lake refuge. Lars tried walking through the cover, over his head in some spots, but it was too tough, so he found a spot ahead of the hunters and waited. In no time at all a deer came by and he downed it.

We never thought of him having a deer down, so when he shouted and waved at us for help, we just waved back and went on hunting. Finally, we got back to the car and there was Lars. He had his deer in the trunk, having cleaned it and dragged it several hundred yards through heavy cover. Two other members of the party dragged one deer between them and both were all in. They sure took a ribbing.

Of course, life hasn't been all hunting and fishing for Marv Larson. He and Chris Freh started their own office equipment business a few years ago and recently moved to bigger and better quarters.

HONORED IN 1950

Lars was named as the Jaycees' "outstanding young man of the year" in 1950, served as secretary of the Jaycees, was president of the Lions Club and is now a director of that organization, was president of the Jaycee Toastmasters Club, served two terms as secretary of the Brown County Sportsman's Club, past deacon of Bethlehem Lutheran Church, and has been active in Legion and Masonic activities.

At the present time he is a member of the Aberdeen Park board.

"He does more work for the good of Aberdeen than a lot of us who don't have a handicap," one of his friends remarked.

"The beauty of it is," says Mrs. Larson, "that his wonderful disposition and constant cheerfulness aren't just a front. He's that way all the time."

The Larsons have 2 children, a son, Gordon, 9, and a daughter, Lynn, 7. They live in a spacious, new ranch-type house at 1318 South Lincoln Street. Sure, Lars did some of the work on that house himself. He probably could have built the whole thing. His evenings are busy ones now, because he is building a recreation room in the basement. And in between strokes of the saw and swings of the hammer he's trying to figure out a way to make a collapsible fishhouse which one man can set up and take down to facilitate finding spots where the fish bite in the wintertime.

He'll probably have it all built one of these days.

New Hampshire Poll Given Wide Attention

EXTENSION OF REMARKS
OF
HON. PERKINS BASS
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. BASS of New Hampshire. Mr. Speaker, under leave to extend my remarks, I include a news article which appeared in the March 10 issue of the New York Sunday Times, outlining the results of a unique poll which I recently conducted in the Second Congressional District of New Hampshire on current issues before the Congress:

POLL FINDS MANY FOR YUGOSLAV AID—VIEWS OF HIS CONSTITUENTS PROVE A SURPRISE TO GOP REPRESENTATIVE

WASHINGTON, March 9.—Representative PERKINS BASS, Republican, of New Hampshire, who, like most Congressmen, gets plenty of free advice from his constituents, received some surprising results when he polled them recently for guidance.

He disclosed that 4,800 replies to a questionnaire mailed to 17,000 voters had showed a better than 2-to-1 preference for continued aid to Marshal Tito's Yugoslavia.

"That was just contrary to the way my other mail has been running," Mr. BASS commented.

Support for the United Nations ran 8 to 1. Some increase in the postal rates to put the Post Office on a paying basis received a 7-to-1 endorsement. At the same time opposition to lowering the voting age to 18 won a 6-to-3 lead.

Mr. Bass did not ask his voters about taxes and size of the Federal budget, but he was not surprised to find quite a few volunteering the information that both were too high.

MANY RESORT TO POLLING

The polling device is being used by a growing number of Representatives to keep a hand on the pulse of the people who sent them to Washington. Many of them, including Mr. BASS, believe the method an improvement on tabulations of day-to-day mail, which many times is prompted by "pressure groups."

Mr. BASS' district, the New Hampshire Second, covers the entire western and northern parts of the State. Among his constituents are both New Hampshire Senators—Styles Bridges and Norris Cotton; Sherman Adams, the Assistant to the President; and Robert C. Hill, Assistant Secretary of State for Congressional Relations.

Mr. Bass, a second-term Representative, sent his questionnaire to a list he believes represents a cross-section of his constituency. He thinks the constituency also is an "accurate cross-section of national feeling." The district comprises industrial cities balanced by towns and rural areas. Questionnaires went to Democrats and Republicans alike.

On the question of aid to the Tito government, 2,947, or 62.6 percent of the replies, said the United States should continue to give the President authority to extend aid if he finds it is to our best interest to do so. An additional 1,284, or 27.2 percent, wanted to cut off all aid, and 476, or 10.2 percent, had no opinion.

Comment included the statement that the President should have the authority "he feels necessary and he is surely in the best position to know. But I am weary of all 'these giveaways' abroad." Other reactions ranged from "I think we should help all friendly nations economically," to "can't understand why we should help Tito—isn't he a Communist?"

AGREE WITH PRESIDENT

On the United Nations question, 3,878, or 82.3 percent of the replies, expressed agreement with President Eisenhower's inaugural statement that "we recognize and accept our own deep involvement in the destiny of men everywhere. We are accordingly pledged to honor, and to strive to fortify, the authority of the United Nations."

Four hundred and ninety-five, or 10.6 percent, replied "no," and 334, or 7.1 percent, said they had "no opinion."

"I agree with the President but feel the United Nations is powerless to enforce its decisions without a police force," one of the replies stated.

"Yes," replied another voter, "but let's not go overboard for the United Nations." A dissenter said "I don't see how the United States can carry along so many nations on our back."

A majority of voters polled answered a question about Federal aid to fight juvenile delinquency in the negative, reflecting a view that this was a job for local and State authorities.

One said that the delinquency stigma, in any event, should be attached to adults, whose "lack of interest in youth" brings about all the trouble.

"It would seem to me more appropriate to call it adult delinquency toward juveniles," the writer commented.

Some of the Tax Money Sent to Washington Should Be Returned to the States To Aid in Building Schools

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. ELLIOTT. Mr. Speaker, under permission to extend my remarks, I include in the RECORD an article from the March 6, 1957, issue of the Montgomery Advertiser:

D. C. OCTOPUS GOT THERE FIRST

The causes of the financial crisis in Alabama's school system today can be used in reverse as justifiable reasons why more thought should be given to proposed legislation relating to Federal aid for education.

Alabama school officials have just submitted their budget requests for the coming biennium. They claim $357 million will be needed during the next 2 years to operate existing schools and construct additional buildings to meet the needs of the increasing classroom population.

To meet the requests of $357 million the State can offer only the $208 million expected to be produced by school taxes already in force. Thus it is apparent if education is to be granted its request in full or in part, new money must be forthcoming from some source.

And it is the locating of a new source of revenue which creates the most difficult problem; actually there appear to be none available. This is due primarily to the octopuslike Federal tax structure which has extended itself into most every area of the local economy. And with every extension of a Federal tax, the State is preempted of just one more tax source. As the Federal Government siphons off more and more the tax well of the State drops proportionately lower.

It is this argument that is now being used with considerable effectiveness by proponents of Federal aid for schools. Since the Federal Government has cornered such a big share of the State tax sources, it seems only fair that some of the money sent to Washington should be returned to the local level for schools.

Providing, of course, it is returned completely free of any Federal controls.

In Either Case Public Foots the Bill

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. YOUNGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following editorial from the February 16, 1957, issue of the Redwood City (Calif.) Tribune:

IN EITHER CASE, PUBLIC FOOTS THE BILL

Representative CLAIR ENGLE, of Red Bluff, is a spokesman for the Democratic obsession that it's better for Uncle Sam to build projects with tax money than to let private industry build them and pay taxes.

When he learned that Interior Secretary Fred A. Seaton had approved the Pacific Gas & Electric Co.'s bid to build and operate the powerplants of the Trinity River reclamation project, ENGLE had the following to say:

"The Pacific Gas & Electric pays no money it does not collect on the light bill. The cost of the powerhouse and the money it proposes to pay the Government will all be charged to the power users—and at a profit."

In general, this is true. Money spent in any way must come from somewhere. If the Pacific Gas & Electric builds the plants, operates them, and pays the Government for the privilege, the money comes from those who buy the power and thus benefit from it.

If the Government builds them, operates them, and sells the power at a rate that returns no profit, the money comes from the taxes paid in by all the people. The power users are therefore subsidized by nonusers who benefit only indirectly, if at all. And even they benefit less than they seem to think; they must add their share of the tax bill to their costs before they count their blessings from Federal power.

Statement in Support of a Budget Limitation of $65 Billion for Fiscal Year 1958 — Suggested Amendments to House Rules for Better Fiscal Control Over Appropriations

EXTENSION OF REMARKS
OF
HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. PILLION. Mr. Speaker, on Tuesday, March 12, 1957, I had the privilege of making the following statement to the House Committee on Rules:

Mr. Chairman and gentlemen, I appear here in support of the main purpose of House Resolution 170, that is, a substantial reduction in Federal expenditures for the fiscal year 1958.

Our expenditures are so huge, they threaten the solvency and the stability of our Government. They discourage individual initiative by the erosion of capital savings. These wasteful expenditures require the imposition of taxes which are increasingly oppressive to our people.

Mr. Chairman, there are hundreds of thousands of governmental units in this Nation. They range from the smallest school districts to the United States Government. I know of no governmental unit where there is more confusion and such loose fiscal management as in the United States Government.

The bipartisan Hoover Commission in 1955 concluded control of the purse by the Congress has been impaired. Their report further states "under present procedures there is no effective control over expenditures either by the Congress or the executive branch."

Gentlemen, this state of affairs is an indictment, particularly, of the House of Representatives where our Constitution placed prime responsibility for fiscal management.

Congress recognized the need of a legislative budget by its adoption of the Reorganization Act of 1946. This act directed the Tax and Appropriation Committees of both Houses to report a legislative budget by February 15 of each year. Since 1949, this section of the act has been wholly ignored. The failure on the part of our committees to comply with this rule is not a willful one. I believe the present provision to be impractical for a number of understandable reasons.

The failure to report a legislative budget, has created this condition. The President's budget becomes the "bible" instead of being treated as an advisory request for appropriations. Appropriations are influenced, compared with and controlled, in large measure, by the President's budget.

The executive budget is compiled without the advice of Congress. We, thus, have the anomalous situation where, the executive branch, which does practically all spending, writes its own ticket in this field.

The present resolution would mark the beginning of an attempt by this House to revise its rules for the purpose of recapturing its constitutional prerogatives.

Adoption of this resolution would not give it the force of law. The House, could supersede it at any time by voting expenditures beyond its limit of $65 billion.

On the other hand, the adoption of this resolution would amount to more than a mere expression of the will of this House. It would have an electrifying and salutary effect upon the spending forces in both the executive and legislative branches of our Government. It would enhance the prestige of this body and restore confidence in Congress.

The adoption of a ceiling upon our annual expenditures would have a restraining influence just as the debt limitation has had a beneficial effect upon the creation of additional debt.

Estimates of how much the present budget can be cut range from $1 billion to $10 billion. I personally agree with Senator BYRD that $5 billion can be taken out of the budget without any loss to our defense potential. The amount of the limitation contained in this bill is immaterial. Certainly, this resolution ought to be reported with an open rule, so that the House can make its own estimate of what our total expenditures for the next year, and the consequent taxes should be.

I would suggest that all reference as to the disposition of any possible surplus be deleted from this resolution. It will only serve to create conflicts as to what taxes should be reduced and what amounts shall go toward debt reduction. Such language is diversionary from the main objective, that of limitation upon expenditures.

This resolution needs bipartisan support both in this committee and on the floor. A substantial bloc of Republican Members are already committed to it. In accordance with tradition, I respectfully invite, sponsorship of this resolution by some member of the majority party on this committee.

This budget anticipates a surplus of $1.8 billion. Two or 3 years ago, the budget estimates were off by about $4 billion. I believe the present estimates are overoptimistic. If the present rate of business decline continues, anticipated revenues could easily decrease $5 billion. Then instead of a $1.8 billion surplus, we would find ourselves saddled with an additional $3.2 billion debt.

Mr. Chairman, there can be no question of the dire need for a comprehensive reform in our fiscal affairs. Primacy in fiscal affairs rests with the House. Recommendations of rules and procedures to insure adequate fiscal control is delegated to this committee.

This is why I ask this committee to enlarge the scope of these hearings to include a comprehensive study of procedures relating to fiscal control.

Although there are dozens of meritorious proposals being advocated, I would like to briefly suggest the following for your consideration:

First. The creation of an additional Finance Committee to be composed of senior ranking members of the Ways and Means and the Appropriations Committees. They would be charged solely with the responsibility of reporting a legislative budget. No appropriation bill would be in order until a legislative budget is adopted. Chairmanship to be alternated, each year, between the chairmen of the two committees.

At the present time the Appropriations Committee is free from the necessity of reporting tax measures. The legislative budget would require this committee to share in the responsibility of taxation.

Second. We have too many reckless and spendthrift authorizations emanating from standing committees who escape the corresponding burden of recommending taxes.

(A) These loose authorizations might be discouraged by requiring all authorization bills to contain departmental estimates of costs.

(B) Our rules should be amended to do away with packing our standing committees with members who have a special interest in legislation before these committees. This is the result not of any evil intent but the attempt to satisfy the requests of the Members themselves.

For example, the Interior and Insular Affairs Committee, of which I am a member, has a total membership of 31. The number of Members of Congress from the 17 reclamation States is 98. They would be entitled to 22.5 percent of the committee membership or 7 members.

Instead of having 7 members, the reclamation States have 21 members, or 67.7 percent of the membership.

Due to political pressures, the legislation emanating from this committee cannot be representative of the whole body of the House. It would be contrary to human experience to expect legislation from such a committee that is not partial to their sectional interests at the expense of the Nation at large.

Other committees have equally serious and excessive imbalances of committee memberships which encourage excessive and special-interest expenditures.

I have an attached sheet entitled "Schedule A" which details the imbalance of representation on the Interior and Insular Affairs Committee.

Third. As discussed by this committee at the last meeting, the Senate has almost made it a habit to increase House appropriations. It has not yet acquired any tendencies toward increasing revenue bills. We should find some method of moderating their appropriation habits.

We have too great a dispersal of appropriating participation. We should find means by which we can couple the responsibilities of taxation in the same parties who are empowered to authorize and appropriate.

SCHEDULE A

Example of imbalance of representation on Committee on Interior and Insular Affairs:

Reclamation States, total number 17

Arizona, California, Colorado, Idaho, Kansas, Montana, Nebraska, Nevada, New Mexico, North Dakota, Oklahoma, Oregon, South Dakota, Utah, Washington Wyoming, and Texas.

Total membership of Committee on Interior and Insular Affairs, 31

Members of Committee From the 17 Reclamation States, 21

1. ENGLE, California.
2. ASPINALL, Colorado.
3. ROGERS, Texas.
4. PFOST, Idaho.
5. EDMONDSON, Oklahoma.
6. METCALF, Montana.
7. SISK, California.
8. UDALL, Arizona.
9. RUTHERFORD, Texas.
10. BARING, Nevada.
11. ULLMAN, Oregon.
12. MILLER, Nebraska.
13. BERRY, South Dakota.
14. DAWSON, Utah.
15. WESTLAND, Washington.
16. HOSMER, California.
17. RHODES, Arizona.
18. CHENOWETH, Colorado.
19. UTT, California.
20. THOMSON, Wyoming.
21. WEAVER, Nebraska.

Total Number of Representatives From 17 Reclamation States, 98

Arizona	2
California	30
Colorado	4
Idaho	2
Kansas	6
Montana	2
Nebraska	4
Nevada	1
New Mexico	2
North Dakota	2
Oklahoma	6
Oregon	4
South Dakota	2
Utah	2
Washington	6
Wyoming	1
Texas	22
Total	98

The percentage of Representatives from 17 reclamation States of the total membership of House of Representatives (435) is 22.5 percent.

Average membership on the committee would be 7 members.

The percentage of Representatives (21) from the 17 reclamation States of the total membership of the House Interior and Insular Affairs Committee (31) is 67.7 percent.

Actual membership on the committee is 21 members.

Thus, the reclamation States, having a special interest in legislation before the Interior and Insular Affairs Committee, have an excessive representation amounting to 3 times that of a normal or average representation.

Civil Defense Award for Springdale, Ark.

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. TRIMBLE. Mr. Speaker, Springdale, one of the fastest-growing communities in the Third District of Arkansas, was the site of a very successful civil-defense test in April of last year. As a result of this test, Springdale and Lee Wilcox, Springdale civil-defense director, have been given awards for the best civil-defense exercise conducted in the United States last year. The awards were given by the Valley Forge Foundation, Valley Forge, Pa. The city received a plaque, and Mr. Wilcox received a cash award of $100.

Springdale deserves a lot of credit for working so well on this very vital defense exercise. We are proud of the city, and we are also very proud of Lee Wilcox, the local civil-defense director. A hand salute to all these folks, and to our State civil defense director, Owen Payne, who has contributed so much to the civil defense program in Arkansas.

As a part of my remarks, I insert in the RECORD an article from the Arkansas Democrat of April 27, 1956, giving information about the civil-defense test exercise at Springdale:

"REFUGEES" POURING INTO SPRINGDALE
(By Bill Butler)

SPRINGDALE.—Geiger counters clicked and jet planes parted the clouds over Springdale today as civil defense workers showed the Nation how best to receive and care for thousands of "refugees" from an H-bomb attack.

It was all make-believe in this northwest Arkansas city as the first Civil Defense Administration exercise of the year was conducted for civil defense officials from all over the Nation.

But to the citizens of Springdale "Operation Arkansas RFD (ready for disaster)" was serious business. They quickly demonstrated that they were capable of meeting the "emergency."

For purposes of the exercise it was assumed that Tulsa, Okla., had been hit with an H-bomb and that radioactive dust or fall-out from a bomb cloud, had fallen over parts of northwest Arkansas.

It was the duty of this city and its civil defense organization to serve as a reception cented for "refugees" from Oklahoma and several northwest Arkansas cities.

THREE THOUSAND STUDENTS INVOLVED

The role of the "refugees" was played by more than 3,000 high school students from 10 Arkansas cities. Those participating were from Rogers, Fayetteville, Gentry, Prairie Grove, Lincoln, Huntsville, Elkins, Greenland, West Fork, and Springdale.

First-aid stations for the "injured" were set up in two churches, the medical clinic, the old city park and the football-practice field.

Reception centers for the "refugees" were located in the high school field house and 12 churches scattered throughout the city.

The Rogers unit of the Arkansas National Guard set up a complete field kitchen in the old city park area to provide food for the "refugees" and civil-defense workers.

School children taking part in the exercise arrived by bus on the outskirts of the city shortly before noon. The students, or "refugees," were taken to the reception centers or first-aid centers.

Fifty students were bandaged by civil defense medical teams and put on stretchers for transfer to a railroad box car and airplanes to simulate being evacuated to Little Rock hospitals.

Just after the noon hour a flight of jet fighters from the Arkansas Air National Guard passed over the city. About 30 minutes later the first alert was sounded on the city's disaster siren as a B-47 bomber swooped overhead.

National Guard units cleared all people off the streets in the downtown business district and members of the Springdale civil defense radioactive teams went to work. They thoroughly checked the district with Geiger counters in a mock detection of radioactive fallout.

The mammoth parade of all types of equipment which could be pressed into service in the event of a disaster wound through the city streets to end the first national civil defense test for 1956.

Civil defense demonstrations of first aid rescue work and fire work was conducted late this afternoon at the rodeo grounds.

A PILOT STUDY

Today's civil defense reception exercise here was described as a "pilot study" by regional civil defense officials. They said that similar tests will be held throughout the Nation during the week of September 9.

Several National and State Civil Defense leaders were on hand to observe today's "Operation Arkansas RFD."

Edward Lyman represented the national office of the Federal Civil Defense Administration. He is the FCDA's national director of public affairs.

Observers from the regional civil defense office in Denton, Tex., were: Welcome W. Wilson, regional administrator; Leslie Holland, Federal liaison officer; W. T. McMillan, operations officer, and Bill Rosch, regional civil defense official.

Harold L. Goodwin, director of operations for the A-bomb tests at the Government proving grounds in Nevada, was here to observe the exercise. His headquarters is in Washington, D. C.

Other Federal agencies represented were: Ed McDonald, regional director of the Bureau of Employment Security, Department of Labor; Karl Wallace, regional director of the General Services Administration, and James Bond, regional director of the Health, Education, and Welfare office. All are from Dallas, Tex.

FAUBUS HEADS DELEGATION

Governor Faubus headed the Arkansas delegation which included Owen Payne, Jr., State civil defense director, and Richard Holt, deputy State civil defense director.

Civil defense directors from several States were in the city today.

They included William McGill of Texas and former president of the National Council of Civil Defense Directors; Gen. Frances Woolfrey, Louisiana; Marvin Smith, Missouri; Ken Wood, Missouri deputy director, and Col. Tareyton, Florida, and Joe Morriss, Tulsa.

In charge of Springdale's part of the day's activities was Lee Wilcox, Springdale civil defense director.

Today's civil defense exercise in Springdale is the second one ever held in the United States to test the civil defense organizations of rural areas on preparations for the reception, care, and first aid of evacuees.

The first exercise in the history of the Nation was held last May in Forrest City.

How Tight Does the Administration Intend to Squeeze?

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. FASCELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article, Money Jungle Is Closing in on Veterans, which appeared in the Miami Herald on Sunday, March 3, 1957. This article, by Mr. Robert F. Coll, calls attention to the serious dilemma facing veterans now in the market for GI home loans.

The article follows:

MONEY JUNGLE IS CLOSING IN ON VETERANS
(By Robert F. Coll)

WASHINGTON.—An administration official says the veteran armed with his GI home loan is equipped with only a "hunting license."

And at present, he explains, the license is only good for rabbit hunting in the big game country of mortgage money.

The Government, through the Veterans' Administration, can merely stand back of the GI home loan. It cannot lend money except in rural areas where there is no private mortgage money.

President Eisenhower has asked Congress to increase the interest rate on VA loans from the present 4½ percent to 5. But the House Veterans' Affairs Committee refused. It said it was not at all sure this would accomplish the desired result of luring more mortgage money from banks and other lending institutions into GI homes.

Meantime, a number of developments have taken place.

First, new home building starts in January slumped to 11,000 all over the country—the lowest since the business recession of 1954.

Banks, led by the largest home loan institutions in the Nation, have pulled more and more money out of the GI home-mortgage market.

The banks, with a shortage of money to lend, felt they must place what's left in commercial loans, where it will bring better interest.

Veterans themselves are seeking and obtaining loans in fewer numbers.

As of January 1957 only about one-quarter of the Nation's 20 million veterans of World War II and Korea have taken up the Government on its veterans' home loan guaranty.

Some administration sources feel the slowdown in appraisals and applications means the average veteran has thrown up his hands on obtaining a GI loan even in areas where there still is enough private mortgage money to go around. They simply have stopped trying.

Another theory in some administration quarters is that the spiraling costs of real estate have priced many veterans out of the market.

Builders cite rising costs of labor and materials for the scarcity of low-cost housing.

Whatever the economic or political reasons, there is little question that unless a sharp change occurs building will continue to fall off along with loans.

Taxpayments of Arabian American Oil Co.

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. VANIK. Mr. Speaker, on February 20, 1957, I addressed a letter to Mr. R. L. Keyes, president of the Arabian American Oil Co., commonly known as Aramco, concerning a statement I made on the floor of the House of Representatives the day before, in which I alleged that for the purposes of United States income taxes his corporation treats oil royalty payments to the Saudi-Arabian Government as tax paid to a foreign government and therefore deductible from income taxes due the Government of the United States. My letter to Mr. Keyes is as follows:

FEBRUARY 20, 1957.

Mr. R. L. KEYES,
President, Arabian American Oil Co., New York, N. Y.

DEAR MR. KEYES: Yesterday, on the floor of the House of Representatives, I made a statement alleging that for the purposes of United States income taxes your corporation treats oil royalty payments to the Saudi-Arabian Government as tax paid to a foreign government and therefore deductible from income taxes due to the Government of the United States.

In view of the tremendous commitments of economic and military aid made by our Government to the Saudi-Arabian Government, which promise dollars and soldiers to protect Saudi Arabia and the government of King Saud, it is extremely important for the American people to know what part of this tremendous investment in the Middle East flows back to the United States Treasury in the form of taxes. They are footing a tremendous bill and underwriting an obligation which may entail the lives of American citizens.

The American people, through their elective representatives, are expressing their good faith in pledging economic and military aid to stabilize the conditions in the Middle East. It seems morally incumbent upon your corporation, which is the principal beneficiary of this situation, to make clear the intricacies of your organization and your compliance with the spirit as well as the letter of the internal-revenue laws of the United States.

Your cooperation in this matter is very much needed to clear up the record.

Sincerely,

CHARLES A. VANIK,
Member of Congress.

In order that this matter may be fully considered by Members of Congress, I am submitting below a copy of a letter which I have received from Mr. R. L. Keyes, president of Arabian American Oil Co., in which he indicates that I have been misinformed with respect to the company's royalty payments to the Saudi Arabian Government and their treatment for United States income-tax purposes. Following is the copy of the letter which I have received from Mr. Keyes:

ARABIAN AMERICAN OIL CO.,
New York, N. Y., February 25, 1957.

Hon. CHARLES A. VANIK,
House Office Building, Washington, D. C.

MY DEAR MR. VANIK: Your letter of February 20, 1957, and your statement on the floor of the House of Representatives on February 19, 1957, which has also come to my attention, indicates that you have been misinformed with respect to the company's royalty payments to the Saudi Arabian Government and their treatment for United States income-tax purposes.

The royalties which the company is obligated to pay under its concession agreement with the Saudi Arabian Government, and which it has paid since its production of oil in Saudi Arabia began, have been used only as deductions in computing net income in the company's United States income tax returns. They have never been applied as a credit or deduction from the income tax itself. I am informed that they cannot be.

Since 1950, when the Saudi Arabian Government enacted certain income-tax laws, the company has paid, in addition to the stipulated royalties, the income taxes imposed by those laws. These income taxes have been applied as a foreign tax credit against the United States income tax in accordance with provisions of the internal-revenue laws which have been available to all kinds of United States industries operating abroad under a policy which was first pronounced in the Revenue Act of 1918. These provisions have remained substantially undisturbed in principle since that time and are now contained in sections 901 through 905 of the Internal Revenue Code of 1954.

Thus, it is only the income taxes which this company pays to the Saudi Arabian Government, and not the royalty, which is credited against the United States income tax. This complies, not only with the letter of the internal-revenue laws of the United States, but with the spirit of those laws, which for nearly 40 years have evidenced a clear purpose to relieve United States industry operating abroad from the discrimination which would inevitably result if it were subject to local taxation in addition to the income taxes of the United States.

Sincerely,

R. L. KEYES.

In my letter to Mr. Keyes and in my statement on the floor, I made an unfortunate use of words in stating that the corporation treated the oil-royalty payments to the Saudi Arabian Government as a tax paid to a foreign government. What I should more properly have stated was that the arrangement between the Arabian-American Oil Co. and the Saudi Arabian Government was one which had undergone a change since 1950, in which the emphasis on royalty payments was minimized in favor of an increase in taxes by the Saudi Arabian Government. The increased taxes arranged to be paid the Saudi Arabian Government in lieu of higher royalties could be used as a deduction by the Arabian-American Oil Co. on income taxes due the United States. There are apparently friendly relationships between our Government and the Government of Saudi Arabia, but this relationship does not approximate the relationship between the Arabian-American Oil Co. and the Saudi Arabian Government, which is one of close partnership in oil and oil profits.

It has come to my attention that the income-tax payments of the Arabian-American Oil Co. to our Government during recent years have become substantially below expectations, primarily because of the development of a deal between the Saudi Arabian Government and the Arabian-American Oil Co., which provided increased income-tax payments to the Saudi Arabian Government in lieu of increased royalties. In this way, the Arabian-American Oil Co. reduces tax-payments to the United States in the sum of any amounts paid to the Saudi Arabian Government as an income tax. It is indeed paradoxical that while American income taxes defend Saudi Arabia, King Saud assesses income taxes to provide friendly American corporations with handy deductions on American taxes.

I want to take this opportunity to restate the importance and the need of a public disclosure of the devotion to income-tax responsibilities of American corporations deeply involved in Saudi Arabian oil. The American people have pledged their good faith, their economic and military aid to guarantee the integrity of their oil contracts. They have a vital interest in knowing the practical application of our internal-revenue laws with respect to these extraordinary operations.

Anniversary of Hungarian Independence

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. BYRNE of Illinois. Mr. Speaker, today, from all corners in the world, people will gather in churches and elsewhere to pay tribute to the valiant Hungarians who celebrate in their hearts the 109th anniversary of Hungarian Independence. Hungary was founded in 897 A. D. and became a Christian country in 1000 A. D. As we recall history we know that the Turks occupied the country from the 15th century for 150 years. It is interesting to note that the desire for freedom lived in the hearts of these freedom fighters even while under the yoke of the Turks. In the 13th century they got a bill of rights which was similar to the Magna Carta which the British received at Runnymede, in 1215, though the Hungarians did not get this until around 1272.

I wish the RECORD to reflect my sincere hope that the Hungarians will soon again know the freedom for which they have so courageously fought recently. It is a sad but yet an inspiring thing to know the youth of Hungary have and are keeping alive the spirit of freedom despite heavy odds. Those of us who

have not known the struggle the Hungarian patriots have experienced can certainly look to these brave people and be filled with admiration, respect, and a genuine affection.

The Metropolitan Problem

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 13, 1957

Mr. OSTERTAG. Mr. Speaker, perhaps the major phenomenon of our times is the unprecedented growth of our metropolitan areas. Our population is increasing at a rate that has confounded the experts, and most of it is concentrated in some one-hundred-and-seventy-odd metropolitan complexes, whose spread, unless directed and controlled, will invite chaos in the not-too-distant future.

All over this country, local officials are overwhelmed with problems that they have neither the tools nor the authority to solve.

Fortunately, a tremendous amount of thought and study is going into the matter, both by official and unofficial agencies, at the local, State and Federal levels. Last week I introduced a bill, H. R. 5565, which would create a commission to study the problem from the national viewpoint, and suggest guidelines for its solution at the State and local levels where, of course, it must be solved.

Several of our great newspapers have rendered a tremendous public service by calling attention to the problem in their news columns, among them being the New York Times and the Rochester Times Union. During the past week, the Courier Express of Buffalo has published an excellent and comprehensive series of articles analyzing the problem as it affects the great Buffalo metropolitan area, and suggesting steps that must be taken to unlimber local government, free it from the rigidities of the past, and make it flexible enough to meet the needs of the present and the future.

Under leave to extend my remarks, Mr. Speaker, I include in the RECORD, the first two articles of this excellent series:

NEW PROBLEMS ARISE WITH SUBURBS' GROWTH

(Staff reporters of the Courier-Express have prepared a series of stories, of which this is the first, setting forth problems of urban living resulting from rapid growth of Erie County.)

Tom Jones sat by helplessly one night and watched his suburban home burn to the ground. Jones, who discovered the fire shortly after it started, had called the fire department.

Unfortunately he lived near the boundary of a fire district and he called the wrong company. By the time the mixup was straightened out and the right company arrived, it was too late to save the house.

Bob Smith had an important series of conferences in Buffalo. He left his East Aurora home in what should have been plenty of time. But unfortunately, it had snowed the night before.

Smith began creeping toward downtown Buffalo. The farther he went, the heavier the traffic and the slower the progress.

By the time he had inched through overcrowded streets to his office, a big chunk of his important business day had been wasted. He had lost time. He had lost money. And he had lost his temper.

PROBLEM: GROWTH IN SUBURBS

Bill Thompson and his wife spent several hundred dollars and countless hours fixing up the basement of their Snyder home, transforming it into a fine playroom. They laid tile on the floor and equipped the room with good furniture.

Then the rains came. Their yard was flooded and their sewer backed up. The Thompson furniture was ruined and water seeped under the newly laid tile. Their time, money, and plans went down the drain with the receding water.

Those particular things may not have happened to those specific persons in exactly that way. But the examples are typical, not of what could happen, but of what is happening here in varying degrees of seriousness virtually every day. They are symptomatic of Erie County today. Jones and Smith and Thompson are victims of the same municipal malady: The Topsy-like urban growth in the county.

Buffalo has burst its seams. It can't contain the urban population of the region, serving in the manner urbanites want to be served. The people are looking for something more than they can get in the city. And they have flocked to the suburbs to get it.

Towns and villages have had to accommodate the disgorged population at a rate far faster than they had anticipated, far faster than they were prepared for.

Buffalo on the other hand was for more than 100 years geared to expansion. It must now readjust itself to a static population. Some experts have suggested it may be a declining one by 1975.

But the people who remain in the city and those who are moving in from other areas expect urban services to continue and to improve. To them, those services are a part of city living. They will not tolerate reduced services simply because the city's position in the expanding community is being altered.

MORE SERVICES IN SUBURBS

On the other hand, the families who moved to the suburbs want those urban services in their new homes. They weren't moving away from the city to do with less.

They moved to improve their living standards. In their new homes they want more, not less, than they were getting in the city.

They want the quiet surroundings, the extra space, the cleanliness, the good schools, the all-around gracious living associated with suburban life. But with it they want water, sewers, improved streets, street lights, adequate fire protection, quick transportation to the city by car or bus.

They want it now. And they want it without having to pay taxes very much higher than the people in the city pay. In far too many cases, they haven't found it.

SEWERS AND SCHOOLS

They have found the good schools but with them they have found overcrowding and part-time sessions. They have found sewer facilities but they have found some woefully inadequate in times of emergency. They have found extra space in their homes and yards but they have found highways jammed with bumper-to-bumper traffic. They have demanded these things be improved.

It's quite an order, and one which the towns and villages have done their best to fill. Within their limits, they have filled it well. The villages have extended their services to the limit—even to the annexation of adjacent areas. The towns themselves have nearly 1,000 special-service districts to provide the services in the unincorporated areas.

SOMETHING MUST BE DONE

But special districts have their limits and disadvantages as our fictional friends Jones and the Thompsons found. And the heavy additional traffic on the streets and highways in the county have caused problems complicated by uncoordinated efforts of highway departments on various levels of government, as Smith discovered.

No one is directly to blame for the present situation. No one has been really derelict in his duty. And for what consolation it's worth, Erie County is no worse off—it may even be better—that most other urban areas in the Nation.

Something must be done, though. The problem is a big one and getting even bigger. In an effort to define the scope of the problem, the staff of the Courier-Express has prepared a series of articles to explain what we are facing and to point up ways of meeting the problem.

OLD BORDERS IMPEDE VITAL SERVICES

(This is the second in a series of articles which will discuss the problems posed by the growth of Erie County.)

What to do about mushrooming suburban growth is strictly a problem of our times—at least as far as Erie County is concerned. In 1900, when Buffalo was preparing for the Pan-American Exposition which was intended—in part, at least—to glorify Buffalo, the suburbs played practically no part in the thinking.

The population outside the city was only 81,300, compared with 352,387 in the city itself. And those who lived outside Buffalo either were residents of incorporated villages (there were no other cities then) or farmers. No one worried about town streets, sewers, planning, law enforcement, or any of the other problems facing us today.

That situation continued through World War I. The population in the county outside Buffalo increased only 23,971 between 1900 and 1910 while Buffalo was growing by 71,328. In the next decade, the outlying portions added only 22,643 while the city was adding 83,060.

But after World War I, with the birth of the automobile age, the towns started growing—first in the sections right next to the city and gradually into the second ring of towns. The towns of Amherst, Cheektowaga, Hamburg, and West Seneca more than doubled their populations in the 10 years ending in 1930. Tonawanda doubled it and then doubled it again in the same period.

The population growth outside Buffalo nearly matched that of the city during the 1920–30 period—the first time in history that happened. The city added 66,301 persons, less than in the previous decade, while the remainder of the county added 61,419, nearly three times as much as in the 10-year period ending in 1920.

TOWN EFFORTS MADE

The towns immediately surrounding Buffalo tried to meet the problem. They installed sewers, assessing the cost of the improvement against the benefitted property, with little regard for ability to pay. The process nearly bankrupted the property owners when the depression hit in 1929. The towns added streets and schools and built up police forces in many cases. But they didn't plan for orderly growth. They had no community planning agencies and their zoning and subdivision regulations were rudimentary.

In the depression decade the surging population was cut off almost as fast as it had grown. Between 1930 and 1940 the population of the county outside Buffalo grew only

29,144. But that was far faster than it grew in Buffalo. The city's increase was only 2,525.

This was the time for planning, for consolidating, for laying the foundations for the future. But in the 1930's no one was absolutely sure there was going to be any future. And even those who were optimistic barely managed to keep their heads above water. They weren't about to go out and make vast expenditures for future growth.

Then came World War II and a new birth of confidence. It became obvious that things were going to boom after the war. Housing was going to be short. People were going to be demanding consumer goods. Expansion was expected. But many people having been burned once, weren't in the mood for buying a pig in a poke as far as expansion went.

They figured the sewers and improvements that were already in, the developments that had been placed there in the 1920's in anticipation of the growth that never came, would be sufficient to take care of the immediate needs. State restrictions were tight. Planning was a new-fangled idea. And besides all that, there was no material available with which to do any work anyway.

"Doncha know there's a war on?" was the stock answer for a man who wanted a white shirt. If you couldn't get shirts, how could you get sewer pipes and concrete?

So the war ended and all the other booms in history were mere bumps on the log of prosperity compared with the spectacular joyride we have experienced ever since. Between 1940 and 1950, more than 100,600 persons moved into the suburbs. Authorities estimate 139,000 more have moved in since 1950.

HOUSING BOOM

In the postwar boom, people wanted homes. And with the help, in many cases, of GI loans, they got them. They got them in every conceivable size and shape. Subdivision regulations and zoning ordinance which put a minimum price on property improvements might as well not have existed. You couldn't even put up a cracker box for less than $5,000 and that was the minimum price in many locations. The $10,000 minimums soon became equally worthless.

With the growth came the realization that governments which had seemed perfectly adequate in the early 1900s and perfectly good—though pretty lax—in the 1920s simply could not cope with the current expansion which spilled over town and municipality boundaries as if they weren't there.

They aren't there, except in a governmental sense. But in that sense they are about as real as any fact could be. Services which were needed where the population was were hemmed in by artificial boundaries, many of them established more than 100 years ago.

So today we are working in Buffalo and living in Clarence. Or we are living in Buffalo and working in Tonawanda. We go from our homes in Orchard Park to spend an afternoon in the Buffalo Zoo, driving over West Seneca, Cheektowaga and Buffalo Streets to get there. We turn on our water in our home in Amherst and get Water Authority, Tonawanda or Buffalo water, depending on what time of day it is and how big the demand has been. We let the water out of the drain in our home in West Seneca and it goes out through a local sewer system, the Buffalo Sewer Authority system or into a septic tank, depending on which side of the road we live on.

BOUNDARIES IN WAY

We find many of our services hemmed in and hedged by those artificial boundaries which still are fine for many local purposes but which are only in the way when it comes to providing us with the services we need in the most efficient way and at the lowest possible cost.

High Court Boots Football

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 20, 1957

Mr. SAYLOR. Mr. Speaker, the recent Supreme Court decision claiming that football is a business, and refusing to reverse a decision that professional baseball is a sport, has created untold confusion in the sports ranks of our country, not only to the owners of teams in the National Football League, but also players, sports editors and writers, and sportsmen in professional football and in all other sports. All, at present, are greatly confused.

I believe that this point is aptly expressed in an editorial which appeared in the Johnstown Tribune-Democrat on Saturday, March 17, by George S. Cooper, sports editor, entitled "High Court Boots Football."

Mr. Cooper is well known, not only in Johnstown, Pa., but throughout organized and amateur baseball, and in all other fields of sports, as an outstanding editor. I believe this editorial will be of genuine interest, not only to the Members of Congress, but to all interested individuals.

HIGH COURT BOOTS FOOTBALL

The Supreme Court dealt the National Football League a staggering blow this week when the high tribunal ruled that professional football is not exempt from the Federal antitrust laws.

The NFL had contended that it was entitled to the same exemptions as enjoyed by professional baseball. The court, however, said "no," by a 6–3 verdict.

Consequences of the decision will be far reaching in pro football. It will affect the NFL's reserve clause, patterned after the reserve clause in baseball contracts, and it casts grave doubts upon the legality of the league's draft system.

Why, then, is baseball exempt? How come baseball holds special privileges which are denied football and boxing and all other professional sports? These questions were raised generally after last Monday's decision.

There are technical differences between the football draft and the baseball draft. Neither are the contract reserve clauses exactly identical.

The chief distinction, however, as we see it from the court's latest decision, is that baseball acquired an exempt status 35 years ago and now the court doesn't want to reverse itself. At that time professional sports operations were vastly different from today. Pro football in 1922 was not organized. Boxing's interstate activities 35 years ago were negligible. Chief Justice Oliver Wendell Holmes then ruled that baseball was a sport, not a business in the sense of the antitrust laws. If that distinguished jurist were living today he might have a different viewpoint.

In 1922 there were no farm systems, no television and no radio. All of those things now are essential in the business of professional baseball.

Another baseball case reached the Supreme Court in 1953. The Court at that time recognized the changes that have taken place in 30 years, but still was unwilling to set aside Justice Holmes' famous decision. The high tribunal said Congress could remove baseball's exemption by legislation if it saw fit.

UP TO CONGRESS

Congress, however, made no move and baseball still is exempt.

The Court broadly implied in the majority decision Monday that baseball also would be ruled subject to the antitrust laws if the Court were considering baseball for the first time. Speaking for the majority, Justice Tom Clark said, "were we considering the question of baseball for the first time upon a clean slate we would have no doubts."

The Supreme Court naturally is reluctant to reverse itself after having twice affirmed baseball's status. However, the Court again declared Monday that the 1922 decision and a 1953 decision adhering to it "must yield to any congressional action."

WHAT ABOUT BASEBALL?

Last Monday's Supreme Court decision threw pro football for a loss. And it didn't do pro baseball any good, either.

The major baseball leagues unquestionably will be under heavier pressure to maintain their privileged, exempt status. There may be a wave of public opinion against this apparent discrimination. Congress, of course, is susceptible to public sentiment. If the popular demand is strong enough, Congress will remove baseball's exemption.

Major league baseball is, as a matter of reality and fact, far more extensively engaged in interstate business than either football or boxing.

The High Court still holds, however, that baseball is a sport, not a business.

To a casual observer professional baseball may be principally a sport. But anyone who has tried to operate a minor league club knows that professional baseball is a ruthless, cold-blooded business.

No minor club can operate these days without the sanction of the majors. For example, Johnstown won't have baseball this year. The New York Giants last fall decided to drop the Johnnies from their farm system. No other major club wants Johnstown. So, we're through.

Why? Simply because the big leagues have a virtual corner on professional ball players. And the antitrust laws don't apply, the Supreme Court says.

Hungarian Independence Day

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. DINGELL. Mr. Speaker, the extraordinary heroism which patriotic Hungarians have sown in their recent fight against tyranny has electrified the free world, and has endeared them to all lovers of freedom. It is interesting that these important and startling events have their counterpart in the great events of 1848. In March of that year, when revolutionary waves were sweeping Europe, the Hungarians revolted against the Austrian autocracy. As a result, Hungary became, just 109 years ago, what was essentially an independent state. That day became a landmark in Hungary's history, and March 13 has ever since been celebrated as the Hungarian Independence Day.

The events of 1848 bear close resemblance to those of last November. In both instances the Hungarians fought bravely for high principles. The independence they achieved is now a mere memory. But it stands for the hopes and greatness of the Hungarian people. I gladly join them in the celebration of this solemn and memorable day, the Hungarian Independence Day.

Fifty–Fifty Law Holds Ocean Freight Rates Down and Expedites Agriculture Surplus Disposal Program

EXTENSION OF REMARKS
OF
HON. THOR C. TOLLEFSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. TOLLEFSON. Mr. Speaker, the 50–50 shipping law—also known as Public Law 664, the Cargo Preference Act—which provides that at least 50 percent of Government-sponsored cargoes shall be shipped in American-flag vessels, has proved its worth not only to our merchant marine but also to the farm segment of our economy. This may come as a surprise to some of our agriculture and foreign-aid friends who have vigorously opposed the 50–50 legislation because they do not understand it.

The bill was designed to furnish cargoes for American-flag ships many of which would now have been laid up but for the legislation, according to testimony by the United States Maritime Administration. Those who alleged that it would cost the Government more to ship 50 percent of its relief cargoes and agriculture surplus cargoes on American ships than on foreign ships are being proved to have been in error—as the proponents of the legislation indicated would be the case. The opponents were in error also when they said that the 50–50 law would hinder the agriculture surplus disposal program.

In the first place, American liner services charge the same rate as foreign liner services because they are governed by international conference agreements. Thus, there was no additional expense when United States liner services were used. The American tramp ship normally charges a higher rate than does the foreign tramp ship, but the difference is only a small percentage of the total freight paid by the Government and is far exceeded by the income tax which the Government collects from the ship operator who is permitted to stay in business by the 50–50 law. The general benefits to our economy by keeping some of our freight dollars in our own economic blood stream need not even be considered for purposes of this discussion. Nor do we need to discuss the national defense benefits from maintaining a strong American merchant marine.

Secondly, the 50–50 law has kept world rates down for the carriage of Government-sponsored cargoes. During the current shortage of world shipping, caused in part by the Suez Canal situation, world rates would have skyrocketed had it not been for the 50–50 law.

How does this happen? The 50–50 law provides that at least 50 percent of Government-sponsored cargoes shall be carried on American-flag ships if available at fair and reasonable rates. Pursuant to this law the Maritime Administration establishes fair and reasonable rates for United States flag commercial vessels which participate in the program. In other words, a ceiling is set beyond which United States-flag ship rates for carrying Government-sponsored cargoes cannot go. This tends to set a ceiling also for foreign-flag vessels which would normally take advantage of international ship shortages and charge all the traffic would bear. If foreign-flag vessels wish to participate in carrying our foreign-relief cargoes and agriculture surplus cargoes their rates must be in line with those established by the Maritime Administration. If during a period of ship shortages, they seek to pressure our Government into paying higher rates by not making their foreign ships available for our cargoes, the Government could obtain needed shipping space by breaking out ships from its reserve fleet. This it has done. The net effect has been to keep the rates down on Government-sponsored cargoes.

How much money the Government has saved as a result of 50–50 is, of course, a matter for conjecture. Some idea may be gained from a news item quoting Col. Arthur Syran, ICA Director of Transportation. He was quoted as saying that in the grain trade from the North Atlantic to Antwerp-Rotterdam there were no American-flag ships available and the rates rose 58 percent. He was also quoted as saying that on a certain grain fixture ICA had paid an 88-percent increase in rates.

Under Public Law 480 the disposal abroad of $3 billion worth of our surplus agricultural products was authorized. As a general rule of thumb, ocean transportation costs under normal circumstances would run less than 2 percent. Thus, the cost of transporting overseas $3 billion worth of agricultural surpluses would run about $60 million. Any substantial increase in ocean freight rates would amount to quite a sizable sum.

In addition to acting as a ceiling on ocean freight rates, it should also be noted that the 50–50 law has in effect helped to expedite the agricultural surplus-disposal program. Without the law there is no question but that the whole program not only would have been at the mercy of skyrocketing foreign rates, but would have bogged down for lack of vessels to carry the cargoes. Because American ships have been available at fair and reasonable rates the agricultural surplus-disposal program has operated on schedule. As a matter of fact it is anticipated that the general authority under Public Law 480 will be increased by an additional $1 billion in this Congress.

Only through the existence of an American merchant marine could our farmers and agricultural groups find assurance of service and protection from excessive rates in seeking to serve their international markets. I sincerely trust that there will be no ill-advised attempts in this Congress to scuttle the 50–50 law which has proved to be both fair and beneficial.

Tribute to a Hero

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. HOLLAND. Mr. Speaker, under leave to etxend my remarks, I would like to include in the RECORD the following remarks made by Col. Raymond G. Davis, United States Marine Corps, CMH. The occasion was the presentation of a portrait to Mrs. Emma Kelly, the mother of Pfc. John D. Kelly, Homestead, Pa., who valiantly gave his life in Korea and who was posthumously awarded the Congressional Medal of Honor. The entire community of Homestead was on hand to honor this great hero on February 28, 1957.

The Homestead School Board is to be congratulated on its presentation of a portrait to honor the late Pfc. John D. Kelly, here in the school from which he graduated.

It is most fitting that this ceremony is being conducted here.

This school is one of the symbols of a great people who value liberty and freedom of expression above all else and who have won and maintained our liberty through deeds of sacrifice and heroism akin to those of the young man whose memory we are now honoring.

No country can rise higher than the intelligence, moral and spiritual development of its citizens.

We have founded our country upon the basic principle that its citizens will be enlightened and will be clean in morals and chaste in manners.

Many times we are able to find ideals upon which we can gage our lives.

These ideals are ofttimes associated with our heroes.

For many of us for a long time heroes were people we read about in books.

History had recorded their illustrious deeds, the years had given them grandeur, but time in rendering their heroics had left their likenesses a little hazy.

We would applaud our heroes, cherish them, take their accomplishments for our standard, but we could never feel close to them.

Here in Pennsylvania you have given to our country many of these heroes in the past. Here are a few:

Anthony Wayne fought with Washington and distinguished himself at Germantown.

Admiral Perry—not born here, but a Pennsylvanian by choice—was a hero of the naval battles of 1812.

General McClellan served in the Mexican War and later commanded the Union Forces in 1861 and 1862.

Tasker Bliss serevd in the Spanish-American War and rose to be Chief of Staff of the Army.

Peyton March served in the Philippines in the Spanish-American War and rose to be Chief of Staff of the Army following General Bliss.

Those heroes we find are statues in our parks, headings in our textbooks, contribu-

tors to our heritage, who are quoted, honored, praised.

We revere them at a dim and misty distance, but we do not really know them as individuals.

Now those things have changed.

We live in an era of crisis when courageous men and women must race to meet the challenge of every day that dawns.

The heroes of these demanding days are men and women we know.

The boys and girls who have grown up in our own lifetime and in our lives.

They have walked our streets, played in our backyards, learned their lessons in our schools, prayed in our churches, romped in our parks, played ball on our corner lots.

Jack Kelly unlike the heroes of the past was a man known to Homestead.

He lived here among you.

John D. Kelly exemplified all the finer things we strive for as a standard upon which to gage our lives.

How did he become the man he was?

To whom are we indebted for his great character?

First we owe a debt to his family.

The real honored guest here today is the mother of the young man whose deeds of courage and sacrifice have occasioned this ceremony.

Her early guidance and her strong character were reflected in her heroic son.

May her sense of grief over the loss of her son be mellowed by the memory of the heroic manner of his going, and by the great honor he has brought on all about him.

We are indebted also to his friends, his neighbors, his counselors, and to all who contributed toward his development.

The day to day contacts he made, his friendly associations, the games he played; all these played a part in his growth.

This school contributed greatly also.

His teachers and counselors, his coaches, the facilities for study and development of ideas and ideals.

He is remembered as a fine student, and one who played basketball on your championship team, prior to his graduation in 1948.

He then attended Arizona State College prior to entering the Marine Corps.

The war in Korea was a year old when he joined.

After completing his basic training at Parris Island he was transferred to Camp Pendleton on the west coast for combat training prior to joining the First Marine Division in Korea.

The war there was a stalemate in overall effect, but there was a very real, serious battle for many positions over much of the front.

His unit was in the middle of some of the heaviest fighting on the Korean front as indicated by the fact that more than 3,000 heavy mortar and artillery shells were fired into his area on the day of his heroic action.

His unit was under direct fire from machineguns and was being hit by hand grenades.

It was the kind of situation which can only be saved by the presence of a man who can rise above the rest and lead the way to success.

Fortunately in many dire situations throughout our history we have always had such a man to appear.

In this battle, which was going very badly indeed, Jack Kelly was to be that man.

He had been a radio operator.

Seeing how desperate the situation was he obtained permission and left his radio in the care of another Marine so he could better participate in the assault on the enemy key positions.

I have a letter from Jack Kelly's commanding officer in Korea which I would like to read:

ARCADIA, CALIF., *February 21, 1957.*

DEAR MRS. KELLY: The words of a citation can never serve to describe the true value of deeds performed by such men as your son. His heroic conduct and action will never be forgotten by the men of my command.

The morning of May 28, 1952, is a vivid memory for me and all of the men who served with me. Aside from the courageous conduct of your son in the face of hostile action, his great sacrifice has served an even greater purpose. The immediate effect of his performance on that morning was to inspire the men of my platoon into numerous individual acts of bravery that enabled us to accomplish our mission against the numerically superior enemy force.

The enduring effects of that morning will be to serve as inspiration to all of the men in my platoon in the conduct of their lives. It is a deed that will long be remembered and always discussed when we are able to rendezvous around the country. I will always consider it an honored privilege to have served and directed men of the United States Marine Corps and especially to have been associated with your son on May 28, 1952.

More important, the men of my platoon, who are the fathers of today, will utilize the memory of your son in demonstrating to their sons the values so important in the lives of the leaders of tomorrow—courage, initiative, leadership, and self-sacrifice.

It is very pleasing to me to know that the memory of your son will be commemorated in the school which must have contributed so heavily in molding the character and personality of this great young American.

I regret that the distance of miles will keep me from attending this memorial service, but can assure you that my prayerful thoughts and memories will be directed to Homestead, Pa., on the occasion of this service. It is my hope that I will be able to visit you and witness this portrait at an early date.

Sincerely,

HOWARD L. SIERS.

Quoting from his citation for the Congressional Medal of Honor:

"Fearlessly charging forward in the face of a murderous hail of machinegun fire and hand grenades, he initiated a daring attack against a hostile strongpoint and personally neutralized the position, killing two of the enemy.

"Unyielding in the face of heavy odds, he continued forward and singlehandedly assaulted a machinegun bunker.

"Although painfully wounded, he bravely charged the bunker and destroyed it, killing three of the enemy.

"Courageously continuing his one-man assault, he again stormed forward in a valiant attempt to wipe out a third bunker and boldly delivered pointblank fire into the aperture of the hostile emplacement.

"Mortally wounded by enemy fire while carrying out this heroic action, Private First Class Kelly, by his great personal valor and aggressive fighting spirit, inspired his comrades to sweep on, overrun and secure the objective.

"His extraordinary heroism in the face of almost certain death reflects the highest credit upon himself and enhances the finest traditions of the United States Naval Service.

"He gallantly gave his life for his country.

"DWIGHT D. EISENHOWER,
"The President of the United States."

To recall and recognize his deeds of heroism is not only to honor John D. Kelly, but to strengthen our own resolution to be worthy of the example he has set.

Few of us will ever approach his bravery but we can at least keep alive in ourselves and instill in our children those standards and traditions of unselfish devotion to great principles which make men and nations great.

We can honor Jack Kelly more fittingly by dedicating ourselves to the task of making our country the kind of place for which he and others like him would be proud to have given their lives.

The heroism of this young Marine gives new meaning to our heritage of courage.

Today, we pay tribute to Pfc. John D. Kelly, not as a man whose heartbeat has been stilled, but as another great and brave Pennsylvanian whose heart beats on in the great heartbeat of freedom.

The Pros and Cons of Health and Welfare Issues

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. CURTIS of Missouri. Mr. Speaker, last week I received a report published by the Washington office of the American Medical Association. It contains statistics of vital interest to those people who discuss the pros and cons of health and welfare issues.

The report follows:

COST OF MEDICAL CARE IN THE UNITED STATES

When the various parts that go into the Nation's health bill each year are added up, the total is staggering. Estimates of private and public spending include the cost of everything from patent medicine and toothpaste to surgeons' fees. Private care for the country in 1955 was placed at $11.2 billion, while public care (Federal, State, and local) was estimated at $3.9 billion. The following figures for private care costs are for 1955: $3.4 billion for physicians' charges; $3.7 billion for hospital charges; $2.3 billion for charges for drugs and appliances; $1.8 billion for other charges, including nursing, etc.

HEALTH AND MEDICAL RESOURCES

The medical "plant" that provides the country with the finest care of any nation is equally impressive when viewed statistically. In one area, that of medical-school graduates, bare statistics fail to tell the whole story. They do not, for instance, reflect the increased utilization of physicians' skills and the advance of medical knowledge in treatment of patients.

Two hundred and twenty-five thousand five hundred and seventy-nine physicians in United States in January 1956; 1,604,000 hospital beds in United States in 1955; 430,000 professional nurses in 1955; 300,000 practical nurses, attendants, nurses' aids in 1955; 4,735 medical-school graduates in 1930; 5,275 medical-school graduates in 1940; 6,135 medical-school graduates in 1950; 6,845 medical-school graduates in 1956.

VOLUNTARY HEALTH INSURANCE

Another development of great importance in the furnishing of medical care has been the growth of voluntary health insurance. Twenty years ago the number of persons covered by some form of health insurance was only 1.5 million. When the drive was on for compulsory health insurance in 1949, just over 50 million persons were covered by voluntary insurance. Organized medicine contended then that voluntary coverage would expand, thus obviating the need for Government insurance. The following figures prove this was a good estimate of the situation: 110 million persons now covered for hospital

charges; 92 million persons now covered for physicians' charges for surgery; 55 million persons now covered for physicians' medical charges in hospitals; 10 million persons now covered for physicians' home and office call charges; 10 million persons now covered for major medical expenses (catastrophic) compared with 1,200,000 covered in 1953.

HEALTH BILLS INTRODUCED IN CONGRESS

National legislators have not held back on the sponsoring of many health and medical bills. They cover just about every phase of medicine and human welfare. Most of them, of course, never get past committees. But as an indicator of the growing interest in health legislation these figures on bills introduced are illuminating: 250 measures, 1951–52, 82d Congress; 407 measures, 1953–54, 83d Congress; 571 measures, 1955–56, 84th Congress.

POTENTIAL BENEFICIARIES OF FEDERAL MEDICINE

Some of the greatest activity in the health field has involved laws and amendments to laws that widen the scope of medical care for Federal beneficiaries. The very latest is Medicare voted last year for military dependents. Today, nearly 1 out of every 4 persons, including over 22 million veterans, is eligible to receive at no cost to them some degree of medical care from the Federal Government: 22,599,000 living veterans as of January 1, 1957; 5,200,000 military personnel and their dependents; 300,000 beneficiaries of the Public Health Service, including 200,000 seamen, but excluding beneficiaries of Federal Employees' Compensation Act and Indians; 5,100,000 public assistance recipients; 370,000 Indians and Alaskan natives receiving care in 56 Federal hospitals or in private facilities under contract; 4 million beneficiaries of the Federal Bureau of Employees' Compensation Act (at-work injuries only); 48,627 Public Health Service hospital admissions in 16 hospitals in 1956; 1,042,000 outpatient visits in 121 Public Health Service outpatient facilities during 1956; foreign economic aid programs (entirely U. S.) and the World Health Organization (U. S. largest contributor) give limited health care in 92 foreign countries. Example: 25,300,000 children were vaccinated in 1956; 7 million Federal employees and their dependents (will be eligible for health care if proposed legislation is enacted).

FEDERAL HEALTH SPENDING

Under the impetus of new legislation enacted during the last few years—and particularly the new emphasis on medical research—the Federal health budget is rising steadily. Bills introduced in the present (85th) Congress seek to expand many existing programs or set up new ones. The following tables gives the total Federal health bill for the current and last fiscal year and a breakdown of health-spending for the top three departments of Government:

	Fiscal 1957	Fiscal 1956	Increase (percent)
Total, all agencies	$2,558,719,168	$2,268,826,576	12.8
Veterans' Administration	825,024,300	790,185,800	4.4
Department of Defense	790,105,000	818,104,500	----------
Department of Health, Education, and Welfare	772,661,800	526,935,400	46.6

SOCIAL SECURITY

Of all the programs of Government enacted in the last several decades, none has had greater impact on the population or has been subject to more liberalizing amendments than the Social Security Act of 1935. It began on a relatively modest scale, with retirement payments of up to $10 a month for wage earners who reached age 65. At that time, there were no benefits for the surviving spouse and children.

Now, 22 years later, the law has been amended to include: (1) Survivorship benefits, (2) maximum monthly family survivorship payments as high as $200, and (3) a program enacted in 1956 and effective this July 1 for payment of social-security benefits to disabled workers at age 50. Efforts continue to be made to amend the law, including a program of free hospitalization of the aged, disability benefits at all ages, and compulsory national health insurance. Statistics on the program as it exists today: 9,250,000 persons received OASI monthly checks in January 1957; 70 million wage earners are covered and being taxed; 9 out of 10 persons in the United States are primarily insured or are their beneficiaries; $22,519,000,000 in United States bonds in OASI trust fund. Payments from the OASI trust fund and contributions to it are now about equal. Tax rate is 2¼ percent for employees and employers (4½ percent total); 3⅜ percent for self-employed. Under present law, 1975 rate will be 4¼ percent for employees and employers (8½ percent total); 6⅜ percent for self-employed. Under a 1956 law, permanently and totally disabled persons aged 50–65 can get payments equal to retirement payments. Over 1 million inquiries already have been made for disability payments or disability freeze; about one-half of the more than half a million formal applications have been approved.

Labor organizations propose a $6,000 tax base on which contributions would be computed, instead of the present $4,200 base.

PUBLIC ASSISTANCE

A part of the Social Security Act, but a separate administrative operation, the public-assistance program, also was enacted in 1935. Its basic purpose was to assist States in providing subsistence for destitute families. From the beginning, the States have contributed a portion of funds for the various categories of recipients. Federal appropriations 20 years ago were about $209 million annually. Now they have increased more than sevenfold, so that the appropriation for the current fiscal year approximates $1.5 billion. There are four programs: aged, blind, permanently and totally disabled, and dependent children.

Until amendments last year, unspecified Federal-State funds were paid out for medical services of the needy. An educated guess has been that between $90 million and $100 million of Federal money has been going into such medical payments. A more accurate estimate should be forthcoming as a result of the 1956 amendments. These amendments set up a new category of Federal-State payments for medical care over and above the old subsistence-payment limits, with medical payments going directly to the physician, hospital, druggist, clinic, or nursing home.

Five million one hundred thousand persons get monthly public-assistance checks—medical costs included.

Under new law, direct medical payments are to be made in behalf of assistance recipients to physicians, nursing homes, hospitals, and for drugs. These direct payments will probably exceed $200 million and could reach $300 million by 1958.

VETERANS

Another vast program with high demands on the Federal budget is that for veterans' medical care. The policy of the Federal Government is that wartime veterans with service-incurred disabilities are entitled to the best medical and hospital care that can be provided. The American Medical Association supports this policy. Congress in June 1924 authorized VA to admit indigent non-service-connected veterans when there were spare beds. By 1957 roughly 75 percent of all cases treated in VA hospitals were for injuries and diseases not originating during or aggravated by military service.

Now the problem is becoming more complicated as the veteran population grows older (World War I veteran in VA hospitals averages age 62) and becomes subject to chronic illnesses. Demands increase for use of VA facilities. Today VA requires: A full-time staff of over 4,600 physicians; 2,247 residents; 11,000 part-time consultants; and thousands of doctors on a contract basis for the agency's hometown care program.

Twenty-two million five hundred and ninety-nine thousand total number of living veterans as of January 1957; 121,865 total number of VA hospital beds as of January 1957; 111,540 number of patients in VA hospital facilities on an average 1957 day; $619,614,000 will be spent by VA for in-patient care in fiscal year 1957; $82,638,000 will be spent for out-patient care in fiscal year 1957.

More than 2 out of 3 veterans treated in VA hospitals are treated for non-service-connected conditions.

Alabama Service Station Association Asks for Passage of H. R. 11, the Equality of Opportunity Bill

---

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 13, 1957

Mr. PATMAN. Mr. Speaker, any time we try to legislate to strengthen the antitrust laws, or plug some loophole in the antitrust laws, we encounter some powerful opposition. This has been the case with H. R. 11, although this bill would give small-business firms only quite modest and reasonable protection from big business' abuse of power.

The giant corporations in several industries have been carrying on campaigns against the bill. This biggest and most powerful campaign is being waged by the super-giant corporations in the oil industry. This is not I imagine, because the major oil companies are more opposed to H. R. 11 than are the major corporations in some of the other industries. It is because these corporations have more lavish funds to spend on such campaigns, they have bigger and better oiled machinery for conducting a nationwide grassroots campaign and, so it has seemed, the officials of these corporations are more arrogant and irresponsible even to what is, in the long run, their own self-interest.

On January 28, and again on February 5, I called attention to a "false front"

lobby which is being conducted by some of the major oil companies, to prevent passage of H. R. 11. This lobby was conceived and organized within the American Petroleum Institute, and it utilizes all of the most modern and effective techniques of lobbying. It is appropriately called a false-front lobby for the reason that the major oil companies have not set about to persuade the public that the legislation will be bad for the major oil companies; rather, they have set about to persuade oil jobbers and retail dealers that the legislation will be bad for these small-business men who, in fact, will be greatly helped by the legislation.

DEALERS ARE NOT DECEIVED

Despite all this expenditure of money and effort by the major oil companies however, most of the independent gasoline dealers appear not to have been persuaded that black is white, and that they will be hurt by an antitrust law which would give them some protection against abuse of power which is inherent in these multi-billion dollar oil corporations. In fact, I have received many letters from retail gasoline dealers and from State associations of retail gasoline dealers which express just the opposite point of view. One of these letters from a State association has come to me from Mr. Allen Smith, chairman of the board of directors of the Alabama Service Station Association.

Mr. Smith's letter, omitting personal references to me appears below, after which I will comment on the reasons why H. R. 11 is in the public interest:

ALABAMA SERVICE STATION ASSOCIATION, INC.,
Birmingham, Ala.

Hon. WRIGHT PATMAN,
House of Representatives,
Washington, D. C.

DEAR SIR: I have just finished reading, with interest, your addresses in Congress on January 28 and February 5.

* * * * *

We, even collectively, cannot possibly raise funds and supply time and effort to fight our own battles as they should be fought. Fortunately, however, there are a few of us who are willing to make a sacrifice of time and money to see that justice is received by our more timid fellow men. I am sure that you have already found our association on record as supporting H. R. 11.

Are you receiving full support from our representatives?

We are thoroughly in accord with you in that if the big oil companies cannot meet competition at the established prices they should cut their tremendous earnings to meet it or else we need new blood in the oil industry.

Please notify us of any way we can be of any help in this battle for us.

Sincerely,

T. ALLEN SMITH,
Chairman, Board of Directors, Alabama Service Station Association, Inc.

H. R. 11 GIVES ONLY MODEST PROTECTION TO DEALERS

Now what does H. R. 11 do? Does it say to the major oil company that it cannot discriminate in price to meet the competition of an off-brand dealer? Does it say that the oil company cannot discriminate in price to assist one of its independent dealers to meet the price of an off-brand dealer? Does it say that if a major oil company cuts its price to meet the competition of an off-brand dealer in Chicago, that it must also cut its price in New York—or at least, perhaps, that it must cut the price throughout the State of Illinois?

The answer to all of these questions is—no.

What H. R. 11 does say to the major oil company is this: You may cut your price to one of your dealers in order to meet the competition of an off-brand station, but if you do so, then you must also cut your price to your other dealers who are in competition with that dealer for whom you wish to cut the price.

Now of course, if the bill said that the major oil company must give absolutely equal treatment to its competing dealers, then the bill might prove troublesome and inconvenient to the oil company. But the bill does not require absolutely equal treatment. It only cautions the oil company against making discriminations which are so gross and so prolonged that the effect may be, in the language of the bill, "substantially to lessen competition or tend to create a monopoly."

As I have said, I believe that in the long run H. R. 11 will prove to be a vital safeguard to continued private ownership of the major oil companies. However, it is easy to see why, from a narrow, short-run point of view, the big oil companies prefer the law as it is. Under the Supreme Court's interpretation of section 2 of the Clayton Antitrust Act, as amended by the Robinson-Patman Act, an oil company may discriminate in price among its dealers as it pleases, if the lower of its prices meets a competitor's price.

BIG OIL COMPANIES BENEFIT FROM DISCRIMINATION

This unrestrained license to mobilize great marketing power and pinpoint the whole weight of that power on any market—on any neighborhood—gives a formidable advantage to the big oil companies.

It permits the major oil company to take business from an off-brand filling station, and from the small refiner who supplies the off-brand station, at only an insignificant cost to the major oil company. Under the law as it now stands, the major oil company can cut prices to one of its dealers just across the street from the off-brand station, so that the dealer may meet the price of the off-brand station; but—and this is the point small business objects to—the oil company need not, at the same time, reduce prices to its other dealers just down the street who also lose business, and perhaps go out of business, because of the first dealer's price reduction to meet competition.

The practical result of this kind of "price meeting" is, of course, that the off-brand dealer is either squeezed out of business, or kept barely alive on a starvation volume, depending upon the major oil company's preference in the matter. An equal result is that some distributor who supplies that off-brand dealer is squeezed out, and the small refiner who supplies that distributor is squeezed out. Independent refiners have been going out of business faster than retail filling stations over the past several years. But unlike the retail filling stations, as independent refiners have gone out of busiess, no new independent refiners have sprung up to take their place. More and more of the business is taken over by the major oil companies.

MAJOR OIL COMPANIES LIKE A LITTLE OFF-BRAND COMPETITION

The present license to discriminate to drive out the off-brand dealer is the basic power advantage by which the major oil company reaps many other advantages. For example, while there is no great number of off-brand stations in the country, the major oil companies find it advantageous that a scattering of such dealers remain in business. Obviously, by the discriminatory devices which the oil companies regularly use, all of these off-brand stations could easily have been driven out of business long ago. In fact, some major oil companies actually supply many of these off-brand dealers—with first-grade gasoline to be sold as unbranded gasoline. There are no longer enough independent refiners to supply them, located as they are at many places where freight costs make them inaccessible to the independent refiners.

These off-brand dealers then provide the major oil companies with an excuse for discriminating in price to squeeze their dealers' margins. The major oil company simply cuts its price to one of its dealers in an area, knowing that dealer will cut prices to meet the off-brand station, or to meet the price of a price-cutting dealer of another major brand, and this will then force down dealer margins in the whole area.

PRICE DISCRIMINATION IS THE MEANS OF MONOPOLY PROFITS

But does this major oil company control over prices and competition result in consumers receiving lower prices than if the monopoly control did not exist?

No, the major oil companies determine the retail price; and retail prices are set at that level which will yield the maximum profit, considering the volume which will move at that price. Squeezing the dealers' margin, then, is simply a device whereby the oil companies take a maximum portion of the profit contained in the retail price. In other words, the discriminatory technique has two effects: one, it gives the major oil companies the power to set retail prices at levels which maximize profits; and, two, it is the means by which the major oil companies take a maximum portion of these profits. It is thus both the instrument of monopoly and the means of milking the benefits of monopoly.

H. R. 11 WILL CUT BIG OIL COMPANY PROFITS ONLY SLIGHTLY

As I have said, H. R. 11 will not prevent the oil company from meeting competition. But the bill will do this: It will say to the oil company that when it cuts its prices to one of its dealers, it must also cut prices to its other dealers who are in actual competition with that dealer. Of course, this will mean that it will cost

the oil company a little more money—a little less profit—to meet the off-brand dealers' competition. The company will have to reduce its prices, not in all of the States in which it markets, and not throughout a State where the competition occurs; but it will have to reduce prices to all of its leaders within an area who are so directly in competition among themselves that one dealer's selling at a lower price than another would result in a substantial diversion of business from the others.

I believe that the major oil companies can afford the very modest reduction in profits which would be required to treat their dealers fairly. Whenever they discriminate in price to subdue an off-brand dealer and drive out small refiners who supply such off-brand dealers, they would only have to be careful not to put their own dealers out of business.

Wisconsin by the Sea

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. JOHNSON. Mr. Speaker, under leave to extend my remarks I would like to call the attention of my colleagues to an article in the March 2 issue of the Wisconsin Agriculturalist and Farmer. It discusses the St. Lawrence seaway in terms of what it will mean to farmers in Wisconsin—one of the States which will have its own ocean ports in the near future. Farming and dairy communities from Northwest Wisconsin that are mentioned as contributing goods already being shipped to overseas ports include Bloomer, Jim Falls, Augusta, and Whitehall. When the gargantuan task of opening the Great Lakes to ocean-going vessels is finally completed midwestern farmers should find the new trade route to be a tremendous stimulant to their sales.

ST. LAWRENCE SEAWAY: WHAT IT MEANS—LOWER SHIPPING COSTS AND SHORTER HAUL TO FOREIGN MARKETS ARE SOME OF ADVANTAGES

A cold wind whistled through the huge warehouse where stevedores hustled about on their fast tractor loaders. Winches whined and heavy Swedish voices directed filling the holds of the *Erholm*, 1,500-ton freighter of the Swedish-American Line.

In the warehouses were piled drums of powdered milk, cheese and butter oil for Germany, Holland, Belgium, France, Italy, Spain, Asia, and ports of the Caribbean.

MANY FARM PRODUCTS

There was dried milk and lard for Sweden, green hides for world trade ports, binder twine for Belgium, Holland, Denmark, and Portugal, linseed meal, wax beans for Hamburg and brewers' yeast for almost every port in world trade.

Is this New York Harbor we're describing to you? Not at all. It's the Milwaukee waterfront, where 16 foreign steamship lines keep things humming during the shipping season.

These were the lines whose ships discharged and loaded 73,500 net tons in the 1956 season, 90 percent of which was agricultural products.

Random notes from the export labels on the commodities awaiting shipment show meat products being shipped by three different packing plants.

And there was beer and brewers' yeast from every major Wisconsin brewery; canned foods from Bloomer and Oconomowoc; tobacco from Viroqua.

Point of origin on the powdered milk drums include such familiar names as Jim Falls, Reedsburg, Sauk City, Augusta, Cashton, and Whitehall.

That's a quick picture of the shipping in and out of Milwaukee Harbor now, when limited lock facilities and shallow ship channels allow only vessels of 1,500-ton capacity to pierce the heart of the Midwest.

What the potentials are for increases when the St. Lawrence seaway allows ships of 7 to 8 thousand ton capacity to dock at Wisconsin wharves staggers the imagination.

Probably there has never been an engineering feat to rival the digging of the St. Lawrence seaway.

It's 744 miles from the mouth of the St. Lawrence River, where world trade vessels enter, to the Great Lakes ports where they discharge and reload.

In comparison, the Panama Canal is only 50 miles long and its locks lift ships only 85 feet. The Suez Canal is 103 miles in length and is at sea level.

Not only is the St. Lawrence seaway seven times longer, but it will provide locks that will lift ships 580 feet to Lake Huron and Lake Michigan, and 600 feet to Lake Superior.

Work started on this project shortly after the 1955 Congress passed Public Law 358.

The more optimistic hope that the seaway will be completed by 1958. The more conservative talk in terms of 1962.

EIGHT THOUSAND MILE SEACOAST

Any way you figure it, this man-made seacoast of some 8,000 miles will be realized within the next 5 or 6 years.

The cost? A billion dollars, at least. And cities will spend millions more for harbor improvements. Private industries will make terrific investments too, attracted by the excellent coastal facilities.

Who will pay this billion dollars? Canada and the United States agree to split the cost, roughly 50–50.

But that doesn't mean that you will have to dig down in your pocket to supply a stiff per capita tax to cover our share.

General taxation may be levied on the modernization of the existing seaway facilities such as the Welland Canal and the St. Mary's River.

Bordering States will assess themselves for a good portion of this, expecting to get it back in electric power.

Shipping tolls and power revenues will go a long way toward paying for this "big ditch."

The electric power potential of the new dams along the route is almost limitless, with advantages to public and private enterprise alike.

Now, just what will it mean to Wisconsin farmers to get into the world trade picture?

We know, for instance, that the Midwest lies a long way from the east and west coasts. Hauls of farm products to the sea are long and freight rates are high.

RAILWAY CARS SCARCE

Railway cars are scarce and motor freight isn't equipped to handle all kinds of farm products. Storage space for surpluses is at a premium.

By the time all delays and disadvantages have been met, profit margins have shrunk on many commodities and markets have, of necessity, been limited on others.

Savings on water shipment are substantial. But shipping by short haul to Milwaukee, a wheat farmer can save 400 miles over the distance from New York to Liverpool, where wheat prices are set.

That means a saving of 12 cents a bushel. And often you may actually save 50 percent of your costs by using water transportation.

An even more fantastic saving is predicted by an article in Seaways Magazine. "Thirteen dollars a ton cost of shipping cargo via rail from the Midwest to the Atlantic will be slashed to approximately $1.70 for a seaway trip," it says.

SHIPPING RATES LOWER

Actually water-shipping rates figure out 10 times cheaper than by rail and avoid some 4 or 5 handlings.

These savings, plus increased volume of sales in world trade, should bring big profit advantages to the Wisconsin farmer.

Also, his front door will be open to the rest of the world with all the interests and cultures it will bring to him and his family.

The 1955 agricultural exports from Milwaukee, in round numbers, totaled 4,000 tons of dried milk, 800 tons of butter oil, 1,100 tons of cheese, 6,000 tons of lard, 1,300 tons of meat and fatbacks, 7,000 tons of linseed meal, 7,000 tons of hides, and 2,000 tons of flour.

With the St. Lawrence seaway leading to our lake ports, those figures should multiply many times.

The Voice of Democracy

EXTENSION OF REMARKS
OF
HON. CARL T. DURHAM
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. DURHAM. Mr. Speaker, the Voice of Democracy contest, sponsored each year by the National Association of Broadcasters, Radio-Electronics-Television Manufacturers Association, and the United States Junior Chamber of Commerce, has recently been concluded. Of the 12 national semifinalists to compete for this award, one contestant came from the city of Greensboro, N. C., which lies in my congressional district. This young student, Miss Frances Demetriou, came to the United States from Greece in 1949. At that time she could not speak English. She is now a sophomore at the Greensboro Senior High School.

Miss Demetriou, along with the other semifinalists in the contest, was honored at a banquet at the Sheraton Park Hotel on Friday, February 22, at which time the winner of the contest was announced.

I think my colleagues in the House will be interested in the speech made by Miss Demetriou as one of the semifinalists. It is a high tribute to our country, which gave her and her family refuge, and it points up in an impressive and heartwarming manner the value of the freedom which we here enjoy.

It was a beautiful day when we left our village. The soft breeze was swinging the corn back and forth in the fields and the happy songs of the birds were echoing through the valley. Yet, ladies and gentlemen, there was a feeling of tension in the air, a feeling of doom.

Into the mountains we went, seeking refuge from those who wanted to govern us and take away our freedoms. When we reached a cliff, all of us turned and looked at our valley for the last time. It was very

picturesque, with its high mountains and hilly meadows. Even though I was a very small child, I knew that I would never again see our valley. I knew that I would never again skip along the road without a care in the world.

For days we heard nothing; it was as though everything had come to a standstill and waited for destruction to come. On the fourth day we saw a cloud of smoke coming from below, and we knew that they were burning our village. Do you know how it feels to see all your dreams, all your lifetime hardships, go up into smoke in a matter of minutes? I'll tell you how it feels. It feels like the world is coming to an end for you. In that moment you die a little inside, though you utter no word of pain; it hurts deep, deep inside of you. Your facial expressions are of torment, of fear, and of defeat.

After a week, we returned to our destroyed village. As far as the eye could see there was nothing left except ashes. Here was nothing for us; but since we were people who had a desire to live and to work for a better life, we turned to face the fate of tomorrow. "Where?" you ask. To America, the land that had given shelter to those who were in need of it. For hundreds of years this country had opened its doors to the homeless. My mother, my brother, and I were among the thousands that entered the doors of this country.

We were welcomed. We were given a chance to build a happier and more secure life for ourselves. Though we were foreigners we were given the same rights as those whose ancestors came to America on the Mayflower. We are happy that we live in a democratic country. I have seen the happiness in their faces. I have seen it in the face of a cafe owner who a short number of years ago was an immigrant himself and without hope. I have seen it in the faces of those who were getting their citizenship papers. I have seen it in the faces of a family going to church on Sunday. Freedom to worship as they please; in their country it was forbidden. Here we have freedom of religion. We are proud that we live in a country which has more jobs, more food, more factories, more schools than any country in the world. Today we are proud, proud to say "I am an American."

My story to you is not fiction. It is true. I have lived in Greece during the war, and I have seen men die for freedom. I have heard the anguished mother who had lost her only son in the war, but deep in her heart she knew he had not died in vain. I have seen young boys lined up against the wall and shot. People have lost their homes rather than admit defeat. Freedom is priceless. Freedom is life itself. Democracy to me means freedom. I know.

What the American Soldier Means to Me

EXTENSION OF REMARKS
OF
HON. W. PAT JENNINGS
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. JENNINGS. Mr. Speaker, a young constituent of mine, Robin Thompson, a member of the senior class of Honaker High School, Honaker, Va., has written a very commendable essay entitled "What the American Soldier Means to Me." This excellent work has been called to my attention by one of his teachers and I wish to bring it to the attention of the House.

Under leave to extend my remarks, I herewith include this essay in the RECORD and commend it to the Members:

WHAT THE AMERICAN SOLDIER MEANS TO ME

To me the American soldier means many things: security, freedom, courage which defies description, loyalty to the cause for which he is fighting, and willingness to die, if necessary, so that others may live in peace and security. To me the American soldier means manhood; the kind that Ralph Waldo Emerson was thinking about when he wrote:

"Not gold, but only man can make
A people great and strong;
Men who, for truth and honor's sake,
Stand fast and suffer long.
Brave men who work while others sleep,
Who dare while others fly—
They build a nation's pillars deep
And lift them to the sky."

The American soldier is a hero who believes in certain American ideals of equality, freedom, and justice so strongly that he is willing to sacrifice his life for them. He believes in respect for every individual; he believes in equality of opportunity; he believes that all men are created equal and that they are endowed by their creator with certain inalienable rights, and that among these are life, liberty, and the pursuit of happiness; he believes that "government of the people, by the people, and for the people" shall not perish from the earth. The American soldier believes in democracy.

The American soldier not only believes in democracy but he makes a substantial contribution to the strengthening and preservation of it by helping to keep our country strong and great. He is one of the hundreds of thousands of troops who make up our ground forces. He is a member of a fighting unit such as the infantry, artillery, or armored divisions. He operates on land; he meets the enemy face to face in combat; he defends our country against the forces of tyranny and oppression.

In peacetime as well as in war, the American soldier—quick, alert, and capable of leadership—is working to help his country and its citizens. In time of tragedy and disaster, the American soldier is on the scene working tirelessly to render first aid, relieve suffering, and restore order.

The American soldier is loyal—he possesses true patriotism which exhibits itself in everyday service and sacrifice. To him the pledge of allegiance to our flag and our patriotic songs are not mere words; instead they have meaning which is emphatic and strong.

To me the American soldier personifies the words of the poet Struthers Burt when he says:

"My people came to this country
In need of a land that was free,
So I think the only thing I can do,
If a decent man I would be,
Is to walk with my head held high and proud
For the blood that runs in me."

Yes, the blood of liberty and freedom of body and soul runs through the veins of the American soldier.

A Sign of the Future

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. ROGERS of Texas. Mr. Speaker, under unanimous consent, I place in the RECORD an editorial that appeared in an outstanding weekly newspaper in my district. I refer to the Memphis Democrat, which is published at Memphis, Hall County, Tex., by Mr. J. Claude Wells and Mr. Herschel A. Combs, two citizens of whom west Texas is deeply proud. This editorial expresses the thoughts, the sentiments, and the stamina of people who inhabit our section of this country. We hope everyone who reads this editorial will have an opportunity to visit the place of its birth and enjoy the good hospitality always afforded.

A SIGN OF THE FUTURE

An event which will be noted in the history of Memphis took place last Friday night in the Travis school cafetorium. This was the 37th annual Memphis Chamber of Commerce and Hall County board of development banquet. The banquet was a milestone in the history of this area, not because of the outstanding speaker, not because of the work that went into the preparation; but because it proved that the citizens of this area have decided that the drought can not and will not stop them from building a better community and county.

Ticket sales to the event reached a sell-out point Thursday afternoon and all day Friday many persons were asking for tickets. A new sign of life can be seen in the faces of farmers and businessmen as they prepare to enter the year in another struggle with the forces of nature and low farm prices and rising costs. But this year there is a little different glint in their eyes and a firmness in their jaws, which wasn't there last year.

This spirit of awakening to a new effort was manifested Friday night in the number of persons who attended the banquet and the other scores of persons who couldn't get tickets. It's a fine thing to see the people of this area strongly united behind an organization which is trying to improve our economy in every possible way. We, here at the Democrat, would like to take this occasion to rededicate ourselves to work even harder in the future for the betterment of this area.

If we all work together there is no limit to what we can accomplish. A wise man once said: One elephant can not move a hill but 100,000 ants can soon carry it away.

Tax Reductions for Teachers

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. AVERY. Mr. Speaker, several bills have been introduced during this session, H. R. 4662, 5318, 5390, 5466 and 5477, which would amend the Internal Revenue Code of 1954 to allow a reduction from the gross income for expenses paid by teachers for their further education.

The following editorial appeared in the Manhattan, Kans., newspaper, Tuesday, March 5, 1957. As the editorial points out, there is merit in the theory of granting special tax consideration to teachers who expend sums of money to further prepare themselves for the teaching profession. I bring the editorial to the attention of everyone be-

cause of the principle presented. The editorial follows:

HURRAY FOR HER

A Chicago schoolteacher is understandably irate. She has taken pen in hand and written her Congressman. In this case favorable action is apparently going to result, as it should.

The Chicago teacher's complaint is about income taxes. This certainly is not novel; everyone has a beef about them. And probably thousands of letters go to the Congressmen on this very subject.

But the teachers may have hit paydirt. We hope she has. Her complaint is that expenses of summer study are not deductible whereas business executives who take clients to the Stork Club can put that tab on their returns to Uncle.

"Teachers are bitter," writes the Chicago teacher, "over businessmen being able to entertain customers in the Stork Club and deduct the tax."

"We sit in stuffy lecture halls absorbing Plato, psychology and human dynamics, also for the purpose of increasing our income and can't deduct the tuition."

This gal's got a point and if it takes an act of Congress to rectify only this one glaring inequity in our system then it should be done forthwith.

Getting Post Offices Out of Banking Business

EXTENSION OF REMARKS
OF
HON. ELFORD A. CEDERBERG
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. CEDERBERG. Mr. Speaker, in line with the current drive to reduce the budget and get the Government out of competition with private enterprise, we now have before us a worthwhile proposal which I hope will be approved.

That is the recommendation of Postmaster General Arthur Summerfield to abandon the Postal Savings System.

This Government operation has long ago outlived its usefulness and there is growing public approval for its elimination as an unnecessary Government project.

A few days ago my hometown newspaper, the Bay City Times, commented on this as follows:

POSTAL SAVINGS SHOULD GO OUT

There is no conceivable reason why Congress should fail to take Postmaster General Arthur H. Summerfield's advice that the postal savings system be abandoned. The public itself has indicated a desire to do away with the service by heavy withdrawals of its funds from postal savings in the last few years.

The conclusion is that the public has found better places for its money—either in private investments, Government bonds or in private banks, at higher interest rates.

The only real excuse the postal savings system ever had for its existence—that it offered more security than did the banks—has been gone for more than 20 years. It disappeared when the Government started guaranteeing bank deposits. Now virtually any bank in the country is as safe a depositary as the post-office "bank."

The Government hardy can excuse its competing with private business when private enterprise can do the job satisfactorily, as it most certainly can in banking. The Eisenhower administration is pledged to take the Government out of business wherever possible. The great majority of voters has indorsed that pledge in two national elections. To say any more on the subject of postal savings would be to labor the point.

A column in the Syracuse Herald-Journal calls it a creaking system and makes the following comment:

A CREAKING SYSTEM—POSTAL SAVINGS CALLED USELESS

(By Sylvia Porter)

As I paid my housekeeper her salary the other day, she murmured:

"Now I'm off to the post office."

When I casually asked what she was mailing, she said:

"I'm not mailing anything. I'm depositing my money. I always deposit my savings there. It's safe."

Which short conversation brought about this column, for it reminded me that despite the fact that the Postal Savings System is utterly, even ridiculously outdated now, it still exists.

And more than 2 million Americans from coast to coast are still placing a whopping $2 billion of savings in it. These millions are being financially naive—even silly.

For the Postal Savings System pays no interest on funds until the money has been on deposit a full year. More than one-fourth of the deposits are withdrawn within 60 days.

Even when interest is paid, the rate is only 2 percent. This is impressively below the interest rate paid by most savings banks and savings institutions. United States savings bonds return 3 percent if held to maturity.

The safety factor no longer stands up at all. Since the Government now insures individual bank deposits up to $10,000 and the average postal savings balance is $750, the deposit is just as protected in a bank as in the Postal Savings System.

Certainly, the System made sense—once. Back in 1910, when Congress created the Postal Savings System, many depositors had an intense and understandable fear of banks. The financial panic of 1907 had wiped out hundreds of banks. Immigrants were hoarding their cash, sending it back to Europe for deposit in Postal Savings System there. The need for a safe system which would blanket the country and be backed by the magic name of the United States Government itself was obvious.

And right through the depression of the 1930's and the catastrophic bank failures of that era, the System continued to make sense.

But 1956 is hardly 1910 or 1932. As far back as 1952, the Comptroller General flatly told Congress, "the main purpose and justification of the Postal Savings System are no longer applicable. * * *"

In May 1955, the Hoover Commission recommended to Congress that it should abolish the System, give depositors a reasonable period in which to shift into other forms of savings. Just in the last congressional session, five bills were introduced to eliminate this anachronism.

Still, the System goes on. Ignorance, laziness of depositors, the mistaken belief that this is the best savings system—can these be the explanations for its continued life?

No, they are not sufficient. The real explanation is that the Post Office "makes money" on the System and doesn't want to see it die. It invests the deposits it gets in United States Government securities on which it earns at least 2½ per cent; it pays interest of only 2 percent. Its annual profit runs around $6.5 million to $7 million.

But this isn't a real profit. It's an illusion. For it's the Treasury which is paying the Post Office the money. And that means you and I, the taxpayers, actually are footing the bill.

It simply makes no sense—from any point of view. A Congress which even pretends it wants to cut down bureaucracy ought to get after this obvious form of it, and pronto.

Eighteenth Anniversary of the Founding of the Slovak Republic

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my statement as well as a letter which I received from Mr. Viktor Nesnadny, of Pittsburgh, on the occasion of the 18th anniversary of the founding of the Slovak Republic:

STATEMENT BY MR. FLOOD

On this occasion of the Slovak national holiday independence I wish to commend the National Committee for the Liberation of Slovakia for its great work which it is doing to liberate the Slovak people from the Communist oppression, and I hope that this organization, as well as other Slovak organizations, will fulfill all aspirations of the democratically minded Slovaks when it will be recognized as its Government in exile.

HON. DANIEL J. FLOOD,
Congress of the United States,
House of Representatives,
Washington, D. C.

DEAR MR. FLOOD: On the occasion of the 18th anniversary of the founding of the Slovak Republic, I would like to bring to your attention once more a few facts about Slovakia, which are still little regarded and often twisted into half-truths and lies.

The Slovak Republic was founded in peace time and was proclaimed by free decision of the Slovak Parliament on March 14, 1939.

It was recognized de jure by 28 countries, and de facto by 3. In a short time it consolidated the internal chaotic situation created in political, economical, and cultural matters by Czech opportunism. It was ruled according to democratic principles, the laws were made by a parliament chosen in free elections and consisting of members of several political parties.

During the short life of the republic, the country experienced a boom in its economy: Highways were laid, railroads expanded, new hydroelectric works built. The latest principles of social security were introduced to benefit people in all walks of life.

The Slovak University was completed and the school system enlarged on all levels. The Academy of Arts and Sciences prospered. Science and culture fluorished to an extent never dreamed of before.

Then in 1945 came Soviet occupation. In the face of strong Slovakian opposition, Czechoslovakia was reestablished. The old conditions of subservience were renewed, aggravated a thousand times by Russian communism. Still, the Slovak Republic lived on in the hearts of its constituents, and as a matter of fact, it continues to exist now even legally. For it can legally cease to exist only through a treaty in which its liquidation is established. Until such time Slovaks will not cease to insist on its continuity.

Today it is absurd to talk about Czechoslovakia as a state; it is no more than a

Soviet province. This Soviet satrapy represents nowadays an advanced stronghold of Russian imperialism, menacing the free world. Without doubt, this situation was made possible by the suppression, murder, and deportation to Soviet Russia of thousands of Slovak patriots.

There is every reason to expect that the Slovaks will continue in their fight against communism and against the reinstatement of Czechoslovakia, not only in their own interest, but also in the interest of freedom and the ideals of a democratic order in the world.

Mr. Flood, I know of your past efforts in behalf of Slovakia and the other nations behind the Iron Curtain, and I appreciate them strongly. For this reason I am confident that you will give every possible consideration to my present request, which is: Could you have this statement inserted into the CONGRESSIONAL RECORD?

Very truly yours,

VIKTOR NESNADNY,
Member of the General Assembly of the Slovak Liberation Committee.
PITTSBURGH, PA.

Anniversary of Hungarian Independence

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. ANFUSO. Mr. Speaker, the 109th anniversary of the Hungarian declaration of independence against foreign oppression occurs on March 15. This date is traditionally observed by Hungarians everywhere as the anniversary of their national independence. This year it takes on added significance for the people of Hungary and for the freedom-loving nations all over the world because of the heroic resistance last fall by the Hungarian people against its Communist oppressor.

Today, the Hungarians are a captive nation, suffering under the subjugation and enslavement of a ruthless regime. The people in Hungary have paid a huge toll in human lives lost, in property destroyed, in nearly 200,000 of its citizens forced to flee from the Communist terror, and the complete extinction of freedom—and all because they dared to stand up and ask for their independence and the right to live their own way of life.

The revolt in Hungary last October, I regret to say, has caught the United States and the Western world by complete surprise. As a result, we were totally unprepared to cope with the situation. We were not aware of what was taking place during the early days of the revolt, and we did not know what to do when it was discovered that an uprising was in full force. We hesitated to recognize or contact the Imre Nagy government, and this lack of action made the Russians realize that they could undertake their own brutal action without fear of any outside reprisals. Because of our unpreparedness, we missed a grand opportunity to help the Hungarian people achieve their freedom.

Nevertheless, the fight for freedom and the hope for national liberalization must not be given up. The people of Hungary are now sealed off from contact with the rest of the world. Yet we know that their indomitable desire for freedom and independence has not been extinguished, that it still lives in their hearts and minds. This annual observance is one way of keeping this desire alive.

We send our heartfelt greetings to the Hungarian freedom fighters on this occasion, together with our hope and prayer that their country will soon be liberated from the yoke of communism and will join the free nations of the world.

Adm. Richard E. Byrd

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. PHILBIN. Mr. Speaker, the greater American explorer, Adm. Richard E. Byrd, was buried today at Arlington National Cemetery in the presence of many high-ranking officials of the services and the Government, civil dignitaries and a host of friends and admirers. With solemn military and religious rites, this great American hero was borne to his last resting place.

I would not try here to recite or to appraise the illustrious achievements of this stupendous figure of our age. Born into a distinguished, historic family of successful business people and outstanding public officials, Admiral Byrd selected a Naval career and almost immediately became marked and noted for his exceptional ability, imagination and creative talents in many fields.

He was a pioneer in the development of modern aircraft and was one of the first men to fly across the Atlantic Ocean in the famous flight of the Navy from Newfoundland to the Azores.

Almost every month of his life saw new laurels come to this great American.

He flew across the North Pole, not once, but twice.

With superlative courage, he flung himself into the incredible rigors of the Arctic regions in order to carry out his scientific research.

Admiral Byrd was not performing these exploits merely for their own sake; behind each and every exploit was some scientific objective, and it is unquestionably the fact that his explorations brought us invaluable knowledge of vast unexplored regions of the world hardly ever touched by man. How much this work contributed to our defense could never be appraised.

On several occasions, he led very successful exploratory expeditions to the Antarctic and he remained in the frozen, barren wastes of snow and ice and terrifying low temperatures for months and months at a time in order to pursue his goal and complete his assignments.

The Navy Department, which he served with all his heart, not only in peace, but in two great wars, may well be proud of him as one of the greatest heroes in its history. Science, education, and learning in many fields—geography, astronomy, biology, botany, navigation, and many other special fields are lastingly indebted to this great man for new knowledge he made possible, which broadened the horizons and spread information regarding the vast Polar regions, obscured for so long in the mists of frigidity and barren silences.

Like all Americans, I greatly admired Admiral Byrd and was proud of my friendship with him that endured for many years. He had splendid personal qualities. Of pleasing, impressive personality and approachable manner. He was friendly, courteous, and cordial. His firmness of demeanor, his power of decision and his wise, sound judgments inspired confidence wherever he was known, and wherever he was in command, because Admiral Byrd was one man who knew what he was doing, how to do it, and he was of unceasing perseverance in reaching his aims.

It is difficult for me, as a friend and admirer, to find proper words to pay Admiral Byrd fitting tribute. To my mind, he was, not only one of the greatest Americans of our time, but one of the truly great Americans, who ever lived. His intrepid, courageous, fearless exploits will be emblazoned imperishably upon the most magnificent pages of American history. His achievements and contributions will live in the minds and hearts of the American people for many years to come. The star of his glorious accomplishments will shine as a beacon light throughout the centuries to inspire and guide men of courage to seek new and broader horizons either on this earthly globe or in the outer reaches of space.

Great Naval hero, patriot, and greatest of all explorers, Admiral Byrd takes a place in American history, reserved for the noble and the great. May he rest in peace.

To his stricken family in their sorrowful bereavement, I extend most heartfelt sympathy, and hope sincerely and pray devoutly that the Divine Maker may strengthen and encourage them to bear their irreparable loss—which is the Nation's and the world's loss as well—with that understanding and resignation that faith in Him can give.

Need for Public Review of Taxes Paid by Middle East Oil Companies

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. VANIK. Mr. Speaker, on February 19 I spoke on the floor of the House of Representatives on the need for pub-

lic review of income taxes paid by American companies engaged in Middle East oil operations.

In view of the tremendous commitments of economic and military aid made by our Government to the Saudi Arabian Government, which promise dollars and soldiers to protect Saudi Arabia and the Government of King Saud as well as the integrity of contracts between the Saudi Arabian Government and American companies, it is extremely important for the American people to know what part of this tremendous investment in the Middle East flows back to the United States Treasury in the form of taxes. They are footing a tremendous bill in underwriting an obligation which may entail the lives of many American citizens.

The American people have a right to know the complete picture of their obligations and their returns on the tremendous Middle East investments. Since there is a great public investment in these Middle East operations, there should be a public review of the tax responsibility of the beneficiary American corporations engaged in Middle East activity.

Following is a vital article on this subject by Marquis Childs, which appeared in the Washington Post on March 13, 1957:

SENATORS EXAMINE BIG OIL PROFITS

(By Marquis Childs)

The scene is a familiar one—the slightly faded elegance of a Senate committee hearing room crowded to the doors—and the principals are familiar, too. It is the subcommittee investigation into the oil industry that has long since left the initial objective—to inquire into the oil lift to Western Europe—to challenge directly the power of corporate enterprise.

The chairman, Senator JOSEPH C. O'MAHONEY, of Wyoming, has spent a great deal of his congressional career doing just this.

But there are two major differences this time. One is the fact that the giant companies have grown bigger than even Senator O'MAHONEY could have envisioned when he ended 3 years of TNEC testimony in March of 1941. Standard Oil of New Jersey is an $8 billion corporation.

A second difference is the politics of oil in the Middle East with all its urgency for the West.

Senator JOHN CARROLL, who came to the Senate from Colorado on his third try, is like a determined terrier worrying a very large bone as he presses in committee hearings for details of the taxes and profits of the oil corporations with their far-flung holdings.

With the executives of Standard of New Jersey, Gulf Oil, and other giants, CARROLL has sought to establish that, thanks to the 27½-percent income-tax allowance—for a wasting asset—the foreign subsidiaries of these companies pay little or no Federal income tax.

The fact that this 27½ percent depletion allowance can be taken not only on the profits of oil produced in the continental United States but by American companies operating overseas seemed to be news to some committee members.

Carroll concentrated on the Arabian-American Oil Co., 30 percent of which is owned by Standard of New Jersey, 30 percent by Texaco, 30 percent by Standard of California, and 10 percent by Socony. Executives testified that Aramco, which operates in Saudi Arabia, had total earnings for 1955 of $724,370,316.

Operating costs cut this down to $452,157,849. The company paid income taxes to Saudi Arabia of $192,742,624. Under a 1918 law, the amount paid in taxes to a foreign government can be offset against taxes which would otherwise be paid to the United States.

At the same time, the company got a depletion allowance of $121,698,005. As a result, according to the figures Carroll had put into the record, the company got net earnings free of taxes of $272,212,467.

While investigations produce headlines, the ratio of legislation to publicity generated by these inquiries is normally small. But Carroll is suggesting a change in the law that has thrown a scare into the big companies. This is either to reduce greatly or eliminate altogether the depletion allowance on oil operations outside the United States.

Such a threat is formidable because the real political pressure for keeping the 27½-percent deduction comes from the independents and the small producers in the United States. Senator O'MAHONEY, for example, has oil and gas producers in his State of Wyoming who would bring very effective pressure to bear if he were to go along with a move to abolish the tax deduction altogether.

But the independents and the small producers could hardly be expected to come to the defense of the big companies with their foreign holdings. The independents have tried hard in recent years to put up tariff and other barriers to keep out foreign oil. Thus far they have not succeeded.

Another element in the hearings is the rise in the price of petroleum products started by the Humble Oil Co., a subsidiary of Standard of New Jersey with huge holdings of gas and oil.

The big headlines are, of course, going to the McClellan investigation of prostitution and labor racketeering. But the Senators conducting the oil inquiry are dealing with something nearly as interesting as sex, and that is big money and the price that every consumer must pay.

The Antithesis of Communism

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. CRAMER. Mr. Speaker, many of the Latin residents of the First District of Florida depend upon the Diario Las Americas, a newspaper published in my State for news of friends and common cultural interests throughout Central and South America. Dr. Francisco Aguirre, published of this paper has continued to strive, as indicated in the newspapers slogan, "for liberty, culture, and hemispheric solidarity." I believe it important that the Members of the House of Representatives become acquainted with this publication and particularly with an editorial entitled "The Antithesis of Communism" published Saturday, March 9, 1957. This is effective use of a great medium to promote the cause of democracy in our representative republic. I include this editorial in the RECORD at this time.

THE ANTITHESIS OF COMMUNISM

Nothing is feared more by Soviet imperialism than a true democracy, well organized and respected. The Communists know that what could be called the genuine antidote for their system is a democratic regime, when it functions on the basis of sobriety and, above all, when it functions in its true sense, as far as this is possible in every human institution.

The existence of regimes of authentic democratic meaning cause immense wory to the hierarchs of the Kremlin. They know that among the peoples accustomed to the good things brought by that type of regime, Communist work is more difficult, even when this does not mean, of course, lack of Communist infiltration, as there is, in a small scale, in the United States of America, where there is a genuine democracy.

Before people who enjoy the benefits of freedom and democratic order, Communist campaigns knock themselves out against a wall, because the trust the people have in a democratic system is a barrier which rejects the catechizing work of the false Red apostles.

The Communists know so well how much harm democracy does to them that, in order to deceive the masses—even if they fool only the candid—they call their movement popular democracy, indulging in an unforgivable pleonasm, which can be explained only as a desperate effort to confuse the people, to make them believe that the Red doctrines are also democratic.

In the doctrinary field and, above all, in that of practical achievements, communism is, fundamentally, the antithesis of a well understood and straight democracy. The leaders of international communism know this, perhaps better than anybody else. It is, for this reason, that they fear much, very much, the countries where democracy is dignified by the government and the people.

Every effort that can be made, beneficial to the prestige of the democracy, of its security in the institutional life of the people, must be made, so as to be in better condition to repel Communist infiltration and to create, in the conscience of every citizen, the loftiest resistance and repudiation of a system which denies the political freedom of human beings and their individual dignity.

New England Is Disturbed Over the Power of Oil

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 13, 1957

Mr. PATTERSON. Mr. Speaker and distinguished colleagues, the peculiar prices of oil and gas are creating increasing concern in New England, particularly in the State of Connecticut. This is evidenced by the very significant letter which recently appeared in the entirely objective newspaper, Waterbury Republican. Under unanimous consent, I insert this thought-compelling letter at this point in the CONGRESSIONAL RECORD:

THE POWER OF OIL

To the EDITOR OF THE REPUBLICAN:

Connecticut and New England are largely dependent on oil and gasoline for home, industry, and transportation. This is pretty much true of the whole country. We are all captive consumers since there is no substitute to use in the equipment we have.

We are at the mercy of the giant oil producers who recently, in unwritten collusion, all increased oil and gasoline prices. Their identical prices despite our anti-trust laws make a cynical joke of the frustration of our Representatives in Washington. The recent

price increase cost each family about $30 per year. There is no control over when the next one will come, or how much it will be.

Electricity for light and power at my own place in Roxbury costs $249–$250 per year and the supplying companies are subject to commission regulation. Fuel oil and gasoline costs me $500–$600 per year—more than my real-estate taxes. But there is no public control or regulation over the oil producers. Their latest price increase came at a time when because of the Suez crisis, there was no prospect of consumers securing foreign oil at less than the prices the domestic monopolists charge.

National figures show that oil supplies and inventories are at their highest levels in history in this country. There was no justification for a price increase. The producers brazenly defied the President's mild request that prices be held down to avoid inflation. He did nothing about it and the record of this administration on prices and budget gives us no hope.

The oil industry has just had another highly profitable year (1956). Its common stocks like Standard of New Jersey, a $7 billion asset corporation, have been split and have soared to unprecedented heights. These stocks have been bonanzas for investors. Standard is the favorite of all the investment trusts, and the rate of return was very high before the price increase.

The price of crude oil is now 2½ times the price at the end of the war. The industry has been the most favored by tax laws and supply limitation. It is not the dealers but the giant producers who are to blame.

The top 15, giant oil producers control the industry and fix the prices while our representatives and administrators stand idly by. They could do something about it, but do not act because we, the consumers are too stupid or indifferent to complain, as we should and have every cause to do. The combined assets of the top 15 companies amounts to more than $20 billion. Their net income after taxes in 1955 was $1,929,000,000—they are bigger and richer than many whole States in the Union combined. They have over 250,000 oil stations in the United States whose operators are vassals to the giants.

It is time now to recognize that this gigantic oil industry, with such power over all of us, has become a public utility and its prices and conduct should be subject to public regulation.

Sincerely,

THEODORE K. QUINN.

ROXBURY, *February 25, 1957.*

A Case for a Dam

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 13, 1957

Mr. METCALF. Mr. Speaker, House Joint Memorial 1 of the 35th Montana Legislative Assembly would have asked the Congress to authorize construction of Paradise Dam on the Clark Fork River in Montana and to appropriate funds for detailed planning and construction.

It read in part as follows:

Now, therefore, be it resolved by the Senate and House of Representatives of the State of Montana, That the Representatives of the State of Montana in the Congress of the United States be urged and requested to introduce and the Congress of the United States be urged and requested to enact into law necessary and proper legislation to authorize construction by the Federal Government of the Paradise Dam on the Clark Fork River in the State of Montana and to authorize that sufficient appropriations be provided for the detailed planning and construction of the Paradise Dam; be it further

Resolved, That such legislation include a reservation of hydroelectric power to be used within the State of Montana.

This memorial died in committee in the house following a public hearing.

House Joint Memorial 8 would have asked Congress to authorize construction of Glacier View Dam on the North Fork of the Flathead River in Montana and to appropriate funds for detailed planning and construction.

It read in part as follows:

Now, therefore, be it resolved by the Senate and House of Representatives of the State of Montana, That the Representatives of the State of Montana in the Congress of the United States be requested to enact into law necessary and proper legislation to authorize construction by the Federal Government of Glacier View Dam on the North Fork of the Flathead River in the State of Montana and to authorize that sufficient appropriations be provided for the detailed planning and construction of Glacier View Dam; be it further

Resolved, That this assembly request the Congress, in making appropriations for the construction of the Glacier View project, to define the compensations that shall be received from the Government of the United States by the County of Flathead and by affected cities and school districts in said county for extraordinary expenses resulting from expanded services required in the fields of school and hospital facilities, health and sanitation, and police protection incidental to the construction of said projects; and to provide all necessary funds and take all needed action to insure the construction of all transportation and other facilities needed to provide opportunity equal to that now existing of access to mines, to forests in Federal, State and private ownership, and to manufacturing and refining plants, to the end that the present steady and continuous employment of Montana people depending upon forests and mines for their livelihood will not be adversely affected.

This memorial passed the house and died in the senate by only two votes.

So apparently there is sentiment in Montana for a dam in Glacier National Park.

Another point of view is presented by Mr. David R. Brower, executive director of the Sierra Club, in the February 1957 issue of the Sierra Club Bulletin.

Note that, instead of stating the question as being one of private development by the Montana Power Co. as against public development at Paradise, he says it is a question of Paradise Dam or Glacier View. The alternative question is Paradise or Spruce Park, Ninemile Prairie, Swan Valley, and Flathead Lake. Mr. Browers' article follows:

A CASE FOR A DAM

A decision is imminent that will result in a very serious threat to Glacier National Park. The threat is all but unknown. The Sierra Club just happened to stumble upon it last year in the long course of urging the National Park Service and the Secretary of the Interior to protect Glacier National Park from the proposed Smoky Range Dam, the obscure name for a dam put forth as a substitute for the proposed Glacier View Dam. Both dams would have severely impaired Glacier Park. Former Secretary of the Interior Douglas McKay firmly opposed Glacier View, but the Department's Smoky Range position wasn't clear. One of Secretary of the Interior Fred Seaton's first moves when succeeding Mr. McKay was to oppose Smoky Range firmly and clearly.

But this isn't to be about Glacier View or Smoky Range Dams, or any of the long list of dams in the Pacific Northwest that the Sierra Club is alert to in their relation to our Scenic Resources Review. Let's focus instead on two mutually exclusive dams—Buffalo Rapids No. 4 and Paradise. One of them promises to be history-making; there seems to be a firm basis for conservation support for Paradise.

WHAT IS THE PARK THREAT?

Montana Power & Light Co., a subsidiary of Anaconda Copper, is contemplating a moderate-sized dam at a site known as Buffalo Rapids No. 4 on the lower Flathead River, a tributary to the Columbia and well downstream from the sites within Glacier National Park. This site lies within the impoundment area of the proposed Paradise site which the Bureau of Reclamation's studies have determined to be the best of the 109 sites studied in the Clark Fork Basin. Paradise Dam was locally opposed early in the decade owing to its effect on Indian lands, on settlements, and on a transcontinental railroad and highway. It would inundate pretty country, but nothing scenically outstanding. The reclamation aspects of the project would bring in more agricultural land than would be inundated. Rail and highway relocation costs would not hamper the financial feasibility of the project.

But local opposition and Montana Power Co.'s interest in Buffalo Rapids No. 4 have combined to remove Paradise from active consideration by the Bureau of Reclamation. Montana Power Co.'s license to study Buffalo Rapids No. 4 has been renewed. If the company asks the Federal Power Commission for permission to build and if the Bureau of Reclamation is prevented from arguing the superiority of the Paradise development, then Paradise Dam can never be built. This will lose the finest water-storage opportunity in the Clark Fork Basin. It will eliminate one of the major opportunities for flood-control storage (Paradise has seven times the capacity of Buffalo Rapids No. 4) in the Columbia main control plan. In contemplation of this eventuality, the Corps of Engineers and the Bureau of Reclamation are jointly studying other sites where this flood-control opportunity, as fragmented, can be compensated for. Best of these, but not under active consideration at present, is the Glacier View Dam site within Glacier National Park. Others are at Spruce Park, Nine-mile Prairie, Swan Valley, and Flathead Lake—all opposed by local groups. Opposed or not, these dams do not add up to the storage sacrificed at Paradise, and their nonreimbursable costs for flood control would in all probability be higher, for less storage, at these sites than at Paradise. Pressure would be increased for upstream regulation, as at Glacier View, once Montana Power had completed its Buffalo Rapids No. 4 Dam and required upstream reservoirs to firm up power generation. No other site could compete with Glacier View in this respect, for sheer engineering and economics.

In summary, if the apparent status quo should prevail, a private company could build Buffalo Rapids No. 4, Paradise could never be built, and to the present demand for Glacier View Dam would be added the demand of Montana Power Co.

If the Government takes the initiative, rather than wait for a private company to invite it to do so, Paradise dam can be built instead, and the flood-control necessity and economic feasibility of major upstream storage can be eliminated, and all this probably

at less cost to the Government. Glacier National Park would be safe from this threat.

PARTNERSHIP: TO BE OR NOT TO BE?

Full development at Paradise can probably be accomplished in only two ways: (1) entirely by the Federal Government, or (2) by the Federal Government in partnership with a private utility, such as Montana Power Co. The former alternative would provide lower cost power to the region, at an indirect cost to the rest of the Nation, the theory being that this stimulus to an underdeveloped region would turn out to be a good investment for the rest of the Nation—the good elements of TVA or the upper Colorado project.

Under current administration policies, the second alternative may be chosen, provided it is decided to favor full development. Montana Power Co. would finance the power installation, while the Federal Government would add its own incremental share for flood control, navigation, reclamation, conservation pool, and recreation, and would sell falling water to the Montana Power Co. in order to pay out the Government's reimbursable costs. Power cost in the region would be higher, but the indirect cost to the rest of the Nation would be minimized, as would the danger of Government power monopoly. Private initiative would be stimulated.

Either way, full development would insure maximum downstream power benefits and minimum upstream scenic impairment.

One Government official who watched the Sierra Club's role in the Dinosaur controversy has commented, "After all, you are in an advantageous position in this Paradise situation—as well off as you would have been if you had tackled the Echo Park problem back in 1946." But perhaps not. The building of Echo Park Dam and the destruction of Dinosaur would require legislative action in what you might call the fishbowl of Congress, where all could see and be heard. But the building of Buffalo Rapids No. 4 and the destruction, in time, of Glacier Park requires only executive inaction, pretty much behind closed doors.

At Echo Park in 1946, whatever danger there was, was obscure—so obscure that no one noticed. Not until 1953, when the direct-fire artillery was aimed at the white of the Dinosaur's eye, did the conservationist public become effectively excited. At Glacier in 1957 the danger is obscure. The artillery is laid for indirect fire—over the horizon and out of sight. Quite possibly without Montana Power's knowing it, the gun is laid on Glacier National Park. The lanyard will be pulled if the Federal Power Commission approves Buffalo Rapids No. 4; there will be no authorizing legislation, no debate, no more widespread conservationist interest than there was at Hells Canyon. Just destruction by defualt. If that lanyard gets pulled, no amount of protest will stop the shell in its flight to Glacier.

A QUESTION OF LEADERSHIP

Who should take the initiative in seeing that this doesn't happen to Glacier, with the best dam site in the Clark Fork Basin being wasted in the bad bargain? The Federal Government? Executive or legislative branch? Local government? The Montana Power Co.? Or some wandering conservationist without portfolio?

One wouldn't envy the wandering conservationist his task of persuasion. He would need to be the best ventriloquist yet to get the Indian to say, "Flood my home and farm"; or the utility to say, "Please, Mr. Secretary, tie me with your partnership red tape instead of letting me make more money without it"; or the Great Northern to say, "Tear up this good railroad along the stream and replace it with one along the contours"; or the Montana Highway Department to say essentially the same; or the local county to ask that the reservoir basin land be taken off the tax rolls.

Isn't it leadership in reverse to expect this? There seems to be little doubt that a full treatment at Paradise will provide the greatest good for the greatest number in the long run—of flood control, water conservation, power generation, stimulation of agricultural and industrial development, and an intact national park, too. The Government has the staff and facilities for finding out for sure if this is so. Having found out, it has the means of explaining this to the local people, and of acting for the national interest if the people refuse to listen.

MAJOR GAINS, MINOR LOSSES

After all, the railroad won't suffer. The Bureau of Reclamation outdid the Southern Pacific's engineers at Shasta Dam. The highway can be accommodated as well. And there's no question of whether farmland will be inundated, but of which farmland. Five million acre-feet of water will cover far less acreage if it is stored at Paradise than if it is stored in dozens of smaller reservoirs instead—a pitcher of water will fill a good many saucers. Higher streams are steeper, take higher dams to store less water at greater cost. Montana Power Co. needn't suffer. Everywhere you look there are major gains for minor losses; the Government, acting for the people who will profit from these gains, and paid by those people to lead, can make this all clear and can do it authoritatively. The Sierra Club, or an equivalent organization, isn't equipped for the job, nor is that its purpose. For every dollar the club has to spend, the Government has a million.

Legislation may soon be introduced authorizing the construction of Paradise, the dam that promises to save a park—not by "making the park more beautiful," to quote a line from the old Hetch Hetchy refrain, but by being far enough away from the park, and big enough to minimize the inundation of other acres of scenery and fertile land. Paradise was almost lost. We have reason, however, to look forward to two new chapters in the story, Paradise Be Dammed, and Paradise Regained.

DAVID R. BROWER.

The Harrison Corn Amendment

SPEECH

OF

HON. AUGUST H. ANDRESEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 4901) to establish a minimum-acreage allotment for corn, to provide acreage-reserve programs for diverted acres and for feed grains, and for other purposes.

Mr. AUGUST H. ANDRESEN. Mr. Chairman, I rise in support of the Harrison amendment. This amendment is fundamentally an effort to provide to commercial corn farmers an opportunity to show with their corn planters which of the two options on which they voted on December 11, 1956, is preferable. Let us analyze this legislation in detail and then discuss its great potential advantages.

First, the producer may adjust his acreage in line with his share of the 37.3-million-acre allotment. If he plants not more than his share of this 37.3-million-acre allotment, he will be eligible for price support at not less than $1.36 per bushel. If he so desires, he may enter into a contract with the Government to further adjust his corn acreage by placing some acreage into the acreage-reserve program, for which he will receive payments at the rate of 90 cents per bushel times the farm normal yield. Thirty-eight percent of those voting favored this approach.

Second, he may have the option of operating under a 51-million-acre base program. Under this latter program, he must put not less than 15 percent of his base acreage into the acreage reserve or the conservation reserve in order to be eligible for price support at $1.31 per bushel. If he puts 15 percent of his corn-base acreage into the acreage-reserve program, he must reduce his corn acreage below his base by this amount. For this he will be paid at the rate of 90 cents per bushel times the normal yield of the farm. If he decides to put 15 percent of his base into the conservation reserve, he will receive a much reduced payment in the neighborhood of $9 to $15 per acre. Under this option, he may plant up to his share of the 51-million-acre base. Sixty-two percent of the producers who voted favored this approach.

What benefits will be derived from this legislation?

First, it should be remembered that under either of these two options the Corn Belt farmers will be making a sharp downward adjustment in their corn acreage since the 1956 planted acreage of corn in the commercial-corn area was 57 million acres.

Second, unless the corn farmer plants within his acreage allotment or base these same farmers will not be able to participate in the soil-bank program for other basic crops such as cotton, wheat, tobacco, or rice.

Third, unless the corn producer is given a realistic opportunity to adjust corn acreage, the effects will be felt in every county in the United States. This is due to the fact that corn will be cheap. The cheap corn will be marketed in the form of cheap livestock and livestock products. The marketings of livestock, dairy, and poultry products account for 55 percent of the cash farm income of the United States.

Fourth, price support to corn producers in the noncommercial corn area will be automatically increased by about several cents per bushel.

Fifth, no additional time-consuming expensive record checking will be involved. Farmers have in their hands both their acreage allotments and their bases.

I am sure that when you have considered the implications of our failure to provide a realistic program to corn producers up to now that you will vote in favor of this legislation. There is no reason why corn producers should not be given a fair chance to make a downward adjustment in their production with minimum acreage allotments comparable to those provided to producers of other basic crops, such as cotton, wheat, peanuts, and rice. It is simply a matter of justice for corn producers. With this amendment, the soil bank can do the job which it was designed to do.

"New Wine in Old Bottles"—A Challenge to Educators and Legislators

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 20, 1957

Mr. SAYLOR. Mr. Speaker, it is my good fortune to have as a constituent one of the outstanding educators of my State, Dr. Clara E. Cockerille. Dr. Cockerille is the State chairman of the Pennsylvania Commission on Teacher Education and Professional Standards, as well as the assistant county superintendent of schools of Armstrong County.

At a recent dinner, given by the central western convention district of the Pennsylvania State Education Association for the members of the Pennsylvania General Assembly and Members of Congress, she made the principal address.

I was so impressed, as were all of the other legislators present, that I feel Dr. Cockerille's remarks should be widely distributed because they call for present-day consideration of an urgent problem.

The address follows:

The representative form of government which establishes for our Nation the democratic way of life must be supported by a foundation. Strong homes, vigorous churches, honest government, and sound public education are the pillars on which our way of life rests. Tonight at this dinner are represented 3 of those 4 institutions. The home, by a member of the official family of our State congress of parents and teachers; the Government, by our honored guests, the representatives to the General Assembly of Pennsylvania and the Congress of the United States; and public schools, by the official representative of the Pennsylvania Association of School Directors and the hundreds of teachers, members of the Pennsylvania State Education Association who are the hosts on this occasion. It is fitting that the committee has chosen to use our national colors and emblems in the decoration of this room and tables. Home, schools, and government are inseparable parts of the foundation on which government of, by, and for the people rests.

Tonight we say a sincere "Thank you" to the State assemblyman and Senators and to our Congressman. Not for bills in favor of schools and teachers which you have supported, but for your willingness to be a part of our lawmaking bodies, without which we could not have representative government. We know that for each of you it has meant the assuming of burdens of decisions, the willingness to put your personal interests in the background and devote your time to a common cause. We thank you for your willingness to talk to us, to answer hundreds of phone calls, to acknowledge letters and to attend banquets on Saturday night, when it would be more fun to stay at home and watch TV.

We know that you have been willing to assume an active part in Government affairs knowing full well that few men in your positions become famous, and still fewer become rich (if they do, there is an investigation). We appreciate your service in our behalf. And it has been service over a long period of years. Those founding fathers of Pennsylvania, perhaps quite wisely, said in our Constitution only that there should be schools. Our system of education in Pennsylvania is the result of decisions, some of them momentous and history making, of our legislative bodies. Because the future of our education depends on decisions of lawmakers, the teachers of this State and Nation must be close to the lawmakers. We do not always see alike when we look at the schools and the educational program. We who have chosen education as our profession see it from a close-up view. We see it in detail. Sometimes to others it appears that we see it magnified. To you legislators who of necessity must see education as only one facet of a State program, the problems of education appear different. You have a farther away perspective and sometimes to us it appears that you see the problems in reduced size. Because our viewpoints are different, but our goal of sound public education is the same, we need to talk to each other to try to bring the far and near perspectives into clear focus and to find the right and just answers to our problems. There was a time when teachers did not talk to legislators (that was when we didn't have enough money to travel to Harrisburg). Now, thanks to you, our salaries permit a trip to Harrisburg and so we come. We've learned to talk to you—how to do it and when to do it.

We've learned so well that you sometimes say, "The teachers have a lobby." Perhaps in a strict sense that is true. It is nearer our intent to say that we have come to believe that you want to know what we think, and we have tried to plan our talking so that it is helpful to you as you weigh the factors that determine your decisions. Tonight we do not want to talk to you about salaries or subsidies or reimbursement fractions or buildings but we will be around to show you our viewpoint on all of them as the work of the legislative bodies continues. Tonight I thought I would like to direct the thinking of this group to what I believe is an underlying cause of many of the problems of education in Pennsylvania. I would like you to think as a united group of citizens, not as teachers or legislators. We have chosen our roles, perhaps in a weak moment but the choice has been ours. No one made us be teachers or run for government office. The solutions to the problems which come to us because of the interdependence of legislation and education must be sought together.

Among the rich and colorful words of the Bible is the admonition to be cautious about putting new wine in old bottles, lest the bottles burst and the wine be wasted. Can we not attribute many of our perplexing situations to an attempt to force new elements of society and education into existing patterns which are inadequate. There are four to which I would like to direct your thinking.

Finance: The provision of funds for education in Pennsylvania is an everpresent problem. It is in the attempt to solve this problem that teachers and legislators develop the most ill feeling toward each other. It is the area that often calls forth hasty heated words. The cost of all areas of living is high, prices have increased, wages have increased. What were once luxuries have become necessities. People want the best for their children, not the minimum. Yet we are attempting to meet all the new demands and rising costs with a financial framework which was designed decades ago when the economic picture was entirely different. We are attempting to force today's financial needs into yesterdays methods of financing and we are not succeeding. We get red in the face as a small girl does when she attempts to force her doll carriage through a narrow opening—and we are no more successful than she is—if it goes in, we've smashed it. At a time when men invest their wealth in many ways we hold to real estate tax as the chief way to finance schools as we did a century ago when real estate was one of the few ways that men could invest money. Should we be considering a new container for our school finances instead of being angry because today's needs overflow our old container?

School buildings: Our children have overflowed this container. We have more children than we have safe, desirable classrooms. We knew the children were being born, we have done all we could to help them live, but we are surprised and rather annoyed that they have overflowed our schools. We have schools in communities that no longer have school children and we have children in communities where there are no rooms for them. Should we not consider new schools for the flood of children. Not just more buildings. Some areas of our Nation have building codes that take no account of recent developments in the field of materials and construction. All that World War II taught us about construction cannot be used in many areas because we are still thinking about school buildings as we thought of them in 1900. Here is a field that needs new thinking.

Curriculum: What should we teach? How can we meet the needs of individuals and of our democracy in our schools? Today the children have many teachers outside of school. Television, radio, movies, and travel have resulted in our children having much more general information at 6 years of age than they did at 12 years of age a generation ago. Our pupils live in today's world. The attempt to force today's youth into yesterday's school is resulting in explosive situations. This is most evident in our high schools. Our high schools were designed for a select group of pupils, those pupils who wanted to learn. Compulsory education, labor conditions, our society in general have resulted in the majority of all youth being enrolled in high school. The framework of organization and subjects designed for certain students is being forced to accept all youth. Most of us are concerned. We need to be concerned enough to take steps to rethink our schools, their courses of study, schedules, and organization in terms of the youth of our State today. Education for all the children of all the people means schools that can take the bright, the dull, the backward, the well behaved, the unruly, the talented, the ordinary, the adjusted, the maladjusted, those who delight in learning from books, those who reject book learning. The wine of the young of our communities is precious. We can't afford to waste it because of forcing it into schools that are not capable of receiving and holding it.

Organization of schools and school districts: Ours is a time of easy travel, of rapid communication, of specialization. Yet our basic school organization is in a pattern designed 100 years ago when travel was difficult, communication limited and the teachers, for the most part, boys and girls who 1 year before had been in eighth grade themselves.

With trained administrators, graded schools, and well-prepared teachers, we continue in an organization designed for untrained teachers, teaching in small schools with no help at the local level. New demands for school services needed in today's picture, new needs caused by expanding the century-old pattern. Consideration or reorganization at several levels is an immediate need.

Citizens in general, legislators, and teachers all must share the blame for some of the problems of public education which confront us. We all love old containers. We who insist that all our machines come in next year's packages hold tenaciously to old packages for our social institutions. Countless people who never question that 1958 cars will be more desirable than 1957's ask,

"Shouldn't we return to the schools we used to have?"

Together we must find answers to questions such as, "How high shall teachers' salaries go?" "Shall the Federal Government finance school buildings?" "Shall the compulsory school age be lowered?" "Should there be a county superintendent of schools?" Beyond that we must work out answers to even bigger questions. How can 1957 school costs best be met in 1958? What is an efficient economic school building today?

How can we make our schools effective for our secondary school pupils today?

What organization of schools will provide the services needed today?

Our task involves evaluation of the bottles into which we plan to pour the wine of education, and the action necessary to find new containers when those we have used in the past are no longer suitable.

Why must we be concerned with these difficult tasks? Because we have chosen to be a part of two of the pillars of our way of life—education and government and—

"When we lie down worn out
Other men will stand, young and fresh.
But by the steps that we have cut they will climb,
And by the stairs that we have built they will mount.
At our clumsy work, they may laugh.
And when the stones roll, they may curse us,
But they will climb and by our steps
They will mount and by our stairs."

New Industry For Central Kansas Drought Area

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1957

Mr. BREEDING. Mr. Speaker, my district is making a bid for new industry to supplement its income and to keep those who have been forced off the farm from leaving that area of Kansas completely. Because of Secretary Benson's farm program, decreasing acreages, increased costs and low parities, it behooves the governing bodies of the many cities located in my district to make every possible effort to obtain new industries in order to secure employment for its many citizens and to supplement income ordinarily derived from agricultural products. The city of Liberal is making a bid for such industry. This is a very thriving city and has huge reservoirs of natural gas, and plenty of underground water which is most attractive to new industry. The following resolution was forwarded to me just recently which resolution is signed by the mayor, city clerk, as well as several civic organizations in the city of Liberal, inviting new industries to locate there:

Resolution 332

A resolution inviting new business and industry to Liberal, Kans.

In connection with three important phases of national policy—namely:

1. The national safety requires that industry be decentralized.

2. An orderly adjustment and transition in the Nation's agriculture requires that off-the-farm employment be provided for operators of family-sized farms.

3. A wide distribution of industry is needed for a geographically balanced economy.

The governing body of the city of Liberal desires to spread the following resolution upon the record of its proceedings:

Be it resolved by the governing body of the city of Liberal, Kans:

SECTION 1. That this city government hereby formally recognizes that the city of Liberal and vicinity has become an outstandingly pleasant place in which to live, work, and raise a family. Through its recent growth and development it now offers most of the advantages of urban living, with none of the disadvantages that arise from the congestion in the larger cities.

SEC. 1. That it is further recognized that this area could take care of additional business and industry and a substantial increase in population without detracting from the advantages it enjoys. That the supplies of natural gas and water are abundant and all city services, facilities, and utilities (both city and privately owned) have kept pace with the area's growth and are now in a position to be immediately expanded and extended as needed.

SEC. 3. That the city government, and the community as a whole, welcomes and invites new business and industry and it is deemed appropriate that this be made known to the leaders of Government and industry who are concerned with national policy.

SEC. 4. That certified copies of this resolution be sent to J. FLOYD BREEDING, Congressman from the Fifth Congressional District of Kansas, and to others at his direction.

Adopted by the governing body of the city of Liberal, Kans., and signed by the major, this 5th day of March 1957.

CHARLES M. LIGHT, Jr.,
Mayor.

Attest:

PAUL BURKE,
City Clerk.

Bolivia and the Future

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 27, 1957

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the following address given by His Excellency Victor Andrade, the Bolivian Ambassador to the United States on February 23, 1957, before the Cosmopolitan Club of Pennsylvania State College at University Park, Pa.

His remarks point up the need for more attention by us to our neighbors to the south. The address follows:

BOLIVIA AND THE FUTURE

(Address by Victor Andrade, Ambassador of Bolivia, before the Cosmopolitan Club of Pennsylvania State College, Saturday evening, February 23)

My knowledge of American history is by no means comprehensive, but I find the subject extremely interesting and study it when I have time. The merger of the Original Thirteen States into what later became the United States was a miracle which has affected the destiny of the entire world.

The union of States withstood the impact of a great Civil War which was, until World War I and World War II, the greatest armed clash that the world had ever witnessed.

The Civil War, the War Between the States, seems to hold a peculiar fascination for millions of Americans. Perhaps there is some romanticism in this interest; perhaps a healthy desire to learn more about the past and its meaning in terms of the present. Furthermore, it was your own war and nobody else's; a family affair, so to speak. In any case, I have learned that—save for the younger generation—when one speaks about "the war" it is likely to be the Civil War and not the holocausts of 1914–18 and 1939–45.

I have had southerners tell me that, but for a few mishaps and mistakes the Confederacy might have won. Among these mistakes and mishaps frequently are mentioned the accidental death of Stonewall Jackson, the failure of Jefferson Davis and others to recognize the genius of the great cavalry leader, Nathan Bedford Forrest, and the series of Southern errors at Gettysburg. I have also had Southerners tell me that the South would have won had it not been for the men and resources which your own State of Pennsylvania poured into the fight.

I am more inclined to believe the latter statement than the first. For, men being what they are, mistakes and mishaps during wartime are inevitable. I have witnessed them at first hand in the disastrous Chaco War between Bolivia and Paraguay. Moreover, the North also had unfortunate accidents and blundered a good bit on its own.

There is no question about Pennsylvania's contribution to the Northern cause. This State furnished more than 366,000 troops to the Federal Army, and sturdy troops they were. Furthermore, the munitions which decide modern war came in large part from Pennsylvania. The Fort Pitt Foundry at Pittsburgh turned out between 2,000 and 3,000 tons of artillery pieces and ammunition annually, and a foundry at Reading also made heavy artillery. Then, as now, a great farming country—Pennsylvania—supplied much of the food which kept the Union Army in good shape by comparison with the Southerners.

Pennsylvania is about half the size of present-day Germany, and it compares favorably with Germany in industrial resources. You have iron, oil, both bituminous and anthracite coal, and other vital minerals. In addition, you have rich farmlands and fine timber, despite generations of cutting. You have a good school system, including splendid universities and colleges, of which this school is one. Pennsylvania is known as the Keystone State; the name is well deserved.

I have traveled in Pennsylvania and have seen at first hand evidences of the State's wealth and power. It is inevitable that I should compare your State with my own country of Bolivia. Bolivia is almost three times as large as Pennsylvania. It too has

great natural wealth. My country has one of the great iron ore deposits of the world in the southeast corner near the Brazilian border. We have a vast oil potential, and almost every modern industrial mineral—tungsten, titanium, lead, zinc, zirconium, manganese, gold, and silver; and you probably know that Bolivia is the only source of tin in the Western Hemisphere. We have almost every resource required for a great industrial nation save, perhaps, coal. We may even have that, for much of our country is only partially explored. In all probability, we have uranium and other radioactive minerals.

Pennsylvania has approximately 11 million persons; Bolivia less than 4 million, most of whom live in the plateau which runs along Bolivia's western border. This plateau averages around 10,000 feet in height. Above it rise several snow-covered mountains more than 20,000 feet high. This part of my country is one of the most picturesque in the world. On the Bolivian plateau are remnants of the Incan Empire, which was a marvelous political establishment. There also is the fabulous inland mountain lake, Titicaca.

But I did not come here today for a travelog. I came to try to explain why Bolivia is an undeveloped country; to talk about its difficulties and aspirations and to explain these in terms of what they mean to the United States.

Before William Penn got his grant of land in the Philadelphia area, the Spaniards had built towns and roads in Bolivia and were busily engaged in mining precious metals. With this early introduction to western civilization, what kept Bolivia backward and poor in the centuries which followed?

Many things were involved. The transportation difficulties were very great. The Andes Mountains are a much more formidable barrier than the Alleghenies which run along the east coast of the United States. The Andes slope eastward into great canyons and fertile valleys; these merge into great plains and timbered areas which eventually are swallowed up in the great jungle of the Amazon and other rivers. Not until 1954 was there a highway in Bolivia which connected the lowlands with the valleys, and from there with the Altiplano by rail.

Other factors had more to do with Bolivia's laggardness than transportation. The Spanish conquerors did not think in terms of developing a new civilization in the New World. Their cultural and spiritual homeland was Spain or Europe. They looked forward to the time when they had enough to leave the New World. Most of the settlers in the United States severed their ties with Europe. The Quakers, for example, fled from persecution and had no idea of going back.

The problem of the Indian in Latin America was different too. The tribes in what is now the United States were fierce, but primitive and comparatively few in numbers. War, the white man's diseases, and the white man's liquor killed them off. As the tide of migration flowed on they grew fewer and fewer in numbers.

In Central and South America it was quite different. In Mexico, and in Peru and Bolivia, for example, the Indians had elaborate civilizations. If the Aztecs and Incas had possessed iron weapons and firearms, they might easily have thrown the invaders into the sea.

After the conquest, the Indians still were in the majority numerically. They have remained so in many countries in Latin America. Today more than 60 percent of Bolivia's people are Indians, and a great many others are of mixed blood. The Indians, however, did not again become an integral part of their country's life. They remained submerged and exploited. The governing classes were the descendants of the original conquerors, together with some individuals of both white and Indian blood.

A comparatively small group held power. As was natural under the circumstances, it thought mostly in terms of maintaining its own power and security. There were conflicts within the group, and these resulted in revolutions in which the masses fought and died without knowing why they did so and without being any better off, no matter who won.

Also, Bolivia, at first dependent upon exports of gold and silver, became dependent upon tin. The discovery of the tin mines in Bolivia coincided with the discovery of the value of this metal in our modern industrial society.

Three families, the Patinos, Aramayos, and Hochschilds, gained control of the better tin deposits. All became rich; the Patino fortune being one of the greatest in the world. The wealth of the so-called tin barons enabled them to control the country, politically as well as economically. The tin barons did not use their power to develop the country's other resources. They spent their energies in keeping the status quo, which meant a few millionaires and a dreadfully poor country.

The unrest which kept Bolivia in a turmoil finally spread to the people themselves. The Chaco War, fought between Paraguay and Bolivia in the 1930's, revealed the corruption, selfishness, and incompetence of Bolivia's ruling classes. A younger generation, which fought in the Chaco War, formed political parties dedicated to fundamental changes in Bolivian life.

Out of experience grew the decision to nationalize Bolivia's tin mines as the only effective means of eliminating the reactionary influence of the tin barons from the country. The opportunity to do so came after the 1952 revolution brought the MNR Party into power; the tin mines were taken over by the government in the fall of 1952.

Let us review briefly the situation in which Bolivia found itself after the revolution in 1952.

Inflation already was under way. Actually, this inflation began during the great depression in the early 1930's and was accelerated by the Chaco War, during which the country lost heavily both in men and money. The comparatively high prices for tin during the World War and the Korean fighting helped retard the inflationary spiral, but did not remedy its fundamental causes.

For reasons which had no relation to the 1952 revolution, the price of tin began to fall that year. Fears of world war III were over for the time being; the world was producing more tin than it needed. As they were exploited year in and year out, the Bolivian ore veins were depleted; mining costs rose, and it became more and more difficult for Bolivia to compete with richer and shallower tin ore veins in Malaya and Indonesia.

Keep in mind also that Bolivia was a mono-economy, dependent almost completely for vital foreign exchange upon exports of tin. The country did not produce enough to feed itself; in fact, national policies discouraged agriculture through food subsidies to the consumer. Foodstuffs were imported and sold to the workers below cost. Bolivia had a land system which belonged to the Middle Ages and which hampered production. The Indian farmers, literally speaking, were serfs. Since one of the fundamental aims of the revolution was to make the Indian a first-class citizen, this system had to be changed.

The country had a great oil potential, but in 1952 imported gasoline and other oil products were valued at about $5 million. Food and other imports were about $87 million annually, since the few factories in Bolivia did not manufacture nearly enough to meet even the demands and purchasing power of an impoverished people.

We had, then, to start from scratch in trying to develop our economy. Meanwhile, we were dependent upon tin, which was mined below cost, and we were confronted with the inevitable problems which attended nationalization of the mines.

Contrary to the propaganda of our enemies, Bolivia did not nationalize its tin mines in the belief that this would increase production. Instead, we knew that nationalization would originate new problems, for the time being anyhow. Any drastic changes like nationalization of the mines and freeing the farmworkers meant confusion and uncertainty until the country could adjust to them.

We were in desperate circumstances, and the question—which still remains to be answered—was: Could we hold the country together during the time required to invigorate agriculture, build roads, find ways to develop our oil and other resources, and end our dependence upon tin?

In this emergency we turned to the United States. Our standing in this country was none too good. The State Department did not like the nationalization of the tin mines. The MNR Party held power once before in the 1943–46 period. During that time the tin barons paid for and directed a propaganda campaign against us. As a result of that campaign of slander, the MNR's reputation in your country was destroyed. Some persons in the United States thought us Fascist, some Communist, but the consensus was that we were no good.

Nevertheless, the United States also faced a dilemma in its relationship with Bolivia. What was the alternative to the MNR regime? It was pretty obvious that the people of Bolivia did not want the "rosca," the name for the little group composed of the tin barons and a few wealthy landowners which ran Bolivia prior to the revolution. It also was obvious that the Communists were well aware of the situation and hoped to take control if the MNR failed.

Under all the circumstances, the United States decided to help Bolivia, although we had a pretty hard time before food grants were given us late in 1953. Prior to that, the only help we had was tin purchases by the United States at the market price. The tin was needed by the United States for stockpiling. These purchases were intended to help your country as much as they were Bolivia.

They did have a stabilizing influence on the price of tin. Despite this, tin prices in 1953 and 1954 averaged around 93 cents as compared to nearly $1.10 per pound in the 1948–52 period. Almost every pound of tin taken from the Bolivian mines since 1952 has been at a loss.

Both Bolivia and the United States obviously had to do a lot to make any aid program to Bolivia effective.

Aid from your country had to be sufficient to do more than merely keep the country alive; it had to be accompanied with technical assistance, for we also are deficient in what you term "know-how."

Bolivia also had to do some things on its own. The country had to draft and put into operation systematic and intelligent plans for the development of its resources. If the technical assistance program were to be effective, the advice of the experts had to be followed. And while the United States could not tell Bolivia how to run its internal affairs, it was obvious that your country would not continue indefinitely to help a country which followed a radical and collectivist program, even if that program was not Communist or Fascist in nature.

Let us, as the late Al Smith used to say, take a look at the record. The United States has given Bolivia about $60 million in loans and grants since 1953.

This does not take into account about $25 million recently made available as part of a Bolivian stabilization program. This is neither a loan nor grant to Bolivia since the money simply backs the boliviano, our unit

of currency, with dollars. If the stabilization program succeeds, all of it will be returned, and I might also mention that $7.5 million of the $25 million was contributed by the International Monetary Fund, and Bolivia has contributed about $10 million to the fund.

Since 1952, the United States Government has purchased approximately 50,000 tons of Bolivian tin and paid, less certain deductions, around $110 million for it. Some persons have the fantastic idea that $110 million should also be added to the total which the United States has given Bolivia.

This obviously is not true and simply is anti-Bolivian propaganda. The United States stockpiled the tin against future emergencies; the tin will not deteriorate but will keep indefinitely. It could be worth, under certain circumstances, many, many times the price paid for it. And, finally, the price of tin has risen since the bulk of metal was purchased. Today, the United States could sell the tin it owns at world-market prices and still have a profit.

The United States also has contributed technical assistance to Bolivia in several fields. The two governments have worked together to draft programs for Bolivian agriculture and the development of Bolivian oil. The stabilization program was the work of your experts working with Bolivian personnel.

Despite criticism, the United States has gone steadily ahead with the Bolivian program. I do not intend to pass judgment on the adequacy of the help given.

Perhaps some of you feel that I have been telling a familiar story. The United States digs into its pockets—which, incidentally, include your pockets—and contributes millions upon millions. There seems no end to it and the questions arise as to the value of this tremendous outlay.

I do not intend to discuss your foreign programs today, or to try to draw conclusions from them. Obviously, the Government and people thought they were in the interests of the country, or they would have been discontinued long before now.

It is a truism also to say that the program for each country and/or area has to be examined on its merits.

For example, the situation of Latin America with regard to foreign aid is quite different from that of other continents.

All in all, Latin America has received less than $1.4 billion out of a total of more than $56 billion which the United States has given and loaned other countries since 1945. Most of the Latin-American aid was in the form of loans. I am not arguing that Latin America should have received more, or should get more in the future. That is beside the point.

The average citizen in this country is only vaguely aware of Latin America. He has, on the whole, a kindly feeling toward his southern neighbors and believes they will stand beside the United States in the event of a crisis—as, indeed, has been true in the past. But he knows comparatively little about Latin America and hears comparatively little. Many Latin Americans feel they are taken for granted by the United States and, perhaps, there is something in that feelings.

Yet, when we stop to look at a few facts the importance of Latin America to the United States immediately becomes apparent.

The trade between the United States and Latin America averages around $7 billion annually and is about equally divided.

Furthermore, this trade is almost entirely on an exchange basis—that is, it is financed by an exchange of goods and services and is not financed by United States loans and grants.

The United States has more money invested in Latin America than in any other part of the world. The total is more than $6 billion. Profits from that investment annually are estimated at about $750 million.

In 2 short years, then, the profit on your investments in Latin America amounts to more than all the loans and grants to Latin America since 1945.

Like Bolivia, most Latin American countries are only partially developed. The potential for profitable investment in Latin America is enormous.

The population in Latin America is increasing more rapidly than almost any other part of the world.

Already Latin America has approximately 20 million more people than the United States.

By 1975, Latin America will have 277 million people and in another 25 years, a half billion.

Tht land mass of Latin America is tremendous. Modern nuclear warfare can be so terrible that only nations which have tremendous resources and great land masses can be expected to survive.

Our two hemispheres have resources and territory sufficient to withstand any onslaught.

This presupposes that the hemispheres are united and stand together. In turn, this presupposes friendly and binding relationships between the United States and the Latin American nations.

In summary, the trade with Latin America today is profitable to the United States; investments in Latin America are very profitable also. Moreover, since Latin America is relatively undeveloped, it has a tremendous storehouse of raw materials, and is growing rapidly. The possibilities for the future are great indeed—provided that Latin America grows and prospers as it should.

But we cannot take it for granted that all will be well simply because the United States has a benevolent attitude toward Latin America and has no imperialistic ambitions.

Capitalism has been a blessing for the United States; it has been the opposite for some Latin American countries.

The rich men in my own country were shortsighted, greedy, cruel, and reactionary.

The United States tells the people of Latin America that modern capitalism is the answer to its problems. The Communists tell the masses that they have the answers. Every country in Latin America has its Communists, who take advantage of every business recession and every political crisis. They work with the fanaticism and energy of their kind.

The people of Latin America will, in the long run, prefer capitalism only if they think it is good for them.

The United States then must see to it, if possible, that capitalism is good for Latin America. A lag in any Latin American country hurts the hemisphere and the United States. If there is economic and political chaos in many Latin American countries, the United States is in deep trouble. Your country already is under a very great strain. Even a country as powerful as the United States can be overloaded.

To repeat, Latin America today constitutes an asset to the free world and the United States. It is vital that it remains so and makes an even greater contribution for the future. This requires statesmanship of a very high order.

Every Latin American country differs, but most have common problems.

Most are dependent upon the sale of raw materials pending the time when they industrialize and use these materials at home. If the price of raw materials declines sharply, their economies are badly shaken.

The transportation system in many countries is defective, and vast areas are still very inaccessible.

Several of the countries have a comparatively small wealthy class at the top and great masses of poor people at the bottom.

In quite a few of the nations, the Indian population still is submerged and worse off than it was before the Spanish conquest.

The lack of economic stability in Latin America has created political instability, and political instability has caused resort to military dictatorship.

This is a common method of handling an emergency in a Latin American country. A strong man takes over; he sweeps the problems under the rug. He and his immediate followers enrich themselves at the expense of the country. There is increasing unrest; another revolution and another military dictatorship.

I have heard it said by seemingly intelligent men that this is the way to handle things in Latin America; that the masses have no idea of democracy and simply want to be left alone to live as their ancestors lived before them.

Such generalizations are dangerous. They are predicated upon assumptions which are not true. Once upon a time the great colonial powers thought that the people they governed were satisfied and would never rebel. That was—once upon a time.

Some dictators have the interests of the people at heart, but even a benevolent dictatorship is a pretty poor way to run a country. Surely this generation has had enough of dictatorship and its consequences.

The United States knows the problems of Latin America very well. It wants to help and has helped. In my opinion, it has dispelled the old Marxist theory that a strong capitalistic country always takes advantage of the poorer and weaker country with which it deals.

The attitude of the United States in dealing with weaker countries has been one of enlightened self-interest in many ways. Your country has disavowed imperialism and colonialism. It is trying to prove that other countries have only to follow its example to also become free, stable, and prosperous. But that proof is difficult. There are many skeptics; many who say—wait and see.

The final verdict remains to be delivered. The free world is shocked at the ruthlessness of international communism. Yet, man's memories are short and what has happened may be explained away and excused.

I do not mean to infer that the United States must take full responsibility for making backward countries in this hemisphere rich and contented. There must be cooperation and a sincere attempt at self-help. But, quite obviously, any contribution which the United States makes to the prosperity and stability of a Latin American country is a contribution toward its own stability and prosperity.

In the worldwide conflict with communism, the United States is trying to persuade the backward countries that the free-enterprise system and democracy will bring them the freedom and higher standard of living which they want.

If this theory is true, there is no better place to prove it than Bolivia.

In the first place, all the aid in the world cannot make an intrinsically poor nation rich. Money and the advice of all the experts cannot give a country good land, oil, timber, and mineral wealth if they are not there in the first place.

Bolivia has everything which it needs to become a modern and progressive state.

I think also that the United States would agree that Bolivia has tried to make the aid program succeed.

Mistakes have been made, and plenty of them, but in a country trying to remedy the neglect of generations in a few short years these were inevitable. We have tried to remedy these errors; we have tried sincerely to carry out the advice given us by your great country.

Since 1952, Bolivia has endeavored systematically to attract foreign capital and

has tried to create an atmosphere favorable to free enterprise.

For example, Bolivia's petroleum code announced in 1955 is the most liberal, probably, in the hemisphere. In effect, it says that my country wants the best available outside help in exploiting its tremendous oil resources.

Bolivia has signed the investment guaranty program. This program was initiated by the United States to protect its citizens who invest in foreign countries against inability to convert foreign currency into dollars, or loss through expropriation or confiscation.

Bolivia has abolished import restrictions, subsidies on consumer goods, and other impediments to a free enterprise economy.

At Bolivia's instance, a New York firm conducted an exhaustive inquiry into the mining economy, including operation of the tin mines, and has made recommendations for improvement.

Anyone who examines the Bolivian situation will realize at once that the country will be in a bad way until it begins to produce something other than tin. To do this, roads have to be built, power projects finished, land cleared and put into cultivation, oil wells sunk, timber cut and sold, factories built to produce consumer goods, and many other steps taken.

With the help of United Nations and United States experts, Bolivia drafted, in 1953 programs for the development of almost every phase of its economy. These programs, however, take time and cost money. Some have done remarkably well. My country now is exporting around $6 million worth of petroleum annually instead of having to pay out about $5 million for the oil it needs. Gulf, one of the world's great oil companies, has a concession in Bolivia and other big concerns are interested. Eventually, oil may replace tin as the principal source of foreign exchange. Yet, $6 million furnishes us with only a fraction of the money we need and other programs are not far enough along to do us much good. Also, the programs are costly and the funds spent on them contributed to the inflation which almost wrecked our economy.

To stop inflation, the experts from the United States proposed a stabilization program which would eliminate every expenditure possible, and under which Bolivia must live within its income. We approved the program and put it into effect, even though it hit the workers and other poor people very hard. It meant also the end of work on most of our development programs. Now, some tough questions arise: how can we ever hope to get out of the dilemma we are in unless we increase production? And how can we expect to increase production unless we go ahead with our programs?

Bolivia does not wish to remain on a dole indefinitely. Nor does the United States wish Bolivia to be a charity ward year in and year out. The basic objectives of both governments would be defeated by such a situation.

Offhand, it would seem that any country which half way tried could modernize and stabilize its economy if it had the help of the United States. Nevertheless, here is Bolivia which has cooperated to the best of its ability with the United States but has a long, long way to go.

Perhaps it is time for both countries to look at this matter very, very carefully. If Bolivia needs to make changes, it should do so without delay. Perhaps the United States also should look at the assistance it is giving Bolivia. It could be possible that the funds given us are sufficient to keep us alive but not enough to enable us to make any real progress. If so, would it not be better, and cheaper in the long run, to make the help sufficient to finish some of the development programs that we have planned in cooperation with your experts?

I am of the opinion that private investments in my country will be one of our greatest assets some day. However, foreign investment may be waiting to find out whether we are to rise or fall. If it became convinced that we were out of the woods, I think there would be little hesitancy to put its money into our resources.

I realize that Bolivia is only one of the many countries which the United States is helping. The Bolivian situation is obscured by crises in other parts of the world. Consequently, the significance of the Bolivian program may be overlooked even by some of your leaders who have watched its operations.

I do not think I am going too far when I say that your entire aid program is on trial in Bolivia. Rightly or wrongly, I think most Latin Americans feel that Bolivia is a test case, and many informed persons outside Latin America also.

For in Bolivia we have all the elements which should make for success. Bolivia is trying to bring about reforms without which there can be no lasting progress in my country and in other countries in Latin America. We are grappling with some fundamentals: overhauling our land system, the Indian problem, transportation difficulties, and other factors which have kept much of Latin America behind the times. Furthermore—and this is very important—we are doing so with a democracy and not a dictatorship. And, finally, we are relying upon the dynamics of private enterprise and are avoiding both collectivism and ultranationalism.

If we fail, the repercussions will be felt far outside Bolivia.

The blow to United States prestige would be great. If the United States aid program cannot succeed in Bolivia, where can it succeed?

The blow to the liberal and democratic forces in the hemisphere through failure would be great.

The blow to private enterprise would be great, and, of course, the blow to Bolivia would be very great, indeed. We would have to start all over again and where could we turn?

I do not think we will fail. I am certain we will not if both the United States and Bolivia see clearly what is at stake and determine to do whatever is necessary for success.

While the aid program to Bolivia thus far may seem quite substantial, it amounts to very little compared to the results to be gained.

From the monetary standpoint alone, a stable and prosperous Bolivia will return, in profits from your investments and trade, the funds given us—with interest—in a comparatively short time.

The example of Bolivia will encourage other countries to seek the help of American private capital. The free-enterprise system will be given a tremendous impetus.

The damage to communism and fascism will be shattering.

Let us then, working together, plan for success and to do whatever is necessary to that end. All of us stand to benefit from the results.

In Praise of New Hampshire Solons

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a most interesting and forthright editorial that appeared in the Evening Tribune, Lawrence, Mass., on Monday, March 11, 1957, entitled "In Praise of New Hampshire Solons":

New Hampshire's State legislators last week demonstrated that as a group they are a cut above their counterparts in Massachusetts.

They had two chances to exact spiteful retribution against Massachusetts for the nonresident State income tax which the Bay State solons imposed on New Hampshire citizens over a year ago. They turned both opportunities down despite the fact that there were those who urged that they return tit for tat.

Clearer heads prevailed and, instead of returning the blow, the Granite Staters turned the other cheek by (a) refusing to impose a New Hampshire head tax on those nonresidents who work in New Hampshire and (b) by approving the interstate flood control agreement for the Merrimack River Valley, a measure which is of vital concern to the people of Greater Lawrence.

Of course, the passing by the New Hampshire solons of the flood-control measure was not an act of pure Christian charity. After all, New Hampshire stands to benefit, too, but not to the same extent as Massachusetts, which is farther downstream and more susceptible to floods, does.

But, in refusing to be goaded into taxing Massachusetts residents who work in New Hampshire—at the Portsmouth Navy Yard, for example—the Granite Staters did show remarkable restraint. Legislative bodies are notoriously ever in search of new means of obtaining revenue and here was a source at hand, small but helpful, and they passed it up. The act is even more remarkable when you consider, as, no doubt the Beacon Hill legislators did, that to pass a tax on an out-of-stater is to get money painlessly—for the legislator—as the taxed cannot hit back by voting the politician out of office at the next election. This is the point that makes those in New Hampshire who work in Massachusetts and have to pay an income tax to this State so mad. They have no way of letting off steam against the measure by voting against its proponents.

Wars have been fought in the past over this question of taxation without representation and we are glad to see that New Hampshire did not see fit to start one over the Massachusetts nonresident State income tax measure. Perhaps they reasoned that their forbearance would evoke a like spirit in the breast of the Massachusetts Legislature.

Hungarian Freedom Day: A Tribute

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. FLOOD. Mr. Speaker, Hungarians have long looked upon March 15 as a day of national deliverance because it commemorates the occasion when the freedom fighters of 1848–49 under the leadership of Louis Kossuth attempted unsuccessfully to establish freedom in Hungary.

This year Freedom Day has a special meaning because it comes at a time when the Hungarian Revolution of 1956 is still fresh in our minds. As in 1848–49 the freedom fighters of 1956 made an unsuccessful attempt to establish freedom in

Hungary. But, as over a century ago, Russian intervention prevented the final achievement of their goal.

In one massive assault the Soviets crushed the Hungarian revolution. The courage of these men, however great, was no match for the overwhelming power of Soviet armored divisions and mass infantry. Without outside assistance the revolution was doomed to disaster.

The aftermath of the October revolution brought renewed hardship and oppression to the Hungarian people. Budapest, once a beautiful city, was reduced to ruins. A Stalinist-type of regime under Janos Kadar was imposed upon the Hungarian people by the Soviet Union. The transitory freedom that the Hungarians had enjoyed, although limited in scope, came to an abrupt end. And across the Austro-Hungarian border poured over 170,000 refugees in search of freedom.

Soviet intervention in Hungary exposed the Soviet Union once again before the whole world. Even the faith of members of the Communist parties in other countries was shaken. Press reports today indicate that many Communists in Italy, France, India, the United States, and other countries have not yet reconciled themselves to the harsh reality that the Russians would use military force even against their so-called comrades.

On this day commemorating Freedom Day in Hungary let us pay tribute to the freedom fighters of 1848, but let us also pay tribute to their descendants, the feredom fighters of 1956.

So long as the spirit prevails that moved these men to great deeds of heroism in the defense of their country, so long will there be hope for freedom in Hungary.

Additional Editorial Comment Favoring Trinity River Partnership Plan

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 13, 1957

Mr. SCUDDER. Mr. Speaker, in its edition of February 26, 1957, the San Rafael (Calif.) Independent Journal comments editorially in favor of the partnership plan which would provide for construction of the power phase of the Trinity River project in California by a private utility company.

In its lead sentence, the newspaper states:

A real storm has blown up over the Trinity River portion of California's water plan.

During debate in the House of Representatives on legislation to authorize the Trinity River project, it was pointed out specifically that the proposal by the Pacific Gas & Electric Co. to construct the power portion of the project would be decided on its merit. The proposal has not as yet been presented to the Congress. In spite of this the subject has already developed into a controversy over the issue of private versus public power development.

There is no question but what the Trinity project is financially feasible. However, the fact cannot be ignored that its 3.31 to 1 benefit-cost ratio could not be achieved without the development of hydroelectric power in connection with the project.

The P. G. & E. Co. has offered to build four powerplants involved in the project. They are the Trinity plant at Trinity Dam with a capacity of 98,000 kilowatts; the Lewiston powerplant at Lewiston Dam with the capacity of 600 kilowatts; the Clear Creek powerplant at Whiskeytown Reservoir with a capacity of 133,000 kilowatts; and the Spring Creek powerplant at Keswick Reservoir with a capacity of 153,000 kilowatts. In addition the company will pay for auxiliary buildings and facilities required for construction, operation, and maintenance of the powerplants.

The Secretary of the Interior has recommended to the Congress that the private company be permitted to undertake this construction and operation of the powerplants. Commenting on the Secretary's recommendation, the San Rafael Independent Journal had this to say:

Secretary of the Interior Fred A. Seaton recommended to Congress that the Trinity River unit of the Central Valley plan be developed in partnership with the Pacific Gas & Electric Co., which would build and operate the power facilities of the project.

Seaton reasoned this way: If P. G. & E. builds the power facilities, the project estimated to cost $225 million, would cost $55½ million less. In addition, P. G. & E. would pay for the privilege of using the project's "falling water" about $165 million during the 50 years the partnership would be in effect. Seaton declared:

"Under the present Central Valley rate structure, the Trinity power facilities, if built by the United States, would require substantial assistance from other project revenues in order to meet repayment requirements. Joint development under the proposed agreement, would convert Trinity falling water into a substantial net asset of the project."

And there is more. Estimates are that P. G. & E. would pay $83 million in Federal taxes and $62 million in State and local taxes in that period. If the United States built the powerhouse, there would not be one cent of tax for either.

The Independent Journal further points out that it is seldom that there is an opportunity to compare the real costs of Federal power with that of private industry. The report by the Commissioner of the Bureau of Reclamation states that the sale of falling water by the Federal Government to a private power company would result in an estimated surplus of $165 million to the Federal Government by the end of the year 2013. To meet this $165 million differential in surplus the Government would have to increase project power rates by 0.9 of a mill per kilowatt-hour. Opponents of the partnership plan are aware of this fact and in commenting upon the comparison of costs and savings to the taxpayers with respect to private versus public development, the San Rafael Independent Journal has this to say:

We have always maintained that a private concern can produce anything cheaper than a bureaucratic organization. But it is difficult to collect the figures to prove this because the true costs are lost in the complications of taxes, rates, and special charges. But in this case the figures are laid out for all to see.

To begin with there are $55½ million the taxpayers won't have to cough up for construction. Then there is the $165 million profit the Federal Government makes on the deal. And finally, the $83 million in Federal taxes and $62 million in State and local taxes more than cover the extra amount the preferred customers will have to pay for their power.

The partnership plan will result in a savings of $55.5 million in capital outlay by the Federal Government, and be a direct cut in this year's budget. In commenting on this phase of the plan, the San Rafael Independent Journal concluded its editorial with the following statement:

The mere fact that the $55½ million won't be needed for construction means it can be diverted to distribution or other parts of the CVP system.

The project will be making a profit of $165 million for use of the falling water's power potential, without diverting a single drop of the water from irrigation. This means that much can be used to reduce the cost of the water to the Central Valley's farmers and industries. They can get just as much water for less.

Educational Assistance for Children of Disabled Veterans

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. DORN of South Carolina. Mr. Speaker, I have introduced a bill to provide educational assistance to approximately 56,000 American children, the sons and daughters of veterans of World War I, World War II, and Korea who have been rated by the Veterans' Administration to be 100 percent disabled from service-connected war disability. Last session, the Congress enacted Public Law 634, 84th Congress, which created a scholarship program for the children of service men and women who lost their lives in either of our recent wars or in Korea. This program is referred to as the war orphans scholarship program, and there are several thousand children already enrolled. I believe it is one of the best programs ever enacted by the Congress, and I think it has done a tremendous amount of good for both the veteran and the Nation.

It was a source of great personal satisfaction to me as a member of the Veterans' Affairs Committee to assist in securing enactment of the war orphans scholarship program. When we were considering this legislation, there was a suggestion that we should extend education and training benefits to children of veterans where the veteran has a 100 percent service-connected disability. I believe that the proposal deserves further consideration, and I have, therefore, introduced a bill to accomplish this objective.

A veteran with a 100-percent disability receives $181 a month in disability

compensation. He may receive as much as the maximum of $420 a month if he has a combination of very serious disabilities, such as loss of limbs, loss of eyesight, or a combination of these disabilities. This is barely enough to pay for the necessities of life for a family, and it seems utterly impossible to expect a seriously disabled veteran to save enough money to educate his children beyond the public-school level on this amount.

There are about 56,000 children who have a parent rated 100 percent disabled. This is about one-third the number presently eligible under the War Orphans Scholarship bill, and I believe that we should include them in the education and training program. I realize that cost is a factor to be considered, and I have sought a way to give these children assistance without requiring direct appropriations by the Congress. My bill provides that a fund will be created from alien properties now held by this Government. There is a precedent for the use of these funds for such a purpose. You may recall that funds derived from alien properties were used to dispose of certain claims by prisoners of war, and I think it proper and fitting that these funds should be used to educate the children of veterans who have been deprived of health and soundness of body in the defense of this country against the very nations whose properties were confiscated during wartime and which are proposed to be used for the education of these children.

Mr. Speaker, if we are to win the cold war with Russia, we must produce more scientists, technicians, and elevate generally our educational standards. We must win the cold war in the field of education. This bill is a step in that direction.

It's Almost Never Too Late

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 13, 1957

Mr METCALF. Mr. Speaker, it has been almost 3 years since we beat the last of the bills aimed at sudden-death termination of Federal responsibility for services to Indians and our trust responsibility for Indian lands.

The high-water mark of the drive to make Indians first-class citizens by relieving them of everything they owned, by property rights, and sometimes by treaties agreed to by two sovereign nations, was the 83d Congress.

Bills are now pending in this Congress to undo, insofar as possible, the damage done by some of the legislation which made it through that Congress. This effort, although belated, may help improve our relationships with the first Americans.

But more is needed.

In the February 20, 1957, issue of the Christian Century Mr. D'Arcy McNickle has some concrete suggestions for us. Mr. McNickle—outstanding authority and distinguished writer on Indian affairs, an enrolled member of the Confederated Salish and Kootenai Tribes of the Flathead Reservation, director of the Crown Point project, New Mexico, Indian community development—points out that the solution to the Indian problem will cost money. He says one-half of 1 percent of what is being spent on foreign aid this year, if set up as a revolving fund, would make a good start.

He also suggests that "know nothings" in the Bureau of Indian Affairs are poor substitutes for qualified people.

Mr. McNickle's article follows:

IT'S ALMOST NEVER TOO LATE

(By D'Arcy McNickle)

When Dillon S. Myer became Commissioner of Indian Affairs a few years ago, he removed from immediate contact with his office civil servants who had prolonged familiarity with Indian problems and replaced them by young men with a reputation for getting things done. A few years earlier, when the Indian Claims Commission was being established, word went out that the Commissioners were to be men of character who had no prior knowledge of Indian affairs.

Such actions made some people uneasy. It seemed to them that neither an ability to get things done nor impeccable honesty were adequate substitutes for knowledge and experience in this difficult field. They were mindful of the history of Indian-white relations and knew that driving forces and honest effort had been tried often enough, without bringing the Indian people any closer to better health standards, higher levels of education or more earning power.

Government is not alone in trying to carry enlightenment to the Indians in leaky vessels. Not many years ago a prominent Protestant churchman accused his interdenominational coworkers of sending their poorest trained and least gifted mission workers into the American Indian field, while their best went to Asia and other foreign parts. In the meeting where this statement was made, no colleague challenged the speaker.

The attitude is the same: You don't have to know Indians to know what is good for them. Americans know Indians. The history books tell their bloodthirsty tale and Hollywood fills in what the school histories leave out. Talk Indian matters to a western Congressman, and the chances are he grew up in a community where Indians lived across the tracks and he knows all about their failings.

A favorite approach is to start with the premise that Indians are human beings. The premise being granted, it follows that habits of behavior which deviate from the habits of white men mark the Indian as immature and misguided. His addiction to his own languages, his ceremonial practices become quaint anachronisms. Brush these peculiarities aside, and out will come a standard suburban commuter, or the equivalent.

Out of this attitude springs the notion that the published findings of the social scientists are all theoretical and unworthy of serious study by practical administrators. But what if the administrator faces such theoretical questions as how to find a mechanism by which civil authority within a pueblo may be passed on when the clan chief, who formerly had the function of naming a successor, dies and leaves no one in his place? Or how to maintain the role of peacemaker, as an accepted method of settling family disputes, and avoid conflict with a written law code which takes domestic relations as one of its proper fields of authority?

BRAWLING JUDGMENTS, UNASHAMED

Twenty years ago John Collier, the then Commissioner of Indian Affairs, hit on the commendable idea of bringing into his office as expert advisers men who were practicing social scientists. He even negotiated with the Bureau of American Ethnology, an agency established for the peculiar purpose of studying American Indians, for help in planning how best to utilize ethnologists in gathering field data.

Two things happened, both unfortunate. First, the Commissioner could not persuade his regulation-steeped field administrators to make use of cultural data. (It must be admitted that the ethnologists were not skilled at explaining their stuff to the layman). Second, as soon as the congressional Appropriations Committees got wind of the attempt to substitute method for muddle, sulfurous fumes burst from the committee rooms and ethnology went out the window. So embittered was Jed Johnson, of Oklahoma, (then chairman of the House Appropriations Committee) that for several years he inserted in the Interior Department Appropriation Act a prohibition against the payment of money to any employee of the Indian Service who went to Mexico to study educational methods. Word had reached him that experimental ideas were creeping North of the border and might be finding their way into Indian Service schools.

A few anthropologically trained workers stayed on, carefully disguised by the ambiguities of personnel nomenclature.

Willard Beatty, director of education during the Collier regime, never could get an appropriation from Congress to defray the expenses of the summer schools he conducted for his teachers. A man of energy, he managed to operate his summer schools—quite interesting ones—without a budget.

TRIUMPH OF KNOW-NOTHINGNESS

These facts are recounted because they represent perhaps the first effort at inservice training ever attempted by the Bureau of Indian Affairs. Up to then, a prospective employee of the Bureau had never been required to know anything about Indians to qualify for a position, and it had never been thought necessary to provide an opportunity for him to learn about their history and culture after he came on the job. The summer schools were designed to ameliorate the situation, at least for teachers coming into Indian Service schools. But even this effort has been abandoned.

This know-nothingness might not be so serious if it could be confined to the top appointees of the Bureau. But attitudes nurtured at the top have a way of permeating the structure below. A quick glance at the record will explain how attitudes—instead of aptitudes—have brought ruination to Indian hopes.

Until about 1890 the condition of the Indian people was not too bad. They were dying off. They had almost no health care, they enjoyed very little schooling, and they lived under a heavy cloud of public disapproval for what some of them had done to Custer only a few years before. But they still had quite a bit of property. And soon the population trend was to cease its downward plunge and level off, even start an upcurve. Best of all, they were being left alone.

Beginning about that time—specifically in 1887—Congress adopted measures intended to improve their situation. The decision was to start with the ample land base still owned by the Indians, so the General Allotment Act was passed. This ingenious piece of legislation—justified in and out of Congress as a measure to speed up civilization of the Indians—authorized the President, in his discretion, to divide up any Indian reservation into individual holdings, assign a parcel of land to each man, woman, and child, and declare all remaining land "surplus."

The surplus lands were then opened for homesteading and, as and when the lands were taken up, paid for at $2.50 per acre. Thus, without cost to itself, the Federal Government was able to transfer large acreages from Indian to white ownership. The tribes were even required to pay the costs of surveying and allotting. In every case where allotment was carried out, the Indian tribe objected; and in most cases the lands were covered by treaties under which the United States obligated itself to protect the tribe in its right of possession.

Between 1887 and 1930, through this and other legal devices set up by the Allotment Act, the Indian-owned land base shrank from 138 million to 50 million acres. In the same period the Indian population began to increase after its long decline. In 1890 the population was about 250,000; by 1930 it had swelled to 300,000. In terms of per capita acreage, in 1890 each man, woman, and child would have had about 540 acres if the land had been divided among Indians only. In 1930, such a division would have yielded 165 acres per capita. But the good land had gone to the homesteaders. Of the 165 acres available for individual Indian subsistence, about 100 acres were suitable for grazing, 50 were classed as timber (less than half of commercial grade), about 9 were farmland, and 6 were barren waste. In some arid areas the grazing land was only a step above barren waste, since a good part of it was estimated to require from 60 to 150 acres to support 1 cow.

Some part of the havoc wrought by this effort to civilize the Indians was repaired in the 1930's. A study of Indian land needs carried out by the National Resources Board in 1934 recommended that 9.7 million acres be purchased immediately, at an estimated cost of $50 million. Such action, the recommendation stated, would permit the Indians to reach a mere subsistence level above the verge of starvation and the dole.

Between 1935 and the early war years, approximately 5 million acres were added to the Indian land base, some of it by purchase, some by transferring use rights in public domain to Indian tribes, some by restoring former Indian lands which had not been homesteaded. A number of tribes made their own purchases, investing altogether $2 million of their trust funds for the purpose.

NEW EFFORTS, NEW HAZARDS

But right after World War II, when efforts were made to resume the land acquisition program recommended 10 years earlier, a new hazard came up on the horizon. The Western States, in which all of the large Indian reservations are located, were short of money and were looking for new sources of revenue. They expressed dismay at the amount of tax-exempt Federal landholdings within their boundaries and seemed to be especially incensed by the amount of tax-exempt Indian holdings. State after State protested to Congress, and then began the practice of writing into appropriations acts prohibitions against using either Federal funds or Indian trust funds for the purchase of lands for Indians and their removal from State tax rolls. The land purchase program was stopped cold.

When Dillon Myer became commissioner in 1950 the remarkable discovery was made that most of the Indian reservations would not support the dependent population. But instead of concluding, as did the National Resources Board, that the Government had better get busy and build up the land base, Mr. Myer and his young men took off in the opposite direction. Apparently they decided that it would be easier to move the Indians and their troubles out of sight than to stand firm against the tax-hungry States. And so "relocation" has been the policy since, with growing intensity.

Something more than an attitude prompted that decision. For a number of years—in fact, starting with the study by the National Resources Board and a survey by the President's Great Plains Committee—the Bureau of Indian Affairs had been conducting human dependency and physical resource surveys on Indian reservations and preparing plans for soil conservation, proper land use and economic development. In cooperation with the Department of Agriculture and other Federal and State agencies, such surveys had been completed on 50 reservations by 1939.

Beginning in 1943, the reservation staffs were instructed to proceed with an analysis of data at hand—that in their own files as well as compilations like those mentioned above—and to project long-range development plans for each seperate reservation. The plans were to include budget estimates by years. The files of the Bureau of Indian Affairs have such plans for 67 reservations.

A CYNICAL DECISION

All this endeavor, the first systematic effort to assess human needs and resources on Indian reservations, was abandoned by the decision to give up the struggle for an improved economy for Indians.

It was a cynical decision. In Congress at the time there was a mounting demand to reduce expenditures in behalf of Indians and to "get the Government out of the Indian business." To go counter to this demand by asking for more money and more Government technical assistance would have been difficult. Everyone in Indian affairs was aware of this at the time, and everyone knew what the decision of the then Commissioner meant. It caused Indians to ask whether the Commissioner of Indian Affairs was on their side, and if not, whose side was he on?

The Commissioner did not leave the issue in doubt. In August 1952 he issued to all Bureau officials instructions calling for immediate preparation of plans for termination of Federal services and management responsibility for every tribe, band, or identifiable group of Indians in the United States. His memorandum described this planning as a "cooperative effort" involving Bureau personnel, the Indians, and such local agencies as might be required to assume the Bureau's burdens.

His instructions read: "We must lend every encouragement to Indian initiative and leadership (in the direction of withdrawal). I realize that it will not be possible always to obtain Indian cooperation. * * * We must proceed, even though Indian cooperation may be lacking in certain cases."

CUMBERSOME RUNAROUND

A year later, almost to the day, House Concurrent Resolution No. 108 was adopted, declaring it to be "the sense of Congress" that at "the earliest possible time" Federal responsibility for Indian affairs should be terminated. With that declaration the promises of prior administrations were canceled and the hopes of the Indians for economic rehabilitation in their home communities vanished.

It is a pity that the American Indians are not immigrants from Nyasaland. As strange foreigners, they would not be expected to behave like standardized suburban commuters, and officials responsible for dealing with them might make an effort to find out what they are like and what they want. Somebody might even get up the courage to ask Congress for an appropriation to study the subject.

It must be admitted that present methods are cumbersome. Congress passes legislation which is supposed to solve the Indian problem. After a while it becomes clear that the law has not produced good results. So Government lawyers give the law a good shaking and conclude that amendments are needed, possibly even a new law. The revisions are adopted. Negative results continue. Then Congress becomes annoyed and calls for an investigation of the Indian Bureau. And all the while the Indian sits in his tar-paper shack surrounded by untapped resources.

If the United States is serious about discharging its responsibilities to the Indian people and getting out of the business of perennial benefactor, the formula for doing so is at hand. In fact, the formula has been in the files of the Bureau of Indian Affairs since 1928. It consists of a recommendation contained in the report of the Institute for Government Research (the so-called Meriam survey). The recommendation reads: "The most fundamental step that can be taken is to advance the economic and social conditions of the Indians [of each jurisdiction] with due regard to the economic resources of that jurisdiction, and to supply each jurisdiction with a sufficient number of properly trained workers to make that program effective."

Carrying out such a formula would cost money. One-half of 1 percent of what is being spent on foreign aid in the current year, if set up as a revolving fund, would make a good start. And it would be spent at home.

One precaution must be noted: The recommendation specifies "properly trained" workers. This suggests that the time has come when workers are being recruited for tasks involving complicated human-relations problems to scrap the notion that an ignorant good man is better than an informed good man. Indeed, the time had come even before 1928. But it's never too late to accept good advice.

Richard Evelyn Byrd—He Won a War With the Unknown

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. ENGLE. Mr. Speaker, on March 11, 1957, America lost one of its all-time great citizens, and the world its most outstanding Antarctic explorer when Rear Adm. Richard Evelyn Byrd died "peacefully in sleep," according to press reports, in his home at Boston.

In a sense, then, Admiral Byrd died as he had never quite been able to live—for he devoted a lifetime at war with the unknown. That he won is amply evidenced on contemporary maps of the globe, for he led the initial charting of at least 2 million square miles of the earth's surface, and until his last days was at work coordinating the many and complex aspects of United States Antarctic activities.

He and his staff had, for the past 18 months, worked closely with the House Committee on Interior and Insular Affairs in developing legislation which has as its principal purpose establishment of a permanent, single, Federal agency for coordinating Antarctic matters. From the base created by his courage, by his enterprise and dedication to purpose—and by his unrelenting assault on the unknown, will emerge, I am con-

fident, substantially the permanent agency he envisaged.

Admiral Byrd wrote his name on the globe—brightly, clearly, and indelibily. His work will stand as a monument to a man who pioneered and succeeded, dared and conquered, sought—and found.

Mr. Speaker, under leave to extend my remarks and to insert a newspaper article and editorial—and because I believe both capture the spirit and mood of Richard Evelyn Byrd—I offer for the RECORD the following article by Thomas R. Henry in the Washington Evening Star of March 12, 1957, and an editorial from the Washington Post of March 13, 1957:

[From the Washington Evening Star of March 12, 1957]

BYRD EXPLORATIONS ADDED TO WORLD'S KNOWLEDGE

(By Thomas R. Henry)

Rear Adm. Richard Evelyn Byrd was one of the most colorful and complex characters of his generation.

Daring adventurer, scientific explorer, outstanding leader, philosopher, inventor, poet, dreamer, mystic, skillful aviator, able organizer and money raiser, who personally despised these necessary tools of his trade—such was the man who pinoeered the airways over the Atlantic and over both poles and who added more to man's knowledge of the planet on which he lives than anyone else in this century.

He was a lonely man and a lover of solitude, the most agreeable of hosts and companions and the most democratic of comrades who yet never was able to break down entirely the barriers that separated him from other men. He was the victim of many misunderstandings and unjust criticisms because of this very lack of common ground between him and most of the rest of mankind.

CONSTANTLY LOOKED AHEAD

He never considered an end to his career of adventure. No sooner was the great Antarctic expedition of 1947 finished than he was busy planning for another a year hence, a flight straight across the Antarctic continent from New Zealand to Africa in a long-range bomber.

It is noteworthy that those who knew Byrd best admired him most and had the most confidence in him. No man under his direct command ever lost his life on any Byrd expedition.

CONSIDERED PHILOSOPHY

Admiral Byrd was primarily a mystic. His mysticism found expression in flight. He became a great explorer.

In another age he might have been a great philosopher, a great poet—perhaps, I think, a great saint.

During what he describes as "those futile years" which followed his graduation from Annapolis he fumbled for a field of adventure in which he could make for himself a distinguished career—and he had about decided to become a professional philosopher. He even consulted, and received encouragement from Alfred North Whitehead, the British mathematical theorist, perhaps the most brilliant and original philosopher of his generation.

Chance turned Admiral Byrd instead to aviation. He had been attracted to philosophy, as he was later attracted to exploration, because it would take him to places man never had been before.

A FITTING EPITAPH

I can think of no better epitaph for him than the expression which was forever on his tongue during the 1947 expedition: "Beyond the South Pole."

It has been charged that Byrd lived for glory. For 5 years during World War II he was engaged in the most perilous sort of secret military mission of which the public heard no word at the time.

Byrd explored the southeast Pacific in an old gunboat, inspecting islands as possible sites for airstrips. The result was a new air route from the Panama Canal area to Australia.

For this work President Franklin D. Roosevelt personally awarded him the Legion of Merit.

BROTHER OF SENATOR

Born at Winchester, Va., in 1888, the younger brother of Senator HARRY FLOOD BYRD, he travelled around the world alone when he was 12 years old. A former law partner of his father, Adam C. Carson, was then a district judge in the Philippines. He invited the boy to visit him and Dick, overcoming the strenuous objections of his parents, set out.

He entered Annapolis in 1908 and while there suffered several football injuries and a broken foot and ankle due to a fall from a trapeze. These were responsible for his early retirement from active service. Following his graduation in 1912 came a number of futile years of routine assignments on various Navy ships. He was placed on the retired list in 1916.

"Navy regulations would not allow any promotion on account of my injury," he said. "I was retired on half pay; ordered home for good. Career ended. Not enough money to live on; no chance of coming back; trained for a seafaring profession; temperamentally disinclined for business. A fizzle."

GETS CADET TRAINING POST

But 5 days later he was again in service when the Navy appointed him instructor-inspector of the Rhode Island Naval Militia. With the outbreak of World War I he was transferred to Washington, but soon talked his way out of a desk job into cadet training at the Naval Air Station at Pensacola. Shortly after getting his wings he began thinking of the possibility of making a transatlantic flight in an NC–1 type of flying boat, then under construction. The war ended before he was able to persuade anyone that his proposal was practical.

After the war Admiral Byrd again was assigned to the Bureau of Aeronautics in Washington. During this period he invented two indispensable air instruments—the wind drift indicator and the bubble compass which enables an aviator to operate with a false horizon.

MISSED DOOMED DIRIGIBLE

These both were accepted by the Navy and in 1921 he was sent to England as navigator of the dirigible ZR–3, just purchased from the British Government. He missed a train to London. He arrived just too late to be on the dirigible on the trial flight in which she exploded in midair, with the loss of all her crew.

His first great opportunity came in 1925 when he was assigned command of the naval aviation unit of three amphibian planes sent to the Arctic with the McMillan Expedition. The purpose of this expedition was to hunt for certain large islands supposed to exist in uncharted sections of the northern ocean.

PLANS POLAR FLIGHT

Back in Washington, Admiral Byrd again was retired from the Navy, together with Floyd Bennett, his pilot on the Arctic flights. The two at once started preparations for a flight across the North Pole.

Contributions were obtained from Edsel Ford, John D. Rockefeller, Jr., Vincent Astor, Thomas F. Ryan, and Dwight W. Morrow. The United States Shipping Board loaned them a 3,500-ton steamer.

Arriving at Kings Bay, Spitzbergen, they found Raold Amundsen, the discoverer of the South Pole, and Lincoln Ellsworth also getting ready for a polar flight. Byrd got away first. On May 8, 1926, they flew over the pole. For this exploit the future admiral received the Congressional Medal of Honor, and was given permanent rank as a commander.

Hardly was Byrd back from the pole than he was practically forced by public opinion to attempt a New York-Paris flight, for which a $25,000 prize had been offered. He started preparation with the same type of trimotor Fokker which had carried him across the Arctic. A series of accidents, in one of which Bennett was seriously injured, delayed the flight. Meanwhile, both Charles Lindbergh and Clarence Chamberlain made successful flights to Paris.

"MY STOCK WENT DOWN"

"My stock went down to zero," Admiral Byrd said afterward.

The public turned against him. He began to get insulting messages, accusing him of being a "phoney."

The flight finally took off under the worst possible conditions on a day of rain, fog, and low clouds. The crew—Byrd, Bert Acosta, Bernt Balchen, and Lt. George Noville—did not see the ocean from the time they left New York until they neared the French coast. Thick weather prevented a landing at Paris. They turned back toward the coast and finally crashed in the sea off the Brittany coast, near the village of Ver-sur-Mer. They returned to New York triumphantly.

Back in America, Admiral Byrd started at once on a project which he had planned while talking with Amundsen at Spitzbergen—a flight over the South Pole. He estimated the cost of an expedition at $750,000. After raising about a half million, he took a chance and started out with two ships, the *City of New York* and the *Eleanor Bolling;* five planes, 95 husky dogs, a snowmobile and large stores of food, radio equipment and clothing, prepared to spend a year in the Antarctic. The expedition was sneered at as a luxury trip. It reached the Bay of Whales, a little open water indentation in the ice shelf which borders the Ross Sea on the south, shortly after Christmas, 1928. A camp was established there, the first "Little America."

On November 28, 1929, he flew over the pole with a crew of three—Pilot Bernt Balchen, Radio Operator Harold A. June, and Capt. Ashley McKinley, aerial photographer. This expedition discovered and mapped more than 400,000 square miles of the continent, including the Edsel Ford and Rockefeller Mountains east of the Ross Sea.

As the plane crossed over the spot calculated to be the South Pole, Byrd dropped a United States flag weighted with a stone from the grave of Floyd Bennett, his co-pilot on the North Pole flight.

Byrd was then made a rear admiral by special act of Congress—at 41 the youngest in the Navy at that time.

Three years later he was back in the Antarctic with his second privately financed expedition for which, in the middle of the depression, it had been difficult to raise funds. He was able to raise only about $150,000 in cash and supplies. Some of this was obtained only by endorsement of products through radio broadcasts. This brought much criticism, but the explorer always considered that the end justified the means.

ALONE FOR 5 MONTHS

On this expedition he accomplished one of the most daring exploits in the history of exploration. On March 28, 1934, he passed command of the base camp over to Dr. Thomas C. Poulter, of the scientific staff, and established himself alone in a shack sunk in the crust of the Ross ice shelf, 90 miles south of Little America.

There he remained alone for 5 months of the winter night, making daily meteorological

observations. He was overcome by carbon monoxide and was too weak to turn the crank of the hand generator of his radio set. When finally rescued by Dr. Poulter, he was in such serious condition that it was 2 months before he could be taken back to Little America.

His third Antarctic expedition, 1939–41, was sponsored by the Government, and the United States Antarctic Service was set up. A base was established on the same site as that occupied by the second expedition and extensive air and coastal surveys carried out. A second base for scientific observations was established far to the east off the coast of the Palmer Peninsula, a site later occupied by the Ronne expedition.

With the great resources of the Navy after the war, Admiral Byrd saw an opportunity for a major effort to map the coastline and a good part of the interior. He persuaded President Truman of the soundness of the idea. This expedition in 1947, by far the largest exploring enterprise ever launched, consisted of 13 ships and more than 4,000 men. It resulted in the most extensive discoveries yet made in the Antarctic.

In December 1955, he returned to the Antarctic—it was his fifth expedition. In January 1956, he flew over the South Pole for the third time. The following month Admiral Byrd came back to the United States. His expedition had explored 800,000 additional square miles of the subcontinent and located scientists in outposts in which they were to spend the Geophysical Year, a "year" which will start in July 1957 and continue 18 months. In January this year came cancellation of his plans to return to the Antarctic. Illness was not given as the cause, but it was known that he was not well.

[From the Washington Post of March 13, 1957]

RICHARD E. BYRD

Rear Adm. Richard E. Byrd may turn out to have been the last of the world's great explorers. Vast regions of the Antarctic, as large as the United States, remain to be accurately mapped. The moon and the planets beckon. But exploring, terrestrial and extraterrestrial, has become a massive institutionalized business, as in Operation Deepfreeze and Project Vanguard. Where once Byrd and Amundsen raced to the North Pole (Byrd won, in 1926), now nations race to launch the first earth satellite and to be first on the moon. In these competitions, not one Byrd, but hundreds, are required, each contributing specialized knowledge and experience.

If Admiral Byrd was indeed the last of the great individual explorers, however, he was by no means least. He labored under the considerable disadvantage of having nothing left to discover but an incredibly cold and treacherous wasteland. Yet his five expeditions, especially the early ones, are sagas of enterprise, courage, and high adventure worthy of a Columbus or a Magellan. It is not yet certain that the great coal and mineral deposits he and others have found in the Antarctic will be feasible to develop. Much of the impetus for south polar exploration is purely competitive; Britain, Chile, Argentina, and Australia as well as this country now have staked out more or less permanent bases. Even after 31 years of exploring, Byrd himself confessed that his original reason for probing the world's cold underside was still a strong factor in his continuing interest: a curiosity to find out what lay beyond the horizon.

Admiral Byrd also seemed to find in the Antarctic a kind of balm, or substitute, for his lack of success in a little known but compelling ambition of a different sort—a desire to promote a universal peace movement. As Byrd once said at Little America, "You can forget the world here. There are no temptations. The only littleness is the littleness of a man's mind." When he visited the Deep Freeze bases a year ago, Admiral Byrd must have felt both pride and regret—pride that his long fight to interest his country in the Antarctic had succeeded, regret that even this icy vastness, of which he had seen and known more than any other man and thus could truly feel was his own, might soon be permanently inhabited. Like so many explorers before him, he had put himself out of business.

Falling Prices and Reduced Acreage Allotments

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. DORN of South Carolina. Mr. Speaker, the farmers of the Southeast have been particularly hard hit by falling prices and reduced acreage. Our agricultural economy has been revolutionized. We have shifted from a one-crop economy to a diversified agriculture with emphasis on forest products and grass. The most valuable single crop being grown in the Southeast today is trees. The income that our farmers get from their forests is increasing every year.

But, Mr. Speaker, just when the tree farmer begins to see a ray of hope in his forest products, foreign imports of veneer plywood and other wood products are beginning to threaten the tree farmer. Nearly every farm in the Southeast has, to a more or less degree, a certain amount of hardwoods. My farm is typical of the rest. I would like to market my hardwood so as to pay taxes and meet other farm expenses. We can market but little of this hardwood because the demand has been cut in half by foreign imports of hardwoods.

This Congress should place an import quota on this type of foreign imports. We are constantly seeking ways to bolster falling farm prices. If we could market our hardwoods at a fair price, it would be of great help to the farmers throughout the country. There is a demand in America for these products but through our tariff policy, this demand is being supplied by foreign countries with cheap labor, countries with no minimum hours, no minimum wages, no laws against child labor and no social security. These imports are undermining the gains of American labor and the American farmer.

In the past 5 years, the amount of plywood imported into this country from low-wage areas has increased more than 1,000 percent. These imports amount to 46 percent of the entire domestic consumption of hardwood plywoods. They come into this country at a price our local manufacturers cannot possibly meet. Last year, 527 million square feet of plywood came into this country from Japan at an average price of $63 per hundred square feet. This price is $30 to $40 less than domestic industries can produce a comparable panel.

Now, Mr. Speaker, ladies and gentlemen of the House, these imports from low-wage countries have already closed many American plywood plants. It has caused unemployment and distress. Some of our manufacturers have lost their life savings. This policy is wrecking a great American industry. Our manufacturers, our laborers and our farmers cannot meet this unfair competition. We must protect our standard of living. This Congress should act now to protect the American farmer, the American laborer and our hardwood and plywood industries.

Who Pays the Taxes on Federal Dams?

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1957

Mr. SCUDDER. Mr. Speaker, the Santa Rosa (Calif.) Press-Democrat, in an editorial appearing February 21, 1957, poses the timely question "Who Pays the Taxes on Federal Dams?"

The editorial comment by this newspaper, considered to be one of the leading dailies in northern California, is especially significant in connection with the recommendation by Secretary of the Interior Seaton that Congress approve partnership development of the Trinity River project in California.

The Press-Democrat endorses the plan because, in its words:

The proposal is for the P. G. & E., not the Government, to spend the $56 million necessary to install powerplants when the dam itself is built with Federal funds; and for the utility company for 50 years thereafter to pay Uncle Sam for the use of the falling water which turns the power generators.

Some opponents to the partnership plan have inferred that the proposal by the Pacific Gas & Electric Co. would load hidden charges on the power bills of users in northern California.

This is a subject that needs examination. With respect to hidden charges, the Press-Democrat editorial states further:

Private utility companies are in the business of producing, distributing, and selling electric power. They pay taxes, and they make a profit.

Government power projects are also in the business of producing, distributing, and selling electric power. Instead of taxes, they make "in lieu" payments that are far smaller than the taxes paid by private companies. They sell power without profit.

It is the tax angle that involves hidden charges.

In the case of Federal projects, they are well hidden indeed.

About 23 cents of every dollar you pay for private power goes for taxes. The utility company, in effect, is merely acting as a tax collector, passing 23 cents of your expenditure for electricity along to tax-spending units of government.

But what happens on a Federal project?

To begin with, it is built with Federal funds or credit, pays part of the bill, whether they will benefit or not.

At TVA, the "in lieu" payments amount to around 4 cents instead of the 23 paid by private companies.

Somebody has to pay taxes. If a Federal project pays only 4 cents, giving its customers lower rates than private utilities can charge, the difference is paid by everyone else.

Quite appropriately the Press-Democrat concludes its editorial with this statement:

Let's have equal tax payments by public and private utilities, before anyone starts sounding off about hidden charges.

Mr. Olney Also Seems To Be Misleading

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 25, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend and revise my remarks, I present an editorial from the Shreveport Times, Shreveport, La., Wednesday, February 27, 1957, which is as follows:

MR. OLNEY ALSO SEEMS TO BE MISLEADING

In a letter to a House Judiciary subcommittee, United States Assistant Attorney General Warren Olney III, said FBI data indicates that testimony by Louisiana Attorney Jack P. Gremillion before the subcommittee "might have left a misleading impression in a number of respects."

Mr. Gremillion had testified that there had been some difficulty with respect to voting in Ouachita Parish but that he thought this was more or less an exception. The testimony was in opposition to the program of civil-rights legislation now before Congress and being studied by the House subcommittee. The references by both Mr. Olney and Mr. Gremillion dealt with challenging of Negro voters and removal of them from registration lists where the registration was held to be illegal.

Regardless of whether Mr. Gremillion's testimony was misleading, certainly the statements of Mr. Olney can be very misleading. He states, for one thing, that the FBI investigated registration activities in 10 Louisiana parishes, the inference being that there was something wrong in all of these 10 parishes.

But Federal data on voting registration has been presented to grand juries in connection with only 3 or 4 parishes, so far as is known publicly. Two separate grand juries heard testimony. Each found that there was no evidence for indictment of anyone.

If the Federal evidence from 10 parishes was presented to either or both grand juries, then those accused before the grand juries in all 10 parishes were held not subject to indictment.

If the evidence from all the parishes was not placed before the grand juries, the implication is that the Federal Government itself did not think the evidence worth presenting. In that case, Mr. Olney has no business bringing it up.

Further, his statement seems to carry the inference that guilt was established by investigators and that they unquestionably are right, but the two grand juries unquestionably were wrong in not voting indictments on that evidence. Such inference both slurs the grand jury members and disregards the American system of justice.

Mr. Olney seems further to convict himself as being "misleading" when he says that there were 4,000 Negroes registered "as voters in Ouachita but that after a 'purge' of such voters 'there were in excess of 3,000 Negroes deprived of the right to vote in the general election of November 6.'"

Obviously, if there were 4,000 Negro registrants and 3,000 were removed, the same parish officials who removed the 3,000 Negroes as improperly or illegally registered also approved the 1,000 Negroes as properly and legally registered. But Mr. Olney does not mention this.

Further, the tenor of the Olney statement seems to imply that the 3,000 who were removed must have been removed improperly and illegally. But a grand jury found otherwise, and a Federal district judge, appointed under the same administration which appointed Mr. Olney to his office, threw out of court a suit by a Negro against the Ouachita Parish registrar involving registration cards.

Mr. Olney's letter to the committee was written at the request of the committee chairman for information. But the content of it and the phraseology seem intended to give the impression that any Negro removed from the registration rolls in Louisiana must have been removed improperly or illegally and thereby deprived of his constitutional civil rights.

It is noticeable also that Mr. Olney makes no mention of the fact of white persons having been removed from registration rolls in Louisiana at the same time that Negroes were removed and by the same officials and for the same reasons.

Leprechaun Lives On

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, February 27, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following feature article which appeared in the Sunday dispatch of Pittston, Pa., on March 3, 1957:

MCCARTHY'S LEPRECHAUN TALE RUNS INTO ROADBLOCK WITH DOUBTING O'BRIEN

Charles A. McCarthy, Irish historian, and active member of the Friendly Sons of St. Patrick, whose home is on Butler Street in Pittston, got an idea last week, and, as only Charlie can, he worked it to the limit, and the limit in this case was Chief of Police Patrick Aloysius O'Brien, himself quite an Irishman.

Charlie decided to perk things up in town, particularly prior to the Friendly Sons of St. Patrick banquet, and he started a story about "a visit from a leprechaun" at his home on Butler Street.

For those few who may not know what a leprechaun is, the dictionary describes it as "In Irish folklore, a sprite or fairy, ukually in the form of a little old man."

Those of us of Irish heritage and with grandparents who came from the old sod well recall in our younger days the "tales of the little men," and many an old Irishman who went out with the boys and got a wee bit too much under his belt use the little men for a good excuse, à la "Honest, Ellen, I was coming home early minding me own business, when the little men got ahold of me." And the wife, being from the old sod herself, also had faith in the little men, or leprechauns, and grandpop got her sympathy.

And it was that old Irish faith in the leprechauns that Charley based his idea on. He visited several newspaper offices, including this one, to further the propaganda, but his plan met with little success among skeptical newsmen.

CHARLEY'S PITCH

Charley's pitch was that he woke up Monday morning and sitting on the dining-room table "as cute as could be" was a little man, a leprechaun, about 2 inches tall.

Said Charley, "I talked to him for hours. He told me he had just arrived from Ireland, but had been in Pittston, before, about 1887" and Charley added that the leprechaun told him of Pittston activities back in 1887, including the names of some old Irish families and what they were doing then.

Charley even sang a few verses in Gaelic claiming they were the songs being sung by the leprechaun and he invited the newsmen to visit his home right then and there to see the leprechaun, but cautioned, "Don't ring the doorbell. He is frightened by bells." Further Charley said there was no sense in visiting the McCarthy home if you did not believe in leprechauns, or if you were not free from sin.

If we didn't know Charley, and his tendency to get a project moving to stir up activity, and perhaps if we weren't so skeptical, we might have visited his home—he was that convincing. In fact, we did hear that several persons were convinced, and went to visit the leprechaun, but he failed to appear to them. Charley says they were merely curious persons but nonbelievers, so the leprechaun made himself invisible.

The effervescent Charley went all over town with the story about the leprechaun and gave it wide circulation.

THE FINAL STOP

Finally he came to the last stop—Pittston City Hall.

Into the sanctuary of Chief of Police O'Brien, went Charley on Wednesday.

Charley used a different approach to get his idea across to the chief, who is one of those dour Irishmen, whose ancestors came from the part of Ireland comparable to Missouri in the United States where you have to be shown.

Charley entered and said, "Chief, I have a complaint." "Well," answered O'Brien, "you've come to the right place. What is it?"

And McCarthy began the recital about the little man, coming to his home, "and he sits on the table, won't move, and keeps singing Irish songs and asking for the good Irish people of Pittston to visit him."

"Now, Chief," said Charley, "this leprechaun is sensitive to many things and according to Irish history, if he gets angry he has the power to do drastic things, and cause trouble for everyone."

Chief O'Brien leaned back on the old swivel chair in the chief's office, and peered at Charley through the bifocals in his spectacles. He kept staring for several minutes, until Charley said, "Don't you believe me. Come on up to my house. Bring two witnesses. I'll introduce you to the leprechaun."

The cold eye of the chief hit Charley, and O'Brien queried, "When did you have the fall on your head? Was it last night, or this morning?"

Charley remonstrated and repeated part of his story.

By this time the chief had figured out Charley's plan to build up the leprechaun, but also figured a counterplan of his own.

"Come here, Charley my boy," said the chief. "Sit down now and be comfortable and don't worry. It may pass."

GET THE WAGON

Winking at Police Clerk Nick Scarantino, Chief O'Brien ordered "Nick, call the garage and have them bring the ambulance to city

hall. Call the police cruiser, too, they may need help."

Charley began to fidget, as Chief O'Brien kept a tight grip on his arm. "Don't you believe in leprechauns?" Charley asked several times.

"Now Charles" consoled Chief O'Brien, take it easy. It has happened to lots of people. They have nice treatments that won't hurt you a bit, and eventually they'll cure you and you'll be happy again."

Charley began to fidget worse. He could make no headway with O'Brien. "Nick" ordered O'Brien in a louder voice "tell that ambulance crew to hurry." And with that McCarthy broke loose from the chief, and hurried out of city hall, vowing never again to tell a leprechaun story to Chief O'Brien. And for the rest of the week Charley told the story to no one else.

As for Chief O'Brien, he enjoyed every minute of it, and told Clerk Scarantino "Charley doesn't know it, but I'm a wee bit of a leprechaun, myself, when it comes to making trouble when I'm angry."

A Great Labor Organization

EXTENSION OF REMARKS
OF
HON. RUSSELL V. MACK
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 28, 1957

Mr. MACK of Washington. Mr. Speaker, each year the leaders of the building and construction trades section—AFL–CIO—gather in our Nation's Capital for a 3-day legislative conference. These national meetings have been attended, both last year and this year, by more than 2,800 leaders in these unions.

The building and construction trades unions are among the oldest in the Nation. They have held for many scores of years the confidence and respect of both the employers of these crafts and of the general public as patriotic and constructive organizations that work constantly for the welfare of their members and the general good of the Nation.

I was honored last year and again this year by being invited by the leaders of this great labor organization to be one of the speakers at its annual meeting. I was proud and pleased to accept the invitation.

I include here the address I made to these unions on Thursday at the Sheraton Park Hotel in Washinaton, D. C., a meeting which President Richard Gray, the head of this great labor organization, told me was attended by more than 2,800 labor delegates. My address follows:

A TRIBUTE TO A GREAT LABOR ORGANIZATION THAT IS HELPING BUILD A STRONGER AND HAPPIER AMERICA

(By Representative RUSSELL V. MACK, Member of Congress from the State of Washington)

President Gray and representatives of the building and construction trades section (AFL–CIO), I thank you President Gray for your kind and generous praise of my efforts in the Congress to secure a fair deal for labor.

I have supported your labor groups in the committees and on the floor of Congress because I was convinced that your cause was right, fair, and just. The millions of workers in your great labor building and construction trades organization were entitled to the protection of the Davis-Bacon labor provisions in the highway bill.

I will continue to work for the preservation for labor of the Davis-Bacon protection in all construction work that the Federal Government undertakes or helps to finance.

I also agree with President Eisenhower and the members of your organization that certain changes should be made in the Taft-Hartley law, and I hope these will be made at the present session of Congress. President Eisenhower is recommending to Congress, I understand, that changes in the Taft-Hartley law be made. I shall support these changes in that law which your members and President Eisenhower both recommend be adopted.

I come today to talk to you about the great new expanded highway program, the legislation for which was written by the committee of which I am a member. Helping to write this expanded highway bill was one of the most interesting and satisfying experiences I have had in my 10 years in Congress and makes a greater contribution to the welfare of the United States and its people than anything I ever have done in public life.

No group is more interested in good highway legislation than the members of your building and construction trades since they will supply nearly all of the labor required to build this great new system of public roads for which last year's highway bill provides.

The new expanded highway program authorized last year by Congress and now rapidly getting underway will be the biggest public-works project ever undertaken by mankind in all the history of the world.

Compared to this colossal roads program, the building of the Egyptian Pyramids, the Roman Appian Way, the digging of the Panama Canal, the construction of the Grand Coulee Dam, and the erection of the Empire State Building, all of which long have been considered among the construction-engineering wonders of the world, were insignificant, pygmy projects.

Under the highway bill passed by Congress last year, a $51 billion roads-building program will be carried to completing during the next 13 years. Of this money, 24½ billion will be new and additional Federal money over and above any amounts heretofore spent by the Federal Government for highways.

That you may grasp something of the magnitude of this road program, let me say to you that this $24½ billion of extra Federal funds that will go into the building of roads is sufficient to build 70 Panama Canals, or 90 Grand Coulee Dams, or 450 Empire State Buildings.

Man in all his history never has had any experiences that enables his mind to understand or grasp the colossal magnitude of this leviathan new roads-building program.

Figures supplied me by the Federal Bureau of Roads reveal that the 13-year road-building program will require such astronomical quantities of materials as 49 million tons of steel, 1,399 million barrels of cement, 128 million tons of bituminous materials, 7.1 billion board feet of lumber, 48 million tons of concrete pipe, and 1,812 million pounds of explosives.

The 13-year Federal expanded highway program enacted last year by Congress and started this year by the Federal Government is rapidly getting underway, and soon will be by supplying 120,000 new and additional jobs for construction workers over and above the numbers now employed at roadbuilding. Another 80,000 additional new jobs also will be created by the highway program in roadbuilding material operations and in factories of the building-equipment industry.

These figures, I am sure, will convince all of you that "happy days are here again" for the American construction industry and all those, who, like the members of your union, work in that industry.

The very availability of this vast spending power in the hands of the President of the United States, with these expenditures to be equitably distributed in all parts of the Nation, assures a high level of prosperity and employment for our American people for the foreseeable future.

The very existence of such a program is the best possible insurance the Nation could have against a depression or recession. If a temporary dip in employment and prosperity should occur anytime, anywhere in the 48 States during the next 13 years this program can be speeded up thereby restoring full employment in any area where greater employment is needed.

There is another desirable feature of this expanded roads program. It will save lives. Last year, 40,300 Americans, many of them children, were killed in traffic accidents. The traffic safety experts say that present indications are that more than 50,000 will be killed in traffic accidents annually by 1965 by which time there will be many more automobiles on the highways than now. But these traffic safety experts also say that the better roads now being built will lessen the traffic death rate by at least 20 percent. In short, when this great road system, now under construction, is completed, it will save 8,000 to 10,000 American lives a year.

Believe it or not, this great $51 billion system of new roads the Nation will build during the next 13 years is not going to cost taxpayers anything. These new roads will pay for themselves out of the savings which they make possible for the automobile owner.

True, to finance this gigantic program the automobile owner is paying an additional tax of 1 cent a gallon on his gasoline and diesel fuel. Also, is paying 3 cents a pound in additional taxes on new tires.

But the motorist will recapture the extra tax money he pays through the savings he will make, because of the better roads, on the wear and tear on his tires and his automobile, in the few and smaller repair bills he will be called upon to pay and also in the less chances he will run of having the heavy medical and hospital bills that result from automobile accidents. Also, the motorist, due to the increased safety of highway travel, probably will get reductions in his automobile accident insurance rates.

The new expanded highway program is the greatest public works project in man's history. You, the men of the building and construction trades unions, will play a major role in building these highways. By turning your hands to the great task of building this great best-in-the-world system of highways you will be rendering a great service to your country. You will be building for a better, a stronger, a safer, and a happier America.

The Government of the United States and the Government of Mexico Have Concluded an Air Transport Agreement

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. WOLVERTON. Mr. Speaker, it is with extreme pleasure that I learn that there has been concluded an air transport agreement between the Government of the United States and the Government of Mexico.

The agreement entered into will prove not only mutually beneficial to both of the contracting parties in promoting air transport between these two great Republics, but is additional evidence of an understanding friendship between our respective Governments that is continually seeking additional ways of binding us together in even stronger bonds of friendship to promote the welfare of the people of both Republics.

It can and should be the desire of both our Governments to be ever alert and zealous in seeking new ways and means of establishing and strengthening our mutual respect and friendship for each other.

In order that there may be a full understanding of the tremendous importance that can be attached to the Air Transport Agreement that has been entered into between the Government of the United States and the Government of Mexico, the announcement of which was made today by President Adolfo Risiz Cortines of Mexico. I herewith include as part of my remarks the accompanying documents that describe the agreement in detail:

CIVIL AERONAUTICS BOARD,
Washington, March 7, 1957.

Hon. CHARLES A. WOLVERTON,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN WOLVERTON: The Board is pleased to inform you that the Government of the United States and the Government of Mexico will today conclude an air transport agreement, which will become effective after 90 days. Because of your particular interest, and the importance of what is being achieved, we feel that you should be advised immediately of the result of this long protracted series of negotiations.

The agreement grants to the United States the right to conduct operations over seven routes, the most important of which are nonstop routes to Mexico City from New York, Los Angeles, New Orleans, and Chicago. The other routes cover existing United States services from New Orleans and Miami to Merida and beyond, from Dallas and San Antonio to Mexico City, and from Houston and Brownsville to Tampico, Mexico City, and Tapachula, and beyond.

Mexico is granted reciprocal rights to operate nonstop from Mexico City to New York, Los Angeles, New Orleans, and Chicago; a new route to San Antonio; and the route from Mexico City to Miami and beyond, which a Mexican carrier is presently authorized to operate. In addition, the agreement provides a seventh route for Mexican carriers which is not specified at this time, but will be agreed upon at a later date.

The agreement caps more than 10 years of almost constant effort to resolve the conflict in the basic aviation philosophies of the 2 countries. We believe that the resolution of this conflict is the best which could be attained on a reciprocal basis. We are particularly pleased to be able to advise you that the arrangements which have now been made should provide a favorable climate for the long-term development of air transportation between the United States and Mexico. The agreement not only provides for operation of the major trunk routes which the United States requires, but also permits such operations to be conducted on a sound business basis in accordance with the Bermuda principles.

The agreement is for a limited period only, as it is customary for the Mexican Government not to make agreements of indefinite duration prior to national elections. The Board believes, however, that the present agreement can be successfully renegotiated prior to the expiration date of June 30, 1959.

The substance of the bilateral arrangement and the specific routes exchanged are set forth in the attached memorandum of understanding. An exchange of diplomatic notes incorporating this memorandum of understanding will constitute the agreement.

Sincerely yours,

JAMES R. DURFEE,
Chairman.

(From the Ambassador of the United States to the Minister for Foreign Relations of Mexico.)

MEXICO, D. F., *March 7, 1957.*

His Excellency Senor LICENCIADO LUIS PADILLA NERVO,
Minister for Foreign Relations,
Mexico, D. F.

EXCELLENCY: I have the honor to acknowledge the receipt of Your Excellency's note No. 501404 of today's date, together with the attached memorandum of understanding and annex, which read in translation as follows:

"I have the honor to advise Your Excellency that the Government of Mexico, in a desire to contribute to the improvement of air transport between our two countries, is prepared to execute a provisional arrangement on civil aviation with the Government of the United States of America in the terms of the memorandum of understanding and its annex which I attach to the present note.

"If, as I understand is the case, the Government of the United States of America is also willing to conclude such an arrangement on this basis, the present note and the note in reply from Your Excellency advising of your Government's acceptance of the memorandum of understanding and its annex, above mentioned, shall constitute a provisional arrangement regarding civil aviation between the two governments.

"I take this occasion to renew to Your Excellency the assurances of my highest consideration.

"MEMORANDUM OF UNDERSTANDING

"1. The aeronautical authorities of the Government of Mexico shall grant permits to airlines designated by the Government of the United States of America to operate air services on the air routes specified below, via intermediate points, in both directions, and to make regular stops at the points listed in this paragraph:

"A. New York, Washington-Mexico City.

"B. Chicago, Dallas, San Antonio-Mexico City, via intermediate points in the United States.

"C. Los Angeles-Mexico City, via intermediate points in the United States.

"D. New Orleans-Mexico City.

"E. New Orleans-Mérida, and beyond, to Guatemala, and beyond.

"F. Miami-Mérida, and beyond, to Guatemala, and beyond.

"G. Houston, Brownsville-Tampico, Mexico City, Tapachula, and beyond, to Guatemala, and beyond.

"The aeronautical authorities of the Government of the United States of America shall grant permits to airlines designated by the Government of Mexico to operate air services on each one of the air routes specified below, via intermediate points, in both directions, and to make regular stops at the points listed in this paragraph:

"A. Mexico City-Washington, New York.

"B. Mexico City-Chicago, via intermediate points in Mexico.

"C. Mexico City-Los Angeles, via intermediate points in Mexico.

"D. Mexico City-New Orleans, via intermediate points in Mexico.

"E. Mexico City-Miami, and beyond, via intermediate points in Mexico.

"F. Mexico City-San Antonio, via intermediate points in Mexico.

"G. (Pending.)

"2. Both parties agree not to designate, for the present, more than one airline for each route.

"3. An airline designated by either country may, at its discretion, omit stops on any of the routes specified on any or all flights.

"4. The aeronautical operations of the designated lines shall be governed by the principles set forth in the annex to the present memorandum of understanding.

"5. The present provisional arrangement shall enter in force 90 days after the date of the exchange of notes.

"6. The arrangement shall terminate June 30, 1959.

"7. Upon request of either Government, prior to May 30, 1959, talks may be initiated to reach an agreement concerning a system to regulate air transport between the two countries subsequent to June 30, 1959.

"ANNEX

"I

"(A) The term 'aeronautical authorities' means in the case of the United States of America, the Civil Aeronautics Board or any person or agency authorized to perform the functions exercised at the present time by the Civil Aeronautics Board and, in the case of the United Mexican States, the Ministry of Communications and Public Works or any person or agency authorized to perform the functions exercised at present by the said Ministry of Communications and Public Works.

"(B) The term 'designated airline' means an airline that one party has notified the other party, in writing, to be the airline which will operate a specific route or routes listed in the memorandum of understanding.

"(C) The term 'territory' in relation to a State means the land areas and territorial waters adjacent thereto under the sovereignty, suzerainty, protection, mandate or trusteeship of that State.

"(D) The term 'air service' means scheduled air service performed by aircraft for the public transport of passengers, mail or cargo.

"(E) The term 'international air service' means an air service which flies over the territory of more than one State.

"(F) The term 'stop for nontraffic purposes' means a landing for any purpose other than taking on or discharging passengers, cargo, or mail.

"II

"Each party grants to the other party rights necessary for the conduct of air services by the designated airlines, as follows: the rights of transit, of stops for nontraffic purposes, and of commercial entry and departure for international traffic in passengers, cargo, and mail at the points in its territory named on each of the routes specified in the memorandum of understanding. The fact that such rights may not be exercised immediately shall not preclude the subsequent inauguration of air services by the airlines of the party to whom such rights are granted over the routes specified in the memorandum of understanding.

"III

"Air service on a specified route may be inaugurated immediately or at a later date at the option of the party to whom the rights are granted by an airline or airlines of such party at any time after that party has designated such airline or airlines for that route and the other party has given the appropriate operating permission. Such other party shall, subject to section IV, be bound to give this permission provided that the designated airline or airlines may be required to qualify before the competent aeronautical authorities of that party, under the laws and regulations normally applied by these authorities, before being permitted to engage in the operations contemplated by

the Memorandum of Understanding and this Annex.

"IV

"Each party reserves the right to withhold or revoke the operating permission provided for in section III of this annex from an airline designated by the other party in the event that it is not satisfied that substantial ownership and effective control of such airline are vested in nationals of the other party or in case of failure by such airline to comply with the laws and regulations referred to in section V of the present annex, or in case of the failure of the airline or the Government designating it to fulfill the conditions under which the rights are granted in accordance with the Provisional Arrangement.

"V

"(A) The laws and regulations of one party relating to the admission to or departure from its territory of aircraft engaged in international air navigation, or to the operation and navigation of such aircraft while within its territory, shall be applied to the aircraft of the airline or airlines designated by the other party and shall be complied with by such aircraft upon entering or departing from, and while within the territory of the first party.

"(B) The laws and regulations of one party relating to the admission to or departure from its territory of passengers, crew, or cargo of aircraft, such as regulations relating to entry, clearance, immigration, passports, customs, and quarantine shall be complied with by or on behalf of such passengers, crew, or cargo of the other party upon entrance into our departure from, and while within the territory of the first party.

"VI

"Certificates of airworthiness, certificates of competency and licenses issued or rendered valid by one party, and still in force, shall be recognized as valid by the other party for the purpose of operating the routes and services provided for in the memorandum of understanding and in the present annex, provided that the requirements under which such certificates or licenses were issued or rendered valid are equal to or above the minimum standards which may be established pursuant to the Convention on Internationall Civil Aviation. Each party reserves the right, however, to refuse to recognize, for the purpose of flight above its own territory, certificates of competency and licenses granted to its own nationals by another State.

"VII

"In order to prevent discriminatory practices and to assure equality of treatment, both parties agree further to observe the following principles:

"(a) Each of the parties may impose or permit to be imposed just and reasonable charges for the use of public airports and other facilities under its control. Each of the parties agrees, however, that these charges shall not be higher than would be paid for the use of such airports and facilities by its national aircraft engaged in similar international services.

"(b) Fuel, lubricating oils, consumable technical supplies, spare parts, regular equipment, and stores introduced into the territory of one party by the other party or its nationals, and intended solely for use by aircraft of such party shall be exempt on a basis of reciprocity from customs duties, inspection fees and other national duties or charges.

"(c) Fuel, lubricating oils, other consumable technical supplies, spare parts, regular equipment, and stores retained on board aircraft of the airlines of one party authorized to operate the routes and services provided for in the memorandum of understanding and in this annex shall, upon arriving in or leaving the territory of the other party, be exempt on a basis of reciprocity from customs duties, inspection fees, and other national duties or charges, even though such supplies be used or consumed by such aircraft on flights in that territory.

"(d) Fuel, lubricating oils, other consumable technical supplies, spare parts, regular equipment, and stores taken on board aircraft of the airlines of one party in the territory of the other and used in international services shall be exempt on a basis of reciprocity from customs duties, excise taxes, inspection fees, and other national duties or charges.

"VIII

"There shall be a fair and equal opportunity for the airlines of each party to operate on the routes listed in the memorandum of understanding.

"IX

"In the operation by the airlines of either party of the trunk services described in the memorandum of understanding the interest of the airlines of the other party shall be taken into consideration so as not to affect unduly the services which the latter provides on all or part of the same routes.

"X

"The services made available to the public by the airlines operating under the provisional arrangement shall bear a close relationship to the requirements of the public for such services.

"It is understood that services provided by a designated airline under the memorandum of understanding and the present annex shall retain as their primary objective the provision of capacity adequate to the traffic demands between the country of which such airline is a national and the countries of ultimate destination of the traffic. The right to embark or disembark on such services international traffic destined for and coming from third countries at a point or points on the routes specified in the memorandum of understanding shall be applied in accordance with the general principles of orderly development to which both parties subscribe and shall be subject to the general principle that capacity should be related:

"(a) to traffic requirements between the country of origin and the countries of ultimate destination of the traffic;

"(b) to the requirements of through airline operation; and,

"(c) to the traffic requirements of the area through which the airline passes after taking account of local and regional services.

"Both parties agree to recognize that the fifth freedom traffic is complementary to the traffic requirements on the routes between the territories of the parties, and at the same time is subsidiary in relation to the traffic requirements of the third and fourth freedom between the territory of the other party and a country on the route.

"In this connection both parties recognize that the development of local and regional services is a legitimate right of each of their countries. They agree therefore to consult periodically on the manner in which the standards mentioned in this section are being complied with by their respective airlines, in order to assure that their respective interests in the local and regional services as well as through services are not being prejudiced.

"Every change of gage justifiable for reasons of economy of operation, shall be permitted at any stop on the designated routes. Nevertheless, no change of gage may be made in the territory of one or the other party when it modifies the characteristics of the operation of a through airline service or if it is incompatible with the principles enunciated in the present annex.

"When one of the parties after a period of observation of not less than 90 days considers that an increase in capacity or frequency offered by an airline of the other party is unjustified or prejudicial to the services of its respective airline it shall notify the other party of its objection to the end that consultation is initiated between the appropriate aeronautical authorities and decision on the objection is made by mutual agreement within a period which may not be more than 90 days beginning on the date of such notification. For this purpose the operating companies shall supply all traffic statistics that may be necessary and required of them.

"XI

"Rates to be charged on the routes provided for in the Memorandum of Understanding shall be reasonable, due regard being paid to all relevant factors, such as cost of operation, reasonable profit, and the rates charged by any other carriers, as well as the characteristics of each service, and shall be determined in accordance with the following paragraphs:

"(A) The rates to be charged by the airlines of either party between points in the territory of the United States of America and points in the territory of the United Mexican States refered to in the Memorandum of Understanding shall, consistent with the provisions of the present annex, be subject to the approval of the aeronautical authorities of the parties, who shall act in accordance with their obligations under the provisional arrangement, within the limits of their legal powers.

"(B) Any rate proposed by an airline of either party shall be filed with the aeronautical authorities of both parties at least 30 days before the proposed date of introduction; provided that this period of 30 days may be reduced in particular cases if so agreed by the aeronautical authorities of both parties.

"(C) During any period for which the Civil Aeronautics Board of the United States of America has approved the traffic conference procedures of the International Air Transport Association (hereinafter called IATA), any rate agreements concluded through these procedures and involving United States airlines will be subject to approval of the Board. Likewise, agreements concluded through this machinery may also be required to be subject to the approval of the aeronautical authorities of the United Mexican States pursuant to the principles enunciated in paragraph (A) above.

"(D) The procedure described in paragraphs (E), (F), and (G) of this section shall apply:

"1. If, during the period of the approval by both parties of the IATA traffic conference procedure, either, any specific rate agreement is not approved within a reasonable time by either party, or, a conference of IATA is unable to agree on a rate, or

"2. At any time no IATA procedure is applicable, or

"3. If either party at any time withdraws or fails to renew its approval of that part of the IATA traffic conference procedure relevant to this section.

"(E) In the event that power is conferred by law upon the aeronautical authorities of the United States of America to fix fair and economic rates for the transport of persons and property by air on international services and to suspend proposed rates in a manner comparable to that in which the Civil Aeronautics Board at present is empowered to act with respect to such rates for the transport of persons and property by air within the United States of America, each of the parties shall thereafter exercise its authority in such manner as to prevent any rate or rates proposed by one of its airlines for services from the territory of one party to a point or points in the territory of the other party from becoming effective, if in the judgment of the aeronautical authorities of the party whose airline or airlines is or are proposing such

rate, that rate is unfair or uneconomic. If one of the parties on receipt of the notification referred to in paragraph (B) above is dissatisfied with the rate proposed by the airline or airlines of the other party, it shall so notify the other party prior to the expiry of the first 15 of the 30 days referred to, and the parties shall endeavor to reach agreement on the appropriate rate.

"In the event that such agreement is reached, each party will exercise its best efforts to put such rate into effect as regards its airline or airlines.

"If agreement has not been reached at the end of the 30-day period referred to in paragraph (B) above, the proposed rate may, unless the aeronautical authorities of the country of the air carrier concerned see fit to suspend its application, go into effect provisionally pending the settlement of any dispute in accordance with the procedure outlined in paragraph (G) below.

"(F) Prior to the time when such power may be conferred upon the aeronautical authorities of the United States of America, if one of the parties is dissatisfied with any rate proposed by the airline or airlines of either party for services from the territory of one party to a point or points in the territory of the other party, it shall so notify the other on expiry of the first 15 of the 30 day period referred to in paragraph (B) above, and the parties shall endeavor to reach agreement on the appropriate rate.

"In the event that such agreement is reached, each party will use its best efforts to cause such agreed rate to be put into effect by its airline or airlines.

"If no agreement can be reached prior to the expiry of such 30 days, the party raising the objection to the rate may take such steps as it may consider necessary to prevent the inauguration or continuation of the service in question at the rate complained of.

"(G) When in any case under paragraphs (E) or (F) of this section the aeronautical authorities of the two parties cannot agree within a reasonable time upon the appropriate rate after consultation initiated by the complaint of one party concerning a proposed rate or an existing rate of the airline or airlines of the other party, upon the request of either, the terms of section XIII of this annex shall apply.

"XII

"Consultation between the competent authorities of both parties may be requested at any time by either party for the purpose of discussing the interpretation, application, or amendment of the Provisional Arrangement or Schedule of Routes (point 1 of the memorandum of understanding). Such consultation shall begin within a period of 60 days from the date of the receipt of the request by the Department of State of the United States of America or the Ministry of Foreign Relations of the United Mexican States as the case may be. Should agreement be reached on amendment of the Provisional Arrangement or Schedule of Routes, such amendment will come into effect upon confirmation by a further exchange of diplomatic notes.

"XIII

"Except as otherwise provided, any dispute between the parties relative to the interpretation or application of the Provisional Arrangement which cannot be settled through consultation shall be submitted for an advisory report to a tribunal of three arbitrators, one to be named by each party, and the third to be agreed upon by the two arbitrators so chosen, provided that such a third arbitrator shall not be a national of either party. Each of the parties shall designate an arbitrator within 2 months of the date of delivery by either party to the other party of a diplomatic note requesting arbitration of a dispute; and the third arbitrator shall be agreed upon within 1 month after such period of 2 months.

"If either of the parties fails to designate its own arbitrator within 2 months, or if the third arbitrator is not agreed upon within the time limit indicated, either party may request the president of the International Court of Justice to make the necessary appointment or appointments by choosing the arbitrator or arbitrators.

"The parties will use their best efforts under the powers available to them to put into effect the opinion expressed in any such advisory report. A moiety of the expenses of the arbitral tribunal shall be borne by each party.

"XIV

"The provisional arrangement, all amendments thereto, and contracts connected therewith shall be registered with the International Civil Aviation Organization.

"XV

"If a general multilateral air transport convention accepted by both parties enters into force, the provisional arrangement shall be amended so as to conform with the provisions of such convention.

"XVI

"Either of the two parties may at any time notify the other party of its intention to terminate the provisional arrangement. Such notice shall be sent simultaneously to the International Civil Aviation Organization. In case such notification should be given the arrangement would terminate 6 months after the date on which the notice of termination may have been received, unless the communication under reference is annulled before the end of this period by agreement between both parties. Should the other party not acknowledge receipt it shall be considered that the notification was received by it 14 days subsequent to the date on which it is received by the International Civil Aviation Organization.

"XVII

"Upon entry into effect of the Provisional Arrangement the aeronautical authorities of the two parties must communicate to each other as soon as possible the information relating to authorizations given to the airline or airlines designated by them to operate the routes mentioned in the Memorandum of Understanding.

"XVIII

"The aeronautical authorities of both parties shall respectively advise each other 8 days before the actual placing in operation of their respective permits the following data: schedules, frequencies, tariffs, and types of aircraft normally utilized in their services. Any modification of the data under reference shall similarly be communicated."

In reply, I have the honor to advise Your Excellency that the Government of the United States of America is prepared to conclude a provisional arrangement on the basis proposed in Your Excellency's note, Memorandum of Understanding and Annex under reference, and accept your proposal to regard that note, the Memorandum of Understanding and Annex and the present reply as constituting a provisional arrangement regarding civil aviation between our two Governments.

Accept, Excellency, the renewed assurances of my highest consideration.

FRANCIS WHITE.

Congressman Hoffman Proposes To Wipe Out the Personal Income Tax

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 14, 1957

Mr. MASON. Mr. Speaker, Congressman CLARE E. HOFFMAN, Republican, of Michigan, appeared on the Dean Manion Radio Forum on Sunday evening, March 10, 1957, and presented to the millions that listen in on that program every Sunday a very convincing argument against the present personal income tax program.

In his broadcast Congressman HOFFMAN pointed out how the 20 percent to 91 percent income tax rates are affecting the economy; how false "the soak the rich" program is; how the excessive spending programs and the giveaway programs of the Federal Government are encouraged and made possible by the excessive personal income taxes collected from the American taxpayers; and he said that the best way to stop this squandering of the people's hard-earned dollars is to stop the Government from collecting those hard-earned dollars by repealing the 16th amendment to the Constitution, the amendment that permits the Federal Government to "turn the taxpayer's pocket inside out."

The following is the complete text of Congressman HOFFMAN's broadcast:

CONGRESSMAN HOFFMAN GIVES REASONS FOR HIS ANTI-INCOME TAX AMENDMENT

Dean MANION. I believe it was Emerson who said, "What a new face courage puts upon everything." On February 14, last month, the courage and wisdom of an experienced Congressman put a new face upon the nationwide demand for a reduction in Federal spending. On that day, the Honorable CLARE E. HOFFMAN introduced House Joint Resolution 232, calling for a constitutional amendment to wipe out the Federal income tax.

In his heart, every Member of Congress knows that the one sure way to cut off the outpouring of Federal money all over the world is to cut off the inpouring of money that is provided by the ever-rising tide of Federal taxes. Yes, every Congressman knows that, but Congressman CLARE HOFFMAN had the courage to record his conviction in the terms of an unequivocal congressional resolution.

It is obvious now that this proposed Hoffman amendment to the Constitution is going to make very important history for the harried taxpayers of this country. American freedom was born in a spirit of rebellion against tyrannical taxation. Here is the distinguished statesman who proposes to give us a new birth of freedom. I am proud to present my friend and neighbor, the Honorable CLARE E. HOFFMAN, of Michigan.

Mr. HOFFMAN. Thank you, Dean Manion. One of the reasons our forefathers rebelled and established this Republic was because they were oppressed by unjust taxes, in the levying of which they had no voice. They

knew that the individual must be free to enjoy the fruits of his industry and thrift.

They were aware that money to support a central government was necessary if the States were to grow and prosper. From bitter experience, they knew, no matter what the form of government, that selfish ambition was an ever-present, dangerous force.

But they also knew that no individual without power to levy upon the earnings of others could establish himself as dictator or tyrant; that, if left to his own resources, no matter how ambitious, he must fail of that goal. Hence it was that when they wrote the Constitution, they did not give to the Congress the unrestricted power to levy a direct tax upon incomes.

Later, politically ambitious bureaucrats and politicians in the Federal Government, aware that the granting of special favors to individuals and groups was one means of purchasing political support, induced the people to accept the 16th amendment, which made possible our present income-tax laws, gave them more dollars and turned the taxpayer's pocket inside out.

One of the powerful factors which aided in the adoption of that amendment was the unsound argument that it was a tax based upon ability to pay and that it would, in everyday, still-popular language, "soak the rich"—the demagog's slogan.

Aimed at the wealthy, and especially at corporations, the tax, under present legislation, now takes from 20 to 91 percent of your earnings. The result is that all too often the old-age security of the individual, the ability to expand a going business or establish a new enterprise is lessened. The tax often closes opportunity's door.

The Federal Government has no appreciable income except as it takes dollars out of the citizen's pocket. Before that dollar goes back to him, either by way of service or through subsidy payment—if it gets back at all—from it the Government has taken a cut of from 25 to 30 percent. Passing through the Government's mill, this dollar shrinks to 70 cents.

During the fiscal year of 1956, the Federal Government collected from its citizens more than $75 billion. Of that sum, over $56,632,000,000 were taken from the incomes of individuals and corporations, 80 percent of whom had incomes of less than $6,000 a year.

There is a constant demand for new and expensive Federal commissions, agencies, or departments; an ever-increasing demand for additional Federal employees, for new and additional subsidies, price supports.

At the moment, the Federal Government is calling for the expenditure of some sixty-odd-million dollars for new Federal buildings and facilities in Washington. Fifty thousand Federal employees in Washington are demanding annual pay increases of from $500 to $3,000 each.

WHERE THEY WILL STOP, NOBODY KNOWS

The Defense Department is calling for a $38 billion appropriation this year. Some postal employees insist that, notwithstanding job security and fringe benefits, their compensation be increased. Some farmers want additional subsidies, calling for billions.

Disregard of the advice of Washington to avoid entanglement in the affairs of other nations has involved us in two wars, both excessively costly in lives, suffering and dollars. We are now threatened with a third.

Veterans of those wars are receiving something more than $7 billion a year. No one begrudges those payments. Beyond question, increased aid will be given to disabled veterans.

We have spent billions upon billions of dollars to aid other nations, much of it without adequate result. Today, the interest charge on that part of the public debt which is due to our foreign aid policies—the interest charge alone—is more $3,238,000,000 a year.

The administration is insisting that, to prevent being blown to "kingdom come," we must appropriate additional billions to buy friendship abroad, to aid other countries. The President demands authority to send our soldiers to fight in wars directed by United Nations, under officers selected by it—authority to permit him to spend millions in foreign aid. Still with us is the urgent demand for additional foreign aid.

Beyond question, an ever greater number of individuals are denied employment because of their age. Millions have been forced to use money they had saved for old-age security. Because of the ever-increasing cost of living, they must be assisted, either locally or through Federal appropriations, if they are to have sufficient food, clothing, and shelter. They cannot, they will not, be left to starve.

The cheaper and the best way out of our dilemma is to keep our tax dollars in the local communities, where a more efficient job can and will be done.

In the 84th Congress, because of increased spending, the debt limit was raised to $278 billion. The more than 56½ billion income-tax dollars collected last year has not satisfied the present demand or solved our problem. All of the foregoing has been cited only to show that you will not get tax relief from Washington.

The demand from our people that the Congress lessen their tax burden has become a tornado-like roar. But let us be frank. Congress will not give the people worthwhile relief from the present excessive taxes imposed upon them so long as politically powerful pressure groups insist upon the payment of subsidies, benefits, a continuance of foreign aid, and have the power to influence elections.

We have here in Washington the old situation of an irresistible force—to wit, the demands of politically powerful pressure groups—exerted upon a Congress which knows that it must either yield or be replaced by a more compliant one.

Just so long as Members of Congress cling to the thought that, if those who elect them wish to commit financial suicide, they should be permitted to do so, excessive spending will continue, taxation never lessen.

LONESOME CONGRESSMEN SITTING DUCKS

Members of Congress are a long way from home. Twenty-two years' experience here convinces me that Congress will not resist the ever-increasing demand of pressure groups for new and ever larger appropriations, which always mean new and higher taxes. The demand for relief from excessive taxation will not be granted so long as citizens insist upon additional Federal expenditures.

The remedy? The only apparent avenue through which the citizens can obtain relief is to repeal the 16th amendment, which makes feasible the imposition of income taxes.

Oh, but do I hear you say—what form of taxation do you advocate to replace the billions lost through the repeal of that amendment? That question assumes that the tax levies and expenditures, of which we have been complaining and which we demand must end, are necessary. In my judgment, that is a false assumption.

We get back to the old but true statement that one cannot eat his cake and have it, too. Nor can the citizen save his dollars and the Government continue to waste them. For years there have never been tax dollars enough to meet the demand. There is no prospect that there ever will be.

The people must make a choice. Congress having yielded to the ever-increasing demands for Federal aid, there being no relief in sight, the people themselves must now choose between services and expenditures which are absolutely necessary, and those which are desirable but not necessary and the limitation of which will give us less spending, lower taxes.

If the Federal Government does not have tax dollars, it cannot spend them. As long as the people's representatives in Washington can collect and spend and be reelected, the tax burden will not be lessened.

Hence it is that an amendment repealing the 16th amendment is proposed. Shift the power and the responsibility for the levying of taxes to the shoulders of the people who pay the taxes. After all, this is supposed to be a Government by the people, for the people; not for the politicians nor the unrealistic.

Deprive the Congress of the power to levy an income tax. So far as possible, send the spend and tax issue back to the States. There, the voters, living practically next door to their State senators and State representatives, can make their real wishes felt. There, State legislators can really determine whether the people want economy, a sound, stable policy; or whether they wish economic ruin through the imposition and collection of ever-increasing income taxes.

If the people need and are determined to have special benefits, subsidies, or privileges given individuals or groups, they can, through their State legislatures, levy the necessary tax. They can spend their money without Washington taking its cut. But they will know they must pay the piper who plays the tune. The people will be forced to realize that they, not Uncle Sam, are paying the cost.

In effect, the repeal of the 16th amendment will again place in the hands of the home folks the power to determine the amount of tax which they are willing to pay. They will be forced to take a look at the price tag attached to the public service or benefit payment which they desire.

If the people want economy, they can get it. If they want what is known as a liberal spending policy, they can have that, but they will at least have an opportunity to know the cost before they buy.

Reliable authorities advise that the overall tax burden calls for not less than one-third of the average citizen's total income. That means that we must each work 4 months of every year in order to meet our tax obligation—a most astounding situation; one from which at least partial relief can be obtained by placing control of the income-tax levy more directly in the hands of the people.

Involuntary servitude, the obligation to work for someone else, is just as oppressive, just as liberty-destroying, if forced upon us by the Government as by an individual. We can—we should—avoid it.

Dean MANION. Thank you, Congressman CLARE HOFFMAN. I am particularly obliged to you for the important reminder that tyranny is impossible when the Government is without the power to confiscate the earnings of the citizen. This reminder puts your proposal in its proper perspective. The Hoffman amendment is a new emancipation proclamation—a call for the repeal of involuntary servitude. Thank you, Congressman, for giving us all a real rallying cry for the reestablishment of the American Republic.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

Appendix

Foreign Policy

EXTENSION OF REMARKS
OF

HON. THEODORE FRANCIS GREEN

OF RHODE ISLAND

IN THE SENATE OF THE UNITED STATES

Monday, March 18, 1957

Mr. GREEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I delivered at a dinner meeting of the Business International Group, at the Sheraton-Carlton Hotel, Washington, D. C., on March 14, 1957. It includes a lengthy letter from Hon. D. A. FitzGerald, Acting Director, International Cooperation Administration, regarding loan agreements being made with foreign countries in accordance with Public Law 480.

I believe this address will be of interest to the Members of the Senate.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

INFORMAL REMARKS OF UNITED STATES SENATOR THEODORE FRANCIS GREEN, CHAIRMAN, SENATE COMMITTEE ON FOREIGN RELATIONS, AT A DINNER MEETING OF THE BUSINESS INTERNATIONAL GROUP AT THE SHERATON-CARLTON HOTEL, MARCH 14, 1957, WASHINGTON, D. C.

Mr. Chairman, distinguished guests, and members of the Business International Group, I am highly appreciative of the honor which you have bestowed on me by giving this dinner. Probably it is in some way related to the fact that I serve as chairman of the Senate Committee on Foreign Relations, and the further fact that companies of the type represented here have a deep and fundamental interest in the foreign policy of the United States. It is but natural, therefore, that your concern with foreign policy should lead to a special interest in Members of Congress and committees directly concerned with the formulation of that policy.

On the other hand, may I say that my committee is especially interested in the operations of your companies abroad. In most activities in which Members of Congress engage, there is a widely dispersed and vigorous constituency following every move. But in the field of foreign relations we have no constituents, except the relatively few Americans who serve abroad with companies like those represented here, and unfortunately, I suspect that most of your employees abroad do not vote.

In the case of domestic policies—relating to the effective operation of the postal service in the United States, for example—Congressmen quickly hear from constituents if the postman doesn't deliver the mail. In the case of foreign-aid programs, however, Members of Congress are not so likely to have constituents on the spot, who will report any possible shortcomings in the foreign-aid program. The result is that the Congressman often doesn't learn that something is "rotten in Denmark" or "going sour in the Sudan" until the situation is really out of hand or nearly so.

It is precisely to fill this lack of on-the-spot information that my committee has enlisted the assistance of companies such as yours to supplement the information received through official channels or obtained by those Members of Congress who travel abroad from time to time.

As some of you know, the Senate Committee on Foreign Relations has sought your advice in the formulation of foreign policy. Since last summer we have had underway a thorough review of the foreign-aid policies of the United States. We have been concerned with the impact, or lack of impact, which foreign-aid expenditures have had upon our foreign relations. We have wanted to know whether our technical assistance programs in Latin America, our economic assistance programs in India, or our military-aid programs in Pakistan or Turkey or Greece have served the national interest.

Naturally, in seeking answers to these questions Congress turns to the executive branch of the Government for advice. But, it is a strange thing. I have yet to hear a representative of the executive branch come before the Senate Committee on Foreign Relations and testify to anything but the fact that our aid programs have been a great success.

However, in order to supplement this view of the executive branch on the effectiveness of our foreign-aid program, the committee has turned to companies such as yours. Last fall we asked some 50 American companies, newsgathering organizations, and private philanthropic groups with large numbers of overseas representatives, to assist the committee in its evaluation of our foreign-aid programs. For example, the committee felt that the local manager of the Chase Manhattan branch in New Delhi, or an overseas representative of W. R. Grace & Co., or a reporter in Paris for the Columbia Broadcasting System, would be in a good position to give the committee views on the effectiveness or the ineffectiveness of our aid policies in the area where he is located.

I am sure most of you here will be interested in a summary of the information supplied by overseas Americans in response to the questionnaire which the committee sent out last fall. The summary is now in the hands of the Government Printing Office and will supply much of the raw material which the committee must have in reaching its final conclusions. I hope you will furnish me with the names and addresses of any persons who you think might be interested in this summary.

In the weeks immediately ahead I anticipate that the Senate will be devoting a great deal of attention to this subject of foreign aid. Since 1948 the United States has appropriated in excess of $50 billion for this purpose. During the 8-year period since the inception of the Marshall plan in 1948, however, the relationships among the nations of the world have undergone substantial changes and the scope and nature of United States aid programs have frequently been altered during that period.

Here is another phase of the matter. Although there has been a gradual decrease in the sums appropriated over these years, there has been a gradual increase in the opposition to these programs. This increased opposition is evident in the votes in the Senate.

In 1948 there were only 7 votes against final passage of the Marshall plan. In 1956 there were 30 votes against final passage of the mutual security appropriation bill, and this number was equally divided between the 2 parties.

There should be serious cause for concern when foreign policy programs of the size and the impact of the annual Mutual Security Act do not command the support of at least two-thirds of the Senate. It would seem that such programs if they are to be successful in promoting the national interest should be of a kind to enlist wider congressional and public support. One of the reasons for the constitutional requirement of a two-thirds majority for consent to ratification of treaties is that the Nation when it speaks on foreign policy should speak with a strong, united voice. Foreign-aid programs cannot achieve their full potential unless they draw support from the American people, or at least from their official representatives.

The trend of increasing opposition to these programs would seem to indicate either that their purposes have not been clearly understood, or that there is a growing belief that they have in some way failed to serve the national interest. In either event, the trend must be reversed, either by clarifying the relationship between the programs and the national interest, or by changing the programs so that they may more clearly serve that national interest.

It was as a result of considerations of this kind that the Senate last year adopted a resolution introduced by Senator MANSFIELD which created the Special Committee To Study the Foreign Aid Program. The Senate instructed this special committee to make "exhaustive studies of the extent to which foreign assistance by the United States Government serves, can be made to serve, or does not serve, the national interest, to the end that such studies and recommendations based thereon may be available to the Senate in considering foreign-aid policies for the future."

The committee's job of collecting material upon which to base its recommendations is now nearing completion. Some 20 studies have already been made and are in process of publication. The committee has sought the advice of some of our great educational institutions like the Massachusetts Institute of Technology and Columbia University. It has used private contractors in the gathering of material. It has invited prominent American statesmen to carry on surveys for it in various parts of the world.

In collecting this material the committee has been assiduous in trying to make sure that all points of view are represented among those collecting the material. I believe that an examination of the materials and recommendations submitted to the committee will indicate beyond any doubt that we have had before us the views of those who advocate a vast expansion of our aid programs as well as those who advocate its vigorous curtailment, and those who justify the present course.

I cannot as yet, of course, tell you what the committee may finally recommend. All that I can do is to assure you that the committee is doing its homework and express the hope that its conclusions may be beneficial to the American people.

Regardless of the ultimate conclusions of the Special Committee To Study the Foreign Aid Program, I am sure you will find some of the studies of great interest. One study, for example, is entitled "American Private Enterprise, Foreign Economic Development,

and the Aid Programs"; another reviews the foreign assistance activities of the Soviet Union; a third is on the use of private contractors in foreign-aid programs; a fourth is on the subject of the agricultural surplus-disposal program. Copies of these studies are available upon written request to the Senate Committee on Foreign Relations.

In connection with the study relating to the disposal of surplus agricultural products, I know that Business International has been deeply interested in the uses to which foreign currencies generated by that program are put. One of the men the committee sent abroad was former Ambassador David Bruce. He drew particular attention to some of the problems that have been created in Latin America by the disposal program and the impact that our control of large amounts of foreign currencies may have on economic development in that area.

Certainly one thing that has been clearly revealed by the work of the special committee is that greater attention must be directed toward the productive use of these currencies in ways that will serve the national interest.

In the January 11 issue of Business International, Your Weekly Report to Management on Business Abroad, I noted the article entitled "Public Law 480 Funds Still Out of Reach of Private (and United States) Firms." Immediately I wrote to the Secretary of State, sent him a copy of the article, and requested his comments. On Saturday, March 9, I received a lengthy letter from Hon. D. A. FitzGerald, Acting Director of the International Cooperation Administration, regarding this problem.

I would like to read this letter in whole or in part, but the letter itself is very long, consisting of four and a quarter closely typewritten pages. It is carefully reasoned and includes a wealth of detail and many figures difficult to carry in mind. It deserves your careful consideration, but I think it better for me not to read it to you now. For this reason I have had mimeographed copies of my remarks prepared for distribution to you here and have had included the letter itself.

(Following is the letter in full—it was not read:)

INTERNATIONAL COOPERATION ADMINISTRATION,
OFFICE OF THE DIRECTOR,
Washington, D.C., March 9, 1957.

Hon. THEODORE FRANCIS GREEN,
Chairman, Committee on Foreign Relations, United States Senate, Washington, D.C.

DEAR MR. CHAIRMAN: Your letter to Secretary Dulles enclosing a marked copy of an article in Business International regarding the allocation of funds under Public Law 480 has been referred to me for reply. In order to comment most meaningfully on the article it is necessary to review title I of the law, the facts of the situation with which it deals, and some history of its operation.

As you know, the Agricultural Trade Development and Assistance Act of 1954 (Public Law 480) is, to quote the preamble "An act to increase the consumption of United States agricultural commodities in foreign countries, to improve the foreign relations of the United States, and for other purposes." Among the other purposes of the act "it is further the policy to use foreign currencies which accrue to the United States under this act to expand international trade, to encourage economic development, to purchase strategic materials, to pay United States obligations abroad, to promote collective strength, and to foster in other ways the foreign policy of the United States."

Under title I of the act the President, who has delegated this function to the Secretary of State, "is authorized to negotiate and carry out agreements with friendly nations or organizations of friendly nations to provide for the sale of surplus agricultural commodities for foreign currencies." Section 104 enumerates 10 different purposes to which the United States Government may devote the proceeds including: procurement of military supplies; purchase of goods for friendly countries; promotion of balanced economic development and international trade; development of new markets for United States agricultural commodities; purchase of strategic materials; payment of United States foreign obligations; financing international educational exchange activities; financing sale of books and periodicals abroad; assisting United States schools abroad; and most important of all for loans to promote multilateral trade and economic development, made through established banking facilities of the friendly nation from which the foreign currency was obtained or in any other manner which the President may deem to be appropriate. The use for loan purposes for economic development of the purchasing country has been the most important purpose to which these proceeds have been devoted and constituted 56 percent of the total sales proceeds under title I on January 31, 1957.

The negotiating situation under the act was more difficult in the early period but has become easier as time has gone on. What the United States had wanted, primarily, was to sell agricultural surplus, foster good foreign relations, and get the full value out of its sales for foreign currency. What the foreign government wanted was to use this means to purchase needed goods without using foreign exchange, and to secure as large a loan as possible for economic development on the most favorable possible terms from the proceeds. What has happened is that in selling the surplus to largely underdeveloped countries they have wanted loans to finance their plans for economic development. Since their plans for economic development rely heavily on large projects for power production, irrigation and drainage, roads and ports, and other facilities for promoting development which are in their public sector they have used the loan funds heavily for their own public projects. These projects are not attractive to private investors though they are indispensable to later development through private investment. We have not encouraged this choice but have continued to point out the value of using private enterprise, both domestic and foreign, in their economic development. To some extent they have done so, even though until last August we had not sought to secure their specific agreement to do this. Since then we have sought to secure agreement by the purchasing government to set aside a fixed amount or proportion of the loan funds for relending by them to private enterprise, whether of domestic, United States, or other friendly foreign national origin. We have also sought to include such a provision in the supplementary loan agreements even though the sales agreements from which loan funds were derived were made before this policy became effective and contained no such agreement.

The results of this policy have not been entirely satisfactory to those who have had extravagant expectations of what was possible. Essentially its possibilities are limited by a number of factors which I will discuss briefly. These are:

1. The loan funds belong to the borrower, a sovereign government, not to the United States. Since this is so, within the context of good foreign relations, so long as the funds are well used, as determined by our accounting controls, and for good economic development, we can seek their agreement as to proper uses but we cannot substitute our judgment for that of a sovereign government—and a rather jealous one, at that.

2. These sales are primarily made to underdeveloped countries with economies ranging from those as socialistic as Yugoslavia to those as unsocialistic as Japan but, whether socialistic or not, the governments in the least socialistic have in most cases their own fairly well formulated economic development plans, or, at least government projects in the public sector which they think are of the highest priority for economic development. It should be noted, however, that India, which has what many Americans think is too large a public sector, readily agreed to reserving the largest amount for relending to private foreign and domestic enterprise of any country so far—$55 million.

3. Our loan rates, 3 percent for dollar, and 4 percent for local currency repayment over up to 40 years, are low in order to encourage sales and furnish cheap credit to friendly nations for their economic development. Since many of these underdeveloped countries have weak currencies we have felt obligated to require an exchange guaranty to cover the risk of currency depreciation over such a long period. Since we could not afford to lend funds without an exchange guaranty at such low rates and since monetary and credit policy of the foreign government are involved in relending to private enterprise our policy has been to retain the exchange guaranty we already have required from the foreign goveernment and allow them to recoup any losses due to relending by them without value maintenance from the spread in interest rates paid by them to us and charged by them to private borrowers.

There has been a misapprehension about the amounts of proceeds and loans under Public Law 480. The $3 billion of authorization by Congress is for CCC value, including ocean transportation costs. As of January 31, 1957, the CCC cost of commodities sold, including ocean transportation, amounted to $2,885,923,000. The market value including ocean transportation on these sales was programed at $1,980,880,000. Of this amount, 56 percent of $1,117,000,000 had been reserved for loans and the amount of loan agreements signed amounts to $355 millions.

Before we adopted the policy of seeking agreed relending to private enterprise Brazil, Spain, Japan, Austria, Israel, and Ecuador reloaned varying amounts to private investors. From the loan of $31 million to Brazil $13,800,000 was loaned to private investors, of which American and Foreign Power Company secured a loan of $5 million in local currency equivalent. In Spain our first loan of $10,500,000 was reloaned to private investors to the extent of about 50 percent though none to American investors so far as has been reported. In Japan around $5 million out of their two loans has been reloaned to private Japanese investors. The Austrian Government is relending around 50 percent to private investors from its $16 million in two loans. In Ecuador approximately $2 million out of their $3,100,000 loan was reloaned to farmers mainly for irrigation. In Israel on loans amounting to $28,790,000, and in Colombia on loans amounting to $10 million, it is planned to relend portions, as yet unspecified, to private investors.

The only loan agreement signed so far with provision for relending to private enterprise is that with Brazil in the recent loan of $117 million. The Brazilians insisted they could not make a reservation solely to private enterprises, but must include mixed and Government enterprises. Our understanding is, however, that a considerable part of the funds will probably be reloaned to American and Foreign Power and the Canadian-owned Brazilian Railways, Light & Gas Co., Ltd. The Paraguayan loan agreement for $2,200,000, just signed March 8, does not include a private relending provision because of desire not to delay signing, but the Government of Paraguay agrees with the principle and intends to lend up to 25 percent to private investors. In Argentina loan agreements of $20 million are under negotiation under which relending

to private investors was provided by the sales agreements.

Since the beginning of this policy in August sales agreements with private investment relending provisions included have been signed with the following countries and supplementary loan agreements with such agreed provisions are in process of negotiation.

Country:	*Private loan portion (million)*
India	55.0
Pakistan	2.8
Greece	4.8
Spain	22.1
Ecuador	1.06
Israel	1.5
Italy	18.6
Turkey	6.0
	113.86

The voluntary relending to private, including American investors, of upwards of $30 million, the prospect of substantial relending in Brazil and Paraguay and the agreed intention to relend to private investors on a nondiscriminatory basis for loans to private enterprise of both local and foreign friendly country origin of over $113 million is not a poor result for a policy on which instructions were sent to the field only 7 months ago. On the other hand, extravagant expectations of amounts to be made available to United States manufacturers should not be encouraged. Foreign governments will emphasize their own development plans which are heavily in the public sector though these facilities will open up further opportunities for future private investment, both domestic and foreign. They will naturally protect the prospective domestic investor. Interest rates will generally be higher than United States interest rates since capital in underdeveloped countries is well known to be scarcer than in the United States.

Without promising what final performance is likely to be, especially for United States investors, it does seem possible that the first year of this policy might see as much as $250 million loaned and reserved from this source for private relending to which United States investors will have agreed access on a nondiscriminatory basis. By next August when the first year's results will be available for study we should be better able to appraise the results and will do so.

Sincerely yours,

D. A. FITZGERALD,
Acting Director.

During the years I have been in the Senate, I have observed a tremendous increase in public interest in our foreign policy. We now realize that incidents in far away parts of the world, which in the 1930's would have passed unnoticed, may now involve this Nation in war. Foreign policy is front-page news not only in Washington and New York, but in every city and village throughout the United States. The people realize that the livelihood and even the lives of Americans are intimately tied to events in such strange places as Gaza and the Pescadores.

Perhaps one way to measure the increased interest of Americans in foreign policy is to look at the workload of the Committee on Foreign Relations. Only last week I had occasion to examine the number of items before the committee during the first 2 months of this session of Congress as compared with the first 2 months of the session 2 years ago. Two years ago there were 28 items before the committee. This year there were 43. And certainly those of you who have been following the debates in the Senate on the so-called Eisenhower doctrine must realize that a great deal of foreign policy has already been made this session.

In concluding, I think I should warn you, Mr. Chairman and guests, that you should not make the mistake of believing that all foreign-affairs talk on Capitol Hill is foreign policy making.

I am reminded of the story of the company in Chicago which advertised that it was ready to purchase bullfrog skins at 50 cents each. Shortly after the advertisement appeared, the company received a wire from a man in Texas. The wire read: "Can supply 100,000 bullfrog skins. Please instruct."

Back went the reply: "Forward 100,000 bullfrog skins forthwith." Three weeks passed. No skins. Finally there came a small package with one bullfrog skin and a small note attached which read: "Sorry. It sounded like there were a lot more."

Sometimes I am afraid that it sounds like a lot more foreign policy, and with a lot more dissent, is being made on Capitol Hill that is the case. Yet it is a fact that in a democracy such as ours, the formulation of policy is accompanied by a great deal of noise and disagreement. To the initiated the public debate of foreign-policy issues is not a frightening thing. On the contrary, I find it a heartening thing, because it is in the process of free debate and exchange of ideas that this Nation hammers out a foreign policy which serves the national interest, and which will command the support of the American people.

So, let us go forward with courage and confidence.

After Gaza

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the New York Herald Tribune of March 8, 1957:

AFTER GAZA

The blue helmets are in Gaza, and today they will be in Sharm el Shiekh. The United Nations emergency force has interposed itself between Israelis and Egyptians, and the last territory occupied in the series of attacks that began last November is being evacuated by the attackers. Now the constructive work of creating a more stable order of things in the Middle East must proceed with all speed.

Some of this work is already underway. Physically the reopening of the Suez Canal is near completion. Syria has allowed the Iraq Petroleum Co. to begin repairs to the pipeline, wrecked by the Syrian Army.

The most urgent business is to find a political and economic framework within which the Suez Canal can operate. The Security Council, before the outbreak of violence in the region, had unanimously indorsed six principles on which such a framework might be constructed, including the "insulation" of the control of the canal from the politics of any one country. Those principles are still valid; the need for putting them into practical effect and thus insuring the maintenance of navigation for all states through the waterway—including Israel—is greater than ever.

There are two major potential obstacles to such a solution. One would be if Egyptian recalcitrance blocked a fair agreement on the canal question. That need not be assumed, but it cannot be overlooked as a possibility. Should it occur, it must not be forgotten that the United Nations has assumed certain functions in respect to the canal; it has exerted pressure to impel the French and British to withdraw from Port Said and it has undertaken salvage operations to open the waterways. This police and salvage work very definitely implies a responsibility for establishing an equitable regime for the future of the canal—a responsibility which is not limited to making suggestions and serving as a medium of negotiations.

Another obstacle to the swift completion of arrangements for the future of Suez would be a new outbreak of violence in the area. This could occur if UNEF were unable to prevent fedayeen raids or interference with Israeli shipping. The answer to that is to assure that UNEF is adequate—in manpower and in status—for the task. And the first requisite is to prevent any mingling of Egyptian and U. N. authority in the trouble spots. UNEF's main objective is to preserve the peace. That, obviously, cannot be done if the blue helmets make a brief, formal appearance in the Gaza strip and on the Aqaba Gulf and then give way to the Egyptians. They must stay until some just and reasonable arrangements can be reached, both for the security of the land frontiers and the sea lanes in the region.

The U. N.—and the United States—have undertaken serious commitments to create conditions in which a general settlement can be made in the Middle East. Those commitments must be honored. And a very practical immediate reason for maintaining UNEF in strength and prestige in its new posts is that unless that is done, the opening of the Suez Canal might again be delayed indefinitely. That none of the nations whose trade passes through the canal can contemplate without dismay.

One Hundred and Sixth Anniversary of University of Minnesota

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, March 18, 1957

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Our Day To Stretch," published in the St. Paul Pioneer Press of February 27, 1957. I believe the editorial will be of interest to all readers of the CONGRESSIONAL RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OUR DAY TO STRETCH

The University of Minnesota is celebrating its 106th birthday this week and all Minnesota can celebrate it. The university has pursued a vigorous program of teaching, service, and research that has benefited Minnesota and Minnesotans in a multitude of ways and for more years than Minnesota has been a State.

Distinguished educators in dozens of fields have taught on the university's campuses, instilling a love for learning and for seeking the truth in countless students. Many of these students, in turn, have gone on to distinguished careers. Few communities in this State have not felt the influence of the univeristy.

In service and research, the university has been a strong helping hand. From its hospitals, laboratories, and experimental projects has come knowledge of special import to Min-

nesota. The successful process to exploit the State's huge reserves of magnetic taconite ore came from the university, as did crops and fruits adapted to our climate and soils. Surgical techniques developed here have saved many lives. Extension work, testing services, cultural opportunities, skilled studies in a wide variety of fields—the university's contributions have been vast, indeed.

In these 106 years the university has attained high standing in the Nation, and it is appropriate for Minnesotans to salute their great institution this week. They might also give thought to the role of the university in the future—in 15 years, twice as many Minnesota youths as today will be seeking college educations. As the university's president, James L. Morrill, said recently:

"How large they wish their university, or the teachers' college to be; whether they wish to support the junior colleges through State aids—these are the decisions the people will make."

A study of all the factors involved would be the best way to obtain the facts on which wise decisions are based. The role of the university, the State's great public institution of higher education, is particularly vital in any real solution of these oncoming waves of enrollment.

Recent suggestions have pointed increasingly toward an integrated system of public higher education. Any realistic solution also should consider population growth and movement, the role of 2-year junior colleges as well as teachers' colleges, land use, expansion possibilities, student needs, site convenience, traffic, and parking problems.

The truth of the university's Charter Day theme, "Our Day To Stretch," is undoubted. The question for the university and Minnesota, in the midst of birthday felicitations, is how and where?

Questions and Answers on H. R. 11

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 13, 1957

Mr. PATMAN. Mr. Speaker, I have received a letter from the executive secretary of the Gasoline Merchants of Brooklyn, which asks four specific questions about what could and could not be done under the strengthened antitrust laws which will result from enactment of H. R. 11, the equality of opportunity bill. I know that other Members are receiving similar questions about this bill, so I think they may be interested in these questions and my answers. They appear in my reply to Mr. Azarow, which is as follows:

MARCH 14, 1957.

Mr. NAT AZAROW,
Executive Secretary, Gasoline Merchants of Brooklyn,
Brooklyn, N. Y.

DEAR MR. AZAROW: I am very glad to have your letter asking me specific questions about what can and cannot be done under H. R. 11, and I am happy to have the opportunity of answering these questions.

Question No. 1: Could the major oil company meet the lower price of the off-brand supplier who is in intrastate commerce?

Answer: Yes. The fact that the off-brand supplier is in intrastate commerce only, creates no complication to the major supplier's privilege of discriminating to meet competition.

Question No. 2: If this lower price could be given, would it have to be given to every retailer customer of the major oil supplier throughout the country, State, or city?

Answer: No. H. R. 11 would tend to require the supplier to give the same price to all of its dealers who are in actual competition among themselves, but even among competing dealers it would not require absolutely fair and equal treatment. On the contrary, the bill would forbid the supplier to discriminate among competing dealers to such a gross and prolonged extent that the effect of the discrimination may be, in the language of the bill, "substantially to lessen competition or tend to create a monopoly." In other words, even under this bill dealers would not have protection against a mere "injury" to competition.

Question No. 3: Would H. R. 11 in effect protect the off-brand price cutter (in intrastate commerce) so that he could operate without fear of competition even if he sold below the tank-wagon price of the major supplier?

Answer: No. The bill would give some increased protection to the small refiner, but not much. The major company could still give a special price allowance to its dealer across the street from an off-branch station, but under the bill it would also tend to require the major to give the same allowance to its other dealers down the street, or at other locations where trade would be diverted from them by the allowance to the first dealer. It is from this fact that, under the bill, the major oil companies would find it slightly more difficult to destroy small refiners; in other words, the majors could still abuse their great power in competing, directly or indirectly, with a small refiner, but they could not pinpoint their great marketing power quite so sharply.

Question No. 4: In order to give price assistance to retailers in a local price war in Chicago, would the major suppliers have to lower the price to a retailer in New York?

Answer: No. I believe this question is fully answered in my statement above.

I appreciate your giving me the opportunity to answer these questions.

Sincerely yours,

WRIGHT PATMAN.

Aiding the Commies

EXTENSION OF REMARKS
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. HOFFMAN. Mr. Speaker, without accusing any individual, or any member of any group, or the group itself, of intentionally aiding the Communists, to many of us it is evident that, over the years, the left-wingers, the so-called liberals, all of whom we will concede for the sake of argument are sincere and patriotic, have done much to aid the cause of the Communists—to discourage those who, here at home, believe in constitutional government.

A certain section of the press—some high in policy-making departments of the Federal Government—seem, if judged by their publications and utterances, to think they were annointed by the Lord to persecute and silence all those who object to Communists in our Government, to socialistic or communistic policies, and those who, from time to time, speak out boldly and courageously against policies and activities which, in their opinion, undermine our sovereignty, endanger our national security.

From the Saturday Evening Post of March 23 comes an editorial which reads as follows:

LIBERALS USE ANY CLUB TO DISCREDIT NATIONALIST CHINA

(By Geraldine Fitch)

(EDITOR'S NOTE.—Mrs. Fitch has spent many years in China and now lives in Formosa. She is the author of Formosa Beachhead and is now at work on another book.)

Back in 1944 Lt. Gen. P. T. Mow came to Washington as a procurement officer of the Chinese Nationalist Air Force, authorized to spend $49 million for military aircraft and airplane parts. Seven years later, when the Chinese Nationalists had set up a single procurement office for all branches of the service, Mow refused to transfer the balance of his funds to the new organization or turn over his accounts. Ordered to report to Formosa, he refused to go. Instead he charged incredible corruption by the Nationalist Government. The Nationalists replied that more than $25 million of the air-force funds which were supposed to have been spent were not supported by vouchers and that nearly $7 million was missing.

Inevitably, the liberal section of the American press took General Mow and his executive officer, Col. V. S. Hsiang, under its wing and echoed his charges. The Washington Post published a series of five articles to the effect that behind the recall of General Mow lay a morass of fraud, corruption, and intrigue which called for investigation.

The Reporter magazine devoted 65 pages, or almost the entire two issues of April 15 and 29, 1952, to what it called "a shocking story waiting 12 years to be told," involving "billions of dollars and a shocking list of famous names."

The field day of General Mow and Colonel Hsiang came to an end when the Nationalist Government sent its Vice Minister of Justice, Dr. Cha Liang-chen, who is doctor of juridical science from the University of Michigan, to file suit in the United States District Court for the District of Columbia against Mow and Hsiang.

When the prosecution sought to subpena the two officers, it was discovered that Hsiang had sent his family to Red China, had secured a Las Vegas divorce and had married a secretary in the offices of the defense lawyers. Mow had decamped to Mexico with a former night-club entertainer. By the time missing air-force deposits of $2 million were located in two Swiss banks, the Chinese puzzle involved 4 countries: China, the United States, Mexico, and Switzerland.

When the case was completed, the decision went to the Republic of China (Formosa), granting it custody over all records and funds. The court audit set the missing amount as $6,368,000, and Mow's appeal from the audit was dismissed by the appeals court. Dr. Cha's toughest battle was won.

Many proceedings in different States and against different banks followed, with the result that a considerable part of the missing millions was recovered. The United States Treasury froze another $2 million which Mow had invested in Treasury notes. As recently as August of last year, a judgment for $810,000 was handed down in a Los Angeles court in favor of the Nationalist Government.

These facts have been reported in the newspapers here and abroad, but the liberal crusaders against Free China have not admitted that they were taken in by Mow and Hsiang. The odds are against their ever doing so.

Jefferson-Jackson Day Dinner Address by Senate Democratic Leader Lyndon B. Johnson

EXTENSION OF REMARKS
OF
HON. SAM J. ERVIN, JR.
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Monday, March 18, 1957

Mr. ERVIN. Mr. President, on Saturday night the distinguished majority leader of the Senate spoke to the Democrats of my State. His address was one which I believe all my colleagues should read, because it was couched in terms of reason, rather than petty partisanship. It was in keeping with the same degree of high purpose with which the senior Senator from Texas serves the Senate.

He called upon the party which he so ably represents to unite for constructive achievement—not just to divide the country—and his words brought forth an enthusiastic response from all who were present.

Mr. President, in times like these we are fortunate to have a leader who appeals to reason and unity. Those are the qualities which are the salvation of our country.

I ask unanimous consent that the very able and illuminating address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATE DEMOCRATIC LEADER LYNDON B. JOHNSON BEFORE JEFFERSON-JACKSON DAY DINNER, RALEIGH, N. C., MARCH 16, 1957

Mr. Chairman, friends, fellow Democrats, I am here tonight to visit with you about our party and our country.

You are here because you are Democrats. To me, that means simply that you are concerned about the future of our Nation. You are people who believe—believe that the people can act to shape their own destiny.

North Carolina has always been a stronghold of the Democratic Party. I count among my closest friends such able legislators as SAM ERVIN and KERR SCOTT. Luther Hodges is known throughout the Nation.

When I first came to Washington as a Congressman in 1937, Lindsay Warren was a tower of strength and Bob Doughton had forged already his position as the party's expert on taxes and fiscal affairs. I can include among the House Members with whom I have served John H. Kerr, Franklin Hancock, Alonzo D. Folger, William B. Umstead, J. Baird Clark, Walter Lambeth, William O. Burgin, Charles Deane, Alfred L. Bulwinkle, Zebulon Weaver, Monroe Redden, Herbert C. Bonner, Graham Barden, Harold D. Cooley, and Carl T. Durham.

Today your delegation compares favorably with any in the Nation. Some of those that I have named are still in the Congress. They serve with such able men as L. H. FOUNTAIN, RALPH SCOTT, ALTON LENNON, PAUL KITCHIN, HUGH ALEXANDER, BASIL WHITENER, and GEORGE SHUFORD.

Men like these keep the Democratic Party the party of the people and the party that serves America.

As we meet here tonight, events are taking place in a remote corner of the world which may upset the delicate balance between war and peace.

One side in a two-sided dispute seems determined to press its cause beyond the bounds of reason.

In the past few weeks, this country took the lead in mobilizing the free world to persuade Israel to withdraw from Gaza and the Gulf of Aqaba. That withdrawal took place.

But in urging withdrawal, this country did not aline itself with one side. It expected there would be equally statesmanlike acts on the other side.

Those acts have not been performed. Instead, a colonel appears determined to interpret as a military defeat the fact that men's educated minds bowed to persuasion and reason.

There can be no permanent settlement in the Middle East until certain preliminary steps have been taken. Withdrawal was one of those steps.

In return, the Israelis are entitled to peace on their borders and to peaceful commerce. To deny these is to grant the colonel a military victory which his armies did not win.

This country has a clear duty. It was indicated by the President on February 9 when he said:

"We should not assume that if Israel withdraws, Egypt will prevent Israeli shipping from using the Suez Canal or the Gulf of Aqaba. If, unhappily, Egypt does hereafter violate the armistice agreement or other international obligations, then this should be dealt with firmly by the society of nations."

Our clear-cut concepts were expressed by the Congress when it voted to support and supply the U. N. emergency force. I am happy to say that every Democratic Senator voting voted "yea."

We must frankly face the fact that the Israelis withdrew because we took the leadership in persuading them. They were not driven out by Nasser from the Gaza strip and Sharm-el-Sheikh.

Now the world looks to us to determine how we will act in regard to the other side. And if we acquiesce to actions that go beyond the bounds of reason, we will lose the world's confidence.

The strength of our party cannot be underestimated. In the last election, we won on every level except the Presidency itself—and I predict we will win that in 1960.

We won the House and the Senate.

We won a majority of the State legislatures.

We won city hall after city hall and county courthouse after county courthouse.

The score today is 29 Democratic governors and 19 Republican governors; 24 Democratic State legislatures and 19 Republican State legislatures (2 States elect their legislatures on a nonpartisan basis and in 3 States the legislatures are evenly divided).

The Republican Party was given public credit for a popular victory. But actually only one Republican won—the President himself.

The Republicans as a party went down to defeat.

It is time for us to take a close look at our party and to determine our true strengths.

There are many paths that lead to the Democratic Party. Some of us are businessmen. Some of us are workingmen. Some of us are farmers. Some of us are technicians.

But all of us are held together by one common belief. It is that this country belongs to all Americans and that there is no one group or no one sect that can tell the rest of us what to believe or what to do.

The Democratic Party has a long—and frequently stormy—history. It has survived practically every crisis in our history. It has endured through good times and bad times, through crisis and tranquillity.

It has numbered among its leaders such men as Jefferson and Jackson; Cleveland and Wilson; Roosevelt and Truman. We are proud of every one of them. They were Democrats—without prefix; without suffix; and without apology.

When I use this phrase, of course, I am quoting one of the great men of our times, the Speaker of the House, SAM RAYBURN. It is one of his favorite phrases, one which he employs on every occasion where he is trying to express his inmost feelings.

I have not borrowed this phrase just because it is a good one, although it is. I have turned to it because there is nothing more expressive of the real strength and the real vitality of the party which we represent.

To me, there is no such thing as a hyphenated Democrat. I recognize that there are differences of viewpoint within our party. I realize that we do not see all things alike.

We are a nationwide party. That is a fact which imposes upon us certain obligations, obligations which are not felt by a sectarian group or a sectional political organization.

It means that we must have a true realization of the needs of a cotton farmer and an automobile worker; of a tobacco planter and a machinist; of a poultry raiser and a business executive.

We must think seriously of the problems of industry and the problems of labor. We must realize that we cannot cut off our export markets for cotton and we cannot permit textiles to be swamped in a sea of foreign imports.

No responsible man will pretend that there is an easy answer to all these problems. And no responsible political party will pretend that one simple solution solves them all.

It takes work—hard, unrelenting work. It takes a willingness to seek common ground, even where the answers appear to be contradictory. It takes an appreciation of the spirit of give and take, even where people are unwilling to compromise.

And above all, it takes a willingness to listen and learn from every point of view, while denying to any one group the right to absolute control.

There is in the Democratic Party a wealth of talent. That, plus our standing as a nationwide party, represents our true strength.

Our real problem is to bring these men of talent together, to unite them in a common search for the solutions to the problems that face all Americans.

The fact that a man may be wrong about this issue or that problem has never been a matter of absorbing interest to me. But the fact that if he sits down to reason together with a man of a different viewpoint, a solution may be forthcoming seems to me the most important aspect of life.

I can ask you—in all sincerity—to appreciate the keen and understanding mind of a DICK NEUBERGER. With equal sincerity, I can ask the people of Oregon to appreciate the wisdom and the integrity of a SAM ERVIN.

I can ask you—with the same earnestness—to heed the vigorous, imaginative words of a HUBERT HUMPHREY. And I can ask the people of Minnesota to give serious consideration to the blunt candor and patriotic advice of a KERR SCOTT.

This request can be made simply because we are all Democrats—and everyone of us has something to contribute to our party.

Personally, I believe that the people of this country are tired of the kind of political thought that divides Americans into blocs. I strongly suspect that those most tired of that phrase are the men and women who are supposed to be members of the blocs.

I doubt whether the carpenter who built this rostrum thinks of himself only as a part of the laboring class. And I doubt equally whether the man who paid his wages thinks

of himself only as part of the management class.

They think of themselves first as American men and their wives think of themselves first as American women. And they are perfectly right in doing so.

Each has his own responsibilities and his own problems. But neither one is going to be very happy with a group or with a political party that seeks to promote conflict between the two of them.

The real problems of our times do not call upon us to fight just because you come from North Carolina and I come from Texas. They do not automatically require a man from New York to put on brass knuckles when he meets an American from Alabama.

I have an idea that a serious discussion of the basic issues would run just about the same in North Dakota or Georgia; in Idaho or California. The accents would be different but the conclusion would be just about the same.

Of course, there are differences between the sections. There is a northern viewpoint and a southern viewpoint. The outlook of the West differs from the outlook of the East.

Sometimes those differences become heated.

But those differences—heated and angry though they may be—are insignificant alongside of our real problems.

First, there is the question of monetary policy. How long can this Nation remain prosperous when the price of money goes up and up beyond the reach of small businessmen, farmers, and consumers?

Second, there is the issue of foreign policy. Are we working effectively to maintain the integrity of the free world or are we just operating on a "spend more money" basis?

Third, what is happening to our farmers? North Carolina has more small farmers than any other State in the Union. But can we keep them on the farm when costs constantly go up, and prices fall or remain the same?

Fourth, why are we lagging behind Great Britain and the Soviet Union in peacetime use of atomic energy? We have been operating under an act to encourage that development for 3 years. And yet we do not have a single large-scale reactor in this country. Great Britain has two and there is good evidence that the Soviet Union beat us to the punch on a small-scale reactor.

Fifth, are we wisely and prudently conserving our natural resources in view of our expanding population?

Sixth, are we using all our resources and all our newly acquired knowledge to conquer cancer, heart disease, and the other killing and crippling diseases?

Seventh, when only one in every 10 of our young people graduates from college, are we keeping pace with the Soviet Union in training the technicians whom we must have to preserve our freedoms?

I am not raising these questions because they are the only issues before us. I am a realist and I recognize that there are many disputes—some of them angry—that must be settled.

But these are the problems of the present—and their solution will determine the future. They are the problems of maintaining our prosperity; feeding and clothing our wives and our children; assuring the degree of freedom which we cherish.

Neither am I raising these questions in the sense of criticizing somebody else. The American people are not going to cheer because we proved that another party failed to do something.

They are going to ask what we—the Democrats—did. And their judgment will depend upon our answers.

I am not going to stand here tonight and tell you that there are a set of readymade answers to the questions. But I do believe the answers can be found—and can best be found—within the Democratic Party.

The Democratic Party has an advantage which is enjoyed by no other political organization in this country. Through its governors, Senators, Representatives, and party officials, every section of the Nation is represented.

North Carolina speaks with a strong voice—as does Minnesota. Alabama receives a respectful hearing—as does Pennsylvania.

One of my father's favorite sayings was that a man's judgment is no better than his information. That is as true of a political party as it is of an individual.

The Democratic Party has available the best brains and the best information from all parts of the Nation. We must put them together—not in the service of a partisan cause but in the service of our country.

Each of us must give a little and take a little. And all of us—North and South—must give up the idea of crushing the other fellow and ramming our own pet ideas—no matter how nobly motivated—down his throat.

This is a big and a strong country. There is room in it for all of us. And by working together we can make it even bigger and even stronger and assure victory for our party and victory for our Nation.

Four years ago my colleagues did me the honor of electing me the Democratic leader of the Senate. At that time, I stated to them my policy—a policy which I have constantly followed.

In closing tonight I want to repeat to you the words and the philosophy which still guide my course.

I have a great faith in the Democratic Party. I am a Democrat of conviction—not out of habit. I believe that the Democratic Party is now—and always has been—the party that is best for America. I believe there are forces holding our party together greater than the issues over which we may squabble for the moment.

We are now in the minority. I have never agreed with the statement that it is "the business of the opposition to oppose." I do not believe that the American people have sent us here merely to obstruct.

I believe we are here to fight for a positive program—a program geared not just to opposing the majority but to serving America. I think that is the real desire of every Democrat—even though we may disagree as to methods.

Working together, I think we can do more than merely preserve the gains of the past 20 years. I think we can go forward with a positive program—a program that is pro-American and not just anti-Republican. And if we go forward as positive Americans—and not negative oppositionists—I am convinced that the time is not too far distant when the Democratic Party will again be in the majority.

Wilson Day Address by Hon. Wayne Morse of Oregon

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, March 18, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able address delivered last Saturday night by the senior Senator from Oregon [Mr. MORSE] at the Wilson Day dinner at Knoxville, Tenn.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WATER, ELECTRIC POWER, FLOOD CONTROL, RECLAMATION, AND AMERICA'S FUTURE

(Speech by Senator WAYNE L. MORSE to Wilson Day dinner, Knox County Women's Democratic Club, Knoxville, Tenn., March 16, 1957)

Ladies and gentlemen, your invitation to come to the State of Tennessee was one of the nicest compliments that has been paid to me for a long time. I suspect that none of you fully appreciates the fact that Tennessee is the Nation's outstanding symbol of the topic I propose to discuss with you tonight: water, electric power, flood control, and reclamation.

Our Nation and the people of our country for generations to come owe the people of the Tennessee Valley a great debt of gratitude for your tenacious faith in that great natural resource ideal and conservation principle, namely, that each generation is the trusted of God's gift of a priceless heritage in the natural resources of our country.

The people of the Tennessee Valley have taught the lesson to the people of the rest of the country that each generation owes a moral obligation to the next generation to see to it that our natural resources are handed down to the boys and girls of tomorrow in a better condition than that in which we found them.

Let me assure you that it is a much appreciated privilege for me to speak on a platform in the State of Tennessee, a State represented in the Senate of the United States by two such great statesmen and close personal friends as Estes Kefauver and Albert Gore.

When I selected the subject of my speech tonight, one of my associates said that to speak on that subject in the Tennessee Valley would be like carrying coals to Newcastle. But permit me to say to this audience that those of us who are interested in a sound conservation program for America's resources cannot review too often our obligation to the great issue that was fought out here in the Tennessee Valley.

Therefore, I propose to use this platform tonight to spread again information about what I consider to be probably the most important domestic issue confronting us, viewed from the standpoint of future generations of American boys and girls. I would have you think of our natural resources not in terms of the imagery of streams and dams and mountains and forecasts and irrigation ditches. I would have you look at our natural resources problems through the imagery of millions of faces of American boys and girls 25, 50, 75, 100, yes, even hundreds of years in the future.

When I talk about conservation and full development of the natural resources of our great river basin—the Tennessee, the Missouri, the Columbia, and all the rest, I am talking about the need for maintaining a high water table in order that we may maintain a high level of civilization.

History teaches a sad and ugly lesson that as the water table of a nation goes down, its civilization withers and dies. The Democratic Party should carry the fight to the Republican Party on the water resources issue, because the Eisenhower administration has already made a sorry record against the future generations of American boys and girls by its various proposals for underdevelopment in our river basins. For example, the administration's phony partnership sellout to the private utilities of the people's heritage of their own water rights will result in the cheating of future generations of American boys and girls out of a full enjoyment of the maximum economic potentials of our river basins.

I am convinced that the Democratic Party has a great duty to oppose the political expediency of the Eisenhower administration in the field of natural resources.

There can be no compromise of the principles inherent in this issue.

Let me make it clear that I hold no brief for any Democrat in the Congress of the United States who gives aid and comfort and support to the Eisenhower administration's proposals for underdevelopment of our river basins. If I say nothing tonight that I would have you remember until tomorrow it would be this: It is only through comprehensive, full, river basin development that we can protect the water rights of future generations, and give the greatest assurance of the greatest benefits to the greatest number of our people.

Let us never forget that water is the greatest nourishment of the civilization of any nation.

Let us look at a few facts about water, as the indispensable element of a high standard of living.

WATER—THE INDISPENSABLE ELEMENT

Over 2,000 years ago the Greeks believed that there were 4 elements—earth, air, fire, and water, and that all other things were combinations of these. While their chemistry was faulty, the emphasis of the Greeks was eminently correct.

Without water, human and plant life is impossible. Lack of adequate water has doomed whole areas that once flourished.

In the strife-torn Middle East, for example, there was 4 times the amount of land under cultivation in Roman times as there is today.

It is within man's power to waste water or use it to the full. The most fearful waste is that which permits the destruction of sources of water by failure to protect watersheds and the irresponsible pollution of our God-given streams.

Population growth and concentration, new industrial uses, and the proven benefits and necessity of irrigated farming have created vast new requirements for water. For example, at the Hanford Atomic Energy Commission Works, we see a dramatic consumption of water, where a prodigious amount of the flow of the Columbia River is diverted to provide the plant's cooling system. All about us, manufacturing plants use great quantities of water. For example, a soft-drink bottling plant uses thousands of gallons in very short periods. In our houses we are consumers of much water. One shower bath can use up 6 to 14 ballons of hot water alone—depending upon your habits.

In an average industrial community the per capita use of water runs between 100 to 200 gallons a day. A single fire hose has a minimum requirement of 250 gallons a minute.

All communities in our country are acutely sensitive to the growing need for water. So, for example, suburban Westchester in New York now uses 77 million gallons of water a day, compared with 47 million gallons in 1943. The Great Plains drought is a national tragedy. In Texas alone, 244 counties out of a total of 254 counties have been declared drought disaster areas.

At the same time, floods are an imminent threat to cities, towns, and bottom-lands throughout the Nation. New England, California, and Oregon suffered vast floods within the past 2 years. Kentucky and Tennessee are just coming out from under high water.

TVA'S SUCCESSFUL FLOOD FIGHT

TVA has once again proven its inestimable worth during the past few weeks. In this most recent flood, this great comprehensive, integrated basin system prevented flood damage which, at a conservative official estimate, was about 65 million at Chattanooga alone. TVA already has resulted in prevention of property damage equal to more than half the amount allocated to flood control for the entire system. Last year the Columbia River dams, and particularly the great water storage Grand Coulee Dam, helped avert great flood damage.

These recent experiences prove the wisdom of Theodore Roosevelt's and Gifford Pinchot's conservation program. They foresaw that natural resource development requires a basin approach.

The main cause of water feast and famine is deforestation. Without adequate upland forest cover, water flow is irregular. By turns the runoff is too great or too little where great forests do not catch and hold water for gradual flow.

A balanced basin system also requires man-made storage to control water for flood control, manageable power output, irrigation, industrial, and domestic use.

POWER—THE KEY TO WATER CONTROL

These great basin undertakings are not economically possible without electric power revenues. The electric power generated at multipurpose dams is vitally needed itself for farm, factory, and home. Unless its development is integrated with water storage for multiple use, all elements of development are retarded. As we progress with pollution control, it will probably be found that power has a major part to play in achieving it as well.

RECOGNITION OF PROBLEM THE FIRST STEP

It is urgent that the dimensions of our water problem be recognized, for it takes years and decades to achieve the means of adequate multipurpose water development.

As population grows and technology becomes ever more complex we will find, I predict, that the adequacy of water systems will be the ultimate limitation upon our capacity to grow.

Once this factor is taken to heart, we can move forward to meet the challenge of the future.

FAIR SHARING REQUIRED

At the heart of Theodore Roosevelt's resource and reclamation philosophy was the sound and simple principle that it is the people of the Nation who own its natural resources. It followed that its development and benefits should be widely and equitably shared.

The great trust buster also gave to this country a crystallization of the philosophy that monopoly is a prodigious threat to a free economy and free institutions.

So, when the great reclamation acts of his administration were enacted, the requirement was included that no beneficiary of a Federal reclamation project could obtain more than a reasonable share of water from that project. An individual's right to own land was not infringed. But his right to obtain water from a public project, financed by public funds, was limited.

This 160-acre limitation is rooted in the history of the West. It is a requirement of elementary fairness.

Events in California in the past weeks underscore the importance of this provision. I feel the California Supreme Court's Ivanhoe decision, which in effect sets aside the Federal reclamation law, was most unfortunate. I do not mean to comment on a matter of State concern. It is far more than that. A basic and vital Federal policy is involved. As a United States Senator, I have an obligation to speak my deeply held views about this Federal policy.

The decision can result in some good. For it dramatizes a basic issue which must be resolved before adequate progress can be made in water-resource development.

Recognizing the vital role of river basin development on a comprehensive basis—for power, flood control, irrigation, navigation, and recreation—we must decide our future course.

On great interstate streams like the Columbia and Missouri, it is clear that the Federal Government has a responsibility and alone can provide the unifying factor. This doesn't mean doing the whole job—but it does mean the main job of executing adequate plans and coordination. This means, as in TVA and the Columbia River system, the operating control of the key multipurpose dams in the systems. Such a plan is quite compatible with small private or local projects which do not affect the basic system.

Where a State cannot undertake a comprehensive plan for full development of a navigable stream or system within its borders, the Federal Government has a major role as well.

But, it is not fair or right to expect that the Federal Government should bear the burden of nonreimbursable costs for flood control, for example, and surrender, give away, the power facilities or the antimonoply irrigation policy of Federal law.

The Trinity project in California is one example. I opposed partnership at Trinity, and the project would not have been authorized in 1955 if partnership had been included. That is a simple statement of the facts.

Now California is considering the great multipurpose Feather River project as a State undertaking—but only partially so.

It is proposed that the State would finance part of the project without including the traditional and indispensable public-agency preference clause for power or the excess lands provision for irrigation.

Yet it is seriously proposed that the Federal Government will authorize a blank check to pay for flood control with the Corps of Engineers to negotiate the amount. The blank-check aspects are bad enough. But is it right or fair to ask that the Federal Treasury use taxpayers' money to help finance a multipurpose project and at the same time fail to include these two basic Federal policies? This is asking too much. Such over-reaching can defeat the whole proposal.

One Senator, at least, stands here who will oppose such a give-away of funds and policy.

RESOLUTION OF POLICY DISPUTE PREREQUISITE TO PROGRESS

Before real progress can be made on comprehensive basin development for power, irrigation, flood control, and the rest, there must be a resolution of the basic questions of policy on how we shall proceed. Extended controversy can only delay the undertaking of badly needed projects.

That has happened in my State and region. The voters of Oregon, Washington, Idaho, and Montana have rejected the administration's phoney partnership. Yet the administration seems determined to insist upon partnership, after even its congressional adherents have been defeated or rejected the method.

Congress will make good on some of the projects—as at John Day on the Columbia River. Yet, the close division of parties in Congress makes real progress impossible unless the dispute is settled and a real majority can pull together in one direction. If the Republican Administration cannot see this fact, the voters will do it for them in 1958 and 1960—as they have done in the past two elections. I say this not in partisanship but in an appeal to Republicans who traditionally have supported the policies of Theodore Roosevelt, Hiram Johnson, Borah, McNary and Norris—and Franklin D. Roosevelt as well—to get the administration back on the track.

This is a national problem which requires foresight and leadership. It also calls for firm adherence to the historical policies of multi-purpose development and fair distribution of benefits under which the West has prospered in the past.

We will make progress on comprehensive development when there is adequate recognition of the public interest, and protection is given it without evasion or equivocation.

The project that best dramatizes the water resource issue that I am discussing tonight is the great Hells Canyon Dam issue. I am sure that no one came to this meeting, expecting to go home without hearing me mention this issue. I do so with a political relish. I do because it is one of the many Achilles' heels of the Eisenhower administration.

The Hells Canyon Dam issue symbolizes the great difference between the private utility-controlled Eisenhower administration and the program for the future of forward-looking Democrats.

The Nation's farmers need the new low-cost phosphate fertilizer which low-cost Hells Canyon power alone can make possible to the fullest extent. The evidence on this point was fully documented in the 1955 hearings.

The power to be generated at site and which Hells Canyon would make possible downstream will make possible new private enterprise with new plants and the businesses which spring up to serve new industrial communities. What the supporters of high Hells Canyon Dam want is a transfusion of low-cost power for a more vigorous private enterprise economy.

A more balanced local economy will be achieved as population, with new purchasing power, grows. There will be a larger market for regional farm products and the manufactured wares of the whole country. This new economic vitality will be good for the whole country.

POWER FOR IRRIGATION AND MORE ECONOMIC FARMING

It does not take much foresight to know that in but a few decades our growing population will need a more abundant food supply. Expansion of agricultural capacity will require expansion of irrigation and reclamation. Even Secretary of Interior Seaton has warned of that need.

That expansion cannot be accomplished economically without the historic aid of public power revenues for irrigation and reclamation projects. In Idaho and eastern Oregon especially, the future or irrigation and reclamation depends upon Hells Canyon as a Federal project. In 1953, when Secretary of Interior McKay withdrew former Secretary Chapman's opposition to the Idaho Power Co. application, he mentioned that other possible dams might be pressed into service to provide power revenues for irrigation. Those alternatives are disappearing under the administration's resource policies. So-called partnership makes no provision for aid to irrigation.

The administration has even welched on its tentative recommendation of the Scriver Creek power facilities. In 1954, the Budget Bureau's report on S. 1664 indicated its concurrence in what it said would be the Interior Department's recommendation of this project. Yet, when the Interior Department's report arrived in August 1954, not even Scriver Creek was recommended.

The will-o'-the-wisp, so-called, high Pleasant Valley study promises very little for the future of irrigation, even if it is proposed as a Federal project. The administration is being so cagey and reticent on Pleasant Valley that I can only conclude that it is playing for time. This "maybe," "perhaps," "if" study approach of Secretary Seaton will build no dams and provide no help to future irrigation.

He may get a gold star for publicity, but he is flunking the kilowatt, acre-feet of storage-for-flood-control test.

Since the administration began to block the high Hells Canyon Dam in 1953, there has been no planning deserving the name. Instead, the current 308 Review Study has proceeded on the assumption that the Middle Snake should not be considered and the Snake and its tributaries have been Balkanized by the Bureau of Reclamation and the private utilities.

The administration comes forward belatedly and timorously with yet another projected study of a so-called high dam at Pleasant Valley.

This latest move is a patch on a flat tire of a program. Secretary Seaton hasn't even put the jack under the car. All he is saying, in effect, is that partnership has suffered a blowout.

Yet the 1957 winter flood of the Snake River shows that we are again headed for trouble. The 1956 flood threat was dissipated without severe damage, thanks to Grand Coulee storage on the main stem and lucky weather throughout the basin. We will not be so lucky again. It is irresponsible and inexcusable to delay a high dam at Hells Canyon which is indispensable to adequate flood control on the Snake.

Mr. Seaton can juggle proposals and figures as he pleases. He may cry "Eureka" or "Maybe, Eureka" with his "study" of high Pleasant Valley. It would wash out little Hells Canyon Dam and foreclose forever the possibility of a Nez Perce Dam—with its 4,800,000 acre-feet of storage. But he will not achieve full flood control.

Nez Perce is not presently feasible because of fish passage problems. If Secretary Seaton wants to study something important, let him study the Nez Perce fish problem. If it can be solved, we can achieve maximum flood control and low-cost power production. But, instead, the Secretary is proposing—perhaps—maybe—to substitute Brownlee and Pleasant Valley with 3,570,000 acre-feet of storage for Hells Canyon with its 3,880,000 acre-feet and Nez Perce with 4,800,000 acre-feet—a total of 8,600,000 acre-feet of storage.

PUBLIC ENDORSED HIGH DAM

In public test after public test, the free men and women of the region have voted for the high dam. This was so when the Idaho Power Co.-supported Senate bill 99 was defeated by referendum in 1949.

Again, in 1954, Senator NEUBERGER campaigned vigorously for Hells Canyon and won over an opponent of Federal development.

The two new Democratic governors of Oregon and Washington supported high Hells Canyon Dam, their defeated opponents did not.

Senator MAGNUSON defeated the most outspoken foe of Hells Canyon. The same pattern was present in the reelection of DON MAGNUSON and GRACIE PFOST, and was a factor in the great victory of Senator CHURCH. Hells Canyon advocates LEE METCALF and LEROY ANDERSON won in Montana.

In Oregon, Congresswoman EDITH GREEN, another outspoken and effective Hells Canyon supporter, won. CHARLES PORTER won a great upset victory in Oregon. The pattern held.

Congressman AL ULLMAN has been long identified with Hells Canyon as an organizer of the trie-State and National Hells Canyon Associations. His opponent was against the high dam.

My own Senate race involved Hells Canyon, as you know.

THE FUTURE IS LONG

Let us remember that what Congress does or fails to do, what the administration does or fails to do, will have long-range effects. The floods and power shortages of the future, the economic consequences of full development or underdevelopment cannot be undone once the pattern is set. A low, inadequate Idaho Power Co. dam cannot be repealed. A gerrymandered river cannot be reclaimed.

As trustees for future generations of Americans, as well as guardians of the public interest today, Congress, the President, the Secretary of Interior, and other executive officials have grave responsibilities. The issue is a moral one, all signs point to the necessity of the high dam.

Let us in the Democratic Party draw this issue of water conservation and full development of our river basins with the Republican Party in a fight to the finish. We are right, and the voters will so decree in 1958 and in 1960 if we give no quarter and stop providing the Eisenhower administration with the votes to give away the people's heritage in their own natural resources.

Why Prices Have Gone Up

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, March 18, 1957

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Here's Why Prices Have Gone Up," published in the Minneapolis Sunday Tribune of March 10, 1957. The article is most timely, as it concerns a situation with which all of us are confronted, relative to the cost of food to the consumer and the price which the producer receives.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HERE'S WHY PRICES HAVE GONE UP—COST OF GOODS, FOOD SHOW LITTLE OR NO INCREASE

WASHINGTON.—Whether the talker is President Eisenhower, the ordinary housewife, a Congressman, or even a professional economist, Americans today are hearing a common version of what has been happening to prices.

It ain't necessarily so.

Current folklore centers on two almost universally held beliefs:

Only reason prices were stable from 1952 to 1956 was that food prices were down while industrial prices were up.

Reason for the alleged steady rise in the prices of things other than food is that labor unions push up wages and big corporations push up prices.

Examination of the item-by-item details of the Government's cost of living figures disclosed that the first popular belief has no validity at all and the second has validity, if at all, only in a remote sense.

The surprising fact about what actually has been happening to prices over the past 4 years, even allowing for last year's price rises, are as follows:

1. Prices of goods—things other than food—are on the average no higher today than they were 4 years ago. Manufactured goods as a whole were falling in price at retail, not rising, from 1952 through 1955. They did rise, by a little, last year.

This generality holds for almost all goods. Only goods that today are markedly higher in price than they were on the day President Eisenhower took office, according to the Government's figures, are home-heating fuel, gasoline, cigarettes, and alcoholic beverages. And of those, the rise in prices of gasoline, cigarettes, and alcoholic beverages reflects mainly increases in Federal, State, and local taxes.

There have been slight rises over the 4-year period in such things as new automobiles, toilet articles, and newspapers. But the whole range of clothing and apparel is virtually unchanged, as are other items, such as tires.

Most important, there has been an actual decline in price over the 4-year period, in

some cases substantial, of appliances, furniture, the whole range of home furnishings, used cars, television and radios, toys, and sporting goods.

2. Price of food, despite a 3-percent rise last year, is still a shade lower than it was at the end of 1952.

3. Real villains of the piece—prices that actually have been going up all along—are prices of nongoods. This means services, public transportation, rent, and utilities.

Key point about these areas is that, for the most part, there simply is no big union problem and no large corporation. Or if there are, the Government actually has price control in effect, as in transit fares and utilities.

The list of increases is almost endless:

Auto repairs, up 15 percent; rails, bus, and rapid-transit fares, up 25 percent; medical care, up 15 percent; laundry, up 11 percent; haircuts, up 14 percent; beauty-shop services, up 12 percent.

How much do all of these nongoods account for in the average family's cost of living? By the Government's reckoning they come to almost exactly one-third, or far more than is generally realized.

The average family, according to the Government's figures, now spends about 29 percent of its total consumption expenditures on food, 37 percent in the stores for things, and 34 percent on nongoods.

The real truth about the last 4 years now begins to become apparent. Up to 1956, the price of food and the price of things in the stores both were falling. Prices in that one-third of the cost of living represented by nongoods were rising. The two balanced out and the cost of living was steady.

In 1956, food prices rose a little. So did the price of most goods. Neither reached their former peaks, but they did rise. Nongoods kept right on rising. Thus the overall cost of living rose almost 3 percent.

What conclusions can be drawn from these facts?

The first is that the big-union, big-corporation, high-wage, high-profit argument has little direct relevance to the cost of living of the average family.

For example, the price of steel could practically double the cost of living would hardly show it. Between 1951 and 1955 the price of steel rose 14 percent, but the price of household appliances declined 13 percent.

There are several reasons for this. A major one is retail competition. Another is new machinery and automation along the various stages of manufacture and distribution. In general wage increase in the industrial area have not seriously outpaced productivity.

In short, with some exceptions, the places where unions make their bite and where big corporations make their big profits are not the places that push up the ordinary family's living costs.

The second conclusion is a question. Why have prices of nongoods risen so much and so steadily?

There are no certain answers, but the Government's experts generally cite two theories:

First is that these prices are still catching up to the precipitous increases in the price of goods, both food and nonfood, between 1945 and 1952.

The other theory, expressed in economist's terms, holds that the nongoods area as a whole, capital investment and new machinery cannot greatly improve the productivity of labor. But these areas, at a time of full employment, must pay roughly prevailing in order to keep workers. The costs and prices must rise.

There are many exceptions, of course. In such areas as electric-power production and telephone service, productivity has risen very rapidly, fully as fast as in manufacturing.

But in the area of services, in particular, common sense indicates that productivity increases must lag behind those in manufacturing.

And if they do, then the prices of these services must continue to creep upward, particularly if we maintain reasonably full employment.

Small-Business Man Offers Hon. Wendell B. Barnes a Solution to Small-Business Failures

---

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 25, 1957

Mr. PATMAN. Mr. Speaker, I should like to call the Members' attention to a letter from a small-business man, addressed to Hon. Wendell B. Barnes, Administrator of the Small Business Administration, a copy of which has come to me from our colleague the Congresswoman from Michigan [Mrs. GRIFFITHS], who is always an alert and extremely effective champion of the small-business man.

The letter is from Mr. Fred Scarborough, who is in the gas and electric appliance business in Detroit. Mr. Scarborough says that within 6 months he will lose his investment in his business, as well as the investment of a friend who helped him finance the business; and Mr. Scarborough further predicts that within this period some 50 or 60 independent appliance dealers in the Detroit area will also fail.

Mr. Scarborough's proposed solution to his problem, and the problem of the other independent dealers like him, is that he be allowed to buy his merchandise at the same price as his big competitors.

Mr. Scarborough has apparently been told by someone that the present antitrust laws prohibit his supplier from selling to him at the same price the supplier charges Mr. Scarborough's large-volume competitor. This is, of course, incorrect. There is no law which prohibits, or even tends to prohibit, the supplier from selling to the little man at the same price he charges the big corporate distributor. There is a law, however, which was intended—with certain qualifications—to prohibit the supplier from doing just the opposite. This is section 2 of the Clayton Antitrust Act, as amended by the Robinson-Patman Act. This law was intended to have a strong tendency to require the supplier to sell to the small firm at the same price he charges any other business firm that is in competition with the small man—except, of course, that the supplier may pass on any cost savings.

I say that the law has a strong tendency in this direction for this reason: The law was not intended to require that the supplier give absolutely equal treatment to its competing customers, even within the limits of difference justified by cost differences; but the law was intended to forbid the supplier to make such gross discriminations in price as between competing customers that the effect of the discriminations would be a substantial injury to competition, a substantial lessening of competition, or a tendency to create a monopoly.

The good intent of the law, however, has been misinterpreted by the Supreme Court, and the law now has a serious loophole in it which leaves little protection for small business. As we all know, there is a bill pending—H. R. 11, the equality of opportunity bill—which would plug that loophole in large part. This bill would not plug the loophole as to the substantial injury to competition, but it would restore the law to the extent that it would prohibit the supplier from discriminating in price as between his customers where the effect may be, in the language of the law, "substantially to lessen competition or tend to create a monopoly."

This bill would tend to restore the Golden Rule in business. It would say to the big manufacturers, and other big suppliers, that they must treat their customers fairly. It would not require the supplier to sell to any particular business firm. Each supplier will have, as now, complete freedom to select its customers. But the bill would say to the supplier this: "You are not required to sell to any particular buyer; you are completely free, as now, to select your customers; and you are free to charge that customer any price you choose—but when you select a particular customer, and so long as you continue to sell to that customer, you must not sabotage him and destroy his business by selling the same kind and quality of goods, at the same time, to your customer's competitor at a substantially lower price."

I am sorry that we are not able to say to Mr. Scarborough that H. R. 11 is not now the law of the land. We have considered such legislation as this during the past two Congresses. Last year the House finally passed the bill—by an overwhelming vote. But that was late in the session, and the bill did not get taken up in the Senate. The bill was reintroduced in the House on the opening day of this Congress (January 3, 1957) and was, of course, referred to the Committee on the Judiciary. That committee has the bill under consideration, and I am informed by the distinguished chairman [Mr. CELLER] that the committee will hold hearings on the bill again this year. I sincerely hope that since hearings are to be held, they will be held at a very early date.

Mr. Scarborough's letter is as follows:

DETROIT, MICH., *February 3, 1957.*

Mr. WENDELL B. BARNES,
Administrator, Small Business Administration, Washington, D. C.

DEAR MR. BARNES: It has become obvious to me that I will lose my entire investment in this business, as well as that of a friend who helped to finance it.

That statement is about as interesting to you as Detroit's temperature a week ago, but there is a vital factor involved that should interest your organization; I am only 1 of 50 or 60 small independent appliance dealers in the Detroit area that will be bankrupt in 6 months' time; several have already gone under. I assume that the same condition exists in all of the metropolitan centers.

If this flurry of failures continues, it will affect the smaller jobbers, and they will likewise go under.

The disease of this industry is an infection that is spreading to other industries. No small business can survive it.

This in turn leads to depression and unemployment. If a man in your position is so naive as to believe that we are not going to get it—and very soon—I am amazed. When the moral standards of the Nation are so low that business leaders will be publicly quoted as "no foreseeable downturn in 1957," in order to instill a sense of false security in the buying public in order to peddle their wares, we are in a bad way.

This situation has grown in the last 3 years to a point where the small displaying dealer is being used as a showroom for the warehouse, carload buyer who does no selling, no displaying, but gets the business that the small dealer has spent 2 profitless hours, in many cases, to create.

Let me reiterate this important fact—this situation will be true of all other lines of business unless an action is quickly taken to stop the trend.

I haven't consulted an attorney, and I know very little of law, but I do not believe that the Sherman Act, or the Robinson-Patman Act, or any other governing business, states that the supplier is not permitted to sell the small dealer at the same price as the large volume buyer.

That is the only conceivable solution. If I can buy at the same price as the big fellow, I can meet his price and operate at a small profit. Otherwise, all small appliance dealers who are honest are doomed.

John S. Knight, publisher of the Detroit Free Press, said in an editorial Sunday, January 27, "Merger follows merger, and the big get bigger. The little firms are being crushed by developments over which they have no control."

I'm not talking about me—I'm talking about a national disaster that can develop from this situation, unless the Government, business managers, and the unions are willing to make an effort to correct the situation.

Very truly yours,

GAS & ELECTRIC APPLIANCE CORP.,
FRED SCARBOROUGH.

Government Spending and Taxes

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Monday, March 18, 1957

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very humorous and interesting article entitled "Think It Through," written by E. F. Hutton, and published in the New York Herald Tribune of March 14, 1957, dealing with the subject of Government spending and taxation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THINK IT THROUGH

(By E. F. Hutton)

Ever hear of the old farmer and his hound dog? The dog was mighty clever looking after himself by catching jackrabbits. He loved red meat.

But the farmer wanted to do more for his dog than the hound did for himself. So one day the farmer cut off a piece of the dog's tail and said: "See, Buster, old fellow, what I've done for you. Here's a nice piece of red meat."

Buster needed a stimulant just then, so he chewed up the meat. "What a kind master I have," he thought.

Next day the same thing happened, and so on. Before long, Buster's tail was gone. With no tail he couldn't keep his balance going around curves after rabbits, and they got away from him.

And because the farmer could not catch rabbits himself, Buster slowly weazened away.

Well, sir, it sorta makes me think of Uncle. He cuts off a piece of my income and hands some of it back to me and says: "See, nephew, what I've done for you."

'Course, I don't get it all back 'cause Uncle likes meat, too, and can't catch rabbits without my help.

But I go along because it sure relishes good to get back part of my income.

Next year Uncle plans to cut off 72 billions of our meat; and after taking his cut, he'll give us a piece.

Neighbor, that'll taste mighty good.

Hon. Clifford P. Case, of New Jersey, Looks at Beliefs in America

EXTENSION OF REMARKS
OF
HON. H. ALEXANDER SMITH
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Monday, March 18, 1957

Mr. SMITH of New Jersey. Mr. President, under date of February 19, I inserted in the Appendix of the RECORD an article written by my distinguished colleague, the junior Senator from New Jersey [Mr. CASE], and published in the New York Times magazine section on Sunday, February 17, entitled "A Republican Prescribes for His Party."

On February 20, an editorial appeared in the New Brunswick Daily Home News of New Brunswick, N. J., entitled "Senator Case Looks at Beliefs in America." This editorial is very complimentary to my colleague's presentation of his Republicanism, and I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SENATOR CASE LOOKS AT BELIEFS IN AMERICA

Writing in the New York Times magazine on Sunday, New Jersey's Senator CLIFFORD CASE gives the Republican Party a formula for winning the confidence and support of the American people under the title, "A Republican Prescribes for His Party."

More important, probably, than the Case prescription for the rejuvenation of the Republican Party in Ike's image, is his searching and perceptive analysis of what may be called, for want of a better term, the philosophy of America, what America believes, what America is.

Here are some of CASE's carefully chosen words on the subject. Americans "believe that people (the individual rather than the collective man) are the most important things in the world."

We believe that "people are entitled to equal treatment, to protection, to a fair break."

We believe "that things can always be improved and that they ought to be."

But having commonsense, we know that "man is not perfect" and that "therefore no single man or group of men can be allowed to run the show."

We Americans have a "strong belief in private property" but "we do not shrink from governmental intervention to insure that our economy produce a constantly improved standard of living shared as widely as possible."

We Americans "insist that the Government intervene to protect the individual against hardships he cannot master through his own efforts."

"Americans believe in work. Not just in work for the masses, with leisure for a chosen few. We believe that each should make his own way."

"The American understands that while change is inevitable—and desirable—it must not be too rapid."

"The American rejects, as destructive of the general feeling of security, any effort to pit one group of Americans against another * * * tolerance and consideration are not only virtues but necessities, if we are to maintain a democratic society under government by consent."

CASE sums up these beliefs as a "blend of compassion, optimism, and commonsense."

It seems to us that this is an incisive analysis of what America believes, of what America wants, of what America will get. And CASE himself suggests that either major party, if successful in persuading the American people that it stands for these beliefs, would get the overwhelming support of the American people.

Thus the Case prescription can be as much what the doctor ordered for the Democratic Party as for the Republican Party. But more significant than this is the picture which CASE gives America of its own beliefs, of its own faiths, of its own essential goodness.

Two-Man Monopoly

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, March 18, 1957

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting article entitled "Two-Man Monopoly," written by a former Member of this body and a distinguished American, the great Burton K. Wheeler, former Senator from Montana. The article was published in the Missoula (Mont.) Times of February 8, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TWO-MAN MONOPOLY

(By Burton K. Wheeler, United States Senator, Democrat, from Montana, 1923–47)

There are three matters of public interest that on close examination tie together, and have ominous implications for the future of free speech in the United States.

One is a report that NARTB (the National Association of Radio and Television Broadcasters) is going to lobby the next Congress for repeal of section 315 of the Federal Communications Act, a provision I personally had written into the act. This section provides that if a station permits any legally qualified candidate for public office to use the station it shall afford equal opportunities to all other candidates for that office; and

that stations shall have no power to censor these political speeches.

Second is the suit filed by the Department of Justice against RCA and NBC charging them with illegal conspiracy to gain control of the Nation's five best television markets.

Third is the effort to have the Commission permit anyone to have any number of television stations. If section 315 is repealed, broadcasters will have the same power to censor political speeches that they now exercise over advertisers' messages, newscasts, entertainment, and other programs. They will also be able to provide free time to their political friends without granting equal time to opposing candidates and to sell or refuse commercial time to any candidate.

If the chain broadcasting companies had been able to do this during the court fight, then the opposition to the administration's court packing bill could never have gotten their views across to the American people. Even as it was, both the National Broadcasting Co. and CBS joined together and gave all three networks to the administration whenever the President or a Cabinet member spoke in favor of the bill, and they saw to it that every one of their affiliates carried the speech. But when we of the opposition spoke, we were refused equal time by all three of the chains. Furthermore, we knew that our talks usually were carried by far fewer of the network affiliates. No effort was made to see that they broadcast our side.

Television has become one of the most, if not the most, potent force for molding public opinion. People are more influenced by what they see and hear over television than by what they read. It appeals to the emotions far more than does the printed word, and we know that emotions exert a tremendous influence on the conclusions people reach. Any political candidate would enjoy a tremendous advantage if he had the facilities of radio and his opponents did not. Think of the overwhelming advantage the same candidate would enjoy if he had both radio and television facilities to the exclusion of his opponents. Almost any political program or candidate could win public support with such an advantage.

It follows, therefore, that any individual or group of individuals that controls what appears on television and radio will, if section 315 is repealed, also have power to determine what candidates will be elected to public office and what measures shall be enacted into legislation. They will not only control those who vote on legislation but they will largely control public opinion on all national and international issues which vitally affect the American people.

Unfortunately, two-man control of TV already exists to a dangerous degree. I am referring to NBC's attempt to dominate not only five major markets through station ownership but all the major markets if the Commission permits them to own as many TV stations as they desire. Today, many independently owned television stations are dominated by the chains for, as the Commission knows, if you have a television station with a million dollars invested in it, the chains can either make or break you by either letting you have their programs or by taking them away.

NBC and CBS domination of TV advertising and programming is such as to give them the power of economic life and death over most independent TV stations. NBC and CBS affiliates that get the good network programs and advertising prosper. Stations without network affiliation have a difficult time surviving. Local programs and public utterance by station owners are carefully tailored to the networks' position because the owners are all too well aware of the economic whip that the networks hold over them.

This power undoubtedly drove even the mighty Westinghouse Co. into a disadvantageous swap of stations. The Justice Department itself said that if Westinghouse had balked, "it would lose its NBC affiliation in Boston and Philadelphia and would not be granted NBC affiliation in Pittsburgh," adding that Westinghouse would in fact not be able to obtain NBC affiliation for any future station it might acquire. Without network affiliation, the stations could not be profitably operated.

The net result of this situation is that the two men who control NBC and CBS have almost absolute power over what is seen and heard on TV. This is too much power for any two men, regardless of their personal abilities and integrity. If there can be any question of the danger to the public this involves, the present Department of Justice suit against RCA and NBC should provide the answer. Incidentally, on his TV news show on December 4, when the lawsuit was announced (networked to TV stations in 83 of our largest cities) NBC's Chet Huntley devoted more time to NBC defensive propaganda than he did to the Government suit.

Network control of independent TV station programs can be broken only by making these stations financially independent of networks, by means of subscription TV which will give them supplementary income direct from the public. With this supplementary income, plus their financial return from local advertising, most independent stations could do just as well without a network affiliation. But that is another subject.

Repeal of section 315 would eliminate one of the few safeguards that we have to protect freedom of speech on the air, and could give to the two major network heads immense influence over public opinion—and terrifying political power.

Repeal of this safeguard might even make it possible for these two gentlemen to sit down in conference and select the next President of the United States. If that sounds fantastic, we must remember that it was through control of radio that Adolf Hitler secured his absolute domination of Germany. In every modern attempt at political revolution, the first target of the revolutionaries is control of radio communication. TV in the United States is a far more potent influencer of public opinion than radio has ever been, and it is dominated by just two men.

Whether or not NARTB was acting as a network's cat's-paw, the fact remains that repeal of section 315 would be a very dangerous blow to American liberties. Unfortunately, the public is almost completely unaware of the dangers involved, and we cannot rely on the broadcasters to enlighten them.

Congressional Organization and Procedures

EXTENSION OF REMARKS
OF
HON. NORRIS COTTON
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Monday, March 18, 1957

Mr. COTTON. Mr. President, Dr. George B. Galloway, senior specialist in American government and public administration for the Library of Congress, is well known to the Members of the Senate as one of the Nation's leading authorities on congressional organization and procedures. My friendship with him dates from our student days at Wesleyan University. I ask unanimous consent to have printed in the Appendix of the RECORD an article from the March issue of the Beta Theta Pi magazine which pays a well-deserved tribute to the work of Dr. Galloway.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CONGRESSIONAL EXPERT

Dr. George B. Galloway, Wesleyan 1920, is one of the country's best informed and most thoughtful observers of congressional organization and procedure. His doctor's thesis submitted to the Brookings Institution in 1926 was on congressional investigating committees, and since that time he has maintained a continuing and lively interest in all phases of congressional activity.

After a distinguished career with the 20th Century Fund and the National Planning Association, Galloway in 1945 became staff director of the Joint Committee on the Organization of Congress, where he did much of the research that led to the Legislative Reorganization Act of 1946. Members of the committee praised Galloway for his "remarkable vigilance and devotion" and concluded that "from his profound knowledge of the national legislature and the national Government and his penetrating analytical insight came not only many of the concrete proposals, but the moving and sustaining spirit of our study."

Following this stint, Galloway became senior specialist in American government and public administration in the Legislative Reference Service of the Library of Congress. Here his vast experience in legislative matters is available to congressional committees as well as to individual Members of Congress. And they have called upon him frequently: in the 80th Congress, he served as staff director of the Home Rule and Reorganization Subcommittee of the House Committee on the District of Columbia; in the 81st, technical adviser to the Senate Committee on the District of Columbia; in the 82d, consultant to the Senate Committee on Expenditures in the Executive Departments, and in the last Congress, consultant to the Senate Special Committee on Lobbying.

One of Dr. Galloway's most pleasant duties in recent years has been to receive visiting groups of legislators from abroad and talk with them about our Congress. Under the State Department's "leader grant program," Galloway has briefed members of the German Bundestag, the Japanese Diet, the French National Assembly, the British House of Parliament, the Parliaments of India and Pakistan, and many others, on all phases of the work of Congress.

Dr. Galloway has written a number of books on Congress. His Congress at the Crossroads, published in 1946, has been described as "one of the most significant books about the American Government since Bryce's American Commonwealth." This was followed by The Legislative Process in Congress in 1953. In 1954, he received a grant from the Ford Foundation to make a comparative survey of Congress and the British Parliament. He spent several months in England observing Parliament in action and the results of his study, printed as Congress and Parliament, were widely publicized by the American and British press. Dr. Galloway found that the operation of Congress was in many respects superior to that of Parliament, but he also noted a number of lessons Congress could learn from the "mother of Parliaments." One reviewer remarked that "whenever Congress is in a mood to correct its shortcomings, it will find in Congress and Parliament not only a useful analytical study but in addition many forward-looking suggestions."

Soybeans

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, March 18, 1957

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Japanese Market Not Yet Won," published in the Soybean Digest of March 1957.

The editorial relates to the exporting of the United States soybeans to Japan and the working of Public Law 480 in this regard. I think the article, written by George M. Strayer from Tokyo, Japan, is most timely.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JAPANESE MARKET NOT YET WON

(By George M. Strayer)

The operations of the Japanese-American Soybean Institute which are being carried on here under our market development project utilizing Public Law 480 funds, along with moneys from Japanese trade groups and from our ASA coffers, appear to be paying off.

Rumors flying around Tokyo now indicate that the Red Chinese are about to take a page from our book and invite a Japanese soybean delegation to their country in April. The delegation which visited the United States in August and September has been so influential that the Reds are now trying to win friends by using our approach. If the invitations actually materialize it is rumored they will invite about 15 persons from Japan, giving them the red-carpet treatment.

We have not yet won the Japanese market. We will never do so. This country is so located that there will be continuing trade with China, some of it on a barter basis. Segments of the Japanese business economy would like to increase the sales of industrial goods to China, and if they succeed in doing so Japan will buy things in return. Soybeans are a very logical purchase, since they are necessary in the Japanese economy, lie only $6 per ton freight distance away from Japanese ports, as compared with our greatly inflated ocean freight rates from the United States at present. With a $24 per ton rate now, how can we compete with $6?

We will win the Japanese soybean market just to the extent we are willing to work for it. Oilseed crushers like the high oil content of our soybeans. They like the availability of them, without the necessity of the bickering which takes place on Chinese purchases. They are more than pleased in the past with the general average quality of our soybeans, but they still object to our high allowable foreign material content. And they object strenuously to that occasional cargo which seems to slip through with a high foreign material content, largely based on the broken particles of soybeans which we still call foreign material.

Aggressive sales policies will pay off in this market over a period of time. The programs already underway to increase the total consumption of soybean food products will create more purchases of soybeans. Whether we sell them or someone else sells the soybeans to Japan depends on us. We must have a desirable product to offer. We must be competitive in price. We must be willing to take things into the United States from Japan in return for our sales to them. We must help create governmental policies here in Japan which will allow greater purchases of soybeans. We must use our influence wisely. We must help Japan solve its problems as a means of helping ourselves.

BROKEN BEANS ARE NOT FOREIGN MATERIAL

Each time I visit or revisit one of the countries which comprise our major export markets for soybeans I become even more convinced that we are just plain chumps if we do not change—and do it immediately—our classification of broken particles of soybeans as foreign material. It is being used against us at every turn. It will continue to be used against us until we make a change.

Chinese beans come into Japan with one-half of 1 percent foreign material, so I am told consistently. It is essentially correct. In their standards only those things other than soybeans constitute foreign material. They do arrive—some of them—with one-half of 1 percent foreign materials, or less.

And we, in our smugness, establish standards with 2 percent allowable foreign material in our No. 2 grade. But in that we include all pieces of soybeans broken small enough to go through an eight-sixty-fourth round hole screen. They are not foreign material. Foreign material is something other than soybeans. Broken particles of soybeans produce soybean oil and soybean oil meal—in fact the yield of end products per unit of weight will usually be more than from whole soybeans. How can they be foreign material when they produce soybean oil and meal?

A good example of what we are doing to ourselves took place in November. A cargo of United States soybeans arrived in Japanese port. Graded out as U. S. No. 2 yellow (maximum allowable foreign material 2 percent) when shipped it was designated here as having 7.39 percent foreign material, according to samples drawn and analysis run by the official sampling and grading agency. The cargo had been divided. One portion did show the above figure. The other showed 2.04 percent.

At my request a determination was made on the portion of the foreign material included in the 7.39 percent which was broken particles of soybeans. The result? All but 1.7 percent was broken particles.

The moral? Broken particles of soybeans are not foreign material. We are purely and simply chumps so long as we classify them as such.

Cancer Control

EXTENSION OF REMARKS
OF
HON. WILLIAM F. KNOWLAND
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Monday, March 18, 1957

Mr. KNOWLAND. Mr. President, in its fight on cancer the New Jersey division of the American Cancer Society has been very fortunate in having the wholehearted support of the newspapers throughout the State and adjoining areas. Sometime ago, as a small recognition of this splendid cooperation, the Cancer Society of New Jersey sponsored an editorial contest and presented awards to both a daily and a weekly newspaper for the best editorial on cancer. The contest produced very gratifying results and has become an annual event.

The cancer editorial contest sponsored by the New Jersey division of the American Cancer Society was first established by Mr. George E. Stringfellow, a West Orange industrialist, in 1947, when he was the State division's first president, and he still offers the two plaques awarded annually for a daily and a weekly newspaper.

I ask unanimous consent to have printed in the Appendix of the RECORD two editorials which won the awards this year, one from the Montclair Times of April 5, 1956, and the other from the Bergen Evening Record of April 10, 1956.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Montclair (N. J.) Times of April 5, 1956]

NOT FOR MY JO

(By Donald Mulford)

The magazine was lying on my desk when I came back from the hospital. In large type on the cover, it asked "Is a cancer cure near?" I was interested in the answer, but there were a few more personal questions I wanted to ask.

I wanted to know how to tell my 3 teen-age stepchildren that their mother had only a few weeks to live.

I wanted to know how I could visit my Jo, from whom I had never had a secret in our brief 2 years of marriage, and bring her hope and courage when I knew that every day would mean greater pain and suffering until God brought her peace.

Now, 7 weeks later, its' all over. I've had the agonizing answer to both of those questions, but I have a lot more. When is my stepdaughter's biology teacher going to cover the chapter on cancer that she so thoughtfully skipped over last month? How do I thank the special nurses who every day—weekends, holidays, and blizzards not excepted—helped far better than I could to maintain her spirits while her tortured body wasted away.

Those questions too will be answered, and I'll be looking for the answer to that question in the magazine. A cancer cure is near—many forms of it can be cured or arrested already. A vast amount of research is now going on in the field. Although my Jo consented to the use of experimental drugs, she wasn't one of the lucky ones to obtain even temporary relief. Through her suffering, and that of others, however, the answer will some day come—perhaps very soon.

My Jo has done her part. Will you match her death with your dollars by sending a check to the American Cancer Society? Not for me, and not for my Jo—do it for your wife, your dad, or maybe even yourself.

(EDITOR'S NOTE.—This is Cancer Control Month. The Times can think of no better way to support it than by printing this personal experience of a member of its staff.)

[From the Bergen (N. J.) Evening Record of April 10, 1956]

DEATH OF A GOOD TEACHER

(By William A. Caldwell)

We don't suppose Marnie ever in her life was angry, even at the cancer. Other things, maybe, like frustrated—Grant Wood had thought she had in her the stuff of greatness, and here she was teaching art to kids in the Westwood grades—or like lonely or scared. But she had no anger in her, not even for the cancer.

That she left to us. Hate is for the living.

The funeral services will take place tomorrow afternoon, as she wanted them to be. A friend of hers will play the Bach Little Fugue in G Minor and maybe too the Jesu Joy of Man's Desiring. Another friend will read for her dead what we'd somehow neglected to say to her alive. There'll be a benediction

for Margaret Dennis Apfel, and the last of many meetings will be over.

She wasn't afraid to die. She knew it was cancer, and she knew what kind it was—murderous melanoma, the black cancer of which they say that whenever it is discovered is too late. She must have known her number was up all these 2 years, and she must have known we all of us knew it. And so she devised a rather delicate game. Once she knew how things stood, she played that she had rejected the reality. She would shortly be as well as ever—as soon as this twinge of pleurisy passed, as soon as they could clear up this wretched pneumonia, by Christmas time, by March 1, by the end of April. So she compelled her friends to play her small solemn game. We all of us had a secret. It has not to this date been mentioned to Marnie.

Once in a while, nighttimes late in front of the fire at somebody's house when the talk was slow and confused, about what is man and what are we for, also what the hell's the use, she'd be looking away into nothing, the abyss, and sometimes the look in her eyes was terror.

It must have been grim, sitting there listening to Delius or calypso or bull session, getting up once in a while to dance maybe, all the while knowing this thing was inside, feeling its way into the lungs, biding its time. A woman great with death, Marnie was, and if she looked up and saw concern on your face she'd come over and sit down and tell you a story in that Iowa drawl of hers—nothing significant, just letting you know that sympathy, like bravery, mustn't show.

There in merciful Bergen Pines, when she must have known what the score was, she kept her contract with us, right up to the moment she slipped, lightly, making no fuss about goodbys, into whatever it is out there. Only once did she seem concerned about what was happening to her—concerned, that is, beyond the need to summon herself for the next wisp of breath.

To one of her visitors she said this was the first time she had ever had to do this—and he knew what she meant by that; to die—and, Marnie said, she didn't know quite how to act. Perhaps we would be disappointed in her. * * *

She was a literate and honest artist and a good teacher, and she taught us many things without having to say them.

Sitting outside her room, listening to her trying to breathe, you'd ask yourself questions, and she lived the answers.

What's the matter with euthanasia? When your number's up, why can't they let you go?

Marnie taught us the answer to that, and it is this: While there's life there's hope, and this is a platitude until in misery you learn that it is true. Dr. Cameron was saying last week that research is closing in now on cancer—one day soon it will know why a cell, any cell, goes crazy, and soon then it will know how to prevent this aberration, which will be a constant in all tumors.

Who'll give the order to put a pillow on the sufferer's face, and then turn to find an exultant doctor at the door crying that he has found it, the cure, and it works? Who'll give that order?

Question: Is a brief year, a brief day of life, worth the struggle? It is. Life is dear, so Marnie taught us, and there is in it nothing, not even pain and sorrow, that isn't precious. Life is to be felt and seen and smelled and tasted, all of it, with all our faculties. We dishonor our Maker when we let ourselves die, in boredom or escape or tired sophistication, before our time.

For days she had scarcely moved there in the sixth-floor room, the oxygen valve hissing behind the bed, the long eventless hours coming and going, nothing now for it but certainty and despair. "I have so much to tell you," was the last thing she said to us. "Such a good experience."

Why not anger and hate? Cancer has no malice in itself. It means no harm. A cancer's function is to grow and go exploring. If there is anything to hate, it is our failure to come to grips with it. We have scattered our energies; we have engaged the enemy in skirmishes and bitter little holding actions; we must do better or die. Not angrily, she did what she could—she went out last year and rang doorbells in Westwood for the American Cancer Society's campaign. Maybe one day, when the grant-in-aid has just about run out and the money Marnie raised is all that's left between work on the research project in some little college and another inconclusive report for the archives—maybe the last dollar will make the difference. Maybe the cure will come from there.

In our togetherness, not angrily but because we can love each other, we can try. We can try. Marnie was a good teacher.

The Indian Problem

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, March 18, 1957

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a perceptive editorial entitled "Our Own Indian Problem," which was published in the New York Times of March 12, 1957.

The editors of the Times state the urgent need for legislation which would require that Indian consent be obtained before States are permitted to extend civil and criminal jurisdiction over Indian lands. This would be accomplished by enactment of S. 331.

The editors of the Times deem even more important the establishment of a positive Federal policy of helpfulness toward the Indian, as proposed in Senate Concurrent Resolution 3.

I commend this editorial to my colleagues and to all who share my concern over Federal policy toward Indians.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OUR OWN INDIAN PROBLEM

An Episcopal minister who also happens to be a Sioux Indian has brought home to New Yorkers something of the sense of desperation whith which many American Indians must today be facing their future. As reported in this newspaper yesterday, Dr. Vine Deloria of the division of domestic missions of the Protestant Episcopal Church has added his voice to those—led by the Association on American Indian Affairs—urging adoption of a point 4 program to help pull the Indians of our own country out of the slough of despond.

A large portion of the Indian remnant in the United States is suffering from lack of a clear and progressive policy on the part of the Federal Government, erstwhile protector of the Indians. Such policy as there is has not been satisfactory. The proposal, endorsed by Congress a few years ago, to terminate Federal responsibility for the Indian as rapidly as possible cannot and should not be carried out on any large scale because of the Indian's obvious unreadiness for competitive coexistence with the white man in a white man's world. The Federal Government is not going to make the Indian problem go away just by wishing it would. There is a deep and lasting obligation to help the Indian defend himself against the corrosive pressures of a civilization into which, for the most part, he is not yet prepared to enter as an independent competitor.

An example of what happens when the protective arm of the Federal Government is absent can be found in the Plains States and the Northwest, where—as we noted a few weeks ago—some 1,600,000 acres of Indian land have passed out of Indian control in the last 4 years. Individual Indian landowners too frequently cannot resist the temptation to sell their acres for immediate gain, even though such sale will deprive them forever of their birthright. The influence of the Federal Government ought to be brought to bear on this situation, just as its influence should be used in and out of Congress to insure a more understanding approach toward the needs of the Indian population.

Such an approach would include amendment of a fairly recent law allowing States to extend civil and criminal jurisdiction over Indian lands without Indian consent. A consent provision is urgently indicated. Even more important would be endorsement of a positive policy of helpfulness toward the Indian, as outlined in Senator MURRAY's point 4 resolution, the first clause of which recognizes that Federal responsibility toward the Indians "cannot be fulfilled by dispersal of Indian communities but by the continuous development of their human and economic potential."

Reconstruction Finance Corporation

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Monday, March 18, 1957

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The RFC, Earmarked for Death 3 Years Ago, Is Dying Hard," published in the Wall Street Journal of March 15, 1957.

This article gives an interesting account of the present status of the RFC. I have requested Mr. Robbins to calculate as closely as he possibly can the results of the business lending operations of this agency from the beginning to the present. It is my impression that the RFC has a very excellent record in this respect. I feel that this organization was one of the most successful of the Government agencies created during the thirties, and I think the record should be made complete for the information of the Senate and of the people.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE RFC, EARMARKED FOR DEATH 3 YEARS AGO, IS DYING HARD—SOME 200 EMPLOYEES LABOR TO LIQUIDATE LOANS, BUT TIGHT MONEY SLOWS THE PROCESS

(By Ed Faltermayer)

WASHINGTON.—The once-mighty Reconstruction Finance Corporation, earmarked for the graveyard more than 3 years ago, is dying hard.

After the famed, fragrant mink-coast scandals, Congress ordered the lending agency to stop making loans as of September 1953. Nine months later, after it was transferred to the Treasury Department for final liquidation, the RFC appeared all but buried.

But the RFC still is alive and breathing. With credit relatively hard to get these days, private banks are reluctant to buy out the agency's big leftover loans made in bygone easy-money days and bearing low-interest yields. What's more, most of the over $80 million worth of loans left in the RFC's portfolio are "problem loans," and wouldn't be salable under any conditions, says Laurence B. Robbins, Assistant Secretary of the Treasury, who bosses the job of liquidating the RFC.

CURVE FLATTENS OUT

Progress to date in whittling down the RFC portfolio has been impressive, to be sure. The agency's holdings are down to less than one-seventh of their $592 million height of September 1953. But the liquidation curve appears to be flattening out.

President Eisenhower, in his budget message this year, predicted that by June 30 the package of loans will shrink to $53,600,000. But in the fiscal year that begins July 1, the budget predicted, the Government will be able to cut the total by only another $11,500,000.

By no means all the remaining loans are "rotten apples," of course. Biggest of the bunch is a 4½-percent loan made in 1951 to Lone Star Steel Co., a Dallas company that started on a shoestring, but made good. Last month Lone Star made a $7 million payment on this loan which actually wasn't due until April 1.

The $16 million still outstanding on the $50 million Lone Star loan represents about one-fifth of the RFC's remaining loan assets. But because of "tight money" conditions, says Douglas S. Wilson, assistant comptroller, no bank is eager to buy the loan at par and the RFC prefers to wait until credit conditions ease and Uncle Sam can realize 100 cents on the dollar.

NO DATE FOR ITS DEMISE

Though now under the aegis of Treasury Secretary Humphrey, the RFC still is a corporate entity with a balance sheet and capital stock. Some time in the future, when the loan kitty becomes small enough, Mr. Humphrey will dissolve the corporation. But, according to Mr. Robbins, "no consideration has been given to setting a date" for this final burial.

The RFC still operates at its old stand, the handsome Lafayette Building at the corner of Vermont Avenue and I Street, just a stone's throw from the Treasury and the White House. Its old bronze plaque still graces the doorway—although it now shares space with emblems of five other agencies, including the Small Business Administration, which took over many of its lending functions.

Employment is down to 200 from a World War II peak of 13,000. The corporation now occupies only the top two floors of its building, which once swarmed with RFC workers and served as the headquarters for a far-flung network of regional offices.

But no one appears to fear a further drop of the ax immediately. "We have projections" on staff cutting, says Mr. Robbins, adding that "in the next year or so the staff might be cut to 125." Another aide sounds more confident: "With the servicing required on the kind of loans we've got left, the staff isn't going to shrink much."

CASH AND PROPERTY, TOO

Economy-minded Mr. Humphrey will, of course, continue to try to dissolve what's left of the RFC and return as much as possible of the remaining $80 million of loans to Uncle Sam. Since September 1953, the RFC has returned $434 million to the Federal coffers. As of December 31 it had, in addition to loans, $62.5 million in cash and other miscellaneous assets, including $1.9 million of properties obtained through foreclosure on loans that turned sour.

In addition to paying back sizable sums to the Treasury, Mr. Wilson says, the RFC continues to take in more in interest and other service charges than it pays out in operating expenses.

Launched during the last days of the Hoover administration as a depression antidote, the RFC pumped out $50 billion during its 21 year active life, the bulk of it under various World War II programs. It lodged out $12.3 billion to banks, railroads, and individual businesses. In addition, it passed out $7.5 billion to other Federal agencies such as the Rural Electrification Administration and the Home Owners Loan Corporation. The agency claims it made a total net profit of $650 million in its lending programs.

Most of the liquidation to date has been accomplished through sale of large loans or through repayments on some of the bigger investments. During the past year, the RFC has sold at par $17,748,000 of notes of Hidalgo Chemical Co., a subsidiary of Standard Oil Company of Indiana, and got back $28,362,000 through the private refinancing of the remaining balance on an RFC loan to Detroit Steel Corp.

Most vexing, RFC men lament, are a large number of mite-sized loans that add up to only about one-third of the present total dollar value of its portfolio. Liquidation of such loans continues slowly, in some cases through foreclosure. The small-loans account for the bulk of RFC's administrative costs. Eventually, Mr. Wilson thinks, the RFC package will shrink to about 200 of these hard-core loans totaling no more than about $2 million.

Pension Plans for World War I Veterans

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Monday, March 18, 1957

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial relating to pension plans for veterans of the First World War, and published in the Good Thunder Herald of January 17, 1957. I believe the editorial will be of interest to many readers of the CONGRESSIONAL RECORD, more especially veterans.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

This week I am at least partly selfish and perhaps a number of readers will not agree with me. I am going to discuss the need for some sort of a pension plan for veterans of the First World War.

I am selfish because I am a veteran of that war, so am in part asking for something for myself, eventually, at least.

When we left the armed services after World War I we received travel pay home, a $60 bonus payment, and that was all. The pay of a private soldier was $30 per month with a couple of bucks extra for overseas service.

If you came out of the Army early the town gave you a parade, perhaps a dinner and a few speeches telling you you were a hero. Three days later you would meet them on the street and they would ask you when you were going to work. The boys who had to remain overseas until the entire job was done got off the train or bus without fanfare, welcome, or anything else. What price glory?

The public and the Government has done a lot better for the chaps who were in the Second War, and the Korean conflict. They were voted good State bonuses in most cases and means was provided whereby they might continue their education at the expense of Uncle Sam.

There is no quarrel with the treatment given the men who served us in later conflicts. I do think we have forgotten the chap who served us way back in 1917 and 1918. Lots of them are reaching an age where they are unable to get along so well any more.

Most of them went through a depression that had them in breadlines and on the street corners selling apples. That started the song, Brother Can You Spare a Dime? and it was just that rough.

Many of the men who went into the first war were volunteers. The draft came along a lot later.

I think it is high time we did something for the men who served in the first war—commensuate with those who served us at a later date. Many moves have been made to try and get some sort of a pension through the Congress. A partial victory has been won, in that a pension is paid to those who are fully unable to work.

The pension, under present standards, is hardly enough to keep a man alive, less than we pay our later war dischargees to attend college or a trade school under the GI bill. That is hardly fair.

I see no reason why men who served their country in the first war should not have a reasonable income after reaching the age of 60 or 65. Most of those who served are over that age now. I was one of the younger men and it will not take too many years for me to get there.

Don't think for a minute I am against the treatment we have given the GI's who have had the chance to further their education and insure a better earning power. One can hardly do too much for men who have given a part of their adult life to serve their country and you and me.

But in the interest of fair play, let's consider that man or woman who made the same sacrifices 40 years ago. Army life was not any more pleasant nor was it less dangerous then than later.

It is high time we did something about the veterans of World War I.

United States Envoy Becomes Hero as Skin Diver

EXTENSION OF REMARKS
OF
Hon. EVERETT McKINLEY DIRKSEN
OF ILLINOIS
IN THE SENATE OF THE UNITED STATES
Monday, March 18, 1957

Mr. DIRKSEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a rather interesting article from the Scripps-Howard papers about a service rendered by Ambassador Willauer, in Honduras.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

UNITED STATES ENVOY BECOMES HERO AS SKIN DIVER

(By Andrew Tully)

The way our Ambassador to Honduras tells it makes it sound simple. "No one else could do it," says Whitey Willauer, "so I did."

It was not that simple, though. For more than an hour, Ambassador Whiting Willauer

prowled the 40-foot depths of a river pool near Honduras' Capital City of Tegucigalpa before locating and bringing up the body of a 12-year-old Honduran boy who had drowned while on a picnic.

DETAILS

In a brief interview today, Ambassador Willauer gave the bleak yet impressive details of how he had gone out to help with the aqua lung outfit he uses for spear fishing.

"They couldn't locate this boy," he said, "so they called me to ask if they could use my equipment. But nobody else knew how to do skin diving, so I went out personally to see what I could do.

"I found out the boy couldn't swim and he'd gone down when an inner tube he was using was swept away by the current."

So Whitey Willauer went to work with his mask and his tank of oxygen. Fruitlessly, he searched through the nooks and crannies of the pool's bottom. But then, on a ledge only 20 feet down, he found the body of the boy lodged among rocks. He tugged it loose and brought it up. Today he was being widely acclaimed in the Central American country.

"Actually, it wasn't much," he said. "I've always been a pretty good swimmer and I've been doing this skin diving for more than a year. It's all in knowing how."

TALENT

But knowing how seems to have been a persistent talent of this rugged, 49-year-old Ambassador in his first diplomatic post. He has known how to do tough jobs ever since he first came to Washington in 1938 as a Boston admiralty lawyer by way of New York.

His first job was in the Civil Aeronautics Administration (CAA), where he worked out a solution of the airmail subsidy mess as uncovered by Justice—then Senator—Hugo Black's Senate inquiry. From the CAA he went to the Justice Department's Criminal Division, first to clear up political corruption in the Federal judiciary and then to curb the early anti-Americanism of Nazi bundists.

Football injuries suffered at Princeton prevented him from taking a Naval Reserve commission in 1941. So he joined the China Defense Supplies Agency and went to Chungking to boss the transportation of supplies flown over the famed Hump. Later, he became Far Eastern director of the Foreign Economic Administration.

AIRLIFT

Then, in the early postwar period, he joined with Gen. Claire Chennault to set up the celebrated Civil Air Transport (CAT). When the Communists were overrunning China, Whitey Willauer directed CAT in a monumental airlift in which its 18 cargo planes averaged 28 round trips a day flying relief supplies to beleagured Nationalist forces.

In that post, he early recognized the growing menace of communism in China and fought it relentlessly. As a result he was posted No. 3 on the list of men wanted by the Reds for liquidation.

Editorials Applaud HHFA

EXTENSION OF REMARKS

OF

HON. JOHN W. BRICKER

OF OHIO

IN THE SENATE OF THE UNITED STATES

Monday, March 18, 1957

Mr. BRICKER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD editorials from two Columbus, Ohio, newspapers commenting favorably on the expeditious manner in which the Housing and Home Finance Agency certified section 221 housing assistance in connection with the city of Columbus' urban renewal program. The first editorial is from the Columbus Dispatch of January 21, the second from the Ohio State Journal of January 23.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Columbus (Ohio) Dispatch of January 21, 1957]

PROMPT WORK ON HOUSING

The speed of the Federal agencies involved in setting up a program for housing the many families which will be displaced here as the new expressway and slum clearance work gets underway has been met by an equally prompt response by our local builders.

They have signed up quickly so as to make possible the early construction of new homes and apartments to house the families which, perforce, must move to make way for a series of coming improvements.

The Federal Housing and Home Finance agency completed its plans for the Columbus area in about 90 days, and as a result more than $20 million in FHA insured loans for financing this extensive move has become available.

Enough builders have signified a willingness to go ahead with the construction to insure all the 2,212 units which the Washington office has approved as necessary.

This quick development will make possible the steady progress which will be necessary if the expressway work is to be finished on time, and if the slum clearance programs are to get underway within a reasonable time.

The promptness with which this part of the procedure has been tackled calls for some notice and approval for the Federal agency's efficiency at a time when so many similar agencies are being criticized for slow processing. It calls also for some notice of the vast amount of work done so rapidly by so many local people involved in preparing all the details.

[From the Ohio State Journal of January 23, 1957]

QUICK ACTION ON BACKING HOME LOANS

It is reassuring to observe from time to time that our Federal Government, notoriously slow in acting on some matters, can quickly deliver when great need exists. A gratifying example of this is the quick action taken by the Housing and Home Finance Agency to assist our community in obtaining replacement homes for families being displaced by our vast expressway system, slum clearance and other public improvements.

The Federal agency gave its stamp of approval to more than $20-million worth of FHA insured loans in the relatively short time of about 2 months after the request was made. This speed represents cooperation and good work by Forrest Smith, local FHA director; John P. McCollum, Chicago regional director of HHFA; Albert Cole, HHFA administrator, and city employes who prepared the application.

This special financing of privately built homes is not a panacea for the replacement housing problem. There are in our expressway and slum clearance areas many families and aged persons whose incomes are so low that the only way they can obtain adequate housing is through public programs.

Expressways could never be built if only those families capable of paying the cost of private housing are removed from the path. Every family must be moved and the low down payment plans for homes, made possible by the $20-million guarantee, makes such removal possible.

This special financing guarantee was made available by Congress to make certain that displaced families will have adequate homes. It appears to be working well toward that end in Columbus.

Major Oil Companies Can Meet Competition Under H. R. 11

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1957

Mr. PATMAN. Mr. Speaker, I know that the Members are receiving a number of letters from independent retail gasoline dealers which indicate a misunderstanding of the purpose and effect of H. R. 11. I, too, am receiving a number of such letters, although H. R. 11 was designed specifically to help the independent gasoline dealers, and to relieve them from an unfair discriminatory practice which chronically affects these dealers and is daily putting many of them out of business.

The misunderstanding which some of these dealers now have is that, under this bill, a major oil company cannot assist any of its dealers to meet competition—by giving those dealers a price cut—unless the major oil company also cuts prices throughout all of the marketing areas in which it distributes gasoline.

This misunderstanding of what would be required under H. R. 11 has been created and propagandized by certain of the major oil companies. Such claims are made in literature which the major oil companies have been passing out directly, and like claims have been made in such publications as the Gasoline Retailer, which I understand is widely circulated among gasoline dealers and usually follows the propaganda line of the major oil companies.

I have had an exchange of correspondence with a constituent of mine, Mr. W. A. Moore, who is in the retail gasoline business at Paris, Tex. I believe that the Members may be interested in the following letter to me from Mr. Moore, as well as in my reply, in which I have tried to dispell the misinformation, and clear up the misunderstandings about H. R. 11:

GASOLINE RETAILER MISLEADS RETAIL DEALERS

PARIS, TEX., *March 9, 1957.*

Mr. WRIGHT PATMAN,
Member of Congress,
Washington, D. C.

DEAR SIR: I was out of town when your letter came—hence my delay.

I sure appreciate your interest in my feeling about H. R. 11 and have been thinking about it a lot.

I believe that I can answer your letter of February 25, 1957 best by quoting from H. H. Iffness Brown's article in the February 20 issue of the Gasoline Retailer. But since it is a rather lengthy article may I suggest that you read it in case that you haven't already. I feel just about as Mr. Brown does. I believe that in case of a price war here in Paris, that under H. R. 11, my supplier (a major) might not be able

to help me meet the local jobber's dealer prices. This, Mr. Patman, is my main objection and is the objection of nearly every dealer that I have talked to.

Please explain to me, if my idea is wrong, just how my supplier could help me without cutting the price everywhere he operates.

With kind regards, I remain,

Yours very truly,

W. A. MOORE.

NOW SUPPLIERS MAY MEET COMPETITION UNDER H. R. 11

MARCH 15, 1957.

Mr. A. W. MOORE,
Paris, Tex.

DEAR MR. MOORE: You were good to write me again, giving me more details on what is troubling some of the gasoline dealers about H. R. 11. I am sorry that the impression has gotten around that under H. R. 11 a major oil company could not discriminate in its prices to help a dealer meet competition—that is, that the supplier could not cut prices in one area to meet local competition without also cutting prices in every area where the supplier operates. This is a wrong impression of the bill.

At the present time, many of the major oil companies will cut the price to a dealer just across the street from an off-brand station but without cutting the price to the other dealer just down the street. The result is, of course, that the dealer receiving the price allowance cuts prices to consumers and diverts trade from the off-brand station. But it is equally true that trade is diverted from the major's other dealer just down the street.

H. R. 11 does not prevent a major oil company from assisting a dealer to meet competition. It does however, tend to place on the major oil company this requirement: When it cuts its price to one of its dealers to assist that dealer in meeting competition, then it must assist all of its other dealers who are substantially affected by that same competition. I use the word "tend" because the bill does not require the supplier to give completely fair or equal treatment to its dealers who are in competition among themselves; but it does forbid the supplier to treat its dealers so unfairly and so unequally that the result will be a "substantial lessening of competition."

This does not mean that there would be any tendency to require the supplier to reduce prices in all of the States in which it distributes; it does not mean that it would tend to require the supplier to reduce prices throughout any one State; nor does it mean necessarily that the bill would tend to require the major oil company to reduce prices even throughout a city. It simply means, as I have said, that the supplier must try to give fair treatment to its dealers who are in actual competition among themselves.

With kind personal regards, I am,

Sincerely yours,

WRIGHT PATMAN.

Ramon Magsaysay

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, March 18, 1957

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Free World Mourns Death of Magsaysay," written by Albon B. Hailey, published in the Washington Post and Times Herald of March 18, 1957.

The death of Ramon Magsaysay, the President of the Philippines, is a loss to all the world. It is an especially great loss to the United States. Ramon Magsaysay was a friend of the United States, and a friend of all the people of the Western World.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FREE WORLD MOURNS DEATH OF MAGSAYSAY

(By Albon B. Hailey)

Free world leaders yesterday mourned the death of Philippine President Ramon Magsaysay, who in less than a dozen years of a public career became a hero to his countrymen and one of the staunchest defenders of free Asia.

President Eisenhower expressed "great personal concern" over the plane crash death of the man who had come to be regarded as a bulwark against communism in the Pacific and Asia.

The United States, the Philippine Republic and the "entire free world have lost a valiant champion of freedom," Mr. Eisenhower said in a formal statement from the cruiser *Canberra*, en route to Bermuda.

"I had been looking forward to meeting with President Magsaysay in Washington to reaffirm the close and affectionate ties all Americans have with his people," Mr. Eisenhower said.

"A staunch advocate of independence for his people, President Magsaysay was also an active and determined fighter against communism. He will be greatly missed.

"Mrs. Eisenhower and I extend to his family not only our personal sympathies but also the heartfelt sympathies of all Americans who have lost a good friend."

The dynamic Philippine president and World War II guerrilla fighter had planned to visit the White House in late May or early June.

On his last brief visit to Washington in June, 1952, Mr. Magsaysay was awarded a Legion of Merit for service in furthering United States-Philippine relations.

Secretary of State John Foster Dulles, returning from a SEATO meeting in Australia, joined President Eisenhower and other leaders such as India's Prime Minister Jawaharlal Nehru and Chinese Nationalist President Chiang Kai-shek in expressions of grief.

Dulles, saying he was "terribly upset," called Mr. Magsaysay a "great leader who cannot be spared."

Chief Justice Earl Warren said the world has suffered a tremendous loss in the death of a man who was a great lover of freedom, a great leader of his people, a true statesman and an inseparable friend of the United States.

It was during his tenure as Philippine defense minister in 1950–53 that Mr. Magsaysay broke the back of the Communist-led Hukbalahaps rebels and gained fame that swept him into the presidency by a landslide in 1953.

One of the new President's first acts was to dedicate himself to closer ties with the United States and to work for the betterment of the lot of the Filipino peasants.

As befits a champion of the people, he was born into a poor family on August 31, 1907, at Iba, across the bay from Manila in the Luzon Province of Zambales.

He was the second of eight children of Exequeil Magsaysay, who successfully was a a carpenter, blacksmith, schoolteacher, and farmer.

His early life was obscure, but he studied engineering at the University of the Philippines in Manila while working as a cab driver and later continued at Jose Rizal College.

Mr. Magsaysay was married in 1933 to the former Luz Banzon, of Bataan, and to them were born three children, Teresita, Milagros, and Ramon, Jr., all of whom survive.

When the Japanese invaded the Philippines, Mr. Magsaysay, then manager of a transportation company, went to Bataan along with 110 of his trucks requisitioned by the United States Army. There, he fought alongside General Douglas MacArthur and when the doomed bastion fell he fled to the hills.

Circling the Japanese lines, he made his way to his home province of Zambales and joined Lt. Col. Claude A. Thorpe and a handful of other American officers at Mount Pinatubo in the organization of the western Luzon guerrilla forces.

When MacArthur's forces returned to the Philippines in 1945, the guerrillas, with whom Mr. Magsaysay served as a captain and major, helped knock out an enemy fighter plane base that made possible a landing along the Zambales coast.

Impressed by the young Filipino's ability, MacArthur appointed Mr. Magsaysay military governor of Zambales in 1945 in what was the start of a career that was to change the face of the Philippines.

Within a year Mr. Magsaysay had restored order to his home province and had returned to private life.

But bitten by the political bug, he ran for the Philippine Congress in 1946 and was elected. He won reelection and in 1950 he was tapped by then President Elipidio Quirino for the critical post of Defense Minister.

The Philippines had never seen a campaigner like Ramon Magsaysay. A workhorse, he appeared to be everywhere at once.

Big for a Filipino—5 feet 11, and weighing about 175—he was built like a wrestler. But his booming voice and shock of jet black hair were tempered by an ever-ready smile and a warm handshake.

His badge of office he wore lightly, and he was always readily identifiable by the bright, thin sports shirt hanging over his trouser waistband.

The Communist-led Huks were at the height of their power at that time, but the new Philippine defense chief whipped the demoralized army into an effective fighting force which in 2½ years eliminated the Huk menace.

He treated his prisoners well and his strategy when fighting the Communists was to win them over to the Democratic front and then track down their leaders in the jungles of the 7,000 islands and destroy them. For former Communist Huks, he devised an elaborate plan to resettle them on undeveloped land in Mindanao.

After defeating his old chief, Quirino, for the Presidency, Mr. Magsaysay opened Malacanang, the palatial presidential residence, to the people of the islands and launched a vast and benevolent program of reform to save the tottering 7-year-old republic.

America first saw Ramon Magsaysay (pronounced Mog-sigh-sigh) in 1947, when he led a mission to Washington and succeeded in an appeal for additional benefits for Filipino war veterans. An humble man, he brought with him a letter of introduction from his Government.

In 1950 he returned to Washington as a one-man mission to expedite military assistance in the battle against the Huks. He also turned in at Mount Alto Hospital for treatment of an ailment contracted during his jungle fighting days.

Members of the Mount Alto ward to which he was assigned remember him as a jolly, talkative man—a handsome fellow who joked and visited from bed to bed to talk about politics, Army life, and his fierce determination that communism would never make headway in his homeland.

News of Mr. Magsaysay's death was taken as a personal loss by those who knew him.

General MacArthur cabled Mrs. Magsaysay condolences from New York in behalf of himself, Mrs. MacArthur, and his son, Arthur, 19, who was born in the Philippines.

In Washington the Philippine Embassy was flooded with messages of condolence. Ambassador Carlos P. Romulo said the "United States has opened its heart to the Philippine people in an unparalleled expression of grief."

"Ramon Magsaysay was one of the greatest leaders of our time," Supreme Court Justice William O. Douglas said yesterday. "I knew him and loved him like a brother * * * I walked with him among the Huks and saw the great rehabilitation work he was doing. He turned back the Red tide that threatened the Islands.

"But it was his tolerant approach that kept the Philippines from a bloody civil war."

For Labor's Good

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, March 18, 1957

Mr. MUNDT. Mr. President, our current hearings before the Select Committee To Investigate Improper Activities in the Field of Labor or Management has up to now disclosed evidence clearly demonstrating that additional legislation will be required to protect the interests of the working men and women whose dues finance the operations of union officials.

In this connection, Mr. President, I should like to call to the attention of my colleagues in Congress an interesting and informative editorial in the March 12 issue of the Pittsburgh (Pa.) Sun-Telegraph, and I ask that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOR LABOR'S GOOD

Senate committee hearing disclosures of racketeering by corrupt labor bosses are important to the whole country but it seems to us they are of the most intimate concern to men and women who are members of unions.

It is their money that has been plundered.

It is their faith that has been perverted.

It is their good name that has been prostituted.

We have been thinking of these things in connection with remarks by Senator MUNDT (Republican, South Dakota) as a member of the Senate committee.

Senator MUNDT made the point that the evidence indicates the need for Federal legislation for the protection of union members.

One need is to provide more control of union affairs by members. Testimony has shown instances where the top brass made all the decisions without any consultation with the rank and file.

Another is to prevent abuse of welfare and pension funds and to insure an accounting of how they are invested or deposited.

A third is to prohibit use of union funds for political purposes. No one knows better than union members that their money has promoted candidates they themselves as individuals voted against in the ballot booths.

None of these proposals possibly could be construed as antilabor.

They are prolabor in that their purpose is to protect the money and the rights of union members.

Visit by Vice President Nixon With Pope Pius XII

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, March 18, 1957

Mr. BEALL. Mr. President, in sharp contrast with the denunciations and critical expressions that are constantly made by foreign spokesmen, especially those identified with the Kremlin, is the commendatory and favorable statement just made concerning the people of the United States and President Eisenhower and Vice President NIXON. I refer to the laudatory comments of Pope Pius XII made yesterday on the occasion of the conference between Vice President NIXON and the Pope.

In high praise of the lofty aims of the American people, the Pope noted, with genuine satisfaction, the spiritual influences which are motivating our people in their strivings for international peace. He referred feelingly to President Eisenhower, of whom he is an ardent admirer, and extended extraordinary courtesies and welcome to our Vice President and Mrs. Nixon.

In view of the unusaul circumstances of this visitation, I ask unanimous consent that an article entitled "Pope Praises United States; Talks With NIXON," published in today's New York Times, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POPE PRAISES UNITED STATES; TALKS WITH NIXON—ENDORSES GOODWILL AS A KEY INSTRUMENT FOR SETTLING OF INTERNATIONAL DISPUTES

ROME, March 17.—Pope Pius XII told Vice President RICHARD M. NIXON today that it was "comforting" that Americans "at this delicate hour" continued to rely on "goodwill as a key instrument for the settlement of international disputes."

But, he continued, "less than ever can the human family today dispense with charters and statements of policy, carefully and laboriously wrought and worded, and rounded out with solemn sanctions."

His brief prepared speech in English followed a 20-minute private audience at the Apostolic Palace in the Vatican during which he and Mr. NIXON discussed problems of Africa, Asia, and the "cold war."

TELLS OF POPE'S REMARKS

Mr. NIXON reported the Pope had said the trend toward self-government and economic development in Africa would create a substantial new force in the world balance between freedom and communism in the next quarter century. For this reason, he said, the Pope called the current Vice Presidential tour of African countries most important.

The Pope inquired about President Eisenhower's health and was glad to have Mr. NIXON's assurance that it was good. Mr. NIXON said the Pope had been following closely reports of the President's cold and had commented that fortunately a cold was never fatal.

Mrs. Nixon joined her husband in the audience a few minutes before the Pope received the rest of the Vice Presidential party and accompanying news correspondents in the library. She wore a black veil over her blond hair and a black silk ankle-length dress with long sleeves. Mr. NIXON wore a cutaway coat and striped trousers. Neither is a Roman Catholic, Mr. NIXON being a Quaker and Mrs. Nixon a Methodist.

The Pontiff presented to Mr. NIXON a new papal gold medal in an ivory case. The Vice President delivered a letter of greeting to the Pope from President Eisenhower.

Wearing a white robe and skull cap and golden chain, the smiling Pontiff spoke in a firm, steady voice. After the audience he left the library to be photographed in the antechamber by an official Vatican photographer with the Nixons and United States correspondents. United States photographers were not permitted to take pictures. The Pope told the newspaper men they had "great power."

In a speech at the North American Pontifical College, which trains American novices for the priesthood, Mr. NIXON said: "In the struggle between freedom and slavery there is no doubt but that the spiritual strength we develop in the free world may be more important than physical and economic strengths."

TEXT OF POPE'S SPEECH

ROME, March 17.—Following is the text of the speech read today by the Pope to Vice President NIXON and members of his party during their audiences:

"In your honorable person, Mr. Vice President, and in the gracious company of Mrs. Nixon and your distinguished mission party gathered here this morning for a very welcome visit, we are happy once again to see represented so worthily the warmth and constancy of your beloved country's commitment to the cause of peaceful human relations within the family of nations.

"At this delicate hour, which we fervently hope and pray may mark the ending of a too long-continued crisis in the fortunes of East and West, it is comforting to note the reliance placed by your illustrious President and generous people, as well as by those in every corner of the globe who share your hopes and fears, on the simple, informal, unfeigned expression of goodwill, as a key instrument for the settlement of international disputes.

DISCUSSES NEED FOR TREATIES

"That does not mean to disparage the need and function of treaties and collective agreements. Less than ever can the human family today dispense with charters and statements of policy, carefully and laboriously wrought and worded, and rounded out with solemn sanctions.

"Authentic peace is always the work of justice; and justice can be little more than hollow mockery without reverence for the laws of God. But over and above the legal device or diplomatic approach—rather within them as the spirit animates the letter—it is the beating of human hearts in brotherly unison that will avail to make covenants a living and liberating force for peace in the world community. Speaking of human relations, St. Paul told the Romans, 'It is the love of man for his fellow man that fulfills the law' (Romans xxiii: 8).

"And how indeed may one expect the last somber vestiges of mistrust to disappear, unless men of goodwill everywhere make it manifest, at home first and then abroad, that their professed decent respect for the conscience and dignity of mankind is firmly

grounded on the rock of fraternal solidarity under God, and not on the shifting sands of economic or political expediency?

"The open heart, we are sure you will agree, even more than the open hand, remains the surest test of sincerity, and so of moral rectitude, for nations as for neighbors.

"Your Presidential mission of goodwill completed, then, Mr. Vice President, God grant that you may bring home with you to America good news in abundance from the continents you have visited, the fresh and heartening evidence, that is, of the world's mounting esteem for those unchanging spiritual values, enshrined forever in the gospel of the Prince of Peace, on which all our human institutions, frail as the best of them must be, will rest secure.

"With deep affection we pray that heaven's blessings may be vouchsafed to all your fellow citizens and their beloved President. May God grant him health and comfort in the arduous duties of his high office and his unremitting labors in the cause of world peace."

Invisible Government

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Monday, March 18, 1957

Mr. GOLDWATER. Mr. President, Mr. George Meany, the president of the CIO–AFL, expressed a fear last week that certain businessmen would use the disclosures of the current investigating committee to promote laws that would cripple unions. I am sure that the Congress of the United States will not allow that to happen. What the Congress should do, however, is to examine carefully not only what has been and will be disclosed in the fields that are being investigated, but it should look further and discover what the rank and file members of these organizations feel and what the general public feels about these matters. In last week's issue of U. S. News & World Report David Lawrence has done just this, and has pointed out, in my opinion, some matters that already are worthy of congressional consideration. Probably the most important of these lies in the field of compulsory unionism. I ask that his editorial be printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

INVISIBLE GOVERNMENT

(By David Lawrence)

Revelations of the insidious influence and far-reaching power of some of the leaders of a national labor union have recently shocked the country.

A Senate committee, headed by the able and conscientious Democratic Senator from Arkansas, JOHN L. MCCLELLAN, which is investigating labor rackets, has thus far only scratched the surface. Senators on the committee are telling the press there are more exposures to come.

It will not be an adequate answer to say that most of the union leaders in America have nothing to do with rackets and are dedicated to the cause of labor and nothing else.

What the Senate committee has brought out into the open is the existence of an invisible system of government which elects its own mayors and its own district attorneys, and compels the choice of its own police chiefs, to say nothing of the use of large sums of workers' dues and forced contributions to elect governors and even Members of Congress to do the bidding of these self-styled leaders. It is this misuse of financial and economic power which now rightly concerns the American people.

Time was when corporations perpetrated many an abuse against their stockholders and against the innocent public. Congress stepped in and wrote laws, not to restrain the legitimate activities of corporations, but to make sure there was no opportunity for illegitimate power to be exercised.

Labor unions have grown in membership in large part because they have obtained from employers by duress the "union shop," which is, of course, a form of "closed shop." By whatever term it is described, the basic requirement is that a man must join a labor union if he wishes to keep his job, for the employer is by contract required to dismiss anyone who refuses to join a union after 30 or 60 days of employment.

What, in the name of "liberalism," is this but a form of compulsion, a denial of the privileges and immunities of a citizen? How can so-called liberals consistently argue for civil-rights legislation, while at the same time they never protest against compulsory unionization?

At the heart of the labor-union structure today is a rule of coercion. It takes away job opportunities from those who refuse to accept the discipline of a union.

In many occupations there is a waiting list of workers. The applicants are told they must join a union, but even when they are ready to join it is the union which, in effect, determines the priority in hiring. Isn't this a system of private government, with control over the lives and destinies of millions of our citizens, in a supposedly free America? Is it any wonder that some of the national unions with many millions of dollars in their treasuries—accumulated largely as a result of this power to monopolize job opportunities—find it possible to use such funds for improper purposes?

It is apparent from the testimony recently taken by the Senate committee that union funds and power are used locally for improper purposes—to control elections in cities and States where enforcement officers turn their eyes away from vice-ridden areas because union officials have a vested interest there. This raises the question whether there is on the statute books adequate legislation to safeguard the funds of the workers. It is the basic legislative reason behind the current investigation.

Our remedy, of course, is to require full disclosure. The Securities and Exchange Commission was created by Congress to receive and examine the financial reports of corporations, and a great deal of data is filed during the year about the relations of the corporations to their stockholders and long-term creditors. Is it not desirable to require labor unions to submit to the same kind of minute supervision so that the money they collect from workingmen will not be wrongfully used?

We now have strict antitrust laws that prohibit corporations from engaging in monopolistic practices. Political influence by the labor unions thus far has prevented the antitrust laws from being extended by Congress to cover labor-union practices.

National labor unions nowadays fix prices in a whole industry by fixing uniform labor costs throughout that industry. By ordering a strike or a boycott they can destroy a businessman who refuses to do the bidding of a labor union and they can favor a competitor who is willing to act in collusion with the union and pay tribute to it.

Should not the 30 States, moreover, which do not yet have provisions in their constitutions or State laws guaranteeing the citizen the right to work—the right to join or refrain from joining a union—be encouraged to adopt such measures?

The civil rights of citizens of every race, creed, and color are being abused in the numerous labor-union rackets of today.

It is time to bring about the abolition of invisible government in America.

Projected Inland Waterway Connecting Lakes Huron and Michigan

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Monday, March 18, 1957

Mr. POTTER. Mr. President, Merton M. Carter, of radio station WMBN, in Petoskey, Mich., has written a most interesting and excellent article titled "The Isthmus of Mich-i-gami," which appeared in the March issue of Inside Michigan magazine.

Mr. Carter's article pertains to a project of vital importance to northern Michigan—the once famous inland route which extends from Cheboygan to Conway, and which we hope to have extended into a through waterway connecting Lakes Huron and Michigan.

I long have been actively interested in the redevelopment of the inland route, reconstruction of which is now fully underway. I earnestly hope, as do so many of the good people of my State, that our dream of a through route will become a reality in the not too distant future. The people of Michigan are assured of my continued and full cooperation toward this end.

Mr. President, I ask consent to have Mr. Carter's article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE ISTHMUS OF MICH-I-GAMI

(By Merton M. Carter)

Like the Isthmus of Panama, Michigan has its own barrier to a Northeast passage—a narrow strip of land which if opened would connect the fresh waters of Lakes Michigan and Huron and take the skipper by connecting lakes, streams, and channels through the pastoral waters of the famous inland route all the way from Petoskey to Cheboygan, a distance of nearly 40 miles by water.

A canal cutting through the sand dunes at the head of Little Traverse Bay would sever the tip of the lower peninsula, making two entire counties another island among the inland seas of the upper Great Lakes. More important, it would add another highway to Michigan's beautiful waterways and give a safe port of refuge from dangerous storms to pleasure craft sailing to and from Detroit and Chicago. Yacht owners, resort operators, and cottage owners, as well as civic leaders of northern Michigan, are looking for a way to make this dream of 50 years or more come true.

The inland route has always fascinated the visitor to northern Michigan. In the days before modern civilization, our red-skinned brothers from southern Michigan,

Illinois, Ohio, and Indiana summered in northern Michigan, too. At one time as many as 6,000 Indians were camped at Mackinaw City during the summer. Their light canoes were easy to portage from Lake Michigan to Mud Lake, Round Lake, and down the existing stream to Crooked Lake and thence to Lake Huron by the inland route.

Hundreds of Indians made this trip every summer for the lakes and streams abounded in fish and their banks with game. It also gave them protection from the choppy waters in upper Lake Michigan. Like the Indians of Panama, Michigan Indians took the shortest route to where they were going.

But then came civilization. The laying of the Grand Rapids and Indiana Railroad from Grand Rapids to Mackinaw City blocked off the natural water trip. Then the coming of the gasoline age laid highways which put 2 more barriers in the route's usefulness and for more than 50 years it was just a dream left over from days of old.

In the old days, steamboats for hire took visitors from many lands through the inland route of Michigan which started at the village of Conway, went through Crooked Lake into Crooked River, across Burt Lake, down Indian River into Mullet and up Mullet Lake into Cheboygan River and through the lock out into Lake Huron—a distance of 35 miles. In 1900 more than 32 steamboats ran excursions over these waters. It attracted visitors from all over the country who enjoyed a peaceful trip through wonderful surroundings.

The automobile and good roads changed all this, and because of lack of interest, deadheads clogged the water—hulks of old steamboats made navigation dangerous if not impossible for even the smallest of ships.

In recent years there has been a revival of interest. Mr. C. B. Palmer of the New York Times said in a recent article "a congressional committee was told recently that in the United States today the order of popularity of personal participation sports is first: card playing; second: fishing; and third: boating."

Because of this interest in boating the inland route is now being cleared of deadheads and within a year it will be possible again for a boat 65 feet or under to enter the inland route at Cheboygan and travel 35 miles through some of the most beautiful waterways of Michigan if not of the world.

In 1945 the Inland Water Route Association, Inc. was formed with more than 800 members. They elected C. T. Lathers of Burt Lake as their president and it was through the efforts of this association that a Federal grant of $241,000 was approved by the Congress in June 1955. Contributions from local interests have brought the total improvement fund up to $326,000. The State Waterways Commission appropriated $55,000; Emmet County Board of Supervisors, $6,000; the Cheboygan County Board of Supervisors, $6,000, and contributions by businessmen, resort owners and individuals amount to $18,000. Contracts have been approved and work was started in the fall of 1956 to improve the inland water route.

The specifications call for a channel 30 feet wide and 5 feet deep all the way from Cheboygan to Conway, Mich.—a distance of 35 miles. When this work is completed it will be possible for a boat up to 65 feet in length to enter the Cheboygan River from the Straits of Mackinaw on the Lake Huron side and travel by interconnecting streams and lakes to a point just 3 miles from Lake Michigan.

The Inland Water Route Association, Inc., now is attempting to get a new project approved which would cut a channel through to Lake Michigan.

On February 15, 1956, Senator CHARLES E. POTTER introduced a resolution to the United States Senate Committee on Public Works asking the Army engineers to make a preliminary examination of the feasibility of such a project. This resolution was adopted by the committee on February 20, 1956. However, the lack of sufficient funds at the present time has shelved the survey for the time being.

Proponents of the inland canal feel that the economic future of the resort business in Emmet and Cheboygan Counties requires its completion. They point out that yacht owners may not take full advantage of the improvements on the inland water route which are now being made. If they enter the route at Cheboygan and take the route to Conway they will have to turn around and go back all the way—a round trip distance of 70 miles or 8 hours sailing time. If the canal were built, they could proceed into Lake Michigan thus cutting down the distance from Detroit to Chicago and giving them complete protection from the narrow, rocky passages in upper Lake Michigan.

At the present time many yacht owners claim that facilities for the harboring and servicing of small boats are far superior on the Canadian side of Lake Huron and many take summer cruises to the Georgian Bay area.

Russell McKee of the educational division of the Michigan Conservation Department wrote in Land—Our Basic Resource on the value of recreational facilities, "our only real problem seems to be in the way we use this natural bounty. In the first place, it doesn't look like we've got much because we all want to use the same areas for the same old pastimes at the same time. In the second place, we haven't taken enough time or planned enough or spent enough money for these things. Otherwise the potential means nothing, and we've got to spend the time and energy necessary to do the job."

During the 15 months preceding August 7, 1956, the Michigan Waterways Commission had spent $450,000 on waterways and the Federal Government had spent $4 million in the State within the same period. They have improved many ports of refuge along the entire coast of Michigan but still fall short of offering complete safety to the many who sail these waters in pleasure craft.

One of the roughest passages in the entire Great Lakes area for small craft is from the ports of Charlevoix or Harbor Springs through upper Lake Michigan, past Waugoshance point into the Straits of Mackinaw. Even in fair weather the trip is a dangerous one for high winds come up at a moment's notice and it take an experienced navigator to keep his boat off the stone-infested shoals near Gray's Reef.

The Waterways Commission is improving the Port of St. James on Beaver Island to afford better refuge to pleasure craft, but the construction of the inland canal would give perfect protection all the way from Charlevoix on Lake Michigan to Cheboygan on Lake Huron.

Stoddard White wrote in the Pictorial Magazine of the Detroit News on May 20, 1956: "Cruising and sightseeing by water have become increasingly popular since World War II. One of the most delightful areas for this is the inland route, which stretches from Cheboygan to Petoskey—almost from Lake Huron to Lake Michigan across the top of the Lower Peninsula. This 36-mile waterway through big lakes and winding rivers calls to more than 400 'outside' boats a season, not counting all of those which are permanently housed at cottages and homes along the scenic waterway. The 'outsiders' are admitted to the route by a privately owned lock near Cheboygan."

The lock at Cheboygan is 75 feet by 18 feet. This would limit the size of the proposed lock on the inland canal as boats entering on the Lake Michigan side would have to go through the Cheboygan lock to get to Lake Huron. There is a difference of 21 feet between the mean water levels of Lake Michigan and Round Lake and a 4.7 feet drop from Conway to the Cheboygan lock.

Since there is a drop of 21 feet in less than a mile most engineers who have discussed the project feel that it would be best to pump the water from Lake Michigan into the lock. In this way they would always be adding water to, rather than draining from; the headwaters of the inland route. Round Lake is a very small lake in Emmet County and heavy traffic through the proposed canal might endanger water levels. A charge for locking would help defray the cost of operation.

The total cost of such a project only can be estimated at this writing. Until the Army survey is completed no specifications will be available. There would be a mile of heavy digging through sand from Lake Michigan to Round Lake with construction of a small lock in this section. A channel 5 feet deep across Round Lake and a canal for about a mile through an existing swamp over a stream bed would complete the project.

The few objectors to the canal proposal point out that there are some man-made obstables to cross which would add considerably to the cost. Proponents look further into the future than this and have these explanations. U. S. 31 which passes through Conway will be rerouted within a year or two. The highway department should cross the swamp with a bridge having the same clearance as all other bridges on the inland route. The Pennsylvania Railroad would have to raise its grade near Conway to give the same clearance. A road going to Harbor Springs would have to be bridged over the canal and a railroad spur between Petoskey and Harbor Springs also would have to be bridged if it were still in use at the time of construction. It does not carry any freight to mention, at the present, and has not offered passenger service for years. Some feel that it may be abandoned.

Since the Inland Water Route Association, Inc., has advocated the canal, it has met with instant approval of all legislators connected directly with the project. Governmental bodies, chambers of commerce, and yacht clubs have passed resolutions urging its completion at the earliest possible date.

Senator CHARLES E. POTTER has written: "As you well know, I, too, am enthusiastic about the prospects of such an undertaking."

Senator PAT MCNAMARA wrote: "I know that this project is important to you and your region. I want to assure you that I will keep working to get this project completed just as soon as possible."

Congressman VICTOR A. KNOX, Representative from the 11th Congressional District, says, in part, "I assure you that I look upon this project favorably and will be looking forward to the study and recommendations of the Michigan Waterways Commission in the near future."

State Senator Frank Andrews, of the 29th State senatorial district, says, "It is a very fine and constructive project. I assure you that I am ready to do anything which will help in the attainment of such a waterway."

Resolutions urging the completion of this proposed canal have been passed by the Cheboygan County Chamber of Commerce, the Petoskey Chamber of Commerce, the Charlevoix Chamber of Commerce, the Cheboygan County Board of Supervisors, the Emmet County Board of Supervisors, and the Petoskey Outboard Cruising Club. Many other interested organizations have indicated that they will prepare such resolutions at their next regular meeting.

The Petoskey News-Review, the Cheboygan Daily Tribune, the Otsego-Herald Times of Gaylord, the Emmet County Graphic of Harbor Springs, the Skipper magazine of Walloon Lake, and the Tipper magazine of Alanson all have editorially endorsed such a project.

Exponents of the Inland Canal are urging all parties interested to write to their State legislators, their governor, and their Congressmen to endorse this proposal. They point out that this is not a project of local interests. Anyone owning a boat anywhere on the Great Lakes capable of traveling considerable distances should be interested in this project. Yacht clubs and yacht owners in Illinois, Indiana, Ohio, Wisconsin, and Pennsylvania, as well as Michigan, should pass resolutions and forward them to their Congressmen for they, too, would be able to take advantage of this new 3-mile strip of marine highway which would open up a 35-mile dead-end channel.

The boating industry is growing by leaps and bounds. It is the obligation of those in government to see that our recreational resources are developed in step with our new pattern of life. With the social emphasis on more paid vacations, more time for recreation, with fishing and boating leading the parade of vocational desires, it is of the greatest importance that we develop these facilities in keeping with the demands of the future.

Lt. (jg.) A. P. Brown, Jr., information officer of the North Coast Guard District, with headquarters at Cleveland, wrote that as of June 30, 1956, there were 58,067 motorboats registered in the Great Lakes District. Canadian boats of less than 15 tons do not have to register, but with so much coastal mileage on the Great Lakes, the number of Canadian pleasure craft should be considerable. Many of these boats would be attracted to this new waterway. The investment in such a number of boats is almost beyond comprehension, and what they would spend in the territory during their stay, likewise would amount to hundreds of thousands of dollars.

The economy of the north country is largely dependent upon the resort business and any new development that can be accomplished to improve the recreational facilities of the State of Michigan should be of concern to local, State, and Federal interests.

Many local agencies, businessmen, and property owners have shown a desire to contribute to a subscription drive, but until the Army makes a survey and determines what percentage of cost local interests should contribute, nothing can be done in this regard.

The resulting benefits to the owners of pleasure craft, the men who service the boating industry throughout the north, and to those who own property on the inland route would more than repay the costs in increased taxable investments and activity within a comparatively short time.

As Senator CHARLES E. POTTER, of Michigan, wrote: "It is only through the ardent zeal and support of the people back home that we will be able to realize this dream."

Peter Graves, Chippewa Leader

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, March 18, 1957

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two articles on the death of Peter Graves, an outstanding chief of the Chippewa Indians.

One of the articles is entitled "Death Comes for Peter Graves—The Grand Old Man of Red Lake May Have Been 'The Greatest Indian of Our Time.'" This article was published in the Minneapolis Star of March 16.

Mr. President, let me say that on several occasions I visited in the home of this outstanding Indian leader. Peter Graves was a grand man and a distinguished Indian. It is with deep regret that I have learned of his passing.

I hold in my hand articles published in the Minneapolis Star and the St. Paul Pioneer Press, both of March 16. They give some of the details of Peter Graves' life. I ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Minneapolis Star of March 16, 1957]

DEATH COMES FOR PETER GRAVES—THE GRAND OLD MAN OF RED LAKE MAY HAVE BEEN THE GREATEST INDIAN OF OUR TIME

(By Jay Edgerton)

Peter Graves, the 84-year-old Indian chief and elder statesman of Red Lake Indian reservation who died this week, was a man about whom there were many differences of opinion.

Some people thought he was "the greatest Indian of our time." Others said, "Pete Graves is ward politics applied to an Indian reservation."

Mr. Graves himself said many people considered him a dictator, "a backwoods Hitler."

But whether they were for Pete Graves or against him, most people who knew the facts admitted that it was Graves who held the Red Lake reservation together and made it work.

As judge of Indian court, a member of the general council of the Red Lake Chippewa tribe, and secretary of the Red Lake Fisheries Association, Graves was a powerful figure in the north country.

As he grew older, Mr. Graves mellowed. He developed a philosophy which he delighted to expound to visitors and friends. It went something like this:

God is everywhere, in all things and in all places.

But men are ignorant, like children. We have a long way to go to learn the secrets of creation.

The more good that you do in life, the more you build yourself.

The evil that you do you have to pay for. Evil brings its own rewards.

Material wealth won't last. The man who is too intent on material things is like a dog burying bones.

Moderation in all things.

Mr. Graves had known almost every leading Minnesotan for more than 2 generations. He was an intimate friend of the great Senator Knute Nelson. Once, in a reminiscent mood, Mr. Graves remarked, "I have often wondered why Senator Nelson liked me—because I was just as stubborn as he was."

Peter Graves was only part Indian, even though he had come to personify the Indian through his career as leader of the Red Lake Tribe. His father was Joe Omen, a part Scotch refugee from the Riel rebellion in Canada. His mother was a daughter of Munzaun (Wild Rice Chaff), a famous man among the Chippewas.

Mr. Graves received a good education at schools in Peoria, Ill., and in Philadelphia. He entered the Government Indian Service in 1889 and served in it until he went back to Red Lake to organize the Red Lake tribal council in 1918. From 1936 to 1943 he was judge of the Indian court at Red Lake.

For years Mr. Graves was the motivating force behind a program to keep Red Lake for the Indians. Many members of the tribe wanted to cut up their lands and sell resort sites and cabin sites on the lake. To this the old leader turned a flinty face.

"I want this paradise kept for my children and my grandchildren," he would say.

A realist and a shrewd one, Peter Graves had few illusions about his own people. He thought it would be a long time before Indian problems are solved.

"The only salvation for the Indian," he once remarked, "is education. It will take us at least 25 years."

Mr. Graves was firmly opposed to liquor and was an outspoken enemy to those who trafficked in liquor in Indian country.

"Outlaws and anarchists, I call them," he would shout. "All our troubles come from liquor."

For years people in northern Minnesota have asked, "What will happen to Red Lake when Peter Graves is gone?" Now, they will find out.

[From the St. Paul Pioneer Press of March 16, 1957]

CHIEF GRAVES, CHIPPEWA LEADER, DIES

RED LAKE, MINN.—Peter Graves, Indian chief and elder in Red Lake Reservation affairs, died at him home Thursday night. He would have been 85 on May 20.

A lifetime of work among his people led Graves to judge of Indian Court, various positions with the United States Indian Service, and with the Red Lake Tribe.

At the time of his death he was on the general council of the Red Lake Chippewa Tribe and served as secretary of the Red Lake Fisheries Association at Redby.

He attended Lincoln Institute at Philadelphia, graduating in 1889. He was in the Government Indian Service following graduation until 1917. He served as judge in Indian court from 1936 to 1943 and was an organizer of the general council of the Chippewas at Red Lake.

In 1940 he was presented an achievement medal by the Indian Council in Chicago for his welfare work among Indians, and won other similar awards.

As a young man he played baseball in the old Middle States League as a member of the Hazleton, Pa., team.

Surviving are his wife, 2 sons, Joseph of Red Lake, and Clyde, of Redby, and 8 daughters, Mrs. Isabel G. Strong, Mrs. Charles Beaulieu, Rose Graves, and Mrs. Alvin Oliver, all of Red Lake; Mrs. Richard Auginash and Mrs. Carl Carlson of Redby; Mrs. Mary G. Petite, Duluth, and Mrs. Francis DuHaine, of Grand Marais.

Graves, in addition to his children, left 51 grandchildren and 76 great-grandchildren.

Funeral services will be held at 2 p. m. today in St. John's Episcopal Church here.

Control of Billboards Along Federal-Aid Highways

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Monday, March 18, 1957

Mr. GOLDWATER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Federal Squeeze," published in the Arizona Republic of March 15, 1957. The editorial deals with

the subject of control of billboards along Federal-aid highways.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE FEDERAL SQUEEZE

Red-hot advocates of the theory that all rainbows spring from a pot of gold in Washington have perfected a standard horselaugh they turn on whenever someone suggests that Federal aid means Federal control, whether of schools, highways, or the psychiatric clinics to which Government spending may eventually drive us all. They will have a harder time than usual laughing off the battle of the billboards now raging in the Capital.

The battle swirls around a series of bills in Congress which would grant Federal aid to highways in States forbidding billboards along the highways, but deny it to those which refuse to outlaw the big signs. A news report says Congressmen are getting a lot of reaction from persons who, on one side, maintain that billboards deface nature, and on the other side argue that a lot of sign painters' jobs are at stake. If there is any thought in Washington that the whole thing is simply none of the Federal Government's business, everybody there is keeping quiet about it.

Yet that is precisely the situation. It isn't any of the Federal Government's business. If the States don't want billboards along their highways, the State legislatures are perfectly capable of doing away with them. If they want to impose restrictions on number, size, and placement of billboards, that, too, is their prerogative. The Federal bureaucrats have no more right to tell a State what to do about billboards than they have to tell an individual what color to paint his house number.

The billboard battle is as perfect an example as has come up yet of the truth that Federal control follows Federal aid. The Federal highway program was conceived to help States solve their long-distance traffic problems. At least, that was the plea on which it was set forward. It was said that, of course, there would have to be minimum standards of construction, but otherwise the grants-in-aid would not infringe one bit on States rights. Yet now, before the program is even under way, Congress is busily engaged with proposals for such extracurricular Federal controls as could not even have been thought of without the entering wedge of Federal aid.

Who controls the placement of billboards might seem an unimportant issue, but who controls the Nation's schools is far from unimportant—and the principle applied to billboards is no whit different from the same principle applied to schools. If a small group in Washington can use Federal aid to dictate to the States in one matter, they can use it also to regiment the schools according to whatever ideas they may have at the moment.

The closer the management of the people's affairs stays to the people themselves, the longer will America remain free of the totalitarian statism which has taken over so much of the rest of the world. Whether the decision to be made is what to do with billboards or how to educate our children, that decision should be made where the Constitution place it—in the States. Federal aid is robbery, not only of the tax dollars which come from local communities, but more importantly of the very rights of those communities. Congress would be wiser to cut the Federal budget, return taxing power to the States, and forget the whole idea that Washington can do the job better than the people can.

President Ducks Budget Responsibility

EXTENSION OF REMARKS
OF
HON. PAT McNAMARA
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES
Monday, March 18, 1957

Mr. McNAMARA. Mr. President, last week I submitted in the Senate a resolution requesting the President to submit specific recommendations as to how and where his proposed budget could be cut, or take a position supporting his request.

The purpose of this resolution was to require the President to live up to the responsibilities vested in him before the Congress assumed the responsibilities vested in it.

On Friday, the New York Times carried an editorial which very clearly pointed up the extent to which the President is responsible for the budget.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ALPHONSE AND GASTON

The public uproar over the size of the $72-billion budget—largest peacetime spending program in the Nation's history—has led to a remarkable example of buck-passing between President Eisenhower and the United States Congress. The Executive and the legislature are each bowing to the other in the old Alphonse and Gaston role: "After you, my dear Alphonse"; "No, after you, my dear Gaston." Nobody wants to go through the door first, though both sides recognize the pressing need for economy in a period of creeping inflation.

Last January the President delivered his budget message to Congress, and ever since then powerful spokesmen for his administration—notably the Secretary of the Treasury—have been clearly indicating that they would like to see that budget cut. The President himself, as recently as this week, has invited Congress to come up with sensible suggestions for budget-pruning, though he also suggested that he himself didn't see where it could be done. Congress, or at least the Democratic majority of the House, has in turn specifically asked the President to "indicate the places and amounts in his budget where he thinks substantial reductions may best be made."

And so in this struggle to pass along responsibility to someone else, the public will be left holding the bag—full of I O U's. Now, it is perfectly true that the bulk of projected expenditures for the coming fiscal year are fixed and cannot be seriously affected by what the President and Congress do in the next few months. Of the $72 billion that the President says will be spent, over $24 billion has already been appropriated and another $17.6 billion is already obligated in such items as interest on the national debt, price supports, veterans' benefits and the like. Whatever cuts might come would have to be taken out of the remaining $30 billion; and it is here that the President and Congress could, if they would, exercise their shears.

The responsibility is a joint one, but it is the President who must set the pace and determine the general direction of projected expenditures—whether up or down. He is of course technically right in pointing out that "there can't be a cent spent in this Government except for programs approved by Congress and out of money specifically appropriated by them." But he is wrong in virtually abnegating the responsibility for leading the way toward cuts that might be made. His budget is an executive budget; it is designed, as it must be, by the Executive; the Executive proposes the expenditures; and if the Executive wants to make reductions that only can be achieved by new legislation, there is nothing to prevent the Executive from saying so. The President did suggest in his press conference remarks on the budget this week that the postal deficit be eliminated; but when it came to discussing such items as defense, farmers or veterans, all he offered was the not very helpful advice that "Congress will have to say which one they don't want to carry out if they are going to make big savings." Huge Federal public works projects that might better fit a time of depression than of prosperity weren't mentioned at all.

A report of a Hoover Commission task force on budget and accounting 2 years ago observed that "An essential part of his (the President's) function is to exercise national leadership and to counterbalance the sectional and special interests which might otherwise exert undue influence on congressional decisions." Granted that Congress has it in its power to cut specific appropriations or to change basic spending legislation, the President must know that as Chief Executive Officer of the United States he too has a fundamental responsibility in respect to the budget. He cannot have it both ways; he either thinks this budget is the best that can be produced or he does not think so; and if he doesn't, it is his obligation to change it himself or to lead, prod, and cajole Congress into adopting legislation that would permit him to make it better.

4–H Makes the Best Better

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, March 18, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "4–H Makes the Best Better," from the March 7, 1957, issue of the Ocilla (Ga.) Star.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

4–H MAKES THE BEST BETTER

The old gray mare is not the only thing about farming in Georgia that "ain't what she used to be."

Just about everything about it has changed, and most of the oldtimers who lived on the farms of yesterday tell us that they have been changes for the better.

It is progress due to research, and to better methods of reaching the farmer and his family with up-to-date information then helping them put it into practice on the farm and in the home.

Much of the progress, we feel, is due to the 4–H Club.

And this week, during National 4–H Club Week, is a good time to give credit where credit is due.

The 4-H Club offers our rural youth projects as varied as the chores around the farm and the work in the farm home. Business organizations and individuals who care about the future of their State and, more than that, the welfare of their young folks, offer thousands of dollars in scholarships, trips, and other valuable awards as incentives to these boys and girls to continue their way of life.

And so, when the pessimists point to the danger of growing population and diminishing natural resources, when they cry about juvenile delinquency and increasing crime, we want to remind them of the 4-H'ers—141,825 strong in Georgia—standing guard over a precious part of Georgia's heritage—its rural life.

Our hats are off, too, to the county and home demonstration agents and other Agricultural Extension Service workers, and to volunteer local 4-H leaders. We feel that they, in truth, are helping bring a better Georgia.

Tribute to Prof. Selig Perlman

EXTENSION OF REMARKS
OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, March 18, 1957

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a great statement made by Prof. William Haber, of the University of Michigan, in honor of one of America's greatest living scholars, Prof. Selig Perlman, of the University of Wisconsin. He is probably one of the greatest living economic theorists in the field of labor economics.

I wish to commend Professor Haber for the very fine statement he made about Professor Perlman. Perhaps I am a little biased, because Professor Perlman was my major professor in the graduate work I pursued at the University of Wisconsin. He is a man to whom I owe a great deal, and I am proud to join Professor Haber in his tribute.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PROF. SELIG PERLMAN—AN APPRECIATION

(By William Haber)

I am grateful to the Wisconsin Society for Jewish Learning for giving me the opportunity to participate with its members and friends in honoring Prof. Selig Perlman.[1] For me it is a special pleasure. Selig Perlman was my teacher and counselor during my student years at the University of Wisconsin in the early 1920's. I have continued to learn from him and to be counseled by him during the intervening 3½ decades.

His courses in labor history, in the theory of the labor movement, and on capitalism and socialism, which I took in 1922 and 1923, were then and have remained since exciting and stimulating experiences.

To me and the thousands of other students, Selig Perlman opened new vistas. He drew on his deep knowledge of philosophy, history, sociology, and economics. His students quickly developed a profound respect for his scholarship and his wisdom. They recognized his unique ability to illuminate current issues with dramatic insights flowing from his wide knowledge of American, Italian, Russian, and Jewish history.

Professor Perlman's lecture method was a study in itself. He invariably began with one or two ideas and around these he built a unified structure, comparable to a musical composition—the central theme supported by the related motifs. It is no wonder that a course with him was an intellectual delight. It was so for me over 30 years ago and is now for the present generation of Wisconsin students. It is no wonder that Selig Perlman's courses have long been a "must" for the sophisticated student on the Wisconsin campus.

As a teacher, Selig Perlman had a great influence in shaping the careers and the philosophical frame of reference for his students. These students—now themselves teachers, labor leaders, research workers, writers, Government officials, and industrial managers—acknowledge in their work the profound influence of this quiet and modest man whose ideas and graphic skill in expressing them carried overwhelming conviction. I recall, in my own case, how Selig Perlman guided me to study the building trades, then an unexciting segment of the American labor movement. As a young graduate student, I was naturally attracted to the more dramatic developments of left-wing unionism, noisy with loud promises of a better world. Selig Perlman taught me how ephemeral and transient was the character of this new reform group. And how right he was.

Professor Perlman is more than a great and stimulating teacher. He is a truly profound scholar. What he has written has attracted a wide audience in this country and abroad. His writings and their implications are well known the world over, even in Russia. His books have been translated into many languages.

Nearly 30 years ago, in 1928, Selig Perlman challenged the then widely accepted interpretation of the labor movement and specifically that of trade unionism. He inquired into a union's basic motivations, what makes it tick, what is its controlling drive and its fundamental objectives. His book, A Theory of the Labor Movement, is as vital today as it was when first published. To be sure, it is still controversial. Nevertheless, it is a great tribute indeed to him that his theory has stood the test of time. And what a time—three decades in which we have had depression and prosperity, the CIO and industrial unionism, a world war, Franklin Roosevelt, Hitler, and Russia—a series of political, social, and economic upheavals which certainly have radically changed the character of our country and the position of organized labor. The trade-union movement has advanced from a small insecure group of less than 3 million to its present unprecedented size of nearly 17 million., and to a position of power and influence in our economy.

In spite of these spectacular changes in our economy and in the role of our Government, no one has, in my judgment, effectively disputed the solid quality of Selig Perlman's interpretation of the labor movement and trade unionism. Perhaps the reason is that he did not invent or contrive his theory; he found it in the records and diaries, the meetings and proceedings, in the deeds and thoughts of American wage earners. He found, perhaps to his surprise, that workers did not conduct themselves as Karl Marx predicted they would. His Theory of the Labor Movement is the findings of an archaeologist in the sociological and economics diggings among labor records—not the invention by means of an intellectual's crystal ball. That is why his theory is still around and why it is as valid and pertinent for our day as it was 30 years ago. It probably explains why it was never necessary to bring it up to date. The details have changed; the basic interpretation has remained valid.

His theory represents a rich contribution in social philosophy and a really great achievement in scholarship. It is an acute search into the very soul of the labor movement. It is the most illuminating and enduring insight into the factors which shape and determine the character of the labor movement. He revealed the significant relationship between labor and the American community and provided a meaningful explanation of the conduct and attitude of labor, of its role in our society.

In observing the labor movement in action, he saw, not a groping for a radically different society, but rather day to day efforts to improve those special institutions which would make the job more secure, the standard of living higher, and opportunities for advancement more equally distributed. He saw in the union a conscious effort to solve economic problems. He saw in its activities a struggle to develop democratic institutions, and to introduce and strengthen constitutional law and due process in industry. In his view, the job was central to a wage earner's thinking and groping. Thus, he coined the idea of the "trade union mentality" and "job control". He emphasized particularly the essential conservatism of the American environment and the importance of a union so "behaving" as not to challenge the "middle class mentality" characterizing the American community. Thus he wrote about the place of the intellectual, the union in politics, the role of government, industrial democracy, and "working rules". In essence his analysis represents an exceptionally rich contribution to the philosophy of adjustment and the accommodation to social compromise. He foresaw early that the trade union organization represents a conservative, anti-radical and anti-authoritarian force; that the labor movement in Germany, England and the United States would be a vigorous opponent of Communism.

Not everyone accepted his thesis and the opposition from the left—whether reformer or student—was outspoken and persistent. His works have been attacked especially by those who had easy solutions how to establish a new society and saw the trade union movement as a vehicle to reach this end. But his ideas withstood assault and have value for today, giving us understanding and insight into the facts which have shaped and channelled the energies of the American labor movement.

Finally, I should like to say a few words concerning Professor Perlman's participation in Jewish affairs. It is a tribute to him that despite his preoccupation with research and writing, with teaching and counseling, he never lost his interest or contact with the traditions absorbed in his early training. He never lost his identity with the historical heritage of the Jewish people. He was always excited about their search for security and dignity and the expression of this search in the restoration of Israel. Accordingly, he has a deep concern in the development and growth of the Hebrew University in Jerusalem. He came back from his visit to the university and Israel stimulated and enthusiastic. He also has a deep interest in YIVO, in the B'nai B'rith Hillel Foundation, in the Yiddish labor movement and a close contact with its leaders.

I am grateful for this opportunity to pay tribute to Selig Perlman for what he is, for what he has done for his students, and for his superb qualities as a teacher and scholar.

[1] Professor Selig Perlman was honored with an award by the Wisconsin Society for Jewish Learning in Milwaukee, Wis., on October 21, 1956. These remarks were delivered on that occasion.

Easiest Route to Effective Economy Lies in Hoover Commission Proposals To Take Government Out of Competition With Private Business

SPEECH
OF
HON. CHARLES B. BROWNSON
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

(Mr. BROWNSON asked and was given permission to address the House for 1 minute and to revise and extend his remarks.)

Mr. BROWNSON. Mr. Speaker, at no time in my 6¼ years service in Congress has the public of my district been so sincerely aroused over the size of the budget, the rate of Federal spending and waste in Government resulting in high taxes. The letters I am receiving in unprecedented numbers are not inspired by any organized pressure group but represent the spontaneous and angry protests of citizens of all walks and all income levels.

To reduce taxes and retain any sense of fiscal responsibility Congress must reduce authorizations, appropriations and spending. What money must be spent, must be spent with maximum efficiency and effectiveness. Certainly the prompt consideration of the recommendations of the second Hoover Commission by all agencies of the executive and by the Congress itself is a first step toward achieving the efficiency and economy which makes possible skillful cuts in the budget, not only this year, but for years in the future.

Mr. Speaker, I am proud today to join with members on both sides of the aisle in introducing legislation suggested by the citizens committee report as an outgrowth of the recommendations and conclusions of the second Hoover Commission.

As Chairman Clarence Francis, of the Citizens Committee, declared:

> If there was one good reason for the Hoover report when the Commission began its work in 1953 there are two today. Since then a dangerous strain on our national economy has become clearly apparent. Today the cry is to economize. There are great differences of opinion, of course, as to where budget cuts should be made. But there is one point on which no one can disagree: Inefficiency, waste, overlapping, and obsolete governmental business procedures are costing us billions of dollars a year. Now is the time to get busy and put the findings of the Hoover Commission to work. This is no longer a merely desirable objective. It is a national necessity.

On February 4 and 5, the Citizens Committee held their third national reorganization conference, here in Washington. Adopting as their slogan, "Better Government at a Better Price," 25 distinguished Americans from government, industry, and the professions gathered to confer and discuss with good citizens from all over the country the question, "How to make 1957 the year of fulfillment" for the remaining 61 percent of the Hoover report.

After careful deliberation, this bipartisan group concluded that adoption of the remaining proposals can make possible savings of more than $5 billion to the American taxpayer—over $100 for each American family.

The first bill I have introduced today is one to establish a Federal policy concerning the termination, limitation, or establishment of business-type operations of the Government which may be conducted in competition with private enterprise. This legislation originates in recommendations of the Subcommittee on Business Enterprises. The Committee on Business Organization of the Department of Defense has transmitted these recommendations to the Commission on Organization of the Executive Branch of the Government, more familiarly known as the second Hoover Commission.

In a 200-page report, titled "Subcommittee Report on Business Enterprises," this group under the chairmanship of Joseph B. Hall, president of the Kroger Co., submitted 15 conclusions and 3 recommendations to the Committee on Business Organization of the Defense Department. This subcommittee report was accompanied by a staff study on business enterprises outside of the Department of Defense which resulted in 16 additional recommendations.

The subcommittee report on business enterprises in the Department of Defense is for sale by the Superintendent of Documents for 55 cents. The staff study on business enterprises outside of the Department of Defense is available from the Superintendent of Documents for 35 cents. The report of the Commission on Business Enterprises is available from the Superintendent of Documents for 45 cents.

In this last 113-page report, the second Hoover Commission devotes the first 42 pages to a discussion of Department of Defense business enterprises, with the remainder of the report dealing with business enterprises in the civilian agencies of Government. There are 22 recommendations, overall, of which 9 are directed at business enterprises in the Defense Department. Thirteen are directed at business enterprisses in the Dpartment of Justice, the Post Office Department, the Department of the Interior, the General Services Administration, and such other governmental agencies as Federal corporations, Federal lending agencies, and in the field of printing.

The problem of Government competition with privately owned, taxpaying business is not a new one, by any means. Emergencies resulting from wars and economic depressions have served to create most business-type enterprises in Federal Government. The problem is always one of terminating the Federally operated business-type enterprise after the emerbency is over.

Business-type enterprises created by Government during World War I, the depression, and World War II are still very much with us. In most cases these Government business-type enterprises pay no taxes, pay little or no interest on the capital invested, seldom charge depreciation and frequently do not include executive personnel payrolls as part of their operating expense. It is most unfortunate that, in addition to the fact that they usually pay no taxes, most Government business-type activities deprive all echelons of Government, local, State, and National, of taxes which would otherwise be collected from private enterprise performing the same functions.

As long ago as 1933, the House of Representatives found the Federal Government still operating 232 business-type activities from World War I. This special committee of the House of Representatives reported:

> The evidence in general indicates that the operations of the Federal Government in the field of private enterprise has reached a magnitude and diversity which threatens to reduce the private initiative, curtail the opportunities, and infringe upon the earning powers of tax-paying undertakings while steadily increasing the levies upon them.

Today, the Hoover Commission notes that it is almost impossible to estimate accurately the total number of commercial and industrial-type facilities in the Department of Defense, alone. The total number probably exceeds 2,500 with Government capital invested in excess of $15 billion. Some are essential parts of the military service and are not competitive with private enterprise. Many of them are competitive and not so essential.

In 1951 and 1952 I became acquainted with the intricacies of this problem while serving on the Bonner subcommittee of what was then the House Committee on Expenditures in the Executive Departments. We inspected military operated coffee roasting plants, tire retreading shops, vehicle rebuilding facilities, and optical and dental manufacturing facilities. Time after time we listened to owners of small businesses who were being forced to the wall as the military competed with them from the vantage point of Federally owned buildings and facilities. There may be little that big government can do to help small business; there is much it can do to crush it.

In 1952 President Eisenhower defined in broad terms his concept of the relationship of government and its citizens when he said:

> To bring government closer to the people we will set up these principles and adhere to them: That no Federal project, large or small, will be undertaken which the people can effectively do or be helped to do for themselves; that no Federal project will be undertaken which private enterprise can effectively undertake; that no project and no program will be started on the Federal level which can be undertaken and effectively carried through on the State or local level.

The President's criterion is simplicity in itself; the ability of the people to accomplish the project for themselves. It is noteworthy that he makes no mention of competition or of comparative costs. It is obvious there are not common grounds for comparing corresponding private and Government business costs since the Government pays no income taxes, keeps its accounts in a different manner than business, and enjoys other special advantages.

During the period 1953 through 1956 marked progress was made in some areas by the executive departments which followed President Eisenhower's philoso-

phy to a degree. During the past 3 years, as a result of an administration review of Federal commercial-type activities, 492 such installations were discontinued or curtailed by military and civilian agencies.

The Defense Department decided to discontinue 355 of its commercial-type activities, including 83 office equipment repair shops, 79 automotive repair shops, 45 tree and garden nurseries, 22 bakeries, 20 cobbler shops, 15 laundries, 11 cement mixing plants, 4 coffee roasting plants, as well as some 70 others ranging from dry-cleaning plants to a tire retreading shop.

In the last 3 years, Federal civilian agencies have discontinued or curtailed 137 of their commercial-type installations, including 76 bakeries, 21 ice manufacturing plants, 20 surgical and orthopedic appliance units, and 15 ice-cream plants. In addition, they have turned back to the United States Treasury well over a billion dollars through the liquidation of the Reconstruction Finance Corporation and the sale to private industry of such Government-operated ventures as synthetic rubber plants, the Inland Waterways Corporation, the PWA built Bluebeard's Castle in the Virgin Islands, the Island Trading Corporation of Guam, and many others.

In January of this year the Postmaster General recommended the discontinuance of the 46-year-old Postal Savings System. A measure accomplishing this end is expected to be reported out by the House Committee on Post Office and Civil Service this week.

In spite of this progress, Government is still the businessman's biggest and his most unfair competitor. The taxpayers' money in the form of Government capital is still invested in commercial and industrial-type activities to the tune of $12 billion to $15 billion. As far as I can determine, the Army still raises flowers and manufactures clothing, paint, ice cream, rubber stamps, and eye glasses. The military still repairs furniture, mixes cement, carefully tends tree and garden nurseries, runs the world's biggest airlines, operates steamships and a railroad or two. At least one of the civilian agencies of the Federal Government still conducts one or more of these same activities and, in addition, produces helium, sells hot dogs at the national parks, manufactures fertilizer, engages in printing, baking, dry cleaning, and laundering.

Legislatively, the program toward elimination of Government competition in business-type activities has lagged. The Defense Department's decompetition activities virtually ground to a halt in June 1955 with the insertion of section 638 in the fiscal year 1956 Defense Appropriation Act. This section, making it mandatory for a committee of Congress to approve specifically each instance where Government business-type enterprise was to be curtailed, was withdrawn when the fiscal year 1957 defense appropriations were voted on in the House last session. I participated in the debate on this specific point.

However, a Senate Appropriations Committee report instructed the Department of Defense to maintain all commercial and industrial-type facilities, unless disposal or transfer is economically justified and unless no increased costs result. Despite a Budget Bureau policy declaration that comparative costs should not be the major consideration in deciding whether to discontinue activities involving highly competitive products, the Pentagon has been charged with devoting most of these past 6 months studying the feasibility of the Senate report and little has been accomplished in dissolving their business-type enterprises.

For three consecutive Congresses attempts have been made to enact policy provisions for the termination of Government operations which are in competition with private enterprises. The House Committee on Government Operations reported out July 21, 1954, the bill authored by the gentleman from New Jersey [Mr. OSMERS] written to accomplish this purpose. The measure passed the House on July 23, 1954.

In the 84th Congress six similar bills were introduced and referred to the Subcommittee on Legislative Reorganization. Mr. HOFFMAN's bill, was reported to the House Government Operations Committee as early as July 4, 1955, where it remained without action until the end of the session.

On last May 15, the Bureau of the Budget released the first inventory in history of certain commercial-industrial activities of the Government. It is a photolithographed book 8 inches by 10½ inches by a half inch thick. It weighs 16 ounces and contains 108 pages detailing 19,771 commercial- and industrial-type activities of the Federal Government. It represents a distinct step forward on which the administration is to be congratulated because it defined, for the first time, the extent of the problem of Government tax-free competition with business, even after the executive and legislative attempts to date.

This survey shows that 32 civilian departments and agencies were then engaged in operating 18,964 commercial-type enterprises with assets of $760,655,575. The Government owns another 301 commercial-industrial activities with assets of $4,028,545,658 which are operated by private contractors, under contracts with civilian agencies. The Department of Defense had 357 manufacturing installations with assets of $2,229,454,160 which it operated itself plus 149 installations with capital assets of $4,855,335,176 which were contractor operated.

Roughly, then, the Federal Government operates 19,711 Government-owned, or partly Government-owned plants and commercial-type facilities in which it has invested $11,863,990,569 of the taxpayers' money. These activities involve 258,425 civilian employees of the Government plus 8,096 other employees, roughly 10 percent of the entire Federal payroll. This apparently does not take into account military personnel, in uniform, used in supervision or in conduct of these activities.

This total Federal investment of $11.86 billion in business-type enterprises is over twice the valuation of the complete physical plant, before depreciation, of General Motors Corp., which listed its physical assets at $5,066,065,645 last September. The Federal investment is over 4 times the depreciated value of the physical assets of General Motors Corp., last September, which was $2,843,931,323. General Motors had 624,011 employees as compared with the total of 266,521 listed in the Bureau of the Budget study, Inventory of Commercial-Industrial Activities of the Government.

Commercial ventures reported by the Bureau of the Budget included automobile repair shops, garages, service stations, hotels, rooming houses, camps, and other lodging places. The Government also is running wholesale trade establishments, credit agencies, and eating and drinking places.

Industrial operations cover such fields as mining, printing, publishing, furniture making, and rubber and leather production. Four agencies—Agriculture; Health, Education, and Welfare; Interior; and General Services—are engaged in painting, paperhanging, and decorating, for instance. The Department of Defense, Veterans' Administration, Interior, and HEW engage in making bread and other bakery products, except biscuits, crackers, and pretzels.

The purpose of this bill is clearly stated in section 2. It is to provide for the termination, to the maximum extent compatible with national security and the public interest, of all business-type activities engaged in by the Federal Government in the United States to the detriment of private business enterprises.

It puts the Congress on record as opposing Federal business-type activities except where it is necessary for the Government itself to perform such activities in the public interest or in furtherance of national programs and objectives established by statute.

Other provisions require the Commerce Department to hear complaints from businessmen about Government competition and where the facts warrant to consult with the appropriate Federal officials to terminate or limit that competition. It requires the Budget Bureau to review and make recommendations to the President on each new type of business activity proposed that would be in competition with private enterprise. This bill also requires an annual report to Congress by the President on actions taken under this legislation.

Of all the ways open to Congress to cut the budget and increase tax revenue, this route of curtailing Government business-type activities may well be the most painless as well as one of the most effective.

I am also introducing today another bill which has resulted from the recommendations of the second Hoover Commission and the followup of the Citizens Committee for the Hoover Report. It has as its purpose the creation of a Supply and Service Administration in the Department of Defense and is offered in the form of legislation to amend title II of the National Security Act of 1947, as amended.

In the near future I plan to ask for time to discuss this measure in some detail, stressing the history of this particular concept, in order to place this current legislation in its proper perspective.

Labor and the Rackets

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, March 18, 1957

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a timely and moving article by Victor Riesel entitled "Labor and the Rackets," published in the New Leader of March 18, 1957.

The article discusses recent revelations by the special Senate committee probing alleged criminal elements in the trade-union movement. Mr. Riesel is an appropriate author of such an article, for he has sacrificed his sight to exposure of those who would use the great American labor movement for selfish, ulterior and unworthy purposes. He has been a martyr to this effort.

One of my real fears over the current situation is that public opinion may be stirred to an unreasonable point, so that punitive legislation could damage the ability of the labor movement to achieve its basic goal, which is the protection of the living standards and working conditions of millions of American men and women. The Teamsters Union, for example, is under the most public criticism at the moment. Yet even the Teamsters Union has done useful work in helping to secure adequate wages for the truck driver, who is a worker peculiarly vulnerable to exploitation because he is so often in his cab alone, and thus separated from fellow workers.

The real task today is to purge whatever criminal element may exist in the Teamsters Union, without leaving the union permanently crippled and wrecked. The same alternative faces other unions. Mr. Riesel has rightly emphasized in his article that much of the decision is up to labor itself. He points out that, if genuine meaning is given to the ethical-practices codes of the AFL–CIO, "the public anger may subside." Mr. Riesel properly stresses the real challenge which the current situation poses to George Meany, president of the AFL–CIO, and to other outstanding leaders of American labor.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LABOR AND THE RACKETS

(By Victor Riesel)

(EDITOR'S NOTE.—Organized labor today faces its greatest crisis since 1948. Then it had to expel Communist-controlled unions in order to avert more drastic legislation than the Taft-Hartley Act. Now it must smash corruption, or face right-to-work laws on the Indiana pattern and possibly worse. The corruption-ridden teamster, longshoremen, and smaller unions control several million dues-paying members, but the 16-million-member AFL–CIO will be committing suicide if it does not act against them before the legislators do. Only by swift, vigorous, action against the businessmen in labor—the Jimmy Hoffas as well as the Johnny Dies—can George Meany, Walter Reuther, James Carey, and David Dubinsky, be sure their own traditions will continue to inspire labor. Victor Riesel was managing editor of the New Leader before becoming labor columnist of the Post-Hall syndicate. Last year he was the victim of an acid attack as a result of his exposure of gangsters in labor.)

A racket is a racket. This is not from Gertrude Stein. It's a good old-fashioned, heavily muscled, high-button-shoe definition. Away back there when it all began and ward heelers were in fashion instead of the trucking business, the boys used to sell tickets to a ball. The dance was held. The dancers held their gals real tight and sometimes the gals of the other lads, too. Then the slugging began. The racket started. The meat wagons came—as did the patrol wagons—and the racket ended for the night.

Soon the shenanigans became so popular, the boys sold more tickets than there was space for dancers. So they decided that, since some of the ticketholders couldn't get in anyway, why not be democratic about it all? Just sell tickets for a shindig for which none could get in. All men were then equal. No hall was hired. No band played. No racket was heard—or held.

This was the birth of the racket—the something for nothing, the easy buck, and if you complained you'd wind up patronizing one of those white-curtailed offices which you recognized by the sign of the huge, three-pronged gold tooth on the outside.

Then the boys did this with picnics, boat rides for which there was no boat—sometimes not even a river or a lake. Soon the strong-arm men were on steady payrolls.

The union boys in the days of the bowler hat, heavy brogans, and walking delegates thought it a fine function for the union. Soon the racket was refined. Something-for-nothingism became a big business. But unnoticed.

Sociological immorality had come to stay inside labor. This is hardly the magazine for a recital of the techniques of easy money. Every sophisticate knows of shakedowns, the price of labor peace, picket lines which pivoted for a price and disappeared like Houdini in his heyday.

But this was just in one section of the labor movement. There was the other section—those unions which dispatched calls to the young intellectuals, the young Socialists—the idealists, the dedicated. Singing pickets poured into the street for four bits a day, just enough for carfare and coffee at Childs at the corner of Union Square, where you could release your hostilities across the white marble-topped tables at the Commies, who always poured in from their headquarters on 12th and 13th Streets. Those were famous picket lines, for many reasons. Many an honest union was born on those cobblestones. Many a famous labor leader burgeoned as he was bludgeoned by angry city police.

And after the day's picketing was over, there was conversation about morality. Dignity of the workingman. His right to the job. An injury to one is an injury to all. Workers of hand and brain, don't worry; you'll eat. Pie in the sky. There were songs. And there were labor clubs, some of which were hit on the head regularly by the Communists.

There was love and there was Gemütlichkeit. Some day, the depression would be over and the dawn would be bright and everybody would earn at least $7 a day and work 5 days a week. And John Lewis was the ogre because he was picking on the Progressive Mine Workers. And let's collect clothing for them. And who's going down to Harlan?

Many of these young pickets outlasted the depression. They were the forerunners, the advance men of the CIO. They became the intellectuals of the intellectual side of the labor movement. They marched again. They sang. They sat down. They became the experts in research and time-and-motion study, the publicists. They retained, in their maturity, their love of labor, their nostalgia for those days of coffee over at Childs and the wandering into the night to Washington Square with a gal who is today's suburban matron with a bigger ranch house than the other ex-pickets.

They saw the tiny unions for which they fought become big and powerful. They saw a movement of 2 million become a mass of 16 million with 60,000 locals and over 485,000 officials. They saw the fledgling skeletal units of the thirties grow into internationals with several hundred million dollars in assets.

They saw such strength develop that Government and industry were forced to take over the welfare and old-age security of the working class—the beginning of fringe benefits. And while they didn't count the millions, their researchers could have told them that there was over $35 billion in labor-management welfare funds throughout the Nation—just about $15 billion more than there is in the United States old-age social-security funds.

They grew proud of what they had built and what was being built around them. They were angry when they read that the outside press was pointing to Communists in their ranks. This was a problem to handle all their own way. They could clean house. They would make the fight when the time came, but labor must not be split. Finally, in 1949, the Commies were ousted, and labor did not suffer. And suddenly there were new criticisms. Here and there, word began seeping into the press of the other labor movement.

Insurance companies were being set up by union people—and were looting the welfare funds and pension money. Big union treasuries were being pilfered. Unions were buying heavily into Wall Street, and some of their officials were picking up stock on margin which should have gone to the union's credit. Unions were buying real estate for investment and projects. And union officials were picking up parcels nearby because they would accrue in value as a result of the union's purchase. Unionmen were buying into companies which the union could make or break. Union salaries began edging up from the $100-a-week norm to $2,000 per—plus expenses. Private homes were bought, estates, expensive cars, summer homes, winter homes, swimming pools on front lawns. And the other day Jim Carey revealed that one brother even had an artificial waterfall in his living room.

Now this was different from the Scalise type of operation. Or Willie Bioff's depredations, or the Lepke-Gurrah days, or the Communists' Black Gloves mob. This was the respectable, unpunishable type of looting. This was the beginning of the refinement. This was the new business-executive type of labor leader. This was the totally new type of union man.

There were now two kinds of labor movements.

There was the one led by wealthy men. There was the labor movement itself—full grown from the days of the 50-cents-a-day expense-account picket. Trouble was that the decent intellectuals and liberal folk just couldn't see the dichotomy.

No new leader reader need be burdened with a description of the years between—but soon came the merger of the AFL and CIO, and the old-time youngsters found themselves tied to sections of the old high-button-shoes crowd. Nastalgia overruled good sense. Misguided loyalty dominated clear thinking. There was insistence that those on the outside see it all as one labor movement which must not be hurt. There was the constructive role of the labor movement and that should overshadow it all. The outside critic should realize that exposures would injure labor's ability to bargain, the starry-eyed, decent ones said, rather testily at times.

But what they, in their reverence for their youth, did not know was that a sordid combine had moved in quietly—and deep. This was not labor gone tough. This was the tough gone labor.

It makes no difference whether the underworld actually captured unions or just became their buddies. The point is that the crime "take" out of the use of labor outfits was several billion a year. There was mayhem, terror—and worse. There was and is a terror tax on garments, Army uniforms, food, fish, home construction—even the facilities which carry water and natural gas.

There were cases, such as the Laundry Workers Union, where a cool million was looted from the welfare and pension funds. And this was just one of many. There were instances where homes for veterans and slum clearance programs in Negro areas were held up and even permanently canceled because some construction unions shook down contractors at $50,000 a clip. There were instances where even our atomic energy and defense construction setups were victimized—and the Justice Department claims that the extortions of one man, Evan Dale of the Southern Illinois construction unions, cost the Government over $50 million to build one atomic power project.

There was the waterfront. And the Operating Engineers Union, where Bill Wilkins, leader of the opposition group, was ousted because he took to the air and the press to tell his story. Wherever local opposition leadership sprang up, the national offices of the powerful unions involved simply put in a trusteeship. The experts tell me that some 15 percent of the locals of a certain combine of unions are under these trusteeships—and there have been no meetings, no elections, no reports to the membership for over a decade in some instances.

It was inevitable that investigations would be launched. Thousands of complaints poured in on the Government and on newsmen. Back in the winter of 1955, the Government Operations Committee of the Senate, just recovering from the Army-McCarthy hearings, began looking into reports of corruption in purchasing of Army uniforms. The committee counsel, Robert F. Kennedy, thought that this would be just another probe. He began following leads. He discovered that fully 95 percent of the legitimate men's garment manufacturers wouldn't bid for Philadelphia Quartermaster orders at one time—even though the Army could spend as much as $180 million in 1 year. He then found all roads leading to New York racketeers inside labor, and from then on out across the country to what you've seen exposed recently.

Out of this grew the Senate Select Committee. Now the issue is just how much damage all this will do the legitimate labor movement. It is fascinating that Senator BARRY GOLDWATER, who is certainly not enamored of most labor leaders, has said that he is disturbed lest the deep anger of the moment lead to tougher laws than are good for labor.

Well, that all depends on what labor does at this moment. If it implements its ethical-practices codes, as it appears to be doing, the public anger may subside. If the unions in which there is corruption really clean house even a little, the fury may calm.

But if there develops the old refrain that the current probe is merely an attack on labor, the public will implement its anger. If the men of the coffee circle at Childs don't join, the public will move in wrath.

I have in mind particularly an intellectual fellow now a Teamsters' leader in the Midwest. After the first week of Senate exposures, he or one of his colleagues said editorially in their union newspaper that the probe was really an attack on the Portland Teamsters and their wives because these men and their womenfolk had elected Senators DICK NEUBERGER and WAYNE MORSE. This was retaliation, the editorial charged, by some mysterious superforce.

Well, the point is that both DICK NEUBERGER and WAYNE MORSE favor the probe. They do not see it as any retaliation against the forces which elected them. But there you have the kind of rejection of reality in this Midwest teamsters' paper. Head-in-the-sand thing. Print it, believe it, and it will go away. I don't think it will. The people are too angry.

So are most of labor's national leaders. George Meany has not been offended by the probe, nor have Dave Dubinsky and the many others on the high council. Walter Reuther has spoken out in favor of it.

Jim Carey has also taken to the hustings. Listen to his words:

"But the issue today is far more menacing, because this time it comes from inside our movement. It is a betrayal from within. It is treason to trade unionism by those who pretend to believe in, and represent, trade unionism. It is pernicious perfidy by those who profess the ideals of union brotherhood only for the end of personal enrichment.

"These betrayers of labor, these traitors to trade unionism, have brought a terrible disease into the labor movement, a disease that must be cut out—surgically, swiftly, and unflinchingly—to prevent its spread into a corrupting contagion.

"Corruption is never a static thing. Corruption means decay, and decay—unless it is decisively halted—spreads from an unhealthy part of an organism to its healthy parts.

"The hard, cold inescapable fact is that we must utterly destroy racketeering and corruption in the labor movement or racketeering and corruption will destroy the labor movement."

To Jim Carey goes the order of the knights of the marble-top tables. Where are the children of yesteryear's Childs?

Resolutions Memorializing the Congress To Reduce the Eligibility of Persons Entitled to Old-Age Assistance to 62 Years

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the resolutions memorializing the Congress to reduce the eligibility of persons entitled to old-age assistance to 62 years, which have been adopted by the Commonwealth of Massachusetts:

RESOLUTIONS MEMORIALIZING THE CONGRESS OF THE UNITED STATES TO REDUCE THE ELIGIBILITY OF PERSONS ENTITLED TO OLD-AGE ASSISTANCE TO 62 YEARS

Resolved, That the General Court of Massachusetts hereby urges the Congress of the United States to enact legislation whereby the age at which all persons entitled to Federal old-age and survivors insurance benefits shall be reduced to that of 62 years; and be it further

Resolved, That copies of these resolutions be sent forthwith by the secretary of the Commonwealth to the President of the United States, to the presiding officer of each branch of Congress, and to the Members thereof from this Commonwealth.

House of Representatives, adopted, March 5, 1957.

LAWRENCE R. GROVE,
Clerk.

Senate, adopted, in concurrence, March 7, 1957.

IRVING N. HAYDEN,
Clerk.

A true copy.
Attest:
[SEAL] EDWARD J. CRONIN,
Secretary of the Commonwealth.

Compromise Necessary To Pass Corn Bill

SPEECH
OF
HON. H. CARL ANDERSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 13, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 4901) to establish a minimum acreage allotment for corn, to provide acreage-reserve programs for diverted acres and for feed grains, and for other purposes.

The CHAIRMAN. The Chair recognizes the gentleman from Minnesota [Mr. H. CARL ANDERSEN], for 3 minutes.

(Mr. H. CARL ANDERSEN asked and was granted permission to revise and extend his remarks.)

Mr. H. CARL ANDERSEN. Mr. Chairman, as the gentleman from Missouri [Mr. JONES] stated previously, we are up against a very realistic situation. If anybody had asked me this morning if I would ever have agreed to this sort of compromise I would have said "No." I had hoped to propose and get serious consideration of the House on the basic problem of providing 90 percent protection on the family-size farm production.

Now, coming back to being realistic, I know that the temper of the House is such that it would refuse to give me the sort of consideration that that problem deserves. Consequently I am personally open to compromise.

I had intended this morning, as I said in a speech just before we went into this particular Committee, to force the issue of 90 percent parity on family-size production of 4,000 bushels of corn, 25 bales of cotton, and 3,000 bushels of wheat. I discussed the other feature of my proposal which has met with such widespread acceptance. But we must get the bill over to the other body. Unfortunately, I believe there are too many Members in this House who would just as soon see this legislation killed, and have no legislation at all. That is the only reason I am backing down in my viewpoint. I am willing to yield temporarily on the intention I had to force this price-support issue. I am willing to accept Mr. HARRISON's section 1. That is partially what my farmers are interested in. That says that we shall have an allotment of 51 million acres of corn. The farmers in the Corn Belt cannot survive with less. We have been urged to get that, which to me is the most im-

portant thing in this bill. If we have to concede something to our neighbors down South, what is wrong with that? We cannot shut them entirely out of this picture. I for one, as a Member from the corn producing area do not intend to say to the South that they cannot have any of the advantages of far-reaching agricultural legislation which we propose. So I am willing to accept the Poage amendment, mainly because, as has been stated before, it does not add a single dime to the cost for the soil-bank operation this coming year, $1,200,000,000, which is already before my subcommittee on appropriations.

Secondly, it will give us the 51 million acres corn allotment we must have.

Third, it will help get a lot of this feed grain acreage out of production, and if any of you think you are facing this basic problem without taking into consideration this acreage of feed grain production down South, you are not facing up to the situation.

Furthermore, it is obvious to me and should be to everyone that it is either this compromise or no legislation and we must pass a bill today.

The CHAIRMAN. The time of the gentleman has expired.

Mr. ABERNETHY. Mr. Chairman, I yield my time to the gentleman.

Mr. H. CARL ANDERSEN. I thank the gentleman.

I am pleading with you. Let us do something. I am yielding somewhat on my position. I voted for the Andresen substitute the other day because the House had accepted my amendment which had to do with feed grain acreage and a 51 million acre corn allotment was provided. My amendment was a part of it when I voted for it. Now the Poage amendment helps the Harrison amendment to some extent and I hope the bill will do some good. As the originator of the soil bank in the Congress, I want to see the soil bank go on through to success. Unless you do something along the line of reducing this feed grain acreage, wherever it may exist, we will never overcome this surplus feed-grain problem and the soil bank will not have a reasonable chance to succeed.

We are at a crucial point in farm legislation and much depends on our approving this compromise today.

Let me plead with the House, therefore, to finish this debate and accept the Harrison amendment as amended by the Poage amendment. Let us send it over to the Senate, Mr. Chairman. The Senate will then work its will, the conferees can get together, and I am sure we will have, as always is the case with such conferences, worthwhile agricultural legislation.

Mr. ABERNETHY. Mr. Chairman, will the gentleman yield?

Mr. H. CARL ANDERSEN. I yield.

Mr. ABERNETHY. Is not the feeling in the commercial Corn Belt that one of the things which has created their feed surplus problem is the planting of diverted acres in the Wheat Belt and other basic crop areas?

Mr. H. CARL ANDERSEN. There is no question about that.

Mr. ABERNETHY. Has not that been a problem that has plagued them for several years?

Mr. H. CARL ANDERSEN. Yes; and it will remain a problem unless we adopt the Harrison amendment together with the Poage amendment.

Mr. ABERNETHY. If the Poage amendment is adopted and it operates to take out a bushel of corn here and a bushel there in sections where wheat and other basic crops were heretofore planted, it would actually benefit the commercial corn area, would it not?

Mr. H. CARL ANDERSEN. I, as a producer of corn up in the State of Minnesota, will benefit directly for every bushel of grain that is not produced outside the commercial corn area.

Mr. ABERNETHY. Of course.

Mr. H. CARL ANDERSEN. Certainly the effects will be reflected right on the terminal market in Chicago.

May I conclude with the plea that we finish this. Let us have a reasonable bill, Mr. Chairman. What is before us is not 100 percent satisfactory to all of us, especially when I think of what I would like to see passed by this Congress, when I think of the protection I would like to see afforded to the family-sized farm, and certain other improvements in the farm program. I realize we have no opportunity to do all we would like today. But let us do what we can, let us try to do something for the corn farmers everywhere in the United States, and let us do it in time so the corn farmer can make his plans for the coming spring.

This would not be a bad compromise under the circumstances; and, when you consider it in the face of the hard reality that our choice is between this and no bill at all, there should be no hesitancy on the part of anyone to vote for the Harrison amendment together with the Poage amendment. All legislation is a compromise and this bill is no exception.

Georgia Champion Chicken State

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, March 18, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Georgia Champion Chicken State," from the Waycross (Ga.) Journal-Herald.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GEORGIA CHAMPION CHICKEN STATE

Even Texas takes a back seat to Georgia when it comes to producing chickens.

Georgia last year had an estimated output of 238,829,000 baby chicks, a record production which represented one-ninth of all chicks produced in the United States.

Texas was runner-up, but the big State was a poor second to Georgia in commercial production with 112,715,000 chicks.

According to United States Department of Agriculture figures, 95 percent of Georgia's 1956 production (222,646,000 chicks) went into broilers.

This was 35,000 more than went into the same channel during the previous year.

The State's record-shattering output of chickens in 1956 represents a gain of about 534 percent in 10 years. A decade ago the commercial output was less than 37 million chicks.

Last year, as stated, Georgia hatched more than 233 million.

Georgia may not be able to claim honestly the title of Peach State, but no one will debate the fact that we are the undisputed champion in the chicken-production field.

The Hard Money Issue

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, March 18, 1957

Mr. MORSE. Mr. President, in the Washington Evening Star of March 9, 1957, the great columnist, Thomas L. Stokes, wrote a penetrating column entitled "The Hard Money Issue." The subheading is "Administration Accused of Trying To Bar Investigation of Tight Credit Policy."

This column deals with a subject matter concerning which every Member of the Senate ought to try to read everything he can find. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE HARD-MONEY ISSUE—ADMINISTRATION ACCUSED OF TRYING TO BAR INVESTIGATION OF TIGHT CREDIT POLICY

(By Thomas L. Stokes)

One of the most intriguing behind-the-scenes battles for years is now being waged by the Eisenhower administration to prevent a congressional investigation of monetary policy and Federal financial institutions.

Such an inquiry would explore, among other matters, the hard- or tight-money policy of the administration about which Congress is receiving so many complaints. They come pouring in from small business, farmers, veterans who want to build homes, real-estate men, and others whose operations have been curtailed by the boost in interest rates all along the line which the administration has encouraged to curb inflation.

The resultant tight money policy also has depressed the value of Government savings bonds in which so many millions of persons of small means have invested—to the point, in fact, where the Treasury recently recommended an increase in interest from 3 to 3¼ percent over 10 years on savings bonds to make them a more attractive investment. The House Ways and Means Committee has just approved a bill for that purpose.

Instead of a congressional investigation of monetary policy and Government financial institutions, the Eisenhower administration favors an investigation into the nature, performance and adequacy of our financial system by a commission of able and qualified citizens, as President Eisenhower described the aim in his annual message to Congress January 10.

He did not, however, head off the move for a congressional investigation, as was hoped. For Speaker of the House RAYBURN, of Texas, promptly announced his support of a House investigation as outlined in a resolution introduced by Representative WRIGHT PATMAN, Democrat, of Texas, which would authorize the House Banking and Currency Committee to do the job.

But the administration, with the backing of powerful financial interests, did not let up; in fact, redoubled its efforts.

Currently these are concentrated on the Rules Committee, which in recent years arrogated to itself life and death powers over legislation, though it is supposed to be merely a procedural committee to arrange for consideration on the floor of bills approved by legislative committees.

In the present case the administration has found a friend at court in its chairman, the veteran Representative HOWARD W. SMITH of Virginia, a very conservative southerner who has been cooperative with Republicans for years in the famous southern Democratic-Republican coalition that has often wrecked the plans of liberal Democrats. He kept the Patman resolution for a congressional investigation waiting for a long time.

Finally it was brought up for discussion this week and we saw how Chairman SMITH was still cooperative with the administration. By arrangement between high administration officials, on the one hand, and himself and Republicans who oppose the Patman resolution, on the other, two witnesses from outside were permitted to appear and argue against the Patman resolution and for the administration's proposal for an outside inquiry.

These two—Under Secretary of the Treasury W. Randolph Burgess and Fraser B. Wilde, of the Committee for Economic Development—were the first outside witnesses in 10 years to appear before the Rules Committee which usually confines witnesses to Members of Congress directly concerned with legislation.

In reply to Mr. Burgess' contention that a House investigation would be biased, Representative PATMAN pointed out in a speech to the House that Burgess had praised two previous congressional investigations into money and monetary policy as most impressive and said their reports educated public opinion.

Representative PATMAN said those advocating an outside investigation want a banker-guided study. A congressional investigation, he insisted, would be better able to get all the facts from all parties and all sides. Delving back into the past, he said he found precedents favor a congressional inquiry.

One reason the Eisenhower administration is trying to get the Patman resolution sidetracked in the Rules Committee is that it fears a number of Republicans would desert the administration and vote for a congressional investigation if the Patman resolution got to the floor. This is because of the many complaints from constituents about hardships due to high interest rates.

If the administration could get on its side another southern Democrat on the committee, Representative WILLIAM M. COLMER, of Mississippi, as well as Chairman SMITH, to join the four Republicans to vote against the Patman resolution, that would produce a 6-to-6 tie and a stalemate that would keep the Patman resolution bottled up. The committee consists of 8 Democrats and 4 Republicans.

A showdown is expected soon.

Obvious Peril to Democracy

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Monday, March 18, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Obvious Peril to Democracy," from the March 8, 1957, issue of the Macon (Ga.) News.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

OBVIOUS PERIL TO DEMOCRACY

Georgians have been following the fate of United States Attorney General Herbert Brownell's civil-rights bills with an interest which is matched only by apprehension. Many southerners have appeared at hearings in opposition to these proposals, and Senator TALMADGE, of Georgia, and Charles J. Bloch, a Macon attorney, made particularly noteworthy statements.

In brief, the legislation being considered would:

Create a Federal commission to protect the civil rights of citizens, with power to subpena persons and records and to investigate claims of discrimination.

Empower the Attorney General to bring lawsuits for recovery of damages for discrimination, the expenses of the litigation to be paid by taxpayers.

Permit pronouncement of prison sentences without jury trial.

Authorize accusation and conviction not only for committing discriminatory acts, but for mere intent to commit such acts.

How can any intelligent person fail to see the perils of freedom and self-government in such bills? Yet, despite the recognized fact that discrimination is practiced in greater or lesser degree in every part of the country, only the South is outspoken in defending the Nation against these encroachments on democracy.

There is good reason to suspect that the national lawmakers from other sections of the country may on the one hand be so intrigued by the expression civil rights that they close their eyes to the obvious dangers, or on the other hand see clearly and with dismay the inequities of the bills but feel they must ignore their consciences and go along with this flagrant bid for Negro votes.

Mr. Bloch's testimony before a House subcommittee was calm and well reasoned. He traced the historical background of the present controversy and based his arguments on adherence to constitutional principles. His remarks were so impressive in one session that the chairman lifted the rule against applause.

Discussing the crumbling of the principles of constitutional law, Mr. Bloch asked for the South: "Are we supposed to supinely submit. I say 'No'—that we have the right to use every constitutional, legal means to demonstrate to Congress and the courts that these decisions are constitutionally wrong.

"We have just as much right to try to demonstrate to the Congress and the courts that *Brown* v. *Board of Topeka* is wrong as other people had to try to demonstrate that *Plessy* v. *Ferguson* was wrong."

(*Brown* v. *Board of Topeka* was the historic case which resulted in the public school desegregation decision of 1954 and *Plessy* v. *Ferguson* was the historic case resulting in the "separate but equal" opinion of 1896.)

Senator TALMADGE's argument that the proposed legislation is not only unnecessary, but would also be duplicative of and perhaps in direct conflict with the United States Constitution must surely have raised doubts even in the minds of northern Congressmen at the hearing.

"What rights would you protect which already are not guaranteed by the Constitution and the Bill of Rights?" asked TALMADGE. "Are new rights to be created? If so, what rights?"

Continuing, the junior Senator from Georgia asked why it was necessary to create a commission to do what State and Federal courts are already empowered to do, and what procedures for redress in cases of civil-rights violations would be submitted in lieu of those already established by the Constitution and the Bill of Rights.

Senator TALMADGE quite rightly pointed out that any person—regardless of race, color, creed, previous condition of servitude, or place of residence—is fully protected in the enjoyment of his civil rights and has available to him immediate remedies in the event those rights are circumscribed or violated in any degree.

In the Senator's view, and in the view of the South, the protection of the civil rights of United States citizens lies not in the enactment of a welter of confusing, contradictory, and possibly unconstitutional laws but rather in a strict adherence to the constitutional guaranties, processes and prohibitions which are already the law of the land and which, without question, are adequate to meet every requirement of those who are concerned about protecting the rights of the American people.

No Inferences, Please

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. COLMER. Mr. Speaker, another indication of the ultraliberalism of the present United States Supreme Court is evidenced by an editorial which appeared in a recent issue of the Evening Star, Washington, D. C.

With tongue in cheek, the editor of this respected newspaper calls attention to this fact in the following editorial:

NO INFERENCES, PLEASE

District Attorney William M. Langley, of Portland, Oreg., has taken refuge in the fifth amendment in his appearance before the McClellan committee.

On the ground that truthful answers might tend to incriminate him, Mr. Langley has refused to say whether he was involved with mobsters and officials of the Teamsters Union in the Portland rackets. He did say that he presumed he had taken an oath to uphold the laws, but he invoked the fifth amendment when asked whether he lived up to his oath.

We do not know what the people of Portland, who elected Mr. Langley, think about all this. It is possible, however, that they are wondering whether they made a mistake in selecting as their district attorney a man who will not say, for fear of self-incrimination, whether he is a crook who has been mixed up in his home city's vice.

If any such thought is running through the minds of the Portland voters we feel duty-bound to admonish them against drawing unfavorable inferences from Mr. Langley's reluctance to tell the truth. And this is not some ridiculous idea that we have dreamed up; we are merely repeating what the Supreme Court has said. In a 5 to 4 ruling last April, with Justice Clark speaking for the majority, the Court said in emphatic terms: "We must condemn the practice of imputing a sinister meaning to the exercise of a person's constitutional right under the fifth amendment. * * *"

In case the Portland voters don't quite follow this, it means that if Mr. Langley should run for district attorney again they are to mark their ballots without drawing any unfavorable inferences from Mr. Langley's refusal to tell the McClellan committee whether he is an honest or a dishonest law-enforcement official.

State Department Rejects Dominican Explanation of Disappearance of American Pilot

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the complete text of the note sent by the State Department to the Dominican Republic on March 16, 1957, relating to the Gerry Murphy case:

The Embassy of the United States presents its compliments to the Department of State for Foreign Affairs and Worship of the Dominican Republic and has the honor to acknowledge the Department's note No. 3351 of February 9, 1957, transmitting the following documents in connection with the disappearance of Gerald Lester Murphy:

1. Report by the Attorney General of the Dominican Republic.
2. Photostats of the suicide note attributed to Octavio de la Maza, accompanied by photostats of known specimens of his handwriting.
3. Analysis of the de la Maza suicide note by Professor Manuel Ferrandis Torres, of the University of Madrid, concluding that the de la Maza suicide note is authentic.
4. Final disposition of the Murphy case by the examining magistrate concluding that he was murdered by de la Maza and must be presumed dead.
5. Final disposition of the de la Maza case by the examining magistrate concluding that he committed suicide after having murdered Murphy.
6. Interrogations by the examining magistrate in connection with the Murphy and de la Maza cases.
7. Miscellaneous reports related to the Murphy and de la Maza cases, including the medico-legal and autopsy reports on de la Maza.

From an examination of these documents and other evidence, this Government has concluded that if the specimens of handwriting submitted by the Dominican authorities as being of de la Maza are actually his, then the suicide note was not written by de la Maza.

Furthermore, this examination reveals a contradiction between the report of the Dominican Attorney General which states that Murphy's "political influence" in the Dominican Republic was the "object of investigation without anything serious being produced to justify it," and other available information. Our investigations indicate that Murphy was well acquainted with high Dominican officials, among them the late Col. Salvador Cobian, and Brig. Gen. Arturo R. Espaillat.

It would also appear that Murphy's income while in the Dominican Republic must not have been limited to the $350 per month salary which the Dominican Attorney General states he earned as a copolit for the Dominican Aviation Co. (CDA). Our investigations have confirmed the statements made by several American CDA pilots to the Dominican authorities that Murphy, in the words of one of them, "had more money than the rest of us" and that he owned 2 cars, 1 in Miami and 1 in Ciudad Trujillo. As far as is known, Murphy had no income of record in the United States during the period of his employment in the Dominican Republic.

The Government of the United States is gravely concerned about the disappearance of one of its citizens in the Dominican Republic. It assumes that this concern is shared by the Dominican Government.

In view of the foregoing observations and other evidence which it has developed within its domestic jurisdiction, the Government of the United States considers the case of Gerald Lester Murphy as unsolved. The Dominican Government is urgently requested to reopen and vigorously pursue its investigation of the disappearance of this citizen of the United States.

EMBASSY OF THE UNITED STATES,
CIUDAD TRUJILLO, March 16, 1957.

Fuller Answers Chamber

EXTENSION OF REMARKS
OF
HON. CLEVELAND M. BAILEY
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. BAILEY. Mr. Speaker, since the 4th of February, the General Education Subcommittee of the Committee on Education and Labor has been conducting almost daily sessions hearing testimony for and against various bills authorizing Federal aid for school construction.

Secretary Marion B. Folsom has submitted data collected by the United States Office of Education to demonstrate the need for a Federal program which has been pointed up by a specific message from the President of the United States.

The data submitted by the Secretary has been under attack by opponents of the legislation presently under consideration, with the principal ammunition being fired by the United States Chamber of Commerce which has offered in evidence its own interpretation of the school facilities situation.

The fallacies in the chamber's interpretation has been pointedly answered by Secretary Folsom and by Edgar Fuller, executive secretary, Council of Chief State School Officers. Dr. Fuller publicized his answer in a letter to the editor of the Washington Post and Times Herald which was published by that newspaper on March 13.

Dr. Fuller's letter to the editor is included as a part of my remarks, and I invite my colleagues to read it carefully:

REBUTTAL TO CHAMBER OF COMMERCE SCHOOL AID VIEWS

Secretary Marion B. Folsom's reproach to the United States Chamber of Commerce for its barrage of misleading propaganda against the school construction legislation was highly justified. Most members of the Chamber will undoubtedly be as dismayed as the rest of the general public that such violations of fair play have taken place in the name of their organization.

Secretary Folsom illustrated the reasons for his protest mostly from one piece of Chamber literature, "Washington Report" for February. He could have used many others, since numerous graphs and other publications with no more than a part of the truth in obscure print have been widely distributed. Let us analyze a single page entitled "Is There a School Emergency?"

One side is covered by a huge colored graph, showing that each year since 1947 more public schools have been constructed than were necessary—for increased enrollments. In the narrative on the other side the need for Federal assistance is portrayed as nonexistent, on the basis of enrollment increases alone, with a minor exception that will be discussed later. The graph, headings, and all but a few lines near the end give no hint of any other reasons to build new schools.

The United States Chamber of Commerce disregards the specific purpose of the legislation, which is to eliminate the backlog of need accumulated through a great economic depression and 2 wars. Then it hides more than one-half of the total need for school facilities in a cleverly designed document certain to mislead the public. It ignores the overcrowding of 2,295,000 pupils in 1956 to which President Eisenhower referred in his special message requesting the legislation. No mention is made of schools necessitated by mobility of population or by the consolidation of schools. Only the few lines at the end mention the 840,000 pupils attending one-half-day sessions or the replacement of obsolete or unsafe schools.

The graph carries this basic fallacy forward and the narrative adds more. In 1947, it says, increased enrollments required 9,500 classrooms and 16,000 were built. 1950–51, comparable numbers are reported as 20,000 and 44,000, this just before the National Survey of School Facilities found the need to be 312,000 classrooms. In 1955–56 the Chamber found "* * * 38,500 were needed, 67,000 were built." The number of classrooms constructed in that year was 62,776—not 67,000.

Then the chamber goes further, "The Office of Education's most recent estimate placed the need for 1956–57 at 41,300 classrooms, 69,000 were built." The estimate of need referred to was 159,000, not due merely to enrollment increases. The 69,000 referred to is the estimate of construction from July 1, 1956, to June 30, 1957, so the number actually constructed will not be known for many months.

On the same page, the chamber overlooked the 33,750 classrooms constructed with substantial Federal funds under Public Law 815 since 1950, including them among the 470,000 classrooms described as built during the past 10 years, without Federal aid. (Some of the chamber's literature claims 490,000 instead of 470,000, but Secretary Folsom placed the number at 406,000.)

Near the end of the page the chamber discovers 179,000 classrooms constructed over a period of 10 years in excess of those necessary for increases in enrollment, and says these were "used to absorb accumulated shortages and to replace obsolete buildings." Thus it counts 17,900 classrooms annually for a decade for purposes other than increased enrollments, certainly a minor fraction of the need. (Secretary Folsom says the true figures are between 4,000 and 10,000.)

Then the chamber says the crisis consists of the 840,000 half-day pupils, or only 2.6 percent of the enrollment. There is no mention of the 2,295,000 pupils in overcrowded conditions or the need due to other factors.

The truth is that the school construction necessary to bring our public-school plant up to par, is at least 100,000 classrooms each year for 4 years. Enrollment increases will require an average of not less than 45,000 each year during the period. Elimination of overcrowding will add at least 20,000 each year, and this part of the program should be accelerated for the sake of the children now in school. Replacement of obsolete facilities makes necessary another 20,000 classrooms annually, and an allowance of 15,000 for mobility of population, construction due to consolidations and normal replacements of overage facilities is conservative.

Informed persons in the United States Office of Education have said that the real need is for 112,000 classrooms annually for 4 years. There were 62,766 constructed last

year. We need a Federal assistance program to increase school construction at least 50 percent without further delay.

EDGAR FULLER,
Executive Secretary, Council of Chief State School Officers.
WASHINGTON.

Restricting News Coverage

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. McCORMACK. Mr. Speaker, I include in my extension of remarks an article entitled "On Restricting News Coverage," written by Thomas L. Stokes, and appearing in the Washington Star of March 14, 1957.

In his article Mr. Stokes made one unintentional error when he referred to the get together with President Eisenhower "with the four Democratic leaders of Congress." There were 2 Republican leaders of both branches as well as 2 Democratic leaders of both branches.

While the following observation does not apply to Mr. Stokes, it is amazing that the approximately 90 percent of the newspapers of the country who supported President Eisenhower in 1952 and 1956 campaigns are silent on this matter, as well as on other matters of public interest, in addition, many of them discoloring political news.

The article follows:

ON RESTRICTING NEWS COVERAGE
(By Thomas L. Stokes)

An incident at the White House this week, trivial perhaps in the long history of empires and republics, illuminates the growing tendency to restrict news coverage of current history of the Eisenhower administration and its chief figure.

Oldtimers, at least, are getting irked. They can remember more free days, and not too far in the past, when Government was conducted in the fashion of a republic and not an empire. But for the incident—

President Eisenhower was having a get-together late in the afternoon in the White House, itself—the mansion—with the four Democratic leaders of Congress. As is customary in such cases, newspapermen left their usual stations in the lobby and press room of the Executive Offices and gathered in front of the White House, where the cars of the visitors were parked, so they could interview the leaders when they left. While they waited, a butler came out and talked to the drivers of the limousines. Immediately they sped away down the drive.

When the newspapermen returned to the Executive Offices, they found out that the congressional leaders had left by a back gate. James Hagerty, the President's press secretary who has become so much more than that, said it was he who had arranged for the visitors to use the gate by which they avoided the newspaper reporters and had sent word to the drivers. Then he added that the reporters had not been authorized to wait near the front porch.

Authorized.

Among the reporters thus duped were some who through the years have spent hours about the front porch of the White House, by day and by night, waiting for conferences of one sort and another in the White House, itself, to break up, and then interviewed the participants as they were leaving.

Newspapermen needed no authority. Nobody ever questioned our right—not even in wartime, so long as we had our regular credentials.

Still remembered by some of us were the night meetings at the beginning of the Franklin D. Roosevelt administration concerned with ways to check the depression which gripped the country when President Roosevelt took over from Herbert Hoover.

Night after night we stood outside the White House as the new President conferred with Treasury officials and Members of Congress, initially over measures to salvage the tottering bank structure, later over many other measures to rescue the Nation from its worst depression. One night is more vivid than others, perhaps because somehow it reflected the lifting of the spirits of all of us under the tremendous drive and optimism of the new President.

As we waited, it began to rain, a cold March rain. A friendly police officer invited us up on the porch where we had shelter. Presently out of the White House came an old friend to join us, an ex-newspaperman, Marvin McIntyre, one of President Roosevelt's secretaries. Mac loved to harmonize. His favorite song was Home on the Range. He gave us the key and our chorus, rich and strong and not a little raucous, filled the rain-drenched air as we huddled together, arms across each other's shoulders, there on the front porch of the White House.

No one had authorized that.

Then there was the gloomy tragedy of the day of infamy when the Japs struck at Pearl Harbor. We stood outside the White House then for hours, grabbing for every scrap of news.

No one had authorized that.

Memory in this reporter's case goes much further back, back to a night when some of us waited outside for the breakup of a dinner that President Harding was giving to Judge Elbert Gary, of United States Steel, and Charles Schwab, of Bethlehem, and other steel magnates to talk over abolishing the 12-hour day then in effect in the steel industry. After it was over President Harding came out and invited us into the White House. He stod there while Judge Gary gave us a statement about the dinner conference.

There was one President, incidentally, who had a fondness for that front porch. One day, soon after Calvin Coolidge had moved into the White House after the death of President Harding, he was found sitting on that front porch by a Secret Service man. The latter politely informed the President that it was customary for Presidents to sit on the back porch overlooking the grounds and the Ellipse where, there was privacy.

"I like to sit here where I can watch the streetcars go by," the President replied.

So do we, Jim Hagerty.

Wake of the Farm Bloc

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit the following article from the Washington Post and Times Herald of March 16, 1957:

WAKE OF THE FARM BLOC

The defeat of all the corn legislation in the House will come close to taking the prize in the present session for legislative botchery. At least two reasonable measures to keep corn under control this year were advanced with administration support; both went down to defeat because the House Agriculture Committee insisted on promoting a scheme which would have opened the Treasury to outlandish subsidy demands for feed grains. Of course, the representatives of consumers in the large cities, Democrats and Republicans alike, arose in revolt. For this the shortsighted majority of the Agriculture Committee has only itself to blame.

Chairman COOLEY says that so far as he is concerned "the corn legislation is not a dead item." But by the time he patches up an acceptable compromise, if indeed any such compromise is now possible with the farm bloc split asunder, cornfields are likely to be seeded and sprouting. The one chance of inducing the vast majority of farmers to curtail their corn planting this year was to pass early in the session a simple measure enlarging quotas or giving individual farmers a chance to choose the larger quotas and lower price supports as against the smaller quotas and higher supports which are now available but which are also generally unacceptable. These opportunities have been missed, and it is not surprising that Representative ANDRESEN referred to the action of the House as "the wake of the farm bloc."

To Amend the Legislative Reorganization Act of 1946 To Provide for More Effective Evaluation of the Fiscal Requirements of the Executive Agencies of the Government of the United States

EXTENSION OF REMARKS
OF
HON. WILLIAM M. COLMER
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. COLMER. Mr. Speaker, now, when the Members of the Congress are more awakened to the gravity of our financial situation than at any time in the past quarter of a century, it is most appropriate that the House of Representatives, primarily responsible under the Constitution for taxation and appropriations, take some action to get our house in order.

It is past time for the Congress to revise its outmoded machinery.

In this age of alltime high taxes and record peacetime appropriations, our committees, and particularly the Appropriations Committees, responsible for appropriating the taxpayers' money, are substantially equipped for the job as they were 35 years ago when the appropriations and taxes were nominal—under $5 billion.

Our Appropriations Committees in both the House and the Senate are at the mercy of the executive department. They are forced, because of their limited knowledge of the subject matter, to largely take the recommendations of the executive department. This is primarily due to the fact that they are not equipped with the necessary tools to do the job. This is no fault of the Appropriations Committees. It is due to the failure of the Congress to provide them

with the necessary tools with which to work.

For instance, the President has a Budget Commission with approximately 500 employees, all experts in their several fields. On the other hand, the Appropriations Committees have only a handful on their staffs. There is urgent need for these committees to be equipped with an adequate staff of experts. If this staff is wisely chosen the committee will be in position to have equal knowledge with the President's Budget Bureau of the needs of the various departments. Then and not until then will the Congress be able to withstand and defeat unnecessary demands from the various bureaus of the Government for appropriations of the taxpayers' money.

For several years now the able Senator from Arkansas [Mr. MCCLELLAN], and I have introduced and worked for legislation which would provide for, first, a joint legislative committee on the budget from the two Committees on Appropriations of the House and the Senate; and, second, the creation of an adequate staff for the joint committee.

This joint committee on the budget would function largely and generally in the same manner that the joint Committee on Revenue now functions. I am sure that all Members of the Congress are in accord with the splendid job that that Committee has done and is doing.

Twice in recent years the Senate has passed Senator MCCLELLAN's bill.

In 1952 the House by a narrow margin of 16 votes defeated my bill. In the last Congress the Senate unanimously passed this bill.

On March 14 last Senator MCCLELLAN, on behalf of himself and 61 other Senators, reintroduced his bill (S. 1585). Those Senators joining with Mr. MCCLELLAN are as follows: Mr. ALLOTT, Mr. ANDERSON, Mr. BARRETT, Mr. BEALL, Mr. BENNETT, Mr. BIBLE, Mr. BRICKER, Mr. BRIDGES, Mr. BUSH, Mr. BUTLER, Mr. CAPEHART, Mr. CARLSON, Mr. CARROLL, Mr. CASE of New Jersey, Mr. CHAVEZ,, Mr. CHURCH, Mr. CURTIS, Mr. DOUGLAS, Mr. EASTLAND, Mr. ERVIN, Mr. FLANDERS, Mr. FULBRIGHT, Mr. GOLDWATER, Mr. GREEN, Mr. HICKENLOOPER, Mr. HOLLAND, Mr. HRUSKA, Mr. HUMPHREY, Mr. IVES, Mr. JACKSON, Mr. JAVITS, Mr. JENNER, Mr. JOHNSTON of South Carolina, Mr. KEFAUVER, Mr. KENNEDY, Mr. LAUSCHE, Mr. MAGNUSON, Mr. MALONE, Mr. MANSFIELD, Mr. MARTIN of Iowa, Mr. MARTIN of PENNSYLVANIA, Mr. MCCARTHY, Mr. MONRONEY, Mr. MORSE, Mr. MORTON, Mr. MUNDT, Mr. NEUBERGER, Mr. PASTORE, Mr. PAYNE, Mr. PURTELL, Mr. SALTONSTALL, Mr. SCHOEPPEL, Mrs. SMITH of Maine, Mr. SMITH of New Jersey, Mr. SPARKMAN, Mr. STENNIS, Mr. TALMADGE, Mr. THURMOND, Mr. WILEY, Mr. WILLIAMS, and Mr. YOUNG.

This majority of the Members of the Senate insures the passage of the bill by the Senate at this session.

In a few days the Committee on Rules will conduct hearings on my bill (H. R. 2416) and I am very much in hopes that the Committee on Rules will report this bill and that the House will pass it so that the Congress can then intelligently approach this momentous problem of cutting down of governmental expenditures and thereby give the solely pressed taxpayers some much desired and needed tax relief.

Mr. Speaker, I might add that the principle argument used to defeat my bill in the 82d Congress was that if such a joint committee were set up, it would be dominated by the other body. This is absurd. However, to meet this argument, I have provided in my bill that 9 Members of the House as against 7 Members of the Senate constitute the joint committee and, further, that since the House is constitutionally responsible for the initiation of appropriations and revenue, the chairmanship of the joint committee remain in the House. I have reason to believe that the Senate, in order to get this desired improvement in our fiscal policy, will be agreeable to this disproportionate representation.

Hells Canyon: Maximum Power at Minimum Cost

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1957

Mr. PORTER. Mr. Speaker, I should like to invite the attention of the Members of the House to an editorial published in the Medford Mail Tribune of March 10, 1957, commenting on the manner in which the present administration is dragging its feet on the Hells Canyon issue.

The West is keenly aware of the historic decision to be met by us. Watching to see whether we favor ample and inexpensive power in the Pacific Northwest for industry, for defense, for agriculture, or for halfhearted, wasteful and incomplete use of our natural wealth.

I commend this editorial by the distinguished Robert W. Ruhl, editor of the Medford Mail Tribune, Oregon's Pulitzer prize-winning newspaper:

WHAT ARE WE WAITING FOR?

As memorials to Congress by the State legislature are seldom important, so the defeat of the Hells Canyon memorial by one vote was not so important.

But as a party voting index it was significant. Every Republican voted against this approval of public power on the Snake, and every Democrat voted for.

As the Democrats have a majority in the House naturally the memorial passed by a comfortable total there. But with a 50–50 party division in the Senate the result was a tie, 15 to 15, with the measure defeated because it failed to get the necessary 16 count by 1 vote.

This makes it reasonably clear that if the people of Oregon wish to get authorized Federal power projects finished, or any new ones started, they better vote Democratic.

We grant Hells Canyon has become extremely controversial politically but the debate over this memorial plainly demonstrated that in this field the Republicans have learned nothing and forgotten nothing. All the old cliches about the evils of public power from the standpoint of our cherished American way of life were brought from the moth balls, shined up and fired at the opposition with all the exaggerated salemnity of a firing squad delivering a salute to the unknown soldier.

As usual an entirely false picture of the public versus private power issue was presented, although the record of every Federal multiple-power project from TVA, Tennessee, to Bonneville, Oregon, refutes this.

It was claimed, for example, that if a high Federal dam was constructed on the Snake as recommended by the United States Army engineers, in place of the three small dams by the Idaho Power Co., not only would it cost the American taxpayers six or seven hundred millions, but the same taxpayers would lose a million dollars a year in taxes, and after all was said and done, the Idaho company project would, quote: "benefit Oregon and the Pacific Northwest almost as much as the high dam." There is another prize-winning understatement.

The only trouble with this argument is "it just ain't so."

Even the official examiner for the Federal Power Commission in an official report that was never overruled, declared "a high Federal dam would be dollar for dollar the better investment and more nearly ideal development of the Middle Snake.

Why this decision was not accepted and followed by the FPC has never been made clear. The reason given by one official in Washington was that Congress would never vote for another Federal project in the West, so why authorize it. But only a short time later the Congress not only did so vote authorizing the upper Colorado project but at far greater cost to the American taxpayers, for whom the Grand Old Party has such strong sympathies, whenever Hells Canyon is the issue.

But just what does this expense in increased taxes and woeful loss in taxes to local governments add up to when a multiple-project idea is adopted as it was, for example, at TVA on the Tennessee River?

In the first place the project is self-liquidating.

Every penny advanced by the Government is over a period of years returned to the Government through the sale and distribution of power, not directly to the consumer but through local cooperative distributing systems, and always at a low and reasonable cost.

In other words through a couple of generations such a project doesn't cost the taxpayers of the country one red cent.

Moreover at the end of that period, the Government—that is the people of the country—own an extremely profitable and extensive light and power system, the services of which they get indefinitely at a minimum charge. Does that promote the public welfare or doesn't it?

As for the much-advertised loss in taxes which the Idaho Power company, for example, would pay, if given the green light, is there anyone in the audience so naive they believe the company would pay these taxes?

Of course, as everyone knows, they wouldn't. They would merely add the tax costs to their rates, and as always the consumers would pay via the nostrils.

And there one comes to the crux of the entire problem.

Not only is it a question of getting more power—the maximum—but getting cheaper power—the minimum.

And we don't believe there are many who would deny that there is the crying need of the people of Oregon and the people of the Northwest.

Finally there is the multiple purpose item in the Federal project that by the nature of things, and our established financial system can't be included in any private power development.

Again taking the Tennessee Valley Authority as an example, such a trustworthy and conservative news commentator as Marquis Childs, in the equally trustworthy and conservative Oregonian, recently stated that in the matter of flood control alone, this Federal TVA development on the Tennessee River saved one city—Chattanooga—in the recent floods an estimated $65 million.

Of course there would not be a similar flood danger on the Snake but there would be on the Columbia, and on both there would be material, collateral benefits in the area of water storage, navigation, and irrigation.

In short, we can think of no better summing up on this issue of public against private power on the Snake or elsewhere than to quote the official examiner of the Federal Power Commission when, after a thorough examination of all items involved, declared in his official report:

"The high dam would be dollar for dollar the better investment and the more ideal development of the Middle Snake."

Why then don't we have it? What are we wating for?

That, we believe, is the $64,000 question for the present administration to answer.

Public Wants Federal School Aid

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. SCHWENGEL. Mr. Speaker, because an editorial appearing in a recent issue of the Des Moines, Iowa, Register, summarizes a Gallup poll with respect the public's feeling toward Federal aid to education, and because this poll will reflect the opinions of many people in Iowa, I ask consent to have it printed in the Appendix of the RECORD. The editorial follows:

PUBLIC WANTS FEDERAL SCHOOL AID

An astounding unanimity of opinion on the issue of Federal aid for school construction has been reported by the American Institute of Public Opinion. This Gallup poll shows that 76 percent of the public now favors Federal aid to help build new public schools. Only 19 percent oppose and only 5 percent have no opinion on this issue.

Congress has a clear mandate to approve a bill at this session. A squabble between Democrats and Republicans—both professing to favor Federal aid—and the desegregation issue prevented action at the last session. Both parties and both presidential candidates advocated Federal aid in the 1956 election campaign.

The segregation issue should not be permitted to block action at this session. Representative ADAM POWELL, Democrat, New York, again wants an amendment which would exclude aid to school districts which maintain segregation. Approval of the amendment means defeat of the bill because of the views of southerners.

But approval of the amendment would not speed desegregation in any way. Nor would defeat of the amendment mean countenancing defiance of the Supreme Court's finding that Negroes are entitled to equal educational opportunities in public schools. The issues are separate.

Opponents of Federal school aid contend such a program may lead to Federal control of education. The Gallup Poll shows that either the public doesn't oppose Federal control of education or doesn't think the danger exists in this proposed legislation. We think the public does cherish local and State control of education—but it doesn't see the peril of Federal dictation in this particular legislation. We agree.

There's no reason why United States assistance in building schoolhouses should bring about Federal control of education. The experience with Federal aid in vocational, agricultural and special education fields—as well as Federal aid in such fields as highway construction—has indicated that Federal dictation doesn't necessarily follow Federal assistance. The experience in most of these programs might indicate, however, that once Federal aid is started it isn't likely to be discontinued. It's more likely to be expanded.

We think President Eisenhower is wise to insist upon these provisions in school-aid legislation: (1) That the program of aid be limited to a definite period—the time it takes to catch up on the emergency needs of more classrooms; (2) that the aid be distributed—not on a handout basis of just the number of school-age students in each State—on the basis of varying needs in States and their ability to meet the needs; (3) that the aid be restricted to construction of classrooms.

With such a program, we don't see any peril of Federal control of education.

Views of a South Dakota Rancher

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. BERRY. Mr. Speaker, I have asked unanimous consent to insert in the RECORD a portion of a letter I have just received from P. J. Cook, of Castle Rock, S. Dak.

This man is a rancher out on the prairies of western South Dakota who, because of his business and his calling, has an opportunity to live a little closer to nature and a little closer to the problems of everyday life. This man is not only wrestling with the problems of making a living, but is a student of government and of national affairs. His thinking is worth the time of every Member to read and ponder. A part of his letter is as follows:

I would like to briefly explain a few of my views. While the average citizen does not understand the processes of legislation it seems to me that the only way we can make democracy effective is to have an informed citizenry and your letters from Washington help to do that. One of the greatest needs of this day is tax relief and the truth of the statement that "the power to tax is the power to destroy" is becoming more evident. Some informed sources say that our Government can cut enough off nondefense expenditures to justify a tax cut. (No thinking person would want to weaken our defense.) Yet news dispatches from Washington and also your letter indicate the budget for the coming fiscal period is around $72 billion and the highest Eisenhower had submitted to Congress in his 4 years in office and higher than any peacetime budget ever offered by former President Truman; we all thought Truman was a spendthrift but it may turn out that he was a piker in this respect. The explanation given by Secretary of the Treasury Humphrey was that everybody has been looking to the Government for more and more. This philosophy of getting something for nothing is becoming more prevelant and does not conform to truth and honesty. The Government cannot give to the people what they have not already taken from them—this basic fact is elementary and fundamental and while all Congressmen should be aware of this it seems some have a tendency to place this truth in the back of their minds when it comes to more appropriations and more taxes. The present high taxes are killing any incentive to work harder and produce better products and are very near reaching the breaking point and this trend follows right down to the State and county level. I realize fully how complicated things can get when everyone seems to be clamoring for this and that and the Government trying to satisfy everyone. Federal aid in any form is nothing more or less than taxes collected from all the people in the United States and rechanneled back to the various States and cities for use in their own particular locality with a certain amount of loss in the process which some call overhead and administration. Finally, the labor unions have at present an unrestricted concentration of power and have shown gross irresponsibility in managing their affairs and should have their wings clipped before the results of their actions seriously affect every individual in this Nation.

St. Patrick's Day

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. BOLAND. Mr. Speaker, permission being granted to extend my remarks in the RECORD, I would like to have included two editorials in connection with the great feast of St. Patrick on yesterday. The first editorial is from the Springfield (Mass.) Union of March 16, and the second from the New York Sunday Times of March 17:

[From the Springfield (Mass.) Union of March 16, 1957]

ST. PATRICK'S DAY

It may be significant that St. Patrick, though he loved the Irish, was not, according to the available authorities, born in Ireland. In this he resembles most of the rest of us. But the Irish took St. Patrick to their hearts and he took them to his heart. There was warmth in him and warmth in them, and the combination has made St. Patrick's Day something more than was originally contemplated.

The Irish haven't lost their saint, but a lot of other people have taken him on, people of many races and people of more than one religion. When the bands come along playing Killarney or the Kerry Dances, when the green badges flower in the early spring, who is there who doesn't want to cheer for the good and great man?

We may ask ourselves why St. Patrick has attained this position, and there may be any number of answers. He was serious, but the Irish made him gay, too. He was a crusader who wouldn't put up with paganism or any sort of wrong-doing, but he was human and understanding, too. The personality of him comes down the centuries, cheerful and lovable, and one believes he would have enjoyed the parade and the music and the sight of people having a good time. We like to

think that the Irish are generously willing to share their day and their saint.

[From the New York Times of March 17, 1957]

VISITOR FROM DUBLIN

Tradition has it that St. Patrick expelled the snakes from Ireland. For that and other valiant deeds, March 17 has been celebrated as St. Patrick's Day in this country since well before the founding of our Republic. And nowhere has St. Patrick's Day been celebrated more joyously than here in New York, where the Irish and those of Irish ancestry play so large and honorable a role in the city's life.

This year's 2-day celebration of St. Patrick's Day is a particularly joyous and memorable event because the Lord Mayor of Dublin, Robert Briscoe, will be participating. Any Lord Mayor of Dublin would be a welcome guest here, but Mr. Briscoe is in a sense doubly welcome. As Irish as the shillelaghs he brought with him, he is also a Jew and thus personally incarnates the union of two of the great groups which make up this city's cosmopolitan population.

In welcoming our distinguished guest from Dublin, we pay tribute really to the foundation stone of the miracle of America, and particularly of the miracle of New York City. We are a community of the most diverse origins. Our ancestors came from many lands and from many cultures. We worship God in many different ways. Yet we live together here in peace, friendship, and mutual respect. Lord Mayor Briscoe's presence today reminds us that in Dublin as well as in New York the snakes of intolerance have been dealt with as they should be, and with that reminder we may all join our Irish fellow citizens in celebrating this particularly happy St. Patrick's Day.

How Much Is $72 Billion?

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. LOSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I call to the attention of the House an editorial published in the Nashville (Tenn.) Banner of March 16, 1957, entitled "How Much Is $72 Billion?"

The editorial is timely and I hope the membership of the House will read it:

HOW MUCH IS $72 BILLION?

Just how much is $72 billion—approximately the proposed Federal budget for the coming fiscal year—in understandable terms?

According to the family economics bureau of Northwestern National Life Insurance Co., $72 billion would make a stack of $10 bills 410 miles high.

It would pay the combined wages of a million manufacturing workers, at present average wage rates, for 17 years.

It is nearly 2½ times our farmers' total cash receipts for all the produce of American agriculture in 1956.

It is approximately twice as much as the United States Government spent for World War I.

It is more than one-fifth of our present national income.

It is $1,100 per American worker.

It is $1,700 per American family.

Spending $72 billion in a year means spending $137,000 a minute for 24 hours a day for 7 days a week for 52 weeks.

The Budget

EXTENSION OF REMARKS
OF
HON. WILLIAM E. McVEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. McVEY. Mr. Speaker, Members of Congress are being deluged with letters from their constituents who are demanding a drastic cut in the $71.8 billion Federal budget. While there can be no question that these protests are justified, the American people themselves must realize that selfishness must give way to the general good. We must be Americans—we must not try to serve our own personal selfish interests. Whether we like it or not, the programs which were initiated under previous administrations—and which have built the Federal Government to the gigantic size it is today—will continue to require a greater outlay of money as time goes by. The Federal Government cannot keep taking the rights and powers formerly held by the States, without assuming the responsibility of paying for them.

With Congressmen having to face reelection every 2 years, Members of Congress are reluctant to vote against programs which their constituency advocates. It is apparent in the country today that any measure that helps a group of individuals finds that group in favor of such legislation—even when they should know it is detrimental to the best interest of all Americans. Before any tax relief comes for the American people, there must be a real awakening to the dangers inherent in this situation. Pressure groups will have to be told they are trying to serve only a particular group which may have selfish interests at heart. And, Members of Congress must be able to withstand these pressure groups.

When we compare the expenditures for the fiscal year beginning July 1, 1954, with the increases that have been made in those same items for the fiscal year beginning July 1, 1957, we find that about $12.5 billion more revenue is required than was spent 3 years ago. Much of this money is needed for projects and policies started long before the present administration came into power. As our population increases, and expenses grow because prices have risen, we find all along the line there are more individuals who are entitled to pensions, more who are retired, more children who attend schools and need free lunches. We must face the reality that we cannot start any new commitments involving Federal expenditures, unless we are prepared to foot the bills. Need I remind you that the deepest well will run dry?

I have been happy to join with more than 60 of my Republican colleagues in urging that the Rules Committee give the House an opportunity to set some overall limitation on Government spending. Let each one of us rise above being partisan and make it our goal during the 1st session, 85th Congress, to reduce the $71.8 billion budget, insofar as it does not curtail essential services, or endanger the security of our Government. Our citizenry is aroused over the national debt, about the size of our Federal budgets, and over our ever-expanding Federal bureaucracy, and well they should be. Perhaps if we would remember that Lenin once said, "The easiest way to promote a bloodless revolution is for the currency of a nation to commit suicide," a concerted effort will be made by all of us to cut the budget at every opportunity. The decline in the purchasing power of our dollar has been underway for a number of years.

Who Should Cut Budgets?

EXTENSION OF REMARKS
OF
HON. THOMAS G. ABERNETHY
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. ABERNETHY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I would like to include an editorial which appeared in the March 14 edition of the Commercial Appeal, a prominent daily newspaper published in Memphis, Tenn. The editorial, having to do with budget cuts, is very significant inasmuch as this newspaper supported the President in each of his campaigns. The editorial is as follows:

WHO SHOULD CUT BUDGETS?

Democrats and Republicans in Congress are each anxious to appear the less liberal with the taxpayers' money, and hence a good deal of the current controversy over who should cut the Federal budget.

After due allowance has been made for politics, however, it seems to us that House Democrats have the right of it in asking President Eisenhower to tell them where and how to trim the administration's original requests. It is the duty of the President and his administrators to propose and of Congress to dispose.

Republicans, almost with one voice, accuse the Democrats of passing the buck, which is not so bad, after all, if the buck finally comes to rest where it belongs. President Eisenhower has likewise indicated his estimates can be pared and it appears logical to suggest that he and his Cabinet have the responsibility to say where reductions can best be made.

In this connection it is interesting and pertinent to turn to comments made recently in an interview published in U. S. News & World Report by former Vice President John Nance Garner. Mr. Garner, now in his eighties and living in peaceful retirement at his home in Uvalde, Tex., had 38 years' experience as Representative, Speaker of the House, and Vice President. He agrees with Senator HARRY F. BYRD, of Virginia, that the answer to a reduced budget lies in less spending.

Mr. Garner said in part, after noting that President Eisenhower talks about inflation: "Now, he is the author, the final author, of the budget. He has a budget man, but the President is responsible for sending it to Congress. He can't get away from that.

"Now, what he ought to have done when he got that budget, and he and his Cabinet sat around, was to tell them to go back and cut it down—cut it—cut it to the bone. Let Congress then, if necessary, do the job of increasing it. But he didn't do it. He has

recommended more money than I believe Congress will give him. And it will be about the first time that has happened."

"Cactus Jack" has done a fine job of putting the gist of the matter in plain language.

It's a Small World, and We Mean Small

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. ROGERS of Texas. Mr. Speaker, I rise today to ask unanimous consent that the column of Mr. Wes Izzard, publisher and editor, of the Amarillo Daily News, of Amarillo, Tex., which was printed in that newspaper under date of March 9, 1957, be included in today's CONGRESSIONAL RECORD. Mr. Izzard is well known throughout this country as an outstanding newspaperman, editor, commentator, columnist, and radio and TV executive. His observations are always excellent and his style of writing most interesting. We would like to share his splendid comments with others:

IT'S A SMALL WORLD, AND WE MEAN SMALL

Ever since Columbus discovered America people have been saying, "It's a small world."

It has never been smaller than it is today, and it's getting smaller by the minute.

A few years ago a trip to Dallas was a major excursion. As for Honolulu or Rio or Paris—well, only millionaires and adventurers went there; and one such trip in a lifetime was considered enough.

But look at the way things are today. Millions of young American men have been to Germany or Japan or Korea as members of our occupation forces. Other tens of thousands, many of them with their families, have done their stint at American bases in Greenland and North Africa and Arabia and a dozen other places.

Out at the airport the other day we ran into four friends we assumed were going to Dallas or maybe Denver. But it turned out they were headed for Hawaii on a casual 2-week holiday.

We know of half a dozen others who have just been or are just going on Caribbean cruises; and we can name at least 14 Amarilloans who are going to Europe as tourists this spring. Undoubtedly there are several times this number.

Last Wednesday night in Dallas we had the privilege of meeting Sir Harold Caccia, the British Ambassador to the United States, and several other Britons in Her Majesty's foreign service.

We talked about politics and the weather and socialized medicine, and Colonel Nasser, and Texas oil, and the best hotels to stop at, and where to get a good meal in London, and so on. It didn't seem in the least unusual for a bunch of Britishers to be sitting in a Dallas hotel dining room talking to a bunch of Texans. We all spoke the same language.

Then Thursday night we went out to the Knife and Fork Club and heard Ed Tomlinson, the Scripps-Howard expert on Latin America, tell about the industrialization of the southern republics, and the terrific competition among the various nations of the world to sell manufactured goods down there.

Thousands of United States-built factories; tens of thousands of United States technicians and salesmen, and swarms of peddlers from Britain, Germany, Italy, France, Japan, and even China are mingling in the world's biggest boom.

People are mixing with other people everywhere in the world. It's not a political or social movement, as the organized one worlders would have it. It's a natural development of quick transportation plus free enterprise opportunity.

There are no strange, out-of-the-way places any more.

You can buy a Coke in Addis Ababa or ride in a Ford in Jakarta.

A Russian or an Egyptian is no more a curiosity to an American than a New Englander is to a Texan.

American boys are bringing home brides from every quarter of the globe.

From now on if you want to adventure in strange lands among strange people, you'd better turn to outer space. There's no more mystery on this little old world of ours.

Parliamentary Bodies

EXTENSION OF REMARKS
OF
HON. E. ROSS ADAIR
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. ADAIR. Mr. Speaker, Mr. Clifford B. Ward, writing in the Fort Wayne News-Sentinel, expressed some views concerning parliamentary bodies and the individuals of whom they are composed. Because I think he speaks truths which ought to be widely read, I am including the column with my remarks:

This is an age of propaganda and counterpropaganda, pressures and counterpressures. Improved methods of communications have made it possible to step up propaganda and counterpropaganda, while the ease with which organizations can be formed has made it possible to step up pressures and counterpressures.

All members of our parliamentary bodies are constantly beseiged by highly articulate and usually well financed representatives of pressure and counterpressure groups, except that they must wish always always that the general populace was as well represented.

The so-called common man is a pretty friendless individual around any lawmaking bodies, except as he gets friendship, as he should, from some of the representatives in parliamentary bodies that he has selected. Usually the more experienced lawmakers have learned not to overemphasize the noise made in their offices by professional lobbyists. They frequently remember conversations they have had with home folks and vote with such conversations in mind.

Of course, to some extent, the lobbyists for and against any measure serve a useful purpose, because they accomplish the education of the lawmaker with respect to pending bills. It is almost impossible for a lawmaker to study with any degree of intensity any or all of the bills on which he is expected to act and the lobbyists held inform him about what the bills contain. Ironically, a lobbyist frequently accomplishes a purpose opposite from what he had in mind. Where he intends to convert a lawmaker to his cause, he sometimes loses him by reason of his approach.

INTEGRITY NEEDED

The first thing that any public official needs is integrity. You might be tempted to say that he also needs courage, but actually courage is a part of integrity. Probably most persons want to be known for possessing integrity, but too many of them when the chips are down play the role of cowards.

Fortunately for the sake of the general welfare, the number of persons in Government with a sense of integrity outnumber those that lack it. If this were not so, this country would really be in trouble. Despite the general conclusions people are tempted to make about Members of Congress, both Houses can be proud of men who vote their convictions regardless of the pressures brought to bear upon them.

This country has some excellent men in the Senate now, and it usually has, because despite popular cynicism there are a lot of good men in the country. There are some people that can always be pushed around and there are others who quickly resent any attempts to push them around and stand firmly where they think they ought to stand. More than this, no one can ask.

RELIABLE APPRAISAL

Oddly enough, in any legislative body there is a pretty reliable common appraisal of ability and honesty. The incompetent and the dishonest usually agree with everyone else on the matter of who is able and who is honest. Even crooks will say, "Don't bother trying to get to him, because you can't." That is always the highest compliment any man can merit.

The safety of this Nation at all times depends largely I think upon the kind of men who are elected to the United States Senate and the United States House of Representatives. The attempts of many to lessen the prestige of Congressman is a mistake, because it plays into the hands of those who want to break down respect for all authority, especially authority granted by the will of the people and not handed down by despots who seize power.

Federal Taxes

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Gaffney (S. C.) Ledger of March 12, 1957:

FEDERAL TAXES

Even though we are in an inflationary spiral and the experts tell us that we should not reduce taxes, which they say would only add to the inflationary pressure, we cannot refrain from commenting that Federal taxes are so high as to stifle initiative and expansion and constitute a threat to the prosperity of the Nation.

This almost sounds like an old record, coming 12 years after World War II, at a time when some of the taxes of War II are still on the books. Moreover, the Korean war came along a few years later and Congress added a new set of wartime taxes, some of which are still in effect.

Taxes must be reduced in the near future or the country is going to suffer. There is no reason why individuals should be taxed more than 50 percent on money they are able to earn. If an individual is smart enough, or fortunate enough, to earn big money and give a dollar to the Federal Government for every dollar he earns, then he is paying enough to the Federal Government.

He must pay local taxes, State taxes, and other taxes, and he must have money for

expansion and for use as savings, or future security, and therefore it is exacting too much to take more than 1 out of every $2, even from large money earners.

In the lower income brackets, percentages should be reduced accordingly. The capital which is earned, if taxes are lowered, can go into new business ventures and create new industries and new jobs. When it is paid to the Government in taxes, the Government merely spends it, adding to the inflationary spiral.

While a good case can probably be made for the Government maintaining high taxes, the case for reducing them is even better, and they must come down in the near future or the country's expansion will be adversely affected.

The Budget Battle

EXTENSION OF REMARKS
OF
HON. EDWARD P. BOLAND
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. BOLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to have printed the following editorial from the New York Sunday Times of yesterday:

THE BUDGET BATTLE

The budgetary battle this year between President and Congress promises to be livelier than usual, with each side trying to pass the responsibility for budget-cutting to the other but with neither likely to achieve a sensational success.

The House Appropriations Committee has already begun to slice into the President's estimates, late last week proposing, for example, a cut of almost 9 percent, or $500 million in the independent offices bill covering expenditures of 18 Federal agencies for the coming fiscal year. Doubtless the Senate will restore some if not all the cuts the House makes in this and other bills. All this may end up with some more or less haphazard reduction in projected spending for 1958, in response to the unquestionable public demand for a slash somewhere, somehow, in the President's $72 billion budget, largest in the Nation's peacetime history.

But cutting just for the sake of cutting is not conducive to a balanced, reasoned, and orderly program. The areas where political resistance is least—foreign aid, for example—are likely to suffer most; and yet these are not necessarily the areas where the Nation can best afford to economize. Executive leadership in any policy of budget-cutting is essential because the budget is an executive budget, prepared by the executive, defended by the executive, and supposedly representing what the executive thinks is the minimum expenditure required. Yet the President has virtually invited Congress to cut this budget if it can, with the implicit suggestion coming from important members of his administration that it could be cut if there were the desire to do so. But the President is offering few concrete proposals to this end, simply observing that "Congress will have to say which one [program] they don't want to carry out if they are going to make big savings."

Of course it is true that Congress in laying down the law for some of the largest kinds of spending—for farmers, for veterans, for public works, and so forth—has a major responsibility. Of course it is true that Congress could (and in some respects should) change these programs, with beneficial results for future budgets. But it is still true that the President ought to lead the way. There was a measure of justice—mixed in, to be sure, with a large element of political buck-passing—in the House resolution the other day asking the President to indicate just where he thought "substantial reductions" could best be made.

Federal budget-making is or ought to be a reciprocal process, though Congress in recent years has lost a good deal of its power of effective control. One step it ought to take to recoup some of that control would be adoption of the Hoover Commission's recommendation for modernizing the budget and appropriation system. But it is still up to the President to set the tone and character and direction of the budget; and if he thinks it can and should be cut he ought to say so with specific suggestions.

That Postal Deficit

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. SCHWENGEL. Mr. Speaker, the postal deficit, like the national debt, is always with us. Tribute must be paid, however, to the efforts of the Honorable Arthur E. Summerfield to wipe out that deficit and put his Department on a basis where it can pay its own way and thus help the Government reduce its appropriations in order to balance the budget. In recognition of Mr. Summerfield's efforts, I ask to have printed in the RECORD an editorial from the March 7 edition of the Muscatine, Iowa, Journal. The editorial follows:

THAT POSTAL DEFICIT

Postmaster General Summerfield has expressed serious concern—and with good reason—over his Department's deficit problem.

The deficit will soon approximate a billion dollars a year, he warned, unless postage rates are raised to realistic levels. Indeed, the deficit would have passed the billion mark by now, had it not been for certain financial and managerial improvements put into effect during the past 4 years, including increased parcel-post rates and higher foreign mail rates, among others.

This situation is made worse by the fact that the Department faces higher operating costs, due to increased wages and mailing charges. And the fiscal plight is compounded by the Department's need to modernize its physical plant to expedite the handling of an ever-increasing volume of mail. As Mr. Summerfield sees it, "The only possible solution is increased postage rates to assure better service and to introduce financial sanity in the handling of the fiscal affairs of this huge businesslike operation within Government."

We usually think of these proposed increases in rates in terms of letter postage. But fiscal reforms should not stop there. Parcel post (the fourth-class-mail classification) is reported to be still operating at a deficit, and is thus subsidized by tht taxpayers, despite the rate increases Mr. Summerfield mentioned. And parcel post imposes a heavy burden on the Department's physical facilities that are in need of modernization and expansion—for it is reported to account for more than 56 percent of the weight of all domestic mail.

Making the user pay the full cost of such service would both relieve pressure on the Post Office Department, and on the strained Federal Treasury itself. And this would help the Department, to quote Mr. Summerfield again, to "contribute its share to the balancing of the Federal budget, so essential to the economic well-being and security of 170 million Americans."

A Bill To Provide for a U. S. S. "Arizona" Memorial at Pearl Harbor

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. BURNS of Hawaii. Mr. Speaker, on March 11, 1957, I introduced H. R. 5809 to provide for a U. S. S. *Arizona* memorial at Pearl Harbor, T. H. I was joined in introduction by the Honorable CARLTON J. LOSER, of Tennessee (H. R. 5833). Some other Members have indicated a desire also to cosponsor the measure. I welcome their cosponsorship.

It has been truthfully said that the past is but the prolog of the future. The inspiration of the battleship *Arizona* and the significance of the sacrifice of the 1,102 great Americans whose tomb the *Arizona* is should be preserved to honor those who died and remind those who live of the sacrifice demanded of all who would preserve the heritage bequeathed us.

For the information and edification of the Members of Congress and the readers of the CONGRESSIONAL RECORD, I include herewith an article from the Nashville Banner of March 13, as well as an editorial from the same paper:

PEARL HARBOR REMEMBERED

It is with gratification the Banner notes Nashville's Representative J. CARLTON LOSER has introduced a bill in Congress to provide a memorial at Pearl Harbor for the battleship *Arizona*, sunk in the sneak attack of December 7, 1941, with the loss of 1,102 men aboard.

Following a Navy-sponsored tour of Pearl Harbor last year, the Banner's managing editor was haunted by the fact that the sunken ship was rusting away beneath the salt water with no effort being made to memorialize those for whom the war ended as it began. In an article published in these pages on the 15th anniversary of Pearl Harbor, it was suggested that the sentiment of a bronze plaque and a flagpole was insufficient for such an American shrine. A public subscription was urged to establish a fitting and lasting memorial.

It was upon that suggestion that Representative LOSER acted in introducing his bill calling for the Navy's cooperation with the Pacific War Memorial Commission in developing plans for a fund-raising campaign to establish the project. His commendable action should serve to jog the memory of Pearl Harbor and pave the way for Americans to prove again that pride and gratitude are not so perishable as a ship's steel hulk before the inexorable force of time and tide.

The Banner congratulates Representative LOSER for his service to a cause long neglected.

REMINDER OF PEARL HARBOR: LOSER SEEKS MEMORIAL FOR ILL-FATED "ARIZONA"

WASHINGTON.—Representative J. CARLTON LOSER, of Nashville, today introduced a bill to provide a memorial at Pearl Harbor for the battleship *Arizona* sunk in the Japanese attack on Hawaii.

LOSER said he acted on a suggestion by Ed Clark Ford, managing editor of the Banner who wrote and published on December 7, 1956, an article urging recognition of the hulk of the sunken ship.

LOSER's bill would authorize the Secretary of the Navy to cooperate with the Pacific War Memorial Commission of Hawaii in developing a design for a memorial and museum to be built at, or near, the site of the hulk of the U. S. S. *Arizona*.

SUBSCRIPTIONS

The Secretary would also be empowered to furnish publicity material for a public subscription campaign to raise funds for the memorial and museum.

The Navy would later build the project with the private funds and maintain it for the use of the public.

LOSER said Ford first suggested the idea in a Banner article which the Congressman placed in the CONGRESSIONAL RECORD. Delegate JOHN A. BURNS, of Hawaii, noticed the article in the RECORD and is cooperating with LOSER in sponsoring the legislation.

ARTICLE REPRODUCED

The article by Ford headlined, "The sea decays a hallowed shrine," has been reproduced in the Navy Times and the Naval Air Training Command's magazine. After its appearance in the Banner, Secretary of the Navy Charles S. Thomas wrote Ford that it was his hope appropriate legislation would be introduced and passed in this session of Congress "in keeping with that national spirit exemplified by memorials to our war dead throughout the world."

Problems of the Average Small-Business Man

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. BERRY. Mr. Speaker, there is a great need for this Congress to take decisive and constructive action toward improving the climate in which small business operates today.

This week I received an excellent letter from a successful, young South Dakota businessman, R. B. Wheeler, of Lemmon, which outlined in some detail the problems facing the average small-business man. I believe the premise of his letter could be summarized with this statement which I quote from his letter:

Many of our local businesses are operating in a balance that is extremely close where nearly any adverse condition will put their solvency in jeopardy.

He went on to write that while many small-business men are showing an increase in net worth in dollars, the gain is very slow and the numerical dollars are misleading. This is true because of inflation, and deflation brought about by a possible recession would destroy much of this net worth because of its highly depreciable inventories and accounts.

He emphasized that numerous businesses are unable to reduce their liabilities from year to year. In addition, they often find their cash position to be in worse balance from 1 year to the next.

He concluded the net result of this is that the small business must expand its volume in order to take on these additional loads. But at the same time the small business is powerless to expand at a rapid rate because of the income-tax structure.

Mr. Wheeler then commended the President for his recommendation that relief be granted to small business, allowing them to receive the essential benefits from tax reduction.

I have restated several of the ideas from this businessman's letter because it typifies the comments and suggestions I have been receiving. I therefore feel it is essential that small business be granted tax relief, and I have joined several other of my colleagues in introducing a bill to accomplish that purpose.

The bill calls for a substantial tax relief for small firms with incomes under $150,000 a year. It is designed to continue the protection Congress has historically afforded small business in this country and yet permit small firms to grow and adapt themselves to the complexities of our modern economy. It is very true, just as my businessman friend had indicated, that profits of small firms are subject to more frequent and violent fluctuations over a period of years than those of larger concerns. The inability of small businesses to retain stable earnings, both because of high taxes and these fluctuations, prevents the use of earnings for needed expansion and investment.

Congress has a commendable record of passing legislation through the years that in most instances has permitted a healthy climate for business. This started in 1890 when a Republican Congress passed the Sherman Antitrust Act. Since that time Congress has attempted, with considerable success, to protect small businesses, prevent restraint of trade, and maintain competition in the free enterprise system that has made this Nation great. Nonetheless small business must be given a better tax break if it is to continue as the cornerstone, yes, the very foundation, of the American free enterprise systems. Small firms usually start operations undercapitalized and even after some successful operation are unable to attract sufficient investment capital.

The bill I am offering provides for necessary growth and modernization of small businesses by initiating a reduction in normal tax rate from 30 percent to 20 percent and also providing small firms with tax amortization certificates enabling them to write off over a 5-year period the cost of expanding and modernizing their facilities.

In addition, if the small firm's taxable income is not over $10,000, it would be allowed to deduct for modernization purposes up to 50 percent of its taxable income with the deductible percentage reducing as income increases.

Other sections of the bill would provide accelerated depreciation on purchases of used equipment or property, allow an exemption from estate taxes for the so-called good will of a firm as an incentive to its owners to continue the business after the death of one of the leading figures, and provide for installment payment of estate taxes over a 10-year period to prevent disruption of business operations.

These benefits would serve as an incentive for persons to invest in small firms as would the additional provision for more liberal treatment for losses and bad debts.

The multiple benefits of this proposed legislation also apply to the farmer as a small-business man. This is also important to the farming and ranching business in South Dakota. Many family-sized farms and ranches would benefit greatly from the exemption for the improvement, modernization, and renewal of buildings and equipment used in the production of agricultural commodities.

Tax Merry-Go-Round

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am including an editorial which appeared in the Janesville Daily Gazette on March 9, 1957, in which the editor points out just what is going on in this matter of taxing and spending. The editorial follows:

TAX MERRY-GO-ROUND

A cartoon on this page today captures the nub of high taxes and high spending.

Everyone is for government economy and for lower taxes. The trouble is that there are too many who want economy somewhere else, and tax spending for their own pet project.

Janesville, Rock County, and Wisconsin are not without blame for the system as we have it. We in Janesville are now in line for State-Federal help in reconstruction of Highway 51 through the city, along with a new bridge.

As a second example, Rock County is hopeful of obtaining $90,000 in State and Federal funds to cover 75 percent of the cost of a new terminal building at the county airport. Both city and county are looking for aid in bridge and road building.

While there is opposition, heads of the Wisconsin educational system are among those on record as favoring Federal aid for schools. Federal interstate and primary highways are already on the drawing boards.

As city and county citizens contributing heavily in Federal and State taxes, our only hope of getting anything for our money is to grasp for handouts from Madison and Washington. If we could pay our money into the home town treasury we could easily finance all of the improvements for which outside money is "given" to us and save a prodigious amount besides.

By asking for a share of our own money back for local developments, however, we contribute to what State and Federal office-holders call pressure. Since the money is already being taken away from us and we are put in the position where we must ask that some of it be returned, we are "demanding" more and more in Government

services and expenses. Our representatives in Washington and Madison are thus put in the position where they can do us a favor by handing back a small percentage of what has been taken away from us.

Crazy? Yes, but that's the way America is running today.

How H. R. 11 Affects Freight Absorption

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. PATMAN. Mr. Speaker, one of the most frequent questions raised about H. R. 11, the equality-of-opportunity bill, is whether or not, under this bill, producers could absorb freight. I would like to answer this question and in doing so, I believe that I may be able to point out some aspects of the present law on which some of the Members may not be fully informed.

To illustrate, several days ago I received a letter from one of the smaller steel companies which I quote, in part, as follows:

Our competition is from small companies up through to the largest, United States Steel Corp.

We have to make freight allowances when our customer's plant is nearer to another strip steel mill than to ours. That means that our prices vary according to the location of our customer.

We cannot stay in business unless we are allowed to meet competitive prices.

Under H. R. 11, introduced by you, would we be allowed to meet this competition?

In my reply to the above question, I have tried to point out what the present law on freight absorption is and how H. R. 11 would fit into the present law. My reply to the gentleman's letter is as follows:

DEAR SIR: • • • This bill will not prevent freight absorption; and I think that it will in no way change existing law with respect to freight absorption practices described in your letter.

DEFINITION OF ILLEGAL PRICE DISCRIMINATION

The bill is concerned only with a supplier's discriminations in price as between its different customers where the effect may be, in the language of the bill, "substantially to lessen competition or tend to create a monopoly." This language which defines an illegal discrimination is, incidentally, the same language which defines an illegal merger under section 7 of the act and an illegal exclusive-dealing contract under section 3 of the act.

THREE KINDS OF "SUBSTANTIAL LESSENING" OF COMPETITION

Perhaps the best way to clarify the matter for you is to point out that three entirely different kinds of competitive situations have come to be regarded as "substantially lessening" of competition under the act. The legislative purpose of the act, both in 1914 and in 1936, and now, is to curb price discrimination simply for the reason that the practice involves an abuse of marketing size whereby big firms destroy or squeeze out smaller firms.

(1) Big supplier destroys small suppliers

Thus one kind of "substantial lessening" occurs where a producer which has a considerable size advantage over its competitors, by discriminating in price, destroys the smaller competitors. In 1914, the Congress was mainly concerned with this kind of "substantial lessening." For example, the old Standard Oil Co. which was subdivided in 1912, had acquired better than a 90 percent monopoly of refined products simply by cutting prices in one market at a time until it destroyed its smaller competitors or drove them into merger.

(2) Supplier creates inequalities among his dealers

Another effect of the supplier's discriminating in price is, however, that when you have a general regime of discrimination the almost invariable rule is that the big buyers receive an unearned advantage by which they may destroy or squeeze out smaller competing buyers. This is the kind of substantial lessening with which we were principally concerned in 1936 and with which H. R. 11 is concerned.

(3) Suppliers restrain competition among themselves

Beginning with its so-called basing-point cases of a decade or so ago, however, the Federal Trade Commission injected a third kind of substantial lessening of competition. Thus there were several cases in which the Commission charged, and subsequently found, that in some industries the producers maintained a basing-point system of pricing by agreement and conspiracy in violation of the anticonspiracy law. In several of these cases the Commission threw in collateral charges that the antiprice discrimination law had also been violated, on the theory that the conspiratorial basing-point system involved a systematic discrimination in prices. The substantial lessening of competition which was alleged to flow from this discrimination, was not that big producers were destroying small producers by unfair means or otherwise. It was also not alleged to be that the discriminations created any inequalities among competing buyers which put some buyers at a substantial competitive disadvantage over others. Rather the allegation was, as would logically flow from the conspiracy charge, that price competition among the producers engaged in the systematic discriminations had disappeared and thus there was a substantial lessening of competition among these producers. The Supreme Court upheld this theory in the Cement case.

DISCRIMINATIONS MADE BY CONSPIRACY ARE NOT IN GOOD FAITH

Coming back now to H. R. 11, it is concerned only with the abuse of power kind of lessening of competition by which bigger firms destroy smaller firms. It is not concerned with conspiracy or conspiracy-type situations. In short, the bill amends only the so-called good faith defense in section 2 (b) of the act. The bill says, in effect, that where a supplier's discriminatory practice results in a substantial lessening of competition or tendency to create a monopoly, the practice is illegal despite the fact that the discriminations may be made in good faith to meet the lower price of a competitor. Such substantial lessening will require the enforcement agencies to prove that the supplier is creating such inequalities among competing customers that competition is substantially lessened.

The "good faith" phrase in the law, under present interpretation, is a presumptive matter. The seller who shows that his discrimination was made to meet the lower price of a competitor, or shows that he had reason to believe that he was meeting the price of a competitor, although he may not have been doing so in fact, is presumed to be in "good faith". This presumption is overturned, however, and the absence of good faith is established, where the enforcement agencies show the existence of a conspiracy to carry on the discriminations. Hence our third kind of "substantial lessening", which rests on a conspiracy, is not now justified by the 2 (b) defense, since it does not now pass the "good faith" test.

WHAT H. R. 11 REQUIRES

All of this means that under the bill, the seller would be required to avoid creating such gross inequalities among competing buyers that competition is "substantially lessened". Nothing would be added to or taken from the present requirement that the seller also avoid agreements or common understandings with his competitors to use a pricing system to lessen competition among themselves.

I hope you will pardon the great length of this letter; I wanted to try to make sure that you understand precisely what is involved in the bill.

Sincerely yours,

WRIGHT PATMAN.

Will the Budget Be Cut?

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. CURTIS of Missouri. Mr. Speaker, I would like to insert in the CONGRESSIONAL RECORD an editorial which appeared in the St. Louis Post-Dispatch of Thursday, March 14, 1957, entitled "According to the Rules." This is a rather cynical approach, but the editors of the St. Louis Post-Dispatch have been long time advocates of bigger government in Washington which means bigger Federal budgets. The cynicism set forth in the editorial regretably may be justified, however, I am hopeful that this time the people are really behind the movement to cut down on the size of big government in Washington. Nonetheless, I do not believe I will accept the bet the editors offer.

The editorial follows:

ACCORDING TO THE RULES

Nobody should take too seriously the strictly party-line vote by which the House passed a resolution calling upon President Eisenhower to point out where budget cuts can be made. This is just part of the ping-pong game the executive branch and the Congress are playing with the White House recommendations for the biggest peacetime budget in history.

Mr. Eisenhower, who is supposed to be a novice, has learned the game pretty well himself. He batted the ball right back by simultaneously (1) denying that he had ever asked Congress to cut his budget; (2) challenging Congress to go ahead and cut it; (3) putting in a plug for 4-cent letter postage.

It's all part of the game and the game bears a close relationship to two events—to the strident economy cries emanating from business organizations, and to the income-tax consciousness of the public as April 15 with fateful implacability approaches.

After April 15, we'd be willing to bet, there will be much less talk about economy in Washington. The punitive 26 percent slash in appropriations for the White House, just triumphantly voted by the House, will then be quietly restored in the Senate, and the House will quietly accept the restoration. The speeches will be loud, and the voting

soft. And when it is all over, the total sums available for spending will in all likelihood be pretty close to the $71.8 billion that is recommended but not defended by the administration. That is usually the way it goes with budgets.

Homes Versus Ships

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. HERLONG. Mr. Speaker, in my Fifth Congressional District of Florida veterans are having a most difficult time getting mortgage money for homes because the 4½-interest rate is not a sufficient inducement to lenders in today's high money market.

A preliminary examination of a questionnaire I sent out to the people of my district shows that the majority favor an increase in the VA mortgage rates.

In connection with this situation, I present a timely editorial from the Orlando Sentinel, Orlando, Fla., of March 15, 1957:

HOMES VERSUS SHIPS

The complexity of present-day Government grows more and more confusing to the average citizen.

In a recent hearing before the Veterans' Affairs Committee of the House it was revealed that the Government backs maritime 5½ percent bonds 100 percent, while its guaranty for 4½ percent GI mortgage loans on homes is only 60 percent.

To us this is just like saying it is more important that Gulf, Bethelehem, Ingalls and other big shipbuilding firms are financed than it is to house the men who fought our last two wars for us.

Naturally any moneylender is going to grab a 5½ percent, 100-percent guaranteed bond ahead of a 4½ percent, 60-percent guaranteed piece of paper.

Bowery Savings Bank bought $110 million of the maritime bonds. Before the tight money market beset the Nation Bowery had invested $160 million in Florida home mortgages.

It is apparent that unless interest rates on VA loans are raised to at least 5 percent, this source of money and business and new homes that growing Florida sorely needs will dry up.

Brailey Odham, of Sanford, told the committee in Washington that veterans are far more interested in getting well-built homes they can afford than they are in the interest rate they pay for the money.

"They want to know what the monthly payments are," said Odham. "They are intelligent people. They read the newspapers and know what is going on. They certainly know money is tight."

The Congress is the only body which can keep the important VA program going.

In Florida there have been 116,000 VA homes built and loans made. Losses suffered have been one-twentieth of 1 percent.

Here is a program which has been proved worthwhile.

Why abandon it when a mere adjustment to meet a changing money market would keep it pumping life into growing States?

If the money market goes the other way there's nothing to prevent Congress from lowering the rate. It started out at 4 percent, rose to 4½ percent, and now should go to at least 5 percent.

Congress ought to take a realistic view of this important part of our economy.

Louis Hector, Nominee for CAB Vacancy, Outstanding

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

Mr. FASCELL. Mr. Speaker, it is axiomatic that there are at least two sides to every question. In one of his recent columns Drew Pearson presented one interpretation of the significance of the nomination of Mr. Louis Hector, of Miami, to be a member of the Civil Aeronautics Board.

The question of what is truth is not a simple one. In our complex world no single fact stands alone, rather even a supposedly simple fact necessarily rests on certain assumptions and points of view. We are all more or less in the position of the five blind men who sought to describe an elephant.

It is much the same way with news. One columnist or newspaper may touch a part of the truth and the public thinks, "This is how it is." But, one cannot always get a correct overall picture of the truth from an understanding of only one or more parts of the news. To get the whole truth, one needs to get the whole story.

I have known the Hector family for over 20 years. They are one of Florida's finest. Louis Hector is an outstanding man. He has the ability, integrity, judgment, and character to do an excellent job.

In the case of Mr. Hector's nomination, Mr. David Kraslow, the Washington correspondent of the Miami Herald, has interviewed the people concerned and come up with a number of points which support a quite different overall interpretation from that advanced by Drew Pearson. Representative government requires an enlightened public aware of both sides of important questions. We are all agreed that a responsible press is one of the greatest means of promoting an enlightened public.

Mr. Kraslow's article follows:

PEARSON FOUND OFF THE BEAM ON CAB CHOICE

(By David Kraslow)

WASHINGTON.—It was only little more than a week ago that columnist Drew Pearson observed Washington's Birthday by writing an open letter to his grandson about the meaning of truth.

Pearson's letter appeared in the Miami Herald, which regularly publishes his column.

It was a good letter simply because it stressed that which needs stressing, and not just on Washington's Birthday.

Truth and accurate reporting, as Pearson well knows, are trademarks of responsible journalism.

HANDPICKED?

Yet on the day after he wrote the letter about truth, Pearson clobbered Louis Hector, a Miami attorney, with an unfair and wholly irresponsible bit of reporting.

Hector is about to become the first Floridian ever to serve on the Civil Aeronautics Board. There is nothing in his past to indicate anything but respectability.

Hector hasn't even been confirmed by the Senate, but Pearson already has him, in effect, using his position on the CAB to carry the ball for Pan American World Airways.

This is because, according to Pearson:

Hector was handpicked for the job by Senator GEORGE SMATHERS, and the Senator's law firm in Miami—Smathers, Thompson & Dyer—represents PAA.

ADDITION WRONG

It's no secret that SMATHER'S law firm represents PAA in court actions or that SMATHERS and Hector have been longtime friends, or that SMATHERS strongly supported Hector's appointment.

It's just that Pearson's addition is all wet.

If Pearson had bothered to make a few telephone calls, he would have come up with an entirely different story—one supported by the facts.

HOLLAND DID IT

It was Senator SPESSARD HOLLAND, not SMATHERS, who talked to Presidential Assistant Sherman Adams about getting Hector on the CAB.

And HOLLAND'S law firm in Bartow, incidentally, does not represent PAA.

HOLLAND talked with Adams about Hector on 3 or 4 occasions. Adams even telephoned HOLLAND once to obtain additional information on Hector.

Hector is far from a stranger to HOLLAND. The Senator has known the family for many years. When he was governor in 1941, he appointed Hector's father, Harry, to the State road board.

BOYD MENTIONED

When a former Texas Congressman turned down the CAB appointment and it began to appear as if a Floridian could get the Democratic vacancy, SMATHERS telephoned HOLLAND in Florida.

During that conversation, SMATHERS suggested Alan Boyd, chairman of the Florida Railroad and Public Utilities Commission, for the job, and said he thought Hector might also be considered.

Boyd was SMATHERS' top choice after John Stembler, of Atlanta, a former Miamian, was no longer in the picture.

SMATHERS asked HOLLAND to contact Adams and recommend Boyd and Hector. SMATHERS told HOLLAND he felt HOLLAND ought to be the one to do this because he was closer to Adams.

HOLLAND agreed, but only on the condition that Hector be placed first and Boyd second. He said he had a high regard for Boyd, but felt that Hector had to be his first choice. SMATHERS agreed to go along.

Later, Boyd asked that his name be withdrawn, leaving the field pretty much to Hector.

And that, Mr. Pearson, is how the people who know say it happened.

TOUCH OF IRONY

There's a touch of irony to having Hector tabbed as a PAA man.

Hector was, for a time, with a Miami law firm which then represented—and still represents—National Airlines.

This was known by Adams before the White House announced the nomination.

It would seem that Hector deserves to be judged on his performance as a CAB member, rather than prejudged on the basis of conclusions which do not appear to be supported by the facts.

Brief in Answer to the Army's Case for Closing the Murphy General Hospital, Waltham, Mass.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following brief in answer to the Army's case for closing the Murphy General Hospital, Waltham, Mass., which has been submitted by Mr. Kenneth T. Lyons, national commander of the Federal Employees Veterans' Association, Watertown, Mass.:

In answer to the Army's six-point program as to why the hospital should close, the Federal Employees Veterans' Association produces the following facts and figures showing where the Army exaggerated and misconstrued the hospital's extreme value.

1. The Army's claim that the hospital was doing only a trickle of business compared with other Army general hospitals and that of what it did during the Korean war is not true. The fact is that Murphy Army General Hospital is operating at 80 percent capacity (129 bed patients, 2,800 outpatients per month) as authorized by Congress.

2. The Army's claim that cost per patient was nearly double corresponding costs for other general hospitals throughout the Nation might be true but the Army's authorized strength of officers and enlisted personnel to service the hospital is 173 but presently assigned to the hospital are 215. Authorized doctors' pay is $10,851 per month, actually assigned doctors' salary is $17,000 per month. Enlisted payroll per month is $23,000 or $7,000 more than authorized. From these figures of overstaffing by the Army in Washington, we can easily see why Murphy's costs run higher than those of other Army hospitals.

3. The Army's claim that there are adequate facilities for accommodating servicemen and their families at five other installations in Massachusetts is violently incorrect. At present there are three station dispensaries (not hospitals) caring for minor injuries and emergencies located at the Army Base, Boston; Hanscom Air Field and Westover Air Base, who after preliminary treatment transfer these patients to Murphy Army Hospital. Chelsea Naval Hospital and Fort Devens facilities are operating under full-capacity loads.

4. The Army's claim that there are three times as many hospital employees at Murphy Army Hospital as there were patients is most ridiculous. Murphy has 214 civilian employees caring for 129 bed patients and 2,800 outpatients per month. The civilian personnel are also assigned to the care, preservation and maintenance of the Air Force and the Department of Engineers areas who are now occupying one-third of the total hospital facilities.

5. The Army's claim that highly skilled medical personnel were desperately needed in other assignments throughout the country is easily refuted when you consider the number of Air Force, Army, and other military personnel assigned to this area who are in constant need of proper medical attention. We are in a greater need for a general hospital than any other area due to our vast military population. At present many New England armed service personnel are being sent to hospitals in Washington, D. C., and Pennsylvania due to inadequate facilities here.

6. The Army's claim that the Air Force and Department of Engineers need for space of the entire hospital will help the economy of Waltham and will satisfy these two units' need for additional space is "false economy" as both the Air Force and the Department of Engineers had ample opportunity to make use of thousands of square feet of vacant space in vacant buildings at the Boston Army Base. Local economy at the expense of depriving proper medical attention and service to military personnel and their dependents as well as retired military personnel is against our American way of life.

At present the following services have been given by the hospital to military personnel, their dependents and to retired military personnel during the month of January:

Outpatients	2,800
Admissions, bed patients	249
Laboratory tests	4,000
Prescriptions filled	5,200
X-rays	1,700

The medical care bill that was passed by Congress in 1956 was not a cure-all for military personnel and their dependents due to redtape and loopholes incorporated in the medicare bill. Actually the Army hospital has shown a 20 percent increase in services since the passage of the medicare bill.

To close the Murphy Army Hospital at a time when we have just introduced the largest peacetime defense budget together with the fact that there has been no lessening of our military strength is dangerous and can only bring severe hardships to thousands of Massachusetts and New England people.

Here's What Happened to the Republican Corn Bill

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. HOEVEN. Mr. Speaker, despite warnings that corn and livestock prices might be jeopardized if an emergency corn program was not enacted immediately, the Democratic-controlled House on Wednesday last killed off such a Republican-sponsored program by a vote of 217 to 188. Several days earlier, the House killed a similar Republican-backed plan by a vote of 187 to 180.

I am sure the corn farmers of the country are not fooled by what happened to the badly needed corn legislation. Certainly the Nation's press was not fooled and placed the responsibility squarely on the Democrat majority. Let me cite just a few representative headlines which tell the story.

The Washington Post and Times Herald pinned the blame where it belongs in the following headline: "House Democrats Block GOP Move for Emergency Midwest Corn Relief." Here are some other headlines worth noting:

Minneapolis Tribune: "Democrats Beat Ike Corn Soil Bank Bill."

Indianapolis Star: "House Beats GOP's Corn Bill in Row."

Roanoke (Va.) Times: "House Kills GOP Farm Bill To Aid Corngrowers."

Tulsa Daily World: "Demos Defeat Corn Relief by Seven Votes."

New York Times: "GOP Corn Subsidy Plan Killed in House, 217 to 180."

Baltimore Sun: "GOP Corn Aid Bill Loses."

American Legion Birthday

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. McGOVERN. Mr. Speaker, the American Legion has just celebrated its 38th anniversary. I am sure that we all owe a debt of gratitude to the men and women of this great organization—not only for their sacrificial service in wartime, but for their continuing interest in the kind of a peacetime America for which good Americans have always worked and fought. The record of the American Legion in such vital fields as national defense, child welfare, education, and civic improvement is well known.

The Watertown (S. Dak.) Public Opinion, in an editorial dated March 13, 1957, has ably summarized some of the many distinguished achievements of the Legionnaires. The editorial is reproduced as follows:

AMERICAN LEGION BIRTHDAY

The American Legion, launched just after the armistice that ended the fighting in World War I in 1917, and formally organized a few months later, celebrates its 38th anniversary this week, March 15–17.

Its potential strength now augmented by the younger veterans of service in World War II and the Korean affair, the American Legion arrives at its 38th birthday with the largest membership in its history. Reports to the Codington County Post show that the Legion numbered more than 2 million members who had paid their 1957 dues before the first of this year, this achievement reflecting new interest in this organization among veterans substantiates the American Legion's expectation that it will pass the 3 million mark by a wide margin during 1957.

The American Legion has been a great power for good in the United States. It has been a good friend of education, largely instrumental in the organization and continued annual observance of American Education Week. It has been vigorously active in the fight against communism. It has had a broad and effective child welfare program for years. It has championed national security.

The American Legion has been nationally active in youth programs and in community civic development. Two of the outstanding achievements of the Legion in these fields in this community have been its sponsorship of the junior baseball programs and its purchase and donation to the city of Watertown of several acres of land as a site for the new armory, 4-H Club, and other facilities scheduled for construction this season.

Veterans' welfare has been one of the uppermost considerations in the Legion program in which it has effectively sponsored or campaigned for veterans legislation at the State and National level. It effectively supported organization and establishment of the Veterans' Administration.

Veterans of the last war benefited materially from the foresight of the older veterans, who were largely instrumental in bringing

about adoption of the GI bill of rights. More than 10 million World War II veterans received educational and vocational training at Government expense under the educational program set up by this American Legion-supported legislation.

The American Legion has a proud record of promoting both the national interest and the welfare of the Nation's defenders. It is entitled to a 38-gun birthday salute.

Lithuanian Independence Day

EXTENSION OF REMARKS

OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, February 4, 1957

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the Record, I include the following resolution adopted by the American Lithuanian Council of Norwood, Mass., in connection with the observance of the 39th anniversary of the declaration of independence by Lithuania.

We, the Lithuanian Americans of the town of Norwood, Mass., gathered together on the 17th day of February 1957, to recall to mind the valiant efforts of the Lithuanian nation in the great struggle for freedom and to commemorate the 39th anniversary of her declaration of independence.

Whereas having dutifully listened to the orators and their inspirational messages, fully aware of the gravity of the international crisis that has confronted the world during the past year and the present, cognizant of the horrendous reality which exists in the land of our ancestors—Lithuania, and also in all the Communist enslaved nations as was so shockingly demonstrated by the cruelty perpetrated in Hungary;

Whereas the Communist rulers of Russia violated all the human rights guaranteed under the United Nations Charter, in the Declaration of Human Rights, in the Genocide Convention and other bilateral agreements: Therefore be it

Resolved, That we humbly appeal to the conscience of the people of the free world, begging for their help in the name of justice and freedom; be it further

Resolved, That we protest the annihilation of nations and the suppression of the freedom in the lands under Communist domination; be it finally

Resolved, To petition the Government of the United States:

(1) To utilize all imaginable ways and means of stopping the annihilation of the Lithuanian nation and bring an end to their forced exile in the slave camps of Siberia;

(2) To compel the Russian Government to withdraw its forces of occupation from Lithuania and allow the people of this land to choose freely their own form of government and reestablish a free democratic Lithuanian nation;

(3) To request the United States delegation to the United Nations, to bring up the question of the unjust occupation of Lithuania by the Communist Russian Government, condemn Russia as an unjust aggressor and impose sanctions upon her.

THE AMERICAN LITHUANIAN COUNCIL,
JOHN M. PECHULIS,
Chapter President.
PAUL TYLER, *Secretary.*

WALPOLE, MASS.

Thoughts on Labor, 1861–1957

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1957

Mr. MILLER of California. Mr. Speaker, Mr. Frank X. Veit is an officer of the Superior Court of the State of California in and for the county of Alameda and has been in that position for many years.

Prior to assuming his duties with the court, Frank Veit was an active member of the Molders' and Foundry Workers' Union and a sterling leader in the community of Newark, Calif., in which he resides.

In the February 1957 issue of the International Molders' and Foundry Workers' Journal an article appears by Mr. Veit entitled "Thoughts on Labor, 1861–1957." With this article, he included the statement by President Abraham Lincoln on the priority of labor.

I believe that this article is worthy of consideration by my colleagues and, under unanimous consent, I insert it in the Appendix of the CONGRESSIONAL RECORD:

THOUGHTS ON LABOR, 1861–1957

(By Frank X. Veit)

The month of February each year reminds the writer of our great President, Abraham Lincoln, and his birthday being celebrated this month.

It is regrettable that so few know the history of this great man. It is regrettable that Lincoln's priority-of-labor message to Congress is seldom, if ever, quoted at the many annual Lincoln Day dinners. In fact, the publicity of his priority-of-labor message is almost nil.

In the many years of experience of the writer, as a member of the Molders' and Foundry Workers' Union, as a delegate from local union No. 164 to the convention of the international union held in Cleveland, Ohio, in 1923, as a representative to the stove and heater conference several times, and as chief superior court clerk of the Superior Court for the State of California in and for the county of Alameda, Oakland, Calif., the writer has observed much about the law and its application, including the far-reaching Taft-Hartley Act and the part of the act which allows individual States to establish the so-called right-to-work laws. How this right to join or not to join a labor union can be construed as beneficial and protective for the workers is beyond the writer's knowledge of fairness or decency. Some of its cleverly worded features practically nullify organized labor, or reduce its effect to a minimum. Its sponsors and advocates know full well that the main intent and purpose is to individualize labor for easy exploitation purposes and to minimize collective bargaining by organization labor. It is their wish that by establishing a State right-to-work law, they can return to the nonunion or open shops of the days gone by.

The right to join or not to join a labor union is not the real issue. It's phony and pure propaganda promoted by the main sponsors and advocates of the Taft-Hartley Act. They wish participation of the nonmembers equally with the membership of organized labor in the benefits, working conditions, wages, and other compensations established by the membership of labor unions through collective bargaining, without the nonmembers sharing equally with the members in maintaining the obligations and burdens which are necessary to maintain labor unions. In this way, they feel that eventually, enough of the people will quit the unions to cause them to disintegrate.

It should be a well-known fact that under individual bargaining, there is no bargaining or equality of bargaining power between the individual employee and the employer, and this inequality of bargaining permits the employer to make all bargains and terms and the individual employee either takes them or leaves them, according to his necessity to work and the availability of jobs.

"In numbers there is strength and security." This is worth remembering. Without 100-percent organization in a plant, there is no real effective collective bargaining power. There is a fundamental and sound principle of law that says that, "all laws must be equally applicable and obligatory upon all, and he that takes the benefit shall bear the burden." In accordance with that fundamental and sound principle of law, it follows with, "no person has the right to participate in the benefits, working conditions, wages, and compensation established by collective bargaining, without also participation equally in the obligations as a member of a labor union."

Prior to the Taft-Hartley Act, we had the Wagner Labor Act, which was established in 1935. There was nothing wrong with this labor act except that a few people felt it gave labor too many rights, and so to tighten up on labor, the Taft-Hartley Act was written to replace it. The advice of the writer to labor is to read and study the Taft-Hartley labor law together with the Wagner labor law and familiarize itself with the features of both and then to compare both with Lincoln's prophetic and immortal words in his "Priority of Labor" message to Congress. In view of Lincoln's prophetic words, it is reasonable to assume that, were he President at the time of the passage of the Taft-Hartley labor law, he would have vetoed the act.

"THE PRIORITY OF LABOR

"(By Abraham Lincoln, from one of his messages to Congress)

"I see in the near future a crisis approaching that unnerves me, and causes me to tremble for the safety of my country. As a result of war, corporations have been enthroned, and an era of corruption in high places will follow, and the money power of the country will endeavor to prolong its reign by working upon the prejudices of the people until all the wealth is aggregated in a few hands and the Republic is destroyed. I feel at this moment, more anxiety for the safety of our country than ever before, even in the midst of war. God grant that my forebodings may be groundless.

"Monarchy itself is sometimes hinted at as a refuge from the power of the people. In my present position I could scarcely be justified were I to omit to raise a warning voice against the approach of returning despotism. It is not needed nor fitting here that a general argument should be made in favor of popular institutions; but there is one point with its connections, not so hackneyed as most others, to which I ask brief attention. It is assumed that labor is available only in connection with capital; that nobody labors unless somebody else owning capital, somehow by the use of it, induces him to labor. Labor is prior to and independent of capital. Capital is only the fruit of labor, and could not have existed if labor had not first existed. Labor is the superior of capital and deserves much the higher con-

sideration. I bid the laboring people beware of surrendering the power which they possess, and which if surrendered will surely be used to shut the door of advancement for such as they, and fix new disabilities and burdens upon them until all of liberty shall be lost.

"In the early days of our race, the Almighty said to the first of mankind, 'In the sweat of thy face shalt thou eat bread,' and since then, if we except the light and air of Heaven, no good thing has been or can be enjoyed by us without first having cost labor, and inasmuch as most good things have been produced by labor, it follows that all such things belong of right to those whose labor has produced them. But it has so happened, in all ages of the world, that some have labored and others have without labor enjoyed a large portion of the fruits. This is wrong and should not continue. To secure to each laborer the whole product of his labor, as nearly as possible, is a worthy object of any government.

"It seems strange that any man should dare to ask a just God's assistance in wringing bread from the sweat of other men's faces. This country, with its institutions, belongs to the people who inhabit it."

This Is "Declaration of Dependence" Day

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, the Reverend James Keller, in a recent news article, calls attention to a historic fact of some significance. It appears that the First Continental Congress issued a solemn proclamation of reliance upon God. John Hancock, as President of that First Continental Congress, signed what was called the Declaration of Dependence.

It would seem to me, Mr. Speaker, that this Congress should well reaffirm the dedication of that First Continental Congress that as a Christian people, we depend upon Almighty God to sustain us in our personal lives and as a nation.

The article by Rev. James Keller follows:

THREE MINUTES A DAY—IMPORTANT DECLARATION

(By Rev. James Keller)

On July 12, 1775, a year before the signing of the Declaration of Independence, the First Continental Congress issued a solemn proclamation of reliance upon God. It has since become known as the Declaration of Dependence. John Hancock signed it as President of this Congress.

It urged the observance of a special day of prayer for divine guidance in the crisis facing the young Nation.

Here are the opening words:

"As the great Governor of the world, by His supreme and universal providence, not only conducts the course of nature with unerring wisdom and rectitude, but frequently influence the minds of men to serve the wise and gracious purpose of His providential government."

Dependence upon Almighty God was an outstanding feature of the beginnings of our great country. It must continue if we are to survive as a free nation.

Those who would undermine our country are champions of atheism. They know they must first remove that "dependence" on God before they can enslave us. That should be a challenge for all of us to be up and doing.

"The fool hath said in his heart: There is no God." (Psalms 13: 1.)

Awaken us, O Jesus, to a renewed sense of dependence on Thee.

Tax Rate Extension Act of 1957

SPEECH
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 14, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 4090) to provide a 1-year extension of the existing corporate normal-tax rate and of certain excise tax rates.

Mr. HEMPHILL. Mr. Chairman, it was with great reluctance that I voted, along with other Members of the House, for H. R. 4090, extending the tax rate on certain commodities for 1 year. Not only did this extend the normal-tax rate, but it extended excise tax rates on these commodities.

The commodities themselves are not the important items in this consideration; the danger of this legislation is that it recognizes the spending spree of the Eisenhower administration, and gives no hope to the American taxpayer, and the American businessman, for tax reductions.

We all know that the budget submitted to us by the administration is preposterous. On the one hand, the administration recommends appropriations in the budget and, on the other hand, says the budget must be cut. It does so without any apparent difficulties of conscience, and tells the American taxpayer to look to the Congress.

In the hearings on this legislation we have just passed, if I am correctly informed, the administration describes the extension of the tax rate as a necessity in order to meet the heavy expense of the Government.

I am surprised they did tell us this is an emergency as the Eisenhower administration, under the leadership of Mr. Dulles, has kept us in a state of emergency for 5 years. I just wonder how much of the money is committed to some despotic government, and how little the American taxpayer is going to get out of the extension of this tax rate.

I hope and pray that this Congress in 1958 will give a tax cut to the American people. If the administration will not assume the leadership in this necessary change in our affairs, then we must assume that leadership here in the House.

I know Mr. Cooper and his committee worked hard and diligently on this, hoping to get us a tax cut. He has told me; and he and his committee are just as distressed over this high spending as any other American citizen or group of citizens.

I shall continue to vote for a reduction in the budget and I hope that those departments of the Government where the budget is being reduced will renew their sense of obligation to the American people and will tighten their belts and help us reduce taxes next year.

Tight Money Policy

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks I include letters from two of my constituents, and other material.

These letters from two prominent and successful men in separate fields of endeavor show the terrible toll that the tight money policy is taking.

The letters are from Mr. John Schwegmann, Jr., and Mr. Robley J. Gelpi.

The letters and article follow:

ROBLEY J. GELPI & SON,
New Orleans, La., March 7, 1957.

Hon. HALE BOGGS, M. C.,
Congressional Building,
Washington, D. C.

DEAR HALE: I am writing for information regarding the chaotic condition existing today in the $16 billion home-building industry.

From the reports we see in the press, it is apparent that the Congress is aware of the situation, but these reports indicate a state of confusion in the committee hearings.

Existing conditions in the home-building industry are the direct result of a monetary policy of the present administration. This policy could result in a serious economic recession, even a depression, if the Congress does not act immediately.

It is my opinion that the Congress should investigate the policies of the Federal Reserve Board and the Federal National Mortgage Association. These two agencies are directly responsible for the conditions existing today in the money-lending field.

The Federal Reserve Board's policy today seriously affects small business and has cost the Federal Government almost a billion dollars annually on its bonded indebtedness.

The Federal National Mortgage Association, created by Congress to bolster the mortgage market, is actually setting the prices that private money lenders are paying for mortgages. Today, FNMA is buying mortgages at 92; in other words, as a discount of 8 percent.

Did you know that FNMA has been paying 1 percent more for mortgage loans in Mississippi than in Louisiana or New Orleans?

I am enclosing a copy of the National Market Letter prepared by the Real Estate Research Corp. of Chicago. I have circled a section of this letter on page 2 regarding mortgage lending. This is very interesting, except that it does not state the price paid for the money.

I have talked with you several times in the past regarding this matter; however, it had never reached the serious proportions of the present time. Something has to be done to remedy this serious threat to the national economy, and I sincerely hope you see the threat as it really exists.

I would appreciate your advising me whether or not the Congress will act to rectify this condition at an early date, as well

as your views regarding my thoughts outlined above.

With kindest personal regards and best wishes, I am

Yours very truly,

ROBLEY J. GELPI.

SCHWEGMANN BROS.,
Metairie, La., March 8, 1957.

The Honorable HALE BOGGS,
House Office Building,
Washington, D. C.

DEAR SIR: Enclosed is a copy of an article written by me that appeared in our advertisements the week of April 23, 1956, shortly after the Federal Reserve System increased its bank lending rate. Now, I believe, conditions are just as bad as we thought they would be, as shown in the article.

Do not misunderstand me, I believe the Government should take the necessary steps to combat inflation, but there is such as tightening the screws too far. Money conditions today are so tight that even long-established businesses (among which I count Schwegmann Bros., due to our phenomenal growth, the amount of business we do, and the public acceptance we enjoy) are having a very difficult time borrowing money. The usual sources of financing are not available, all due to the tight money situation.

No doubt you know that we are in the process of building our third store, a service which is greatly needed in the area where our building is located. Today, after contacting several insurance companies, most of them report they are not making any large loans and the ones who are lending any money at all are committed all the way into next year.

You can imagine the difficulty a small independent business-man would have obtaining financing for remodeling, not to mention expansion, if I am having trouble, with the assets I have, including a 50-percent equity in the building. In this area, I have not seen an independent branch out in the last 8 years, other than the first store or two. In our area we have national chain stores, instead of local men who pay taxes, vote, and spend their money here. I am not against national stores coming into our section, but I wish to point out to you that the independent has no chance to expand because the money market is not available to him. In regional shopping centers, of which we have two in the greater New Orleans area, independents were not eligible, because the financing paper could be sold much more readily if the occupants of the shopping center were nationally known or part of a national chain. At this time I am preparing a bond issue to be sold to my customers in the greater New Orleans area.

In the present tight money situation, the small independent business-man is being squeezed, and when I say small man, I include myself. And remember, this is a man-made situation. It was not brought about by economic necessity—it was artifically, purposefuily conceived in Washington, and unless this condition is changed, many people will be thrown out of work and many concerns will go into bankruptcy, especially those who have real estate in the process of dividing into subdivisions, etc.

I was prompted to write you this letter because of your interest in the small businessman, and because I believe I noticed in the paper that you were attempting to have some legislation put into effect to help the independent.

With kindest regards and best wishes,

Yours very truly,

JOHN SCHWEGMANN, Jr.

[From the New Orleans Times-Picayune of April 23, 1956]

DOES THE GOVERNMENT THINK WE HAVE IT TOO GOOD?

Since last April, the Federal Reserve System has increased its bank lending rate five times. Last week it ordered into effect on its member banks the highest discount rate since 1933. This makes it more expensive for commercial banks to obtain money to satisfy their clients' demand for credit. Banks have to pay higher interest, therefore they must charge higher interest. Loans are harder to obtain, more collateral is asked, and general progress is impeded.

In order to have full employment, at good wages, it is necessary that sound business enterprises be able to secure credit at all times, and at low interest rates. This country operates on credit—which must be available and reasonably easy to secure. Under the increasingly high discount rates of the past year, the money market has tightened up considerably, which effectively ties the hands of all business which is planning expansion programs. It is especially hard on the small independent buinessman, because he must depend on his bank, while the large corporations can float a bond issue, or sell stocks. It is also hard on would-be homeowners, who have to pay higher interest on home loans. Every kind of a loan will be a little more difficult to get, and will cost more in interest—even installment loans on washing machines, televisions, or automobiles.

You may say—how could the Federal Reserve discount rate affect me? If you wish to own your own home, or if you buy anything on the installment plan, it affects you. To illustrate how much even a slight increase of one-half of 1 percent can affect the home buyer, when you buy a home costing $10,000 and pay for it over a 30-year period, 4 percent interest will amount to $7,210. When the interest rate is advanced by one-half of 1 percent, this increases the interest charges by $1,050. If you pay 6 percent interest, you might pay a total of $21,580 by the time you are through paying principal and interest on a $10,000 home.

Under the present tax structure, it is almost impossible for anyone to save money for the future, because there is so little left after taxes. Because so little can be accumulated from profits, no matter how successful a business is, money to expand and go forward must be borrowed. Sometimes the long term plans for expansion take months to perfect, and by the time the loan is approved the hard money policy is in effect, and the cost of borrowing is too high. When the cost of borrowing is too high, expansion is delayed or given up altogether, production falters, sales dry up, and people are thrown out of work.

Is it logical for the Government to tighten up money, discourage borrowing, and thus slow down construction at a time when we are still 15 to 20 years behind in home, hospital, and road construction? We have not solved our housing problems, our slum problems, or our road problems. Unless we are satisfied with the standard of living in this country, we must continually go forward, in manufacturing, in sales, and in consumption. Unnecessary high interest charges hamstring business, prevent expansion, and stagnate the economy of our country. In my opinion it is far better for the Government to keep interest rates low so that people may borrow, build, and progress, than to raise the rates and put millions out of work and let them live on unemployment insurance.

Tight money limits the number of businesses and makes it harder for new enterprises to develop, which limits competition and causes inflation.

When our country is able to loan billions of dollars to foreign countries without any collateral, or give the money or goods to them outright, what is wrong with showing a little faith in America, and the American businessman?

Du Bois, Pa., B. & O. Shops Pioneering With Assembly-Line Car Building

---

EXTENSION OF REMARKS
OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1957

Mr. VAN ZANDT. Mr. Speaker, the community of Du Bois, Pa., is mighty proud of the Baltimore & Ohio Railroad's shops pioneering assembly-line car building in the railroad industry.

The following article, appearing in the February 1957 issue of the B. & O. magazine, tells the story of the fine job that is being done by over 500 of my constituents who are employees of the B. & O. Railroad Shops, in Du Bois, Pa.

The article follows:

ASSEMBLY-LINE CAR BUILDING

If things continue as they have, Du Bois, Pa., may soon come to be known as the Detroit of the railroad industry—at least insofar as the Baltimore & Ohio Railroad is concerned.

For in this busy little metropolis, in a vast and modern B. & O. car shop, they're now building railroad freight cars on the assembly-line basis, which made Detroit famous as the capital of the automotive world. This is something new in the railroad business and we are proud that the B. & O. is the first road to introduce the technique. Although automobile manufacturers have been using the assembly line method for many years, for various reasons it had never been utilized by the railroads for the building of their equipment. Railroad cars were always considered too heavy and too massive to be built on the mobile, precision-timed assembly line.

It remained for Francis B. Rykoskey, B. & O.'s general superintendent of motive power and equipment and his staff, to set aside this notion and introduce the so-called Detroit method to the highly specialized business of building rail freight cars. And this is precisely what they have done, with the full support of our management, of course, in the Du Bois shops, where a million-dollar conversion program has transformed what was formerly a steam locomotive shop into one of the most modern railroad car building shops in the Nation.

The new assembly line method was first put in operation in October 1956 for the rebuilding of bad-order freight cars. Already production of cars has been doubled—and by the same number of men as were engaged in this work prior to the introduction of the assembly line. Today at Du Bois, 14 cars—4 gondolas and 10 hoppers—are being turned out every 8 hours. By March production will be upped to a total of 24 cars—10 hoppers, 4 gondolas, 10 boxcars—when additional work forces are added.

The sight of freight cars being built by skilled workmen, as the cars move to and from them, is something to see. Every 40 minutes, all cars under construction are advanced by an electric puller, for the distance of one car length. At each stop, waiting workmen perform their assigned duties. A warning whistle gives men 2 minutes' notice before each progression is made. Everything moves like clockwork—from underframe shop to paint shop, where finished products move out into service.

As word of this remarkable operation has gotten around, railroad and car building officials from many parts of the country have come to Du Bois to observe the work, firsthand. Most have watched with amazement and all have had nothing but praise for "the B. & O. assembly line."

Typical of the ingenuity being shown by our men in charge of the assembly line at Du Bois are such techniques as these: rebuilt cars are being given only 1 cross-coat of paint, whereas formerly 3 or 4 coats were required. This is thanks to a new type of paint which has been pioneered by manufacturers at our request. Every day a motive power supply train rolls up to the door of Du Bois shop and delivers the exact amount of materials that will be required for 1 day's work—thereby preventing excessive inventories, eliminating the need for large amounts of storage space and saving the company large sums of money per year. Throughout the operation, countless jigs, dollies, and other devices invented by men of Du Bois shop, themselves, are used to speed and facilitate work. Countless other examples of resourcefulness that pays off, could be listed for this operation.

How do Superintendent of Shops L. M. Schalk and his 563 men at Du Bois like the new method? They're all for it. This way work is better organized; material and tools are placed on the spot and work is brought to the men, instead of their being required to assemble what they need. This way, too, each man becomes an expert on one particular phase of car building, instead of performing a variety of jobs as under the old method, which was more time-consuming and more costly. With assembly line building, a greater number of cars can be turned out, work is more challenging and efficient and the savings are impressive. General Superintendent Motive Power and Equipment Rykoskey and Superintendent of Car Department R. B. Fisher are both high in their praise of men at Du Bois shop for the loyalty and enthusiasm with which they have entered into this important new undertaking, which could mark the beginning of a new era in railroad freight car building.

Already plans are on the drawing board for the installation of an assembly line for the building and rebuilding of B. & O. passenger cars at a shop location yet to be announced.

Of course, none of this would be possible were it not for the full endorsement which has been given the program by B. & O.'s management, which is wisely looking ahead to the future in its effort to strengthen our railroad's position on every front. This intent was reflected in a recent statement by President Simpson to a shipper: "We are pleased that our effort to provide the necessary equipment so vital to your industry meets with your approval," Mr. Simpson said. "I'm sure you know that our endeavor in this respect will not falter."

Vice President W. C. Baker, operation and maintenance, the man under whose jurisdiction the car-building program is conducted, has characterized the new assembly line method as a progressive step of real importance to our railroad, and one in which we have great faith.

The Du Bois assembly line for freight car building is only one part of B. & O.'s new freight-car program for car supply explained by Mr. Rykoskey in his message on the inside front cover of this issue of the magazine. But it represents the heart of the program which aims to increase our supply of serviceable equipment through systematic building and rebuilding of cars—a process which will make necessary only additional light repair work. How well the new program is already working may be seen by the drastic reduction of bad-order cars which has been accomplished. On March 11, 1955, we had 15,160 bad-order cars, or 16.8 percent. By January 11, 1957, these had been reduced to 3,282 bad-order cars, or 3.5 percent. Putting it another way, since March 11, 1955, we have been able to increase our supply of serviceable cars by 11,815, thanks to the accelerated-car program.

They may not be Cadillacs—those gleaming hopper and gondola cars coming off the Du Bois assembly line at the rate of 14 a day, now. But they look mighty good to us. They spell traffic, dollars and cents, and they hold a world of promise for the future.

Public Power

EXTENSION OF REMARKS

OF

HON. GEORGE H. CHRISTOPHER

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1957

Mr. CHRISTOPHER. Mr. Speaker, the most recent annual report of the Rural Electrification Administration covering 1956 shows that the REA co-ops provided 19,933,423,100 kilowatt-hours of electrical energy in 1956, and 8,060,625,900 of these kilowatts were purchased from private power companies, representing 40.4 percent of all the current used. The remainder was obtained from public power systems and their own generators.

So, it would seem to me that private power companies should consider the REA systems in the United States as very good customers, especially in view of the fact that they purchased over 8 billion kilowatts from them in a single year. But it seems instead of considering them good customers they are bending every energy toward the destruction of REA's and public power.

A new water resources policy, regarding public power programs that would first curb and then eliminate public power was drawn up by Secretary of Agriculture Benson, Secretary McKay, then of Interior, and Secretary of Defense Wilson. This recommendation or policy goes much further than even the Hoover Commission report in its proposal to stop the generation of power in flood control and irrigation projects. Even President Eisenhower endorsed the plan and presented it to the Congress a year ago with this comment:

> I commend the fundamental purpose and objectives of this report and I earnestly recommend that the Congress give its prompt attention to its proposals.

This plan is the blueprint for the drive against Federal power programs and the Farm Bureau is leading the drive in this session of Congress. In a letter to President Eisenhower dated February 25, 1957, Charles B. Shuman, National Farm Bureau president, endorsed the Benson-McKay-Wilson report and promised to line up farmers in favor of it. Shuman's letter to the President states:

> We offer our assistance in the drafting of the necessary legislation to accomplish these recommendations. We propose to lend our support to the formation of public opinion leading to the early enactment of such legislation.

Shuman went on to thank Eisenhower for throwing "the full weight of your office" behind the Benson-McKay-Wilson report. A copy of this letter is on file here in Washington.

The big pro-utility lobbies which Shuman said were allied with Farm Bureau in the campaign against power projects are:

First. The United States Chamber of Commerce:

Second. Engineers' Joint Council—the council is a private electric lobby.

Third. The National Reclamation Association which openly works as the main power lobby front in opposing public power projects in exchange for utility backing for irrigation projects without facilities for the generation of power.

Fourth. The National Water Conservation Conference. This power lobby ally works in the interest of soil and water projects but seeks to steer them away from any water projects that would develop hydroelectric power.

The Shuman letter to Eisenhower stated that Farm Bureau has been meeting with these organizations to study their reports and that Farm Bureau individuals, as well as the group collectively, supports the principles and objectives of this report.

If this Benson-McKay-Wilson report were adopted, hydroelectric power would no longer be treated as one of the concerns of the Federal Government. At three different points where the report lists the things that the Federal Government should be concerned with in handling water resources problems, there is no mention of hydroelectric power development.

There is not a single reference to TVA in the entire report. It is a surprising omission to say the least for a report on water resources in the United States to make no mention of the world's most outstanding water conservation and utilization project in an official cabinet level study of how to use and handle water in the United States. The administration is trying to promote and subsidize TVA's for foreigners on the Jordan, Nile, and Tigris-Euphrates Rivers, but the original pattern, TVA, is branded "creeping socialism" by the President and becomes an unmentionable word in his Cabinet Committee on Water Resources Policies.

Five lines of attack against present and future power projects are laid out in the report:

First. Create additional red tape to delay action on water projects.

Second. Increase the cost of power projects as much as possible.

Third. Return the responsibility for flood control to the States.

Fourth. Subsidize the private interests who take over projects in place of the Government, which simply means pay

the private power companies to steal the remaining power sites such as Hells Canyon, a resource which belongs to all the people of the United States.

The method proposed to Uncle Sam would pay the nonreimbursable cost of a dam plus the additional bonus of 10 percent as a direrct donation to the private power companies to encourage them to steal the dam site. The report also proposes "the making of guaranteed loans to private interests for the construction of projects, but would not make guaranteed loans for the power facilities."

Fifth. Worst of all, the report calls for the liquidation of existing Federal power projects.

The report makes this recommendation twice and in the conclusion states:

The committee recommends that operation of water-resources projects be turned over to non-Federal interests in all cases where this is practicable.

And no doubt it would soon be practicable to turn over every public power project in the United States to the private Power Trust.

It has been evident for a number of years that public power and the REA co-ops were fighting for their lives with their backs to the wall, and this administration has only added to and intensified the efforts of those who have been seeking their ultimate destruction. It is bad enough when public power and the REA co-ops have to fight for their lives against a multi-million-dollar power trust determined to secure an absolute monopoly on every kilowatt of electrical energy generated in the United States, but their predicament becomes doubly perilous when the President of the United States and an organization that purports to speak for many thousands of REA users ally themselves and pledge their wholehearted assistance to the enemies of REA and public power.

The enemies of REA keep repeating over and over the statement that co-ops do not pay taxes. I suppose it is the old Hitler technique that if you repeat a lie often enough and make it big enough after a while a majority of the people will believe it. But let us take the latest available record, which is for the year 1955, and see what the facts are relative to REA co-ops. In REA Bulletin 1–1 on page 23, table 20, you will find these figures. Taxes paid by REA co-ops in the United States in the year 1955, $10,979,276; in the State of Missouri, $508,925, or more than one-half billion dollars. The three REA cooperative associations in the Fourth Congressional District, State of Missouri, paid taxes in the following amount: Osage Valley, Butler, $10,501; Barton County Electric, Lamar, $6,007; and West-Central Electric, Higginsville, $4,665.

So you see that when the facts are checked the tax propaganda published against REA is pure fiction. The total REA tax figure for the United States does not include taxes paid by public power generating facilities such as TVA, Bonneville, Grand Coulee, and others because they pay taxes and make payments in lieu of taxes that are not a part of the figures quoted above.

ADDRESS TO ANNUAL MEETING, CALLAWAY ELECTRIC COOPERATIVE, FULTON, MO.

(By Rev. Beverly Ashburry, Director of Chapel, Westminister College, Fulton, Mo.)

It is a pleasure and an honor to be with you at this annual meeting. I am here as a guest and not a member, as a layman and not as a professional in this field. However, I feel a very close kinship with you because of my natural and personal interest in REA.

For one thing, my own lifetime roughly parallels the lifetime of the REA. I am just old enough to remember its humble beginning, and I have grown in size during the same years in which REA has swapped its swaddling cloths for overalls and boots.

For another thing, I was raised in a small town in a rural area of Georgia. My mother had been raised on a farm, and both her family and my father's owned and occupied farmland. This, of course, gave me a personal interest in watching the electric bulb replace the kerosene lamp and the gas lantern. In my short life, I have witnessed the farm people of my native region emerging from darkness into light, from drudgery into a more humane life, from senseless hardship into a life which offered more benefits and greater leisure. And all this occurred as the result of the Rural Electrification Administration. The REA did a job no one else would do, and I believed in it because I saw it work. A personal first-hand experience like that is more important than all the theory in the world—even though I have since come to believe in the theory of REA just as strongly as I believed in its practice.

Just look for a moment at what REA has meant to Missouri. There are 47 cooperatives serving over 263,000 rural consumers in the State. Twenty years ago 93.6 percent of Missouri's farms were in the dark. Fifteen out of sixteen depended on lanterns and kerosene lamps. Today approximately 95 percent of Missouri's farms have electric power, and of those farms 77 percent of them are supplied by REA. Twenty years ago only 6.4 percent had electricity; today, 95 percent. These statistics point to a revolution in living for our people, and I need not name the things you have and can do only because of electricity. Let it be said however, that a higher standard of living has resulted, and the face of rural America has been transformed. It should be no wonder that ministers like myself who are concerned for the welfare of the people, should be so interested in and concerned about the REA program.

II. THE ATTACK UPON REA

In the light of what I have said, it is disconcerting and downright disturbing to realize that REA today is being attacked from some quarters. The climate has changed from one of friendly appreciation to one of hostile suspicion. Some groups with selfish motives and unlimited ambitions are now seeking to destroy or take over a system which has done so much for the country. They seek to do this by brandishing false slogans and by propagandizing misleading statistics and half-baked ideas. They seem to have vast financial resources, and they intend to use them to gain favor for themselves.

As an example of this, let me read you this advertisement which has appeared this week in most of our leading magazines:

"Are you aware of this strange use of your tax money?

"Several million United States families and businesses get their electricity from Federal Government electric systems like the TVA. And your taxes help pay their electric bills. Here's how:

"About 23 cents of every dollar you pay for electricity from your independent electric light and power company goes for taxes. But because of present tax laws, people who get electricity from Government plants escape paying most of the taxes in their electric bills that you pay in yours. They pay taxes of only about 4 cents per dollar if their power comes from the Government's TVA, for example. So to make up for the lost tax revenues which Federal power projects don't pay, you have to be taxed more.

"Don't you think something ought to be done about this unfair tax favoritism?

"America's independent electric light and power companies"

In these ads—whether they be in newspapers, magazines, or on radio or TV—the private companies would lead the public to believe that the REA co-ops are receiving all of the power produced by the Federal Government. The tempo of these attacks is increasing, and the very system which has done so much over the past 20 years is now threatened with extinction. It is high time that we answered this opposition, and I should like to do so here and now.

Item I, tax favoritism: What the advertisements fail to tell us about is the subsidies private companies receive. These companies are allowed a rapid amortization of new facilities for tax purposes. For conventional businesses, this produces a tax savings. But electric utilities do not pay taxes in the usual sense but merely collect them from their customers as tax expense. So when they "write off" their new facilities, they actually collect sums from their customers as tax expenses but never have to pay some of that money in taxes. From June 1951 through April 1956, the Government granted such writeoffs by private utilities to the tune of $1,400,000,000, and over the estimated life of such a writeoff (33½ years) these subsidies will amount to $4,800,000,000. That is more than the total cost of all REA co-ops and Government dams combined. Now, just who is being favored?

Item II, the distribution of Federal power: The advertisements also fail to tell us that co-ops buy only 6.6 percent of "public power." Of the other 93.4 percent, the distribution runs like this: Federal defense agencies (AEC) 29.9 percent, municipalities 19.3 percent, State and other public agencies 10.9 percent, private power 33.29 percent. In the light of those facts and figures, it is difficult to conceive why REA is attacked so vehemently as a threat to free enterprise.

Item III, independent companies: What the ads don't tell us is that these local, independent companies are, in a majority of cases, owned and controlled by eastern financial houses. Their claim to be independent is almost laughable. Eleven eastern houses hold multiple, interlocking voting stock in 100 electric operating companies worth $19 million. These companies are among the largest in the Nation, and they extend from the Atlantic to the Pacific. They are no more independent than a slave chained in the galley of a ship.

These items should make it clear that the current attack cannot diminish the fact that REA is one of our most American institutions. What could be more American than rural folks going into business for themselves to procure electricity that private companies had failed to make available? This is not socialism. This is free enterprise at its best, and only God knows where we would be today if there was no REA. Nevertheless, we are here, and we know that vicious, insulting, misleading, untrue propaganda cannot destroy what has been built by the extraordinary ability of ordinary people. At least it cannot if we are aware of what the opposition seeks to do.

III. WHAT THE OPPOSITION PROPOSES

It proposes a so-called partnership with private utilities, whereby these companies would monopolize the revenue and energy at Federal power projects.

I emphasize the partnership because it represents today the spearhead of the current

attack upon public power. Yet what kind of a partnership is it? It is a partnership in which the Government relinquishes to private monopolies the powerhouse at Federal dams, while the Government continues to finance the nonreimbursable features such as fish ladders, flood gates, and navigation locks.

We had a partnership in operation. It wasn't this kind of partnership. It was a legitimate partnership between the Government and its citizens. It was the Federal-local partnership, under which kilowatts were being sold at low cost to whatever distributing agency the residents of a particular area preferred.

This was a bona fide partnership. But what is proposed today as partnership is no partnership at all. It is monopoly and special privilege. For at least 50 years, a private stranglehold will be given legal sanctity at a great power site, and there will be nothing that the man and women in that area can do about it, through half a century of time.

We are told the abandonment of public power is necessary in the name of Americanism. Yet the preference clause, which safeguards the power supply of our rural electric co-ops, goes all the way back to the administration of Theodore Roosevelt, who was no creeping Socialist.

One of the serious blows suffered by REA's under the new partnership policy was abrogation of 40-year contracts between the Interior Department and cooperatives in the Southwest. As a result, the REA's were threatened with bankruptcy or high rates, or loss of their independence.

I cite these things to indicate how politics and greed are intruding into programs which, until the last few years were decided by the needs of the American people and not by the selfish desires of 1 or 2 utility corporations.

As you are well aware, REA funds have been cut but not abolished by Congress. You have been successful in maintaining reasonably adequate loan funds and services during the past few years. But this cut was to be expected. It was forecast by the late George W. Norris. He said: "The attack upon REA will not be an open assault. The attack will be by stealth and treachery because REA is too popular to be attacked openly."

Let us look briefly at other things which are steadily undermining the REA program:

1. Undoing of regulatory agencies.
2. Failure to observe public preference legislation.
3. Refusal to build transmission lines.
4. Turning over last-choice sites to piecemeal exploitation by private companies.
5. Undermining existing structures.
(a) TVA and Dixon-Yates.

Believe me, the future of REA is fraught with danger. We may be faced with extinction unless present policies are reversed. The present policies also pose the threat that atomic power will be given over entirely to private companies. This is a threat, because we, the taxpayers, have already paid $14 billion to develop this source of power, and it hardly seems fair that we should pay for it all over again—in the way of a profit to private companies.

IV. WHAT WE SHOULD DO

In the light of what has been said, what should we do?

We should remember that we have come a long way, and we have come that distance in spite of formidable and almost impossible odds. Every gain has been carried out despite powerful opposition.

We must not give up our gains now. Nor can we afford to stand still—"man cannot live in a stagnant pool, even a stagnant pool of sunshine." It is time for REA consumers to realize their strength and to organize in multitudes. This is a day crying for men to be aware of what they have and to appreciate and fight for it. Now is the time for men of vision and character to stand up and answer the false propaganda by telling the truth. We must act soon if we are to make our voices heard, our desires known, and our strength felt. Get young people in.

In order to keep what we have, we must first be proud of what we have—remember where we were without it. From there we need to expose phony propaganda and to tell the truth about REA and what it has done. Only informed consumers like yourself—who take up the fight, who write letters—can assure the electric service which our dynamic Nation demands. Our power policies must stimulate the fullest effect by every kind of power agency if we are to realize our potential living standards and economic development and maintain our armed strength. This requires abundant, low-cost electricity if we are to have better living, full employment, and national security.

The fight for these things is ours. May God help us if we fail to win them.

HOW NTEA LOADS YOUR CONGRESSMAN'S MAIL WITH DRUMMED-UP LETTERS ATTACKING CO-OPS

The letters reproduced below provide a good example of the methods used by the National Tax Equality Association to influence Federal tax legislation.

NTEA sent out the form letter below as a means of drumming up letters, wires, and telephone calls to Members of Congress. (The name of the person who received this particular copy has been blocked out at his request.)

Leaving nothing to chance, NTEA sent along three sample letters. It suggested that they be rephrased in the sender's own words so that Members of Congress could not so easily detect a centrally-inspired campaign. The three samples appear below.

The two next-to-last paragraphs in the letter below show how far NTEA goes to promote antico-op letters. It asks that the sample letter, rephrased, be returned to it with a supply of the letterhead paper and envelopes of the person or firm that will be the sender. Then, free of charge, it will have the letters individually typed and will return them to the sender ready to be signed and mailed to Members of Congress.

Congressmen soon learn to spot inspired letters of this sort. NTEA's campaign nevertheless is a reminder that co-op members need to do some letter-writing of their own. As frequently has been pointed out, the best defense against this kind of propaganda is well-informed co-op members who maintain good relations with their Congressmen.

NATIONAL TAX EQUALITY ASSOCIATION,
Chicago, Ill., January 16, 1957.

Mr. ———,

DEAR MR. ———: You and your organization have long been known for your forthright stand on principles in issues vital to private enterprise. It is obvious that many of your members cannot long remain in business if the ever-growing Federal tax-free co-ops continue their inroads eating all lines of business.

Many national organizations have already written the 435 Congressmen and 96 Senators, urging action on this pressing problem during the 85th session.

It is imperative that organizations such as yours, wielding tremendous power in your State, write, wire, phone, or personally see your elected representatives in Congress.

Enclosed are several suggested letters. We would appreciate your rephrasing or rewording one of these letters in your own style, returning it with sufficient letterheads and envelopes to be sent to all Congressmen and Senators in the State where you operate.

We will, of course, free of charge, individually type these letters and send them to you for your signature and mailing from your office.

Your much needed help is deeply appreciated. Only through concerted action on all fronts can success be assured.

Cordially yours,

GARNER M. LESTER,
President.

"Honorable (name),
"House of Representatives,
"Washington, D. C.

"MY DEAR CONGRESSMAN: Our association, representing the druggists in every town and hamlet in this Nation, is concerned about the tax-escape privileges now extended the cooperatives. We have joined with other trade groups in protesting this unfair discrimination against the fully taxed proprietary businesses in this country.

"We not only feel this is economically unsound but is morally wrong. We cannot understand why any segment of the economy competing in the market place should have an unfair tax advantage.

"The taxpayers of this Nation are saddled with a terrific tax burden, and most of this money is being used to protect the interest of our country in an unsettled world. It is deeply resented when the cooperatives are permitted to pay less than their share, when they benefit to the same extent as do the rest of us.

"Our association is, therefore, urging you and every other Member of the Congress to intercede for us before the tax-writing committees of the Congress, asking that the cooperative corporations be fully taxed at the corporate level and thus remove this unfair, un-American discrimination.

"Will you please advise us what you are willing to do to aid us? Our —— members would be very appreciative of your assistance.

"Yours very truly."

"Honorable (NAME)
"House of Representatives,
"Washington, D. C.

"MY DEAR CONGRESSMAN: The members of our association, the National Association of ———— having felt the impact of competition by cooperatives escaping their share of taxes, feel that it is time that legislation be enacted that will eliminate this unjust discrimination.

"We feel that the tax burden of this country should be borne equally by all businesses and individuals earning income.

"Our association, therefore, is asking you, and every other member of Congress, to prevail upon the tax writing committees of the Congress, to the effect that cooperatives be fully taxed on the basis of income on the same level as corporations and that all tax favoritism be eliminated, thus insuring equality of taxation for all.

"May we have an expression of opinion from you in this regard?

"Very truly yours."

"The 85th Congress of the United States has many grave problems to face.

"With part of the world in turmoil, with the United States needing enormous sums of money for defense and assistance, the matter of taxation is of paramount importance.

"We feel that the burden of taxes should be borne fairly and equally by all businesses and individuals.

"To that end we ask you to use your influence with the tax-writing bodies of Congress to the end that the discriminating preference enjoyed by cooperatives be erased, and that cooperative income be taxed at the corporate level and in equal amounts.

"At the present time we feel that cooperatives enjoy all the privileges, without participating in the burden.

"May we have an expression of opinion from you in this regard?

"Yours very truly."

MISSOURI STATE RURAL ELECTRIFICATION ASSOCIATION,
Jefferson City, Mo., March 4, 1957.

Hon. GEORGE H. CHRISTOPHER,
House Office Building,
Washington, D. C.

DEAR MR. CHRISTOPHER: Enclosed herewith are 7 resolutions adopted during our annual membership meeting, February 9, which pertain to the following subjects:

1. Allocation of costs of multiple purpose projects.
2. Increase in rates of interest on rural electric and telephone loans.
3. The Hells Canyon project.
4. Hoover Commission Report on Water Resources and Power.
5. The National Tax Equality Association.
6. Tennessee Valley Authority.
7. Accelerated depreciation certificates granted by the ODM to commercial electric utilities.

Also enclosed is reprint of letters that the president of the NTEA, Mr. C. M. Lester, has mailed most business organizations throughout Missouri, which I believe is self-explanatory. To protect the person to whom the letter was addressed, we had to block out his name.

Sincerely yours,

JULIUS HELM,
General Manager.

ALLOCATION OF COSTS OF MULTIPLE-PURPOSE PROJECTS

Whereas the Flood Control Act of 1944 did not stipulate a definite formula for allocating the various costs in a Federal project; and

Whereas the executive agencies are now applying a cost-allocation method and payout period which are not fair and realistic to each use of the projects; and

Whereas H. R. 965 has been introduced in the House by Representative TRIMBLE, of Arkansas, and said bill would designate a proper method to allocate cost in Federal projects: Now, therefore, be it

Resolved, That the Missouri State Rural Electrification Association, duly assembled during its 20th annual membership meeting in Jefferson City, Mo., this 9th day of February 1957, urges the Congress to pass H. R. 965 in order to establish a definite guide for all executive agencies to follow in cost allocation of Federal projects.

MISSOURI STATE RURAL ELECTRIFICATION ASSOCIATION.
J. C. OMER, *President.*
ROBERT PILLEN, *Secretary.*
JULIUS HELM, *General Manager.*

Whereas bills have been introduced in Congress calling for an increase in rates of interest on rural electric and telephone loans; and

Whereas an increase would place an additional burden on the already hard pressed farmer: Be it, therefore

Resolved, That the Missouri State Rural Electrification Association, duly assembled during its 20th annual membership meeting in Jefferson City, Mo., this 9th day of February, 1957, urges Congress to seek other means of raising revenue.

MISSOURI STATE RURAL ELECTRIFICATION ASSOCIATION,
J. C. OMER, *President.*
ROBERT PILLEN, *Secretary.*
JULIUS HELM, *General Manager.*

Whereas the Hells Canyon Dam site on the Snake River is the best remaining undeveloped power site in the United States; and

Whereas Senator MORSE and 22 of his colleagues have reintroduced a bill in Congress calling for appropriations for Federal construction of this dam: Be it, therefore

Resolved, That the Missouri State Rural Electrification Association, duly assembled during its 20th annual membership meeting in Jefferson City, Mo., this 9th day of February, 1957, urges the Congress to approve sufficient appropriations to begin construction of this dam; and be it further

Resolved, That we earnestly urge all citizent and organizations interested in the welfare of the American farmer to give full support to full development of this site.

MISSOURI STATE RURAL ELECTRIFICATION ASSOCIATION,
J. C. OMER, *President.*
ROBERT PILLEN, *Secretary.*
JULIUS HELM, *General Manager.*

HOOVER COMMISSION ON WATER RESOURCES AND POWER

Whereas the adoption of the Hoover Commission Report on Water Resources and Power would destroy the Federal program of development of public resources from which over 300 rural electric systems get their wholesale power: Now, therefore, be it

Resolved, That the Missouri State Rural Electrification Association, duly assembled during its 20th annual membership meeting in Jefferson City, Mo., this 9th day of February 1957, urgently requests the Congress to reject the approval or adoption of any part of the Hoover Report on Water Resources and Power.

MISSOURI STATE RURAL ELECTRIFICATION ASSOCIATION,
J. C. OMER, *President.*
ROBERT PILLEN, *Secretary.*
JULIUS HELM, *General Manager.*

NTEA RESOLUTION

Whereas rural electric cooperatives and other consumer-owned organizations are recognized by Federal and State statutes as an essential segment of our national economy, and

Whereas the National Tax Equality Association, a perennial and avowed enemy of all types of cooperatives, persists in disseminating false and misleading information in an effort to discredit cooperatives and to generate pressure that would crystalize into unfair laws making it impossible for cooperatives to exist; and

Whereas NTEA has currently released a propaganda movie, The Senator's Daughter, attacking the nonprofit tax status of cooperatives and mutuals; and

Whereas this well-financed propaganda and lobbying organization fails to reveal whether it is financed largely by the commercial utilities, as it has been in the past: Now, therefore, be it

Resolved, That the Missouri State Rural Electrification Association, duly assembled during its 20th annual membership meeting in Jefferson City, Mo., this 9th day of February 1957, does hereby condemn the action of the NTEA as inimical to the best interests of farmers and other consumers the country over; and be it further

Resolved, That we earnestly urge Congress at its next session to initiate an investigation of NTEA aimed at bringing to light who finances NTEA and what motives impel it persistently to attack a vital segment of our national economy.

MISSOURI STATE RURAL ELECTRIFICATION ASSOCIATION,
J. C. OMER, *President.*
ROBERT PILLEN, *Secretary.*
JULIUS HELM, *General Manager.*

Whereas the Tennessee Valley Authority has benefited the American people by furnishing a yardstick of the value of electricity and by pointing the way to flood control, navigation, industrial development, and health improvement; and

Whereas rural electric cooperatives in seven States depend upon TVA for their power supply; and

Whereas 56 percent of TVA electric power must go to the Atomic Energy Commission to further its far-reaching program of nuclear development: Be it therefore

Resolved, That the Missouri State Rural Electrification Association, duly assembled during its 20th annual membership meeting in Jefferson City, Mo., this 9th day of February 1957, urges the President and the Congress to provide TVA either with appropriations or authority to finance the necessary expansion of its generating facilities in order that it will be able to meet the needs of the valley.

MISSOURI STATE RURAL ELECTRIFICATION ASSOCIATION,
J. C. OMER, *President.*
ROBERT PILLEN, *Secretary.*
JULIUS HELM, *General Manager.*

Whereas United States Senator HARRY F. BYRD has instituted an inquiry into the continued issuance of accelerated depreciation certificates to commercial electric utilities, and others; and

Whereas initially the issuance of such certificates was designed as an incentive for private expansion of wartime facilities, which justification is not now existant, and hasn't been for years; and

Whereas such certificates are held by some to be a form of subsidy; by others as the equivalent of interest-free loans by the Federal Government to the recipient; and by others as a program of tax forgiveness: Now, therefore, be it

Resolved, That the board of directors of the Missouri State Rural Electrification Association, duly assembled this 8th day of February 1957, does hereby commend Senator BYRD for initiating an inquiry into the field of accelerated depreciation certificates; and be is further

Resolved, That we urge that the inquiry be broad enough to establish relative effects of "operational expenditures" which might be questionable, in the fields of advertising, propaganda, public relations, etc.; and be it further

Resolved, That we recommend that the information developed from this inquiry be transmitted to the Congress and to interested persons and organizations.

J. C. OMER, *President.*
ROBERT PILLEN, *Secretary.*
JULIUS HELM, *General Manager.*

For Labor's Good

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, in view of recent exposures, it strikes me that the editorial which I am about to insert in the RECORD is pertinent. It appeared in a recent issue of the Milwaukee Sentinel and I think it is a timely expression of opinion which is reflected generally throughout the country.

FOR LABOR'S GOOD

The disclosures from the Senate committee hearings into racketeering by corrupt labor bosses are important to the entire Nation.

They are, of course, of the most intimate concern to union members.

It is their money that has been plundered.

It is their faith that has been perverted.

It is their good name that has been prostituted.

In this vein South Dakota's Republican Senator KARL MUNDT, who is a member of the Senate committee, says the evidence indicates the need for Federal legislation for the protection of union members.

Certainly the need for more control of union affairs by members, themselves, is obvious from the testimony that has shown instances where the top brass made all the decisions with no consultation with the rank and file.

There also is a desperate need for a provision to prevent abuse of welfare and pension funds and to insure an accounting of how they are invested or deposited.

Equally, there is a need for a provision to prohibit use of union funds for political purposes.

No one knows better than union members that their money has promoted candidates whom they themselves, as individuals, opposed.

These proposals are not antilabor. They are prolabor in that their purpose is to protect the money and the rights of union members.

President Should Take Lead in Economy Moves

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 7, 1957

Mr. McGOVERN. Mr. Speaker, everyone is theoretically in favor of economy in Government until our own favorite Federal projects are jeopardized by economy moves. It is entirely understandable that a Member of Congress should look across the waters, or perhaps into some other Member's district as a field for economy moves. That is why the President of the United States who is in the best position to view our national needs in broad perspective has been given the responsibility of drawing up our Federal budget. By the same token the President is in the best position to make recommendations as to where Federal economy moves can best be made in the public interest.

The Baltimore Sun of Saturday, March 16, 1957, editorializes on this theme in a logical manner as follows:

HIS RESPONSIBILITY

The opinion is quite general that the spending total provided for in the budget now before Congress is much too large. Congress senses this opinion, and so does the White House; and the result so far has been confusion. There is much quibbling about which side in this never stable collaboration of executive and legislature should take the initiative in introducing cuts. The President has said that he would like to have Congress point out the places where cuts can properly be made. Congress has asked the President to do the pointing out. Though some tentative steps have been taken, neither is disposed to take the full initiative, and each has an argument to back reluctance. The President's argument is that it is Congress which holds the purse strings under our scheme of Government and is therefore really responsible. The congressional argument is that budget making is specifically an executive responsibility.

Somewhere this impasse has to be broken, since it is perfectly clear that the temper of the country favors a trimming down of Federal expenses, and to us it seems clear that the President ought to make the first move and is in best position to do so.

This is our reason:

In cutting the budget Congress is peculiarly sensitive to domestic pressures, both geographical pressures and special-interest pressures. Congress, in looking for places to cut, will inevitably look for spots which will not be immediately damaging in a political sense. It will turn, therefore, with a special zest to the items of our foreign program, especially the military and economic foreign-aid items. Though we are convinced that there is water to be squeezed out of these items, there is not enough water to satisfy the whole demand for reduced expenditures. A whole series of thoughtful reports by disinterested groups confirms the importance of our program of foreign aid as a part of our national security program.

The President is not under quite such a necessity for playing politics when budget cutting. He is not under the same pressure as Congressmen when it comes to domestic items. Moreover, the fact that the President is constitutionally barred from seeking a third term (a fact that has been widely advertised as weakening his position) is in fact a source of strength in some ways. Since the President is no longer running for office, his armor against pressure groups is much thicker than it was before.

The President, in other words, is in a much stronger position to survey the whole budget. He ought to do so. He ought to recognize not only the vulnerability of Congress when it comes to budget cutting but the danger that Congress, should it be compelled to take the initiative, would cut it in places that are safe politically but dangerous in terms of the national interest.

An Open Letter to George Meany, President, AFL–CIO

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, February 7, 1957

Mr. HIESTAND. Mr. Speaker, the current congressional investigation of the misapplication of union funds by certain union officers makes especially appropriate an open letter to George Meany, president, AFL–CIO. This letter was printed in the Mesa Educator, the official organ of the Mechanics Educational Society of America, AFL–CIO.

It indicates a very effective method which, if enforced, would eliminate the violations that are the cause of the current investigations. About the only reprimands that actually eliminated any of the racketeer element thus far from the AFL–CIO affiliates were a couple of the small so-called federal unions. No effective measures thus far have been taken against any of the big AFL–CIO affiliates, such as the teamsters, by the union committees authorized by the Miami resolution. The letter follows:

We in Detroit are profoundly disturbed by your council's determination to eliminate corruption in constituent unions with the aid of congressional committees.

Whether this passion for purity campaign can be carried out without positive danger to the merged federations, AFL–CIO, is the question uppermost in our minds.

It is obvious that financial skulduggery in labor unions can only be eliminated by standard rigid control by union constitutions. Acts of racketeering and dishonesty by individual officials simply reflect constitutional weakness. Eliminating the result without altering the cause is as leaving the barn door still open.

Financial clauses making it practically impossible for a union official to deviate from the path of financial integrity could be made a must for all unions affiliated to the AFL–CIO.

However, if the Ethical Practices Committee is to be used to carry on a personal feud between major union leaders in the federation, then all labor will lose by the fracas.

It will be very serious if the conduct of a few union officials results in a diminution of confidence by our memberships, in general, and against officials in general.

Most constitutions, including the one under which we operate, are so tight that you have to be careful to throw 3 cents in the postage fund when sending out a piece of personal mail.

* * * * *

Apart from finances, however, we are all guilty as anyone of unethical practices. Labor union officials have always lived under a double ethical standard. Tell the truth to your members, but if necessary to protect said members, lie like hell to the boss. The prevailing practice, a la Decatur, "May our members always be right, but anyhow, our members, right or wrong" has no relationship to pure ethics.

If we were before a congressional committee and they wandered far afield from financial racketeering and questioned us as to our conduct during strikes—the fifth amendment would have to be invoked. They might talk of dynamite, stink bombs, broken arms, and secondary boycotts, and who got how much for what. Is there any union official who would like to discuss such matters? They might even ask for names.

It would be fine if you could slowly and persistently educate union officials along the lines of financial rectitude and supplement this education by forcing constitutional changes that would make it very difficult to dip into the petty cash or maneuver financial deals.

Should this passion for purity result in any weakening of the whole labor movement by its use in personal feuds, then we shall have accomplished nothing.

Finally, we all live in glass houses.

Fraternally,

THE EDITORS.

Administration's Proposal for Alaska Statehood

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. BARTLETT. Mr. Speaker, the Milwuakee Journal during the week of March 11 carried an editorial commenting on the proposal of the administration as advanced by the Interior Department and endorsed by the Defense Department for national defense withdrawal areas within the boundaries of the proposed State of Alaska. Under leave to extend my remarks I should like to reproduce that editorial here.

The editorial follows:

GOOD ALASKAN STATEHOOD PLAN

The evidence is mounting that President Eisenhower wants Alaskan and Hawaiian statehood to list among historic accomplishments of his administration.

Secretary of Interior Seaton has come in with a sound program to meet defense needs in areas of Alaska closest to Siberia. It calls for authority for the President to create national defense withdrawals of land over which the Federal Government may exercise exclusive jurisdiction. In withdrawal areas, residents will continue to have Federal, State, and local voting rights. Local governments will continue to operate.

General Twining, Chief of Staff of the Air Force, emphasized this week that the withdrawal provision was "only military insurance" and that it might never be necessary for the President to exercise it. He said he saw no reason under present conditions for the President to exercise the power.

This is a far cry from the administration plan offered 2 years ago by former Secretary of the Interior McKay. That would have allowed unlimited land withdrawals for the military in approximately half of Alaska. It provided no safeguards for State or local governments and was generally considered, in Alaska, as a partition proposition.

Secretary Seaton, in offering the new plan to a House interior subcommittee, said that in his judgment "both Hawaii and Alaska have a rightful claim to the equal status of statehood."

If this is now firm administration doctrine, and is followed by passing the word along to Republican leadership, prospects for Alaska and Hawaii statehood at this session of Congress seem bright indeed. After all, both the Democratic majorities and the Republican minorities in Congress are bound by firm declarations in their 1956 national party platforms to vote for statehood.

The Future and the Basin

EXTENSION OF REMARKS
OF
HON. CARL ALBERT
OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 18, 1957

Mr. ALBERT. Mr. Speaker, my colleague from Oklahoma [Mr. EDMONDSON] delivered a very fine address at a meeting of the Arkansas Basin Development Association, held in Tulsa, Okla., on March 8, 1957. Every Member of the House is well aware of the tremendous interest which Mr. EDMONDSON has in the development of this great watershed through the States of Oklahoma and Arkansas and the enormous amount of work which he has put into the matter. We in eastern Oklahoma are convinced that development of the Arkansas Basin is the key to the future of the area in which we live. The importance of this project is pointed out in Mr. EDMONDSON'S address, the text of which is as follows:

THE FUTURE AND THE BASIN

(Remarks of Representative ED EDMONDSON)

Mr. Chairman, distinguished guests, and members of the Arkansas Basin Development Association, it is a good thing to get together and to break the bread of fellowship in a common cause.

It can be a very satisfying thing, and even an inspiring thing, when the common cause which unites men is a great and a noble undertaking.

We break bread tonight in a rededication of common purpose in support of such an undertaking: the full and early development of the Arkansas River Basin.

For me, and I am sure for many who gather here tonight, the fight for the Arkansas Basin has been both satisfying and inspiring.

It has been satisfying, because we have already won some major battles along the road. If we think of years in terms of miles, and 1968 as our target date for navigation on this great river, we stand today only 11 miles from home.

The fight for the Arkansas has been inspiring, because this battle for the basin has produced a unity of spirit and purpose in Oklahoma—and between Oklahoma and Arkansas—which I have not witnessed in my 37 years as a Sooner.

What other great cause in your memory, peculiar to our own two States, has united so firmly the chambers of commerce of our principal cities and our smaller towns—the governors and the legislatures of the two States—and the complete congressional delegations of Arkansas and Oklahoma?

The leading citizens of Oklahoma and of Arkansas—in the ranks of industry, in the ranks of commerce, of finance, public relations, civic office and all walks of life—have joined forces to carry on this battle—and have given generously of their time, their talent, their energy, and their treasure, to advance this cause.

It is an inspiring thing, and the progress thus far made is a testimonial to the devoted efforts and sacrifice of hundreds of these leaders in our two States, who have dared to champion a great and a magnificent dream for Oklahoma and for Arkansas—and to work tirelessly to make that dream come true.

Today, in the spring of 1957, we can almost see the castles and towers of this great dream, in the shadows of the mountains still ahead.

It would be a pleasant thing tonight, in this refreshing company and on this splendid occasion, to talk about the magnificence and the splendor of the castles and towers in the Arkansas Basin's future.

The vision of this great and productive inland waterway, with its vast storage capacity of precious water and its vital movement of coal and oil and the produce of industry and agriculture, is a sight to stir the imagination and quicken the pulse of any basin resident.

But if I have a mission tonight, it is not to stir your imagination or quicken the pulses of my fellow citizens.

The message I bring to you tonight is addressed to other qualities—to the resolution and determination which we must have—all of us—to complete this journey by 1968.

Between the goal we seek and the place we stand tonight are not only mountains, but also a great precipice. We will need all the resolution and determination we can muster—and a helping hand as well from divine providence—to pass over these great barriers.

The precipice, of course, is the danger of another world war. An atomic war could not only interrupt all public works, including the Arkansas Basin, it could also pulverize and disintegrate our modern civilization.

The duty we owe as citizens, to help prevent that war, rises above our duty to the sovereign States of Oklahoma and Arkansas.

It is a duty we owe to our fellow men, to our wives and our families, to our children and our grandchildren—who may not know tomorrow if that war is not prevented.

In my own view, there are two duties of American citizenship which today transcend all others.

The first is to give our full support to a program of national defense—both military and civil defense—most likely to give a full measure of national security from atomic attack.

The second duty is to lend our full support to all honorable efforts on behalf of our Government to promote world peace and secure the peaceful settlement of international disputes.

If the citizens of our country perform these duties, and lend this kind of support to their Government, and we who have a responsibility in that Government do our job as well, I believe the chances are good that we will cross the precipice of war, and have the opportunity, in peace, to climb the mountains.

The mountains, of course, are the many steps involved in appropriating the money, and letting the contracts, and paying the bills, to build the great dams and locks which will bring navigation to the Arkansas.

And there is a special mountain in the Congress today, on which I recently reported by newsletter to the people of the second district, which could present some special problems.

I am speaking of the so-called economy wave in the House of Representatives, and especially in the Appropriations Committee, which already has resulted in the cutting of millions of dollars from administration requests for three great departments of Government.

There is good argument to be made in the cause of economy in Washington, and we in the Oklahoma delegation have supported that cause on more than one occasion.

In 1956, Oklahoma's House Members voted unanimously to cut a full billion dollars from the foreign-aid program recommended by the administration, and we are prepared to vote for further cuts in this field, and in some others, in 1957.

Movements for economy, however, can become wasteful and destructive when they are not selective, and when they do not take full accounting of the critical character of some governmental programs.

We do not have a more urgent problem, in our entire Nation today, than the problem of water and its conservation.

There is no waste in Government that even approaches the terrible and unforgivable waste of uncontrolled water resources.

California water engineers have estimated the value of an acre-foot of water at $10.

The 37 million acre-feet of wasted water flowing out of Oklahoma each year is an annual waste of $370 million, by California standards. If we cut that value to only $1 an acre, it is $37 million down the drain, each year, in terms of wasted water.

We do not need to argue in terms of dollars and cents, however, to make a case for urgency.

The Chief of Engineers, on more than one occasion, has warned that our Nation is rapidly approaching a water crisis.

With present needs for water expected to increase 2½ times by 1975—and a population figure of 300 million in sight for America in 1992—there is no room in our 1957 water program for a pennywise philosophy.

The people of America must assert, firmly and unequivocally to their Government, their determination and resolution to support an adequate water program at this time.

And the people of Arkansas and Oklahoma must join their representatives in Washington in expressing this resolution and determination to the representatives of other sections.

I hope the Arkansas Basin Development Association will send one of the largest delegations it has ever sent to Washington, when the Appropriations Committee hearings are held in May.

I hope your spokesmen will continue to speak from resolute and determined hearts of their full support for the basin program.

With resolution and determination, we shall cross the mountains and reach the castles and the towers of 1968.

For my own part, I have taken for my battle cry for the Arkansas the famous words of William Blake, the English poet, who wrote in the 19th century:

"I shall not cease from mental fight,
Nor shall my sword sleep in my hand
Till we have built Jerusalem
In England's green and pleasant land."

The Jerusalem we seek is a promised land where the great treasure of water is conserved and harnessed for the good of our people in the valley of the Arkansas.

Let us carry on the fight together, and let no sword sleep in the hand of any man, until we have built our Jerusalem.

No One Happy Over Budget

EXTENSION OF REMARKS
OF
HON. WALTER NORBLAD
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 25, 1957

Mr. NORBLAD. Mr. Speaker, under leave to extend my remarks I include herewith the following editorial from the Oregon City (Oreg.) Enterprise Courier of March 8, 1957:

NO ONE HAPPY OVER BUDGET

One thing can be said with certainty about the administration's proposed $71.8 billion budget—the largest in peacetime history. Almost no one is really pleased or satisfied with it. Almost everyone is concerned and worried.

There is actually a school that believes the budget isn't big enough. Leon Keyserling, who once headed President Truman's Council of Economic Advisers, recently argued that in the New York Times magazine. In Dr. Keyserling's views, the Government should play a still larger role in national affairs of just about every kind, at a higher cost.

However, the members of this school are comparatively few and far between. The vast majority of people, in and out of the Government, who have studied the budget and considered its implications are convinced that it is dangerously large. As an example, Senator MARGARET CHASE SMITH of Maine, a middle-of-the-road Republican and a strong Eisenhower supporter, has characterized the budget with the word "fantastic."

The President himself has said, in effect, that he hopes the budget can be cut, so long as it is done without peril to national security and world peace programs. Best publicized of all has been the statement by Secretary of the Treasury Humphrey that unless we mend our fiscal ways we will bring on a depression "that will curl your hair." Former President Hoover, after quoting this phrase, said: "Mine has already been curled once, and I think I can detect the signs. Unless we curb inflation on its way up, Old Man Economic Law will return with a full equipment of hair curlers." On the concrete side, Senator BYRD, a top congressional authority on money matters, has said that the budget should be very heavily cut—by $5 billion or more.

This brings up the $64,000 question. Where can it be cut?

Any major cuts, it seems evident, must be in the nondefense field. And that leads to a fact that may not be generally recognized: In the first four Eisenhower budgets nondefense spending rose by $7 billion—from $20.9 billion in 1954 to $27.9 billion in 1957. In a Newsweek column, Henry Hazlitt gave his ideas as to where specific reductions could be made. He said, "There will be no real economy until the Government is ready to slash drastically or to halt entirely whole categories of spending." Categories in which he believes either the ax or the pruning shears should be applied include Federal aid to schools, Federal highways, low-cost housing, foreign aid, and the agricultural subsidies. In his view the budget can be reduced to $60 billion—"all that is needed is the political courage and will to achieve it."

Other students have other ideas as to where and how and in what amounts cuts can be made. An additional point should be made. Concern over the budget is not limited to dollars-and-cents problems of the moment alone. One fear was expressed by Mr. Humphrey in these words: "If we retain our present high tax rates over a sufficiently long period of time, we won't be able to maintain the activities necessary to provide jobs for our people." Another fear is based on the hard fact that this enormous spending projected for a period of extremely high business activity and record employment. Obviously, any decline in business and employment, with the depressing effect that would have on tax revenues, could knock current plans, prospects, and fiscal policies into a cocked hat.

Coloring the News

EXTENSION OF REMARKS
OF
HON. JOHN BELL WILLIAMS
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. WILLIAMS of Mississippi. Mr. Speaker, much of the agitation for the passage of the many force bills before Congress has come about as the result of discriminatory policies of much of the northern press in reporting news stories coming out of the South. Because racial incidents which occur in the South are headlined in other areas, while racial incidents happening outside the South are given little, if any, space in the papers in other sections, the South finds itself portrayed as a section peopled by barbarians, taking delight in depriving members of minorities of their constitutionally guaranteed civil rights.

The southern press, which knows the true conditions in the South, and which deplores journalistic shysterism, is beginning to fight back with truth as its weapon. Under leave to extend my remarks in the Appendix of the RECORD, I am including two editorials dealing with this subject: one, Coloring the News, taken from the March 11, 1957, issue of the Vicksburg Evening Post; the other, It Happened up North, from the February 19, 1957, issue of the Shreveport Journal. These editorials follow:

COLORING THE NEWS

There is no denying the fact that all news concerned with race relations in the South is published by some leading newspapers and news-dispensing agencies, such as radio and TV, completely colored to be detrimental to the South. The story of the Clinton, Tenn., incident was front-page and headline news, with careful attention to those circumstances which would put Tennessee in a bad light.

A national TV news program carried the story of the "death" of Alcorn A. & M., the oldest Negro land-grant college in America. This program, by inference, left the impression that Mississippi, the State so often accused of oppression of Negroes, had summarily closed this institution of Negro learning. There was no explanation of the circumstances which brought about the present Alcorn situation—no explanatory articles which would pinpoint the Alcorn story as one entirely of and by the Negro race. There was no reference to the fact that a Negro professor used his God-given right of free speech, and that the student body, evidently with outside inspiration, walked out in protest, because the professor's views were not shared by an ultraliberal organization which professes to speak for all Negroes.

The coloring of news has been viciously continued throughout the period of the last several years when the racial issue has been brought so much to the fore. Usually reliable news sources have fallen victim to this cunningly inspired method of disseminating news, and the net result has been a tremendous increase in tensions, which have no basis for existence when governed by the actual facts.

It is surprising to witness the extent to which people will go, even to the extent of doctoring news and, in some cases, falsifying it, just to gain support for a cause.

IT HAPPENED UP NORTH

If it had happened in Mississippi, Louisiana, or any place else in the South, every race-baiting magazine and newspaper in New York, Chicago, and Detroit would have had reporters and cameramen on the scene the next morning.

But this latest incident of racial violence occurred, not in Mississippi, but in Massachusetts. It was in Boston early Saturday morning that two white men kicked and beat a colored man to death while the victim's white wife looked on in horror.

So today there is a strange quiet about the offices of Look and Life and Time magazines and their contemporaries and—judging from the absence of reports on the major news wire circuits—everybody up North, including both the law-enforcement officers and the newspapers, must be anxious to drop the whole subject.

A few months ago you would have thought the northern press had formed a brigade and sent it into the South to avenge the death of Emmett Till, a teenage Chicago Negro who met violent death after he tried to force his attentions upon a white woman. But, now, little is being said by these Yankee newspapers concerning a brutal slaying which was far more horrible, because of its circumstances, than the death of Emmett Till.

Unlike the Till case, in which a Negro tried to force himself on a white woman, the Boston slaying involved a colored man who had a white woman for his wife. Two men held the woman's arms to prevent her from interfering while two other men stomped the life out of her husband on a public street. The colored man's death occurred after he protested because the men yelled "Poor white trash" at his wife.

Where are the Look, Life, and Time reporters? Where are the cameramen? Where is Attorney General Herbert Brownell and his civil rights gang? Where are the champions of integration?

Violence of any kind, no matter where it occurs, should be deplored.

But the people of the world should understand that racial integration is as violently opposed in the North as in the South—if not more so. Our northern newspapers and magazines are not worthy of their calling when they fail to note racial violence in

their own section of the country while pointing their fingers of ridicule and scorn at the South.

The Boston incident puts a new spotlight on the fact that integration is a threat to the welfare of the entire Nation—not just to the welfare of Dixie.

Economical Desalting of Sea Water

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1957

Mr. RHODES of Arizona. Mr. Speaker, under leave previously granted, I would like to include a memorial passed by the Senate of the State of Arizona on March 5 directed to the Congress requesting the Congress of the United States to appropriate sufficient funds to the Department of the Interior for the purpose of accelerating research of the problem of economically desalting sea water. The resolution is as follows:

To the Congress of the United States:

Your memorialist respectfully represents:

The United States Department of the Interior has for the past few years been researching and conducting experimentation relating to the economical desalting of sea water. The Federal Government should be commended for exploring this very fruitful research area. However, the problem has become more critical as the years advance, and in order to avoid real hardship to the agricultural economy of this Nation, speed in research is of the essence.

During the past decades both surface and underground water supplies have been decreasing at an alarming rate. At the same time domestic and industrial uses of water, with the increased tempo of our industrialization, have been increasing at a quickened pace. The need for immediate action and research is imperative. Solution of the problem of economically desalting sea water will permit the State of California to have at its disposal all the water it requires, thereby allowing the State of Arizona to take full and complete advantage of all Colorado River water and facilites. This will allow the agricultural areas of both States to flourish and, furthermore, will provide the Nation and the world with much needed agricultural products.

During World War II, because time was of the essence and since we ignored the cost in terms of dollars, phenomenal progress was made in many hitherto unknown scientific fields. Success came because it was vital to the efforts of the free world. Today, the same application to a similarly difficult problem will supply the answer, providing the Congress of the United States is willing to appropriate sufficient funds with a mandate to the United States Department of the Interior that it proceed without delay with this research project.

Solution of the problem of desalting sea water for irrigation purposes is not an idle dream. Engineers have found 6 processing methods that are effective, but expensive, and are working with 7 other methods that appear promising. The United States Department of the Interior and private research firms are on the threshold of success, which means that we should expect desalting of sea water soon to be undertaken on a mass production scale. If desalted ocean water, useful for irrigation purposes, can be delivered to dryland areas at prices ranging from 10 to 20 cents per thousand gallons, the State of California should have all the water it wishes from the Pacific Ocean, and the need to draw water from any other source will be completely eliminated.

Wherefore, your memorialist, the Senate of the State of Arizona, prays: That the Congress of the United States appropriate sufficient and adequate funds to the United States Department of the Interior with express instructions to take every required step to accelerate the study of the process of economically desalting sea water so that the State of California can use for its needs the resources of the Pacific Ocean, while the State of Arizona thereby will obtain the full use of Colorado River water.

A Mail Carrier Protests

EXTENSION OF REMARKS
OF
HON. JOSEPH P. O'HARA
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. O'HARA of Minnesota. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Mankato Free Press, of Mankato, Minn., of March 7, 1957, entitled "A Mail Carrier Protests," by Franklin Rogers:

A MAIL CARRIER PROTESTS
(By Franklin Rogers)

There was a gentleman who strode into our office the other day with fire in his eye and—though he didn't say so—he also may have had bunions on his feet. He was a mail carrier.

The cause of his wrath was a cartoon carried by this newspaper which spoke of what is commonly known as the deficit in the Post Office Department. He wanted to protest the use of that phrase because, he said, the postal division is a service department, and not a business, and therefore cannot have a deficit.

The more you think about it, the more you are obliged to conclude the gentleman is right.

The fact of the matter is that the people of the United States decided long years ago they wanted to send letters and other messages to each other through the mail. So a division of the Federal Government was set up and was called the Post Office Department. It has a director known as the Postmaster General, and he holds Cabinet rank.

The expenses of the Department are paid by the people, either through the use of postage stamps or by taxes, and in recent years by both. The Post Office Department is a little different from the Agriculture Department, for instance, because the latter depends entirely on taxes to keep going. And so do the Departments of State, Treasury, and the others.

Which is what our visitor was talking about when he arrived to protest the use of the term "deficit."

If the people want their mail delivered regularly and on time, it is necessary to pay the expenses connected with that service. Whether it is through the raising of the postage rates or by adding taxes is a relatively small point.

The reason the postal service is discussed in this section of our family gazette is because the mail carrier is a fellow you see every day. (He has more contact with more people than any other public servant.)

If you don't like the way he does things, you either growl about his service or you call the post office. If there comes a holiday and the mail doesn't arrive, you complain about the lazy mail carriers. When the service was cut from twice a day to once you said that was the way with all Government help—they do less and less and expect more and more.

At about this point we probably ought to suggest that we hold no particular brief for the mail carrier, except to suggest that the frequency of his visits are largely determined by the amount of money Congress provides for the postal service. And we have a notion that he isn't getting rich at the current pay scale, which gives him $3,600 a year to start and $4,710 if he hangs around—and his feet hold out—for 25 years more.

But that wasn't exactly what this piece started to discuss. We began by trying to make a case for the proposition that the postal department is like any other Government service. The people must determine through their Congressmen how much they want to pay for it, and then take what that amount of money provides.

We think a mail carrier—or mail clerk, or foreman, or postmaster—ought to be expected to do the best possible job in his particular duty. But, since the amount of money to be spent for the service rests in the hands of the people, we have a feeling they ought to decide how much service they want. It hardly is fair to expect that mail will be delivered twice a day when the budget provides for once a day service. And it is unrealistic to demand that 3-cent postage pay the bill when it costs more than that to mail a letter.

We are all for making the mail carriers step lively, and we likewise stand for paying them a living salary. We also are for providing the Post Office Department with enough money to do the kind of job we want.

Increased Postal Salaries and Pensions Requested

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. OSTERTAG. Mr. Speaker, under leave to extend my remarks, I include in the RECORD the following letter from Rochester branch No. 210, of the National Association of Letter Carriers:

MARCH 11, 1957.

HON. HAROLD C. OSTERTAG,
House Office Building,
Washington, D. C.

DEAR SIR: On Sunday, February 10, 1957, at the Powers Hotel in Rochester, N. Y., approximately 600 postal employees gathered for the purpose of a salary rally. After much discussion by our invited guests, the following resolution was adopted:

"*Resolved*, That we here gathered wholeheartedly endorse bills S. 27, and H. R. 2478, providing for postal employees salaries of $5,500 to $6,100 and also bills S. 21, and H. R. 607, providing increases of $800 for our annuitants; and be it further

"*Resolved*, That we request our Senators and Representatives to insert said resolution into the CONGRESSIONAL RECORD."

At this time, Congressman, I would like to ask this of you, as the Representative from the 39th Congressional District, this request.

Your consideration will be greatly appreciated.

Sincerely,

THOMAS F. CORBETT, Jr.,
Secretary, Branch No. 210, NALS.

Balancing of the Budget

EXTENSION OF REMARKS
OF
HON. WILL E. NEAL
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. NEAL. Mr. Speaker, as a reminder of the extent to which Federal taxation is interfering with and preempting sources of taxation from which the State administration is able to receive funds, I beg leave to call to the attention of the Members of this House the speech recently delivered to the members of the West Virginia State Legislature by Mrs. E. Wyatt Payne serving her first term in that body.

I have no doubt that the situation so clearly set out by Mrs. Payne in this address applies equally to many other States in the Union.

At this particular period when Congress is faced with pressure from all classes of citizens to reduce budget spending, it is well that the facts set out so clearly by Mrs. Payne be given studious consideration by Members of this Congress.

The speech follows:

Mrs. PAYNE. Mr. Speaker, we have heard pleas on this floor for money to bring our mental institutions, our schools, our roads, and many other departments up to standards required for efficient work and national recognition. I submit that our own budget cannot include such necessary funds unless and until the national budget is brought under control, by law. West Virginia, at the State and local level cannot meet its present needs, much less its future plans because our own tax money is doing the Washington circuit and seeing the world, as I shall show. May I suggest that the best and quickest way to guarantee more funds for every need is to join with the other States in support of the Byrd-Bridges amendment and vote for the resolution before you.

The Byrd-Bridges amendment simply requires an annual balancing of the national budget by limiting congressional expenditures in any fiscal year to the estimated receipts for that fiscal year, except in times of dire emergency, and this emergency would be determined by a three-fourths vote of the Congress. In short, this amendment would require the Government to live within its income. Can you run your house or your business successfully any other way? The amendment does not touch trust funds, such as highway development funds, the social-security fund, and other trust funds. Those sound leaders, both Democrats and Republicans, with whom I have talked in Washington say this amendment is the first step necessary to bring Government spending into line, and would give Congressmen their one best defense against unreasonable demands, either from their constituents or pressure groups.

The centralized government, continually over-spending itself, is the most active agency in promoting inflation today. Everyone is against inflation and when those in Washington want to blame capital or labor they should be reminded that they are the greatest offenders. If we would help those on whom the burden falls most heavily, the middle classes, the working man and all those living on fixed income, we must prescribe and proscribe the limits of spending with an annual balanced budget. There is no other way.

It is interesting, by comparison, that the States themselves are solvent. In the aggregate, the 48 States have $7½ billion of assets in cash and liquid securities more than their debts, and the reason for this is that the States, at least most of them, have State constitutions that require each State administration to live within its own income. The State, therefore, cannot spend funds it does not have, unless it has political fortitude enough to add another tax. Thus the States have remained solvent throughout the life of our republic.

The Federal Government, on the other hand, has no such limitations and has never been required to live within its income. The Federal Government is the only echelon of government that can be a free-wheeling spender and therefore it is going faster and faster into bankruptcy every year, and is operating in fields in which it has no constitutional right to operate. Many of these fields are in direct competition with private taxpaying business. The Federal operation always loses money because it operates on "other people's money," yours and mine, and no one man is ever responsible for the tremendous losses and waste. The only way to restrict the Federal Government is to curb its expenses, make it live within its income, and therefore stop adding debt on top of debt to burden our children and grandchildren.

In traveling all over the country, I find the people more concerned about this terrific problem than many of our legislators. They know they are being taxed for benefits they never see or feel and the following figures prove their conclusions to be valid. When any welfare government tells us it can do more for us than we can do for ourselves, it would pay us to look at the facts. In 1954 the Federal Internal Revenue Department collected $70,299,651,505. We got back from the Government, in all kinds of grants-in-aid, all highways, all airports, all relief checks and all payments to individuals, a total of only $4,284,380,522. This is an average kickback of only $6.09 of every $100 that goes to Washington. Reports for 1955 show $6.17 came back. Things are looking up, we gained eight cents. West Virginia fared some bette. than the average. They tapped our pocketbooks in 1954 for $295,062,486 and sent back $48,700,278, or a total of 16.51 percent, but, deducting a reasonable amount necessary to run our share of the National Government, think what we could have done with the difference. Would we be scraping the bottom of the barrel every legislature for necessary funds? Certainly not, we could live and move and have our being as free citizens in a free and independent State with opportunities for all who care to work and demonstrate the individual freedoms we have a right to enjoy under our free-enterprise system and our constitutional Republic.

The present Federal debt of the United States (your debt) is larger than the combined debts of all other countries in the world and all the 48 States. The interest alone is the largest single item in the budget, except national defense. Who are we kidding? Ourselves, of course. The Federal Government is all of us. If we allow it to spend itself into ruin, we, too, are ruined. Twenty great and powerful nations have gone the way of all the earth, and they did not fall when they were weak, but when they seemed to be very strong. I urge you, for the good of your Nation, your State, your family, and your grandchildren to join the other 31 States in asking the Congress to give the people, whose money and right it is to decide at the polls whether or not to save this Nation from financial ruin and collapse by demanding a balanced budget. Please vote for the resolution. Thank you.

St. Patrick's Day and Commodore Barry

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 18, 1957

Mr. O'HARA of Illinois. Mr. Speaker, our colleague, RAY J. MADDEN, of Indiana, delivered the annual St. Patrick's Day speech last Saturday at the Commodore Barry Monument, in Franklin Park, Washington, D. C.

The ceremony is conducted each year by the Washington Irish War Veterans and includes the placing of a wreath at base of Commodore Barry's statue.

Under unanimous consent I am inserting his remarks in the RECORD.

SPEECH OF HON. RAY J. MADDEN, OF INDIANA, BEFORE THE IRISH WAR VETERANS, MARCH 16, 1957, BARRY STATUE, WASHINGTON, D. C.

The Irish War Veterans of the United States of America are to be commended for preserving the name and memory of Commodore John Barry, United States Navy, on each St. Patrick's Day at the site of his memorial statue in Washington, D. C.

The memorial ceremony is especially noteworthy today because on September 16, last year, at Wexford, Ireland, the United States Government, represented by an official Congressional Committee and delegates from the United States Navy, sponsored the unveiling of a monument to preserve the memory of this great American naval hero of Irish ancestry. After 200 years, our Government officially recognized the great deeds and services this Irish patriot contributed in winning our war of independence from Great Britain.

The Congress of the United States through a joint resolution, presented a statue of Commodore Barry to the Irish nation which today stands majestically in Wexford Harbor as a perpetual tribute from all Americans for the great help that Commodore Barry, along with thousands of other Irish patriots and sympathizers, gave our Nation in the Revolutionary War.

As a Representative in the United States Congress from the State of Indiana, I was honored to be appointed by the Speaker of the House of Representatives as a member of the Congressional Committee representing the Congress of the United States at the unveiling ceremony at Wexford Harbor last September. The representatives of the Irish government joined with the official delegation from the United States in the unveiling ceremonies and the ceremonial banquet on that eventful date, Sunday, September 16, 1956. It was indeed fitting that the various speakers on this occasion brought to the minds of the assembled throngs as well as to millions throughout the world who were informed through the press, historical facts concerning the long time friendship between Ireland and the United States of America.

Events outstanding in the life of Commodore Barry were recalled.

He was but a young lad of 15 when he sailed from the very harbor which today is honored with a magnificent life-size statue. As a youth, his heart was always with the sea, and he naturally served his apprenticeship on ships and with shipping. Before many years, he became commander of a merchant ship called the *Black Prince* which afterwards under another name became the first ship in the Continental Navy. He was soon chosen by the Continental Congress to have charge of regimenting the vessels of the initial naval squadron provided by the Congress. This was indeed a great tribute to a

youth, acknowledging as it did his great mastery of ships and seamanship.
